### The Revenue Bill—Appropriations.

EXTENSION OF REMARKS
OF
## HON. GEORGE M. BOWERS,
OF WEST VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, September 7, 1916.*

Mr. BOWERS. Mr. Speaker, as the newest Member of Congress, recently elected from the second West Virginia district, I was chosen upon pledges of support of rural credits, adequate preparedness, protective tariff, and the conduct of public affairs in a businsslike, systematic, and economical way. Acting upon this pledge, I aided in securing the passage of the rural-credits bill at this session of Congress. This bill gives the farmer an opportunity to borrow 50 per cent upon the value of his property in the purchase of it, or for the purpose of improvements, buildings, in the purchase of fertilizer, or any other material that will increase the value of his property. In other words, if a farmer wished to purchase property, and the party who has that property to sell is willing to accept a second lien for part of the purchase money, the Government will lend 50 per cent of the value of that property, taking the first lien thereon to secure itself, in amounts from $100 to $10,000, for a long period at a low rate of interest, with the privilege to the farmer of reducing the principal as he is able. The prudent farmer is in this way assured at all times of the opportunity of owning his farm and keeping it improved without excessive interest or a harsh creditor.

I assisted in forcing upon the dominant party a preparedness measure much better than it proposed. It does not come up to our needs, but is better than the country was led to expect. Money spent for adequate preparedness responds to the pulse of public opinion over the entire country. The American people believe in no half-hearted preparedness, but in an Army and Navy commensurate with our standing as a Nation—one that will make our foreign policy something more than mere apology, and one that will give Americans at home and abroad the protection of a Government willing and able to insure the safety of the lives and property of its citizens. I am proud, Mr. Speaker, to have responded as best I could to the wishes of my consituents back in West Virginia—that section of the country to which Washington said he would appeal for national defense and protection if the Continental Army should have been overwhelmed.

I would be false to my pledge if I failed to voice my protest against the unbusinesslike, unsystematic, and extravagant appropriations of this Congress. Even last year, at the first session of this Congress, the dominant party was extravagant according to their own standards, yet the increase of appropriations this year over last year reaches the enormous sum of $511,502,197.61, and with the contracts previously authorized makes the total appropriation of this year over that of last year $706,047,472.81.

The following table sums up the appropriation acts for the years of 1917 and 1916:

| Appropriation bill. | 1916 | 1917 | Increase. | Decrease. |
|---|---|---|---|---|
| Agriculture | $22,971,782.00 | $24,948,852.00 | $1,977,070.00 | |
| Army | 101,974,195.87 | 267,596,530.10 | 165,622,334.23 | |
| Diplomatic and Consular | 4,091,280.91 | 5,355,096.66 | 1,263,816.65 | |
| District of Columbia | 11,859,584.45 | 12,841,707.10 | 982,122.65 | |
| Fortifications | 6,060,216.90 | 25,747,550.00 | 19,687,533.10 | |
| Indian | 9,771,902.76 | 10,967,644.88 | 1,195,742.12 | |
| Legislative, etc | 36,904,799.75 | 37,925,690.25 | 1,020,890.50 | |
| Military Academy | 1,069,813.37 | 1,225,043.57 | 155,230.20 | |
| Naval | 149,661,864.88 | 313,300,555.84 | 163,638,690.96 | |
| Pension | 164,100,000.00 | 158,065,000.00 | | $6,035,000.00 |
| Post Office | 313,364,667.00 | 322,937,679.00 | 9,573,012.00 | |
| River and Harbor | 30,000,000.00 | 40,598,135.00 | 10,598,135.00 | |
| Sundry civil | 126,922,750.79 | 128,399,285.24 | 1,376,534.45 | |
| Total annual bills | 978,722,857.78 | 1,349,808,769.64 | 377,120,911.86 | 6,035,000.00 |
| Deficiencies | 12,316,343.90 | [1] 68,555,766.99 | 56,239,423.09 | |
| Miscellaneous | 2,330,603.34 | [1] 85,000,000.00 | 82,669,396.66 | |
| Permanent and indefinite appropriations | 121,567,207.00 | 123,074,673.00 | 1,507,466.00 | |
| Grand total | 1,114,937,012.02 | 1,626,439,209.63 | 517,537,197.61 | 6,035,000.01 |

[1] This sum is approximated.

Net increase 1917 over 1916, $511,502,197.61.

This extravagance is beyond the comprehension of the farmer and business man, and notwithstanding the fact that we have been called upon to meet new and burdensome taxes the revenue is still insufficient and bonds are to be issued to meet the deficit.

The financial pages of this session's appropriations, enormously larger than ever before, show no reduction in the normal routine expenditures, but an abnormal increase in the number of offices, in the size of salaries, and in places which can be used as rewards for political work, without regard to the civil-service law, and to crown all, a deficiency in revenue which must be supplied by the issue of bonds.

Such are the ingredients of the traditional Democratic economy. This extravagance does not meet with the approval of the farmer, business man, or wage earner, and others who believe that experienced, competent men should conduct the business affairs of this Nation in a businesslike way. Never was there greater need for sound business methods in any Congress, business methods such as we, as individuals, apply to our own affairs. This waste, coupled with loss of revenue from free trade will, unless promptly checked, result in bankrupting the Government.

There has been no period in the history of this country when the Republican policy of a protective tariff has been such a national necessity. The special commission appointed by the Government at Denmark which has just investigated the conditions of Belgium reports that all the industries are in operation, making full time, and that every available space of tillable soil is being utilized. The same situation doubtless prevails in other parts of Europe. This means after a cessation of hostilities on the continent of Europe, when peace is declared, that the Governments of the Old World under the present free trade will simply unload their wares on the American people to the detriment of our industrial relations and the wage earner. In my judgment, unless there is an immediate return to the policy of protection, this means a panic unparalleled in the history of our Government.

Immediate steps should be taken to prevent such a calamity by the protection of the American laborer and workingman by the broad shield of American law—in other words, a return to a protection that will insure to the American manufacturer a reasonable profit and to the American workingman good wages and continuous employment.

This Congress is acting contrary to the wishes of the people of this country in its wanton waste and is deaf to the present crying need of an old-fashioned Republican protective tariff.

## Naval Appropriation Bill.

### EXTENSION OF REMARKS

OF

### HON. JAMES H. MAYS,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 2, 1916.*

Mr. MAYS. Mr. Speaker, the bill before us as amended carries an appropriation of over $269,000,000. This, we are told, is by far the largest amount that Congress has ever devoted to the Naval Establishment in any single year in our history.

It is a sad commentary upon the civilization of the world that such vast sums must be wrung from the taxpayers and diverted from useful purposes to the arts of destruction. Upon the theory that mankind must be dealt with as it is rather than as it ought to be we vote this sum as a necessary expenditure.

The amount carried by this bill added to that carried by the military bill will make a grand total of approximately $500,000,000 for the year's program. These figures are startling to any citizen who must contribute in taxes, especially when he contemplates the great good that could be accomplished with the funds if devoted to the arts and pursuits of peace.

We vote for this bill only because the uncivilized state of man seems to make the expenditure necessary for our self-defense.

The able address made by the chairman of the committee demonstrated the fact that our Navy urgently needs the five battle cruisers provided for in the bill if a proper balance in the fighting strength of our Navy is to be maintained. The amendment adopted by the Committee of the Whole providing for 30 additional submarines will add immensely to the defensive strength of the Navy. A score or more of these undersea craft can be constructed for the cost of one capital ship and in one-fifth the time.

Properly equipped with these terrors of the deep and with an efficient aerial fleet our Nation need not suspend its ordinary business pursuits for fear of the navy of any belligerent.

Efforts to make the question of adequate defense partisan deserve and will receive a proper rebuke from the people. Attempts have been made in the House, first, to unjustly belittle the relative fighting strength of our Navy, and, second, to charge the party in power with responsibility. The Navy has not been neglected by any administration. The records fail to show that any country in any one year of its peaceful history has ever appropriated a larger sum for naval construction than the $269,000,000 carried by this bill.

The most military of all nations expended in all the 12 years preceding the European war less than $100,000,000 more than the sum we here appropriate. During these 12 years the four leading nations in naval construction expended the following sums:

| | |
|---|---|
| Great Britain | $1,999,209,088 |
| United States | 1,331,721,206 |
| Germany | 854,053,078 |
| France | 791,244,187 |

It will thus be seen that during the same period of time we expended nearly two hundred millions more than France and Germany combined. It may be said that unless our Navy is second in strength among the navies of the world, vast sums of the taxpayers' money have been wasted. It might be pertinent to inquire as to the party or interests properly chargeable with such waste.

Mr. Speaker, it is inconceivable, in view of the record of extortion and bad faith shown by the manufacturers of armor plate that any gentleman of any party, no matter how boss-ridden, could vote against the amendment offered providing for the establishment of a Government armor-making plant.

It has been shown in this discussion and also by records produced in the Senate, and by hearings before committees that the great steel companies have charged our Government an average price of $460 a ton for armor plate while selling the same plate to foreign nations at $250 a ton.

That they sold our Government worthless armor plate full of blowholes fraudulently concealed by putty and paint was also shown. It was further shown that these various steel companies had combined unlawfully to extort unjust prices from the Government—all bidding identically the same figures upon Government contracts. In addition to these uncontradicted disclosures there is quite convincing evidence that an international combination has been effected designed to maintain excessive prices in all the nations requiring armor plate.

Investigations by experts indicate to the committee that the Government can manufacture its own armor plate at $230 per ton. It should certainly manufacture sufficient of all matériel of war of which it is the sole or principal user in order that proper prices may be determined. Great savings have been effected by the manufacture of powder and guns by the Government.

Our Government should be in a position always to insure itself an adequate supply of these materials. It should be in a position always to keep secret new discoveries, new processes, and new improvements in construction.

The profits should be taken out of the manufacture of war materials, including guns, ammunition, and armor plate in order that there may be no inducement for citizens of influence to plunge a nation of people into useless war that their fortunes may be increased.

This, Mr. Speaker, is a very serious proposition. Men profiting greatly from the manufacture of armor plate and implements of destruction have organized "Navy Leagues," "National Security Leagues," and other alleged patriotic societies designed to increase military establishments for their own profit. Such people are not "safe counsellors in the affairs of the Nation."

This pernicious influence controls at this time a great political party and even extends itself with heroic professions of patriotism into the National Congress. Mr. Speaker, before entering this Hall I had heard much of a distinguished defender of national preparedness, a gentleman who shuddered not at the horrors of war, who was too manly to shed a tear over the grief of widows or the helplessness of orphans bereft, or the senseless slaughter of our brave brothers across the sea.

One of my first privileges as a new Member was to see that gentleman rise majestically in his place and request leave to proceed for one hour. In the eloquent address which followed much patriotism was injected into the atmosphere. He would prefer to prepare now. He would adopt compulsory military service. He would fight Mexico and fight her now. He would fight Germany and fight her now for the invasion of Belgium and for the sinking of the *Lusitania* and for various and sundry other offenses. He would not reason further. He would send no notes. He would employ no diplomacy or other agencies developed by civilization. His caustic criticisms of the President were loudly cheered by members of his party.

From the time he made that speech until his eloquent tirade the other day against the provision of this bill that nations be invited to counsel with one another to the end that war may be made more improbable he has been the flaming torch lighting and leading the way toward militarism.

It develops that he was then and is now financially interested in concerns engaged in furnishing this Government and other Governments with matériel of war. It develops that members of his family are also interested which involves a distinguished Senator, who also stands in the forefront of that noble column of patriots who are bold and fearless, willing to let others of their countrymen fight their battles that their profits may increase, and to whom diplomatic notes and humane assurances are most idle and repugnant.

A leading opponent of the armor-plate provision in the Senate bill was found, upon investigation, to be heavily interested in the great steel company furnishing us with armor plate. Various others have been shown to be and still others may be interested in the manufacture of powder, guns, and shells, and all the long list of war supplies.

It is apparent that the gentlemen named would appropriate every available dollar of the taxpayers' money toward our Military and Naval Establishments. Of course, they vote against an appropriation of $11,000,000 for an armor-plate factory. It is to be noted that they even voted against an appropriation of $9,000,000 for the establishment of a system of rural credits. Of course, they will harangue and vote against an appropriation of $200,000 toward efforts to establish courts of arbitration.

Mr. Speaker, the nations of the earth employ their ingenuity and exhaust their resources in building battleships and dreadnaughts equipped with such armor that no gun can penetrate. Then they proceed to construct guns that can penetrate any battleship. Where is it all to end? We hear much in this debate about our determination to become and to remain the first naval power in the world. Other nations are just as determined that they shall be supreme. Where is it all to end? In bankruptcy. That final consequence is admitted. Even naval and military experts admit that from this there is no escape.

It is evident to me, therefore, that the Speaker of this House was right when he asserted the other day that the best part of this bill was the two paragraphs on pages 100 and 101, which provide that—

Upon the conclusion of the war in Europe, or as soon thereafter as it may be done, the President of the United States is authorized to invite all the great Governments of the world to send representatives to a conference which shall be charged with the duty of suggesting an organization, court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament, and to submit their recommendations to their respective Governments for approval. The President is hereby authorized to appoint nine citizens of the United States, who shall be qualified for the mission by eminence in the law and by devotion to the cause of peace, to be representatives of the United States in such a conference. The President shall fix the compensation of said representatives, and such secretaries and other employees as may be needed. Two hundred thousand dollars, or so much thereof as may be necessary, is hereby appropriated and set aside and placed at the disposal of the President to carry into effect the provisions of this paragraph.

If at any time before the appropriations authorized by this act shall have been contracted for there shall have been established, with the cooperation of the United States of America, an international tribunal or tribunals competent to secure peaceful determinations of all international disputes, and which shall render unnecessary the maintenance of competitive armaments, then and in that case such naval expenditures as may be inconsistent with the engagements made in the establishment of such tribunal or tribunals shall be suspended, when so ordered by the President of the United States.

## The Bench and Politics—Wilson the Man of Words, and Hughes the Man of Deeds.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 16, 1916.*

Mr. HUMPHREY of Washington. Mr. Speaker, under the leave to extend my remarks in the RECORD I include an editorial from the Washington Star and one from the Washington Times. The editorials are as follows:

[From the Evening Star, June 13, 1916.]

THE BENCH AND POLITICS.

Take this question the Democrats are raising at St. Louis about the bench and politics. Is it a slam at Alton B. Parker, who, while chief justice of the New York Court of Appeals, made and won his campaign for his party's nomination for President? And he was openly groomed by David B. Hill, one of the foremost Democratic politicians of his day.

Is it a slam at JAMES A. O'GORMAN, who was taken from the bench where he was serving with honor, and transferred to the Senate, where he has been and now is serving with great distinction? Senator O'GORMAN is not popular in administration circles.

Is it a slam at the memory of Stephen J. Field, who while a justice of the Supreme Court made a campaign for the Democratic nomination for President, supplied funds to his lieutenants in the matters of organization, and, wearing his black silk gown, watched all proceedings taken in his name? There was never the slightest secret about the Field boom.

And, coming to the present moment, take this from a St. Louis news story:

"The vanguard of the Illinois delegation arrived here 100 strong, including 30 judges of the circuit, superior, and municipal courts of Chicago and Cook County. They declared themselves 100 per cent for Roger Sullivan for Vice President."

Are these ministers of justice, while on this vacation—political, let us call it—to be affronted in such fashion, rebuked, and driven back home? Tut, tut! as prominent golfers say.

But, most striking and pointed of all, is this a slam at Senator JAMES, who will be the permanent chairman of the convention? He was the controlling spirit at the recent Democratic State convention held in Kentucky, which selected for chairman of the State committee a circuit judge, who accepted the place and still occupies and will continue to occupy his seat on the bench. Moreover, this selection, it is understood, is the initial step toward making that judge the next Democratic candidate for governor.

With its color thus established by the record, what sort of campaign based on the "color scheme"—as they say in society—may the Democratic pot be expected to make against the Republican kettle? With such a text, what sort of speeches may Judge Parker, Senator O'GORMAN, and Senator JAMES be expected to make when the campaign opens, and voters crowd up close to the stands to hear why they should vote against Hughes and for Wilson? How will those three spellbinders deliver the party message and preserve their gravity? How will they differentiate between the Supreme Court and other high courts? That the Democratic offenses have been "such little ones"?

[From the Washington Times, June 13, 1916.]

WILSON THE MAN OF WORDS—HUGHES THE MAN OF DEEDS.

Those who believe or pretend to believe that Charles E. Hughes is too much like Woodrow Wilson to justify a popular upheaval in favor of a new Executive of the Nation are due to receive before this campaign is over a stunning shock, for Hughes is as much like Wilson as black is like white, inertia like motion, puerility like power.

Hughes is not merely a man of quick, clear judgment and deep convictions; he is a driving engine for the application of that judgment and the enforcement of those convictions. He has ideals, not only to talk about them but to work for them. He assumes duties, both to acknowledge them and to fight for them. He doesn't suppose, he knows; he doesn't stop at thinking, he goes on to doing.

Nothing could better illustrate Mr. Wilson's indifference to obligations or incapacity to perform them than his disregard in this very campaign of the pledge of his party's convention four years ago and his implied acceptance of that pledge against a second term. There was no reason on earth why the Democratic Party should have made that pledge; but it did make it. There was no reason on earth why Mr. Wilson should have bound himself to it; but he did bind himself to it. Now he is the same candidate of that same party for a second term.

Why a platform does not mean to Mr. Wilson something definite and concrete to be lived up to practically and solidly may be understood from his manner of making any of his public and official declarations and his manner of almost invariably drifting away from them afterwards.

To him the form of expression, the rhetorical flourish, is everything, the performance nothing.

Wilson loves to prate upon what individuals, communities, and nations should wish to do; of what they can not do without offending good taste, affronting public opinion, or defying righteousness. Wilson philosophizes on the beauties of reasoning with unreason, sermonizes on the virtue of being too proud to fight.

Hughes takes a commission from a legislature to investigate a vast insurance scandal and does it; from the people of New York to be their governor and he is their governor. He talks very little—never unless he has something to say. He does not talk mere rhetoric.

Read Hughes's acceptance of the Republican nomination, with his affirmation of the Republican platform, and see the difference in the mental equipment and the moral fiber, the aim and the will, the directness and the force of the two men.

Hughes does not say to the Republican convention that he is honored by its call. Hughes says, "I can not fail to answer with the pledge of all that is in me to the service of our country."

Hughes does not look with favor upon; Hughes "stands for the firm and unflinching rights of American citizens on land and sea."

Hughes does not simply deplore hyphenism; Hughes uncompromisingly declares, "We do not for an instant tolerate any division of allegiance."

Hughes does not say we should look to peace and security; Hughes says we "must have the strength which self-respect demands, the strength of an efficient Nation ready for every emergency."

Hughes does not say that the future bespeaks our attention, but we "must make industrial and economic as well as military preparation." Not that the tariff merits consideration, but we must readjust it in accordance with sound protective principles. Not that wage earners are our dearly beloved brothers, but we must conserve the just interests of labor. Not that capital has something to be said for it, but that we must secure the foundation of honest business. Not that transportation is a serious problem, but that we must conserve the essential instrumentalities of progress.

Wilson sees things to be talked about gracefully, poetically, even spiritually—and that is all. Hughes sees things to be grappled with manfully, mastered efficiently, and done completely.

Before election day the American people will come to understand emphatically the difference between Wilson, the smooth man of empty words, and Hughes, the powerful man of heavy deeds.

## Woman Suffrage.

### EXTENSION OF REMARKS
OF
### HON. THOMAS W. MILLER,
OF DELAWARE,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, May 29, 1916.*

Mr. MILLER of Delaware. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD on the above date I avail myself of the privilege to insert a few remarks on the subject of woman suffrage in which I include a copy of a resolution forwarded to me by Mrs. Florence Bayard Hilles, chairman for Delaware of the Congressional Union for Woman Suffrage, presenting the views of those present at a meeting held in Wilmington, Del., on May 19, 1916.

I am also including a statement made by me to a delegation of the Delaware convention of the Congressional Union on May 14, 1915, in Wilmington, Del., when I was asked to address the delegation and state my views on the question of woman suffrage.

The platform adopted by the Republican National Convention, held in Chicago, says the following in its suffrage plank:

The Republican Party, reaffirming its faith in government of the people, by the people, for the people, as a measure of justice to one-half the adult people of this country, favors the extension of the suffrage to women, but recognizes the right of each State to settle this question for itself.

Resolution submitted by the Delaware branch of the Congressional Union for Woman Suffrage, May 19, 1916:

*Be it resolved*, That we, the men and women, at a meeting held in Wilmington, Del., on May 19, 1916, do protest at the action of the Judiciary Committee of the Sixty-fourth Congress in preventing the Susan B. Anthony amendment enfranchising women from being voted upon by the representatives of the people on the floor of the House, and do protest against the inconsistent attitude of the party in power—the Democratic Party—in withholding the right of full citizenship from half the people, the women, and further request that this resolution be forwarded to the President of the United States, the Speaker of the House, Majority Leader KERN of the Senate, Majority Leader KITCHIN of the House, members of the Judiciary Committee, and to Senator SAULSBURY, and request that they be read into the CONGESSIONAL RECORD by Hon. THOMAS W. MILLER.

FLORENCE BAYARD HILLES,
*Chairman.*

Statement of Representative THOMAS W. MILLER of Delaware to the Delaware convention of the Congressional Union for Woman Suffrage, at Wilmington, Del., May 14, 1915:

"I would prefer discussing this subject with you informally, but I think it would be best under the circumstances for me to read the following statement of my position, in order that there can be no doubt as to just what my intentions are and my reasons therefor.

"About a month ago, when I consented to meet a delegation from the Delaware Equal Suffrage Association, I had no idea that a demonstration of the character and proportions such as has just been given would accompany this interview.

"Woman suffrage is one of the social problems to the fore at the present day, and while the body politic is interested in this question, it can not, or at least should not, be classed as a political issue by any political party.

"In order for an amendment to the Federal Constitution to be brought before the States it is necessary for an enabling resolution to pass both Houses of Congress by a two-thirds vote, after which it is transmitted by the Secretary of State at Washington to the governors of the several States, who in turn transmit the same to their legislatures for rejection or ratification. If three-fourths of the States ratify the amendment, it becomes a part of the Federal Constitution; otherwise, it automatically dies. Final action, it will be seen, is up to the State legislatures, and the part played by the Congress at Washington is to pass an enabling resolution which will permit the State legislatures to ratify or reject a proposition; or they may take no action whatever, if they so desire.

"To-day there are 12 States and 1 Territory—Alaska—which have granted universal suffrage, 22 of the States have granted partial suffrage, while the remaining 14 States do not allow woman suffrage in any form, the latter being composed largely of what is known as the solid South. In the fall of the present year the great Commonwealths of New York, Pennsylvania, New Jersey, and Massachusetts are to vote on the question of universal suffrage for women, the enabling act in these instances having been allowed by their respective legislatures. In this connection it will be remembered that our own general assembly at Dover during the past session voted 11 to 6 on this subject in the Senate and 22 to 10 in the House.

"A Member of Congress, in addition to the duty of representing his State or district through his voice or action in the National Legislature at Washington, should, in my opinion, consider it as his duty to act as a representative of the United States or, in other words, of the country at large. When you consider the fact that 12 States have already granted universal suffrage to women and 22 additional States have granted partial suffrage, it is plain to be seen that throughout the United States the question should be classed as a national issue. The question is undeniably a pressing one to-day, and the ice of public opinion has been broken through in no uncertain manner, as is evidenced by the figures just mentioned.

"For these reasons I therefore consider that it should be my duty as a national legislator to vote for an enabling resolution which would place the question of woman suffrage before the several States for their rejection or ratification. Should an enabling resolution providing for the submission of this question to the several States come before the Sixty-fourth Congress, it is my present intention to vote for it; but by this I do not mean that my activities shall be exerted in the matter outside of my duties as a Member of Congress. This is not to be construed as a pledge or promise but as my position on the subject to-day. I have not in the past, and I will not in the future, make a pledge, written or otherwise, governing my action as a Member of Congress, believing that the functions of a Member demand that he be unhampered by such pledge or promise."

The Milford (Delaware) Chronicle in its issue of June 8, 1915, said the following in its editorial columns concerning this interview:

We believe in the right of every woman capable of exercising the right to have a vote in the elections of State, county, town, and school affairs, and we want to express to Congressman THOMAS W. MILLER our admiration for the stand he has taken on the question. We believe that we are broader than the narrow views of political policy, and know that our convictions are based upon fairness and equality, the underlying principles of a democratic form of government.

The Harrington (Delaware) Journal in its issue of May 28, 1915, made the following reference to the subject:

We believe Congressman MILLER'S attitude on the suffrage question is not only right, but he is using good judgment when he listens to the request of the Delaware women favoring ballots for women. It is unjust to longer deprive them of the enfranchisement which a large and growing number of our best thinking women are demanding the right. It should be settled once and for all time at the next legislature.

## Speech of Gov. A. O. Stanley, of Kentucky.

EXTENSION OF REMARKS

OF

HON. A. B. ROUSE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, May 29, 1916.*

Mr. ROUSE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech of Gov. A. O. Stanley, of Kentucky, delivered at the Democratic State convention, held at Lexington, Ky., May 24, 1916.

The speech is as follows:

SPEECH OF GOV. A. O. STANLEY, DELIVERED AT THE DEMOCRATIC STATE CONVENTION, HELD AT LEXINGTON, KY., MAY 24, 1916.

Fellow Democrats, words fail me in any attempt to express my profound appreciation of this signal evidence of the continued and continuing esteem of my countrymen. A few days ago 2,000 delegates, speaking through and for more than 200,000 Democrats, assembled in local conventions in practically every county of the Commonwealth, from the mountains to Mills Point, declared their confidence in and their approval of the present administration and in the good work it has just inaugurated. To be the fortunate and grateful recipient of such an unequivocal and universal expression of approval is a distinction a king might covet, and I shall endeavor not to express but to demonstate my gratitude to those who have thus honored me by an assiduous devotion to the best interests of the noblest party and the greatest State in all this world.

It is fitting that at this time we should briefly review the history of this administration, that those who have heartily indorsed may the better know how well it has deserved the commendation "Well done, thou good and faithful servant," so emphatically recorded by the Democracy of this Commonwealth.

On the 31st day of August, 1915, the Democracy of Kentucky in convention assembled committed its nominees to a program of reform far-reaching in its scope and thorough in its operation, embracing at once every department of the State government and the whole field of commercial and industrial activity. It promised:

To foster and promote agriculture and to protect the producer from extortion or exploitation by combinations in restraint of trade;

To improve our school system and to prevent unnecessary waste and expense in the purchase of text books;

A more extended control and regulation of common carriers and other public utilities;

The protection of the electorate and of legislative assemblies alike, from corruption or control by privileged or corporate interests;

Retrenchment and rigid economy in the expenditure of public funds;

A complete revision of the present inefficient and antiquated system of taxation; and,

The maintenance and enforcement of the present county unit law.

To-day you may contemplate with pride the completion in no small measure of the noble and arduous task so recently imposed.

This administration enacted a pure-seed law, and before its close we will see the great Department of Agriculture and the university of the State in thorough harmony and perfect cooperation, providing the farmer with a bureau of markets, and with the assistance of the Federal Government, expending nearly $300,000 in the highest development of the art of agriculture and in bringing in concrete and tangible form, to the cottage and to the field, the rich fruits of scientific discovery—the fertilization of soils and the higher cultivation and development of every form of plant and animal life.

It has written upon the statute books an antitrust law, so wisely drawn as to give perfect freedom of action to every legitimate enterprise, while preventing and punishing oppression of the poor and the exploitation of the public by trusts and combinations in restraint of trade.

It has entered the schoolroom and protected the pupil and the necessitous parent from the cunning of avaricious book companies by forever preventng useless and sweeping changes in text books, inaugurated for the sole benefit of those who patent and print them.

When this administration came into power property was insured by a kind of sufferance. No man knew and no insurance company could say, just what its duties or responsibilities were.

Insurance laws have been rewritten in such a way as to both protect the insured and to give stability and confidence to business.

A quarter of a century ago the framers of the constitution wisely prohibited the granting or offering of transportation to public servants, realizing that a rebate by a common carrier is a naked and indefensible abuse, an iniquity that no good man can defend or wise legislator tolerate. Yet in all that lapse of years every effort to make effective this just and righteous provision of the constitution of the Commonwealth was doomed to ignominious defeat. Every bill introduced for that purpose was strangled in the darkness by a conspiracy of greed and silence. Common carriers are essential alike to the development of the country and to the necessities of the citizen. Wisely and justly operated, railroads are absolutely essential to the happiness and prosperity of the community. The secret rebate is nevertheless the fecund mother of monopoly and corruption. There is no more excuse for discrimination in passenger than in freight rates. The carrier is under the same obligation to abstain from every form of discrimination in the transportation of passengers as of freight. Legislators have been biased, courts cajoled, citizens flattered and corrupted by this pernicious and indefensible practice. The last general assembly, almost without a dissenting voice, forever abolished the free pass to official and citizen alike, and under the present law common carriers will be compelled to serve all men without regard to wealth or place or power with equal and exact justice.

Legislation has been cleansed and ennobled by the prompt and cheerful response of courageous statesmen to the demand of a progressive democracy.

A corrupt-practices act insures the freedom of elections from slush funds provided by designing interests, and an antilobby law throws the light of day upon those who seek by "cunning, sly, insinuating art" to debauch public servants in the discharge of an official duty.

The interests of the shipper have been safeguarded by acts placing the sole responsibility for loss in transit upon the initial carrier. The watering of stock has been interdicted by wise regulations preventing the overcapitalization of corporations and the manipulation of their securities. The powers of the railroad commission have been extended over other public utilities. Legislation has been enacted regulating the operation of railroad, telegraph, telephone, insurance, and banking corporations, and yet no great business interest has been heard to utter one complaint, to make one charge of demagogy or injustice against this administration.

It has relieved the necessities of the laborer by providing a two weeks' pay bill and has provided for those dependent upon him in the case of accident or death by a workmen's compensation act.

It has protected the home by making the desertion of wife and child a felony and has shielded from violence and wrong unprotected womanhood by a severe antipandering law.

It has codified and rewritten the entire body of laws providing for the regulation and organization of the militia and for the operation and maintenance of our common schools.

It has cheapened the cost of public highways by utilizing the labor of convicts in their construction and by wise legislation has extended and rendered available to the poorest counties the aid of the State in extending these great thoroughfares to the most remote sections of the Commonwealth.

Pledged to retrenchment and reform and facing a deficit of more than $3,000,000, it has practiced the most rigid economy in the appropriation and expenditure of public funds. The last general assembly utilized less than half the employees required by its precedessors, thus effecting a saving of more than $200 for each day of its deliberations. The custodian and the sinking fund commissioners are now perfecting a plan by which it is hoped the cost of maintenance of the public buildings and grounds at Frankfort will be reduced at least 30 per cent.

The act providing a fixed date of maturity for outstanding warrants will save in interest to the taxpayers of the Commonwealth not less than $50,000 per annum.

An able tax commission is now tirelessly and assiduously devoting itself to the task of completely revising the present archaic and inefficient system of taxation.

The acts of the last general assembly constitute a unique volume of well digested, wisely constructed, and progressive legislation, which has placed Kentucky in the vanguard of forward-looking States. This administration, intrusted with power for less than six short months, may well stand erect before the Democracy of the Commonwealth, having kept every platform pledge made by the great convention which commended it to the people of the State and committed it to a work well and nobly done.

In behalf of those associated with me in this administration, I can say to you who have so generously commended us that we have regarded the last Democratic platform as a solemn covenant, a contract to be executed in spirit and in letter. Every promise fulfilled, every pledge redeemed, we, who have kept the faith, well may merit this magnificent expression of your approval and esteem. We have done more than crystallize into law those specific reforms incorporated in the last platform. We have abstained from doing those things which were by necessary implication absolutely prohibited.

The Democratic Party has ever been the true friend of temperance and the righteous champion of every reform designed for the intellectual or moral uplift of the Commonwealth. The Democracy of Kentucky believes with the President of the United States that temperance and Democracy are consistent and that the sale of alcoholic liquors can be regulated or prohibited without abandoning or destroying the sacred principle of local self-government. The maintenance of home rule and an inflexible opposition to centralized power are fixed and established principles first proclaimed by Thomas Jefferson and from time immemorial honored and maintained by the Democracy of Kentucky. For that reason in 1911 a Democratic convention declared in favor of the county unit in order that "the citizens of each and every county in the State may determine for themselves whether spirituous, vinous, or malt liquors may be sold therein." The last Democratic platform declared that "We reaffirm and reassert our unqualified approval of the present county-unit law and of the declaration of the Democratic Party in the convention of August 15, 1911, pledging the party to its adoption," and it asserted in no uncertain terms its allegiance to the great leader of a national democracy, declaring that in "any legislation affecting the moral welfare of the people and the party we may well be guided by our great leader, whose wisdom and righteousness are the priceless boon of a triumphant democracy. We unqualifiedly commend to the Democracy of Kentucky his sage admonition that 'the questions involved (in such legislation) are social and moral and are not susceptible of being made parts of a party program. Whenever they have been made the subject matter of party contests they have cut the lines of party organization and party action athwart to the utter confusion of political action in every other field.'" With the President we "do not believe that patry programs of the highest consequence to the political life of the State and of Nation ought to be thrust on one side and hopelessly embarrassed for long periods together by making a political issue of a great question which is essentially nonpolitical, nonpartisan, moral, and social in its nature," and therefore we oppose further agitation and legislative experiment, holding that existing laws, if fairly tried, will achieve the ends for which they were designed."

This administration and the last general assembly were not at liberty to choose between State-wide prohibition and local option without disregarding the emphatic and unanimous demand of more than 2,000 delegates speaking and authorized to speak for the whole body of Kentucky Democracy. To have abandoned the county unit was to repudiate the platform upon which Senators and Representatives were elected. Each of these representatives, before his name could be printed upon a ballot, was required by law of the land to solemnly assert his acceptance of the principles of his party and his purpose to carry them into effect. To have abandoned a principle so well established and so forcibly and so lucidly asserted would have been the height of perfidy and dishonor. State-wide prohibition and local option—and the county unit is local option—are absolutely irreconcilable. The existence of one necessarily implies the abandonment of the other. When the States as a whole determines this matter the counties are necessarily denied any right of independent action, and that right can not be denied them by honorable men in the teeth of a platform which expressly guaranteed to every county in the State the absolute control over the vending of spirituous liquors, and further provides that no county shall be deprived by any outside interference of the right to determine this matter for itself. This administration has done more than uphold the county unit. It has strengthened and perfected it. It has given it a virility and efficiency never attained before.

In order that each county might the better prevent the violation of laws designed to regulate or prohibit the sale of alcoholic liquors, bootlegging has been made a felony, and the governor of the State has been intrusted with the right to remove recalcitrant officials wherever saloons were opened on prohibited days or during prohibited hours, and this law has been enforced with such rigor that to-day, for the first time in the history of the Commonwealth, no barroom dares open its doors to the public upon the Sabbath day in any city or in any hamlet in the Commonwealth of Kentucky. More than that, executive clemency

has been absolutely denied to any man convicted of a violation of any of the laws designed to affect the liquor traffic. This administration has been indeed the sincere champion of true temperance, but it has been the champion of Democracy as well. No good cause demands broken faith, and the cause of temperance is not so weak in Kentucky as to require the repudiation of a Democratic platform in order to properly safeguard the moral welfare of the community.

Those who attempted to obstruct this program, to bring into contempt the proceedings of deliberative bodies by unsuccessful efforts to distract their councils by bitter harangues or useless and unwarranted personal abuse, were treating with defiance and contempt not the governor of the State or the speaker of the house of representatives, they were spurning and repudiating the platform upon which they were elected. They were vainly endeavoring to prevent the representatives of a great party from keeping faith with the people who elected them. This insurrection has been wisely and sternly rebuked by those who believe that platform declarations are and should be binding upon all honorable men, and that those who insist upon the inviolate observance of preelection pledges, deserve from their official associates, not vilification and slander, but cooperation and support.

To-day the Democracy of Kentucky, determined and harmonious, files in solid phalanx behind the greatest leader of the Western World. Your action is the certain earnest of a glorious victory in November and you do well to stand as one man in this crucial hour. Never since the Civil War has any man faced such grave responsibilities and attempted the solution of such world-embracing problems. Upon the success of Democracy depends the honor of the flag and the peace of America. The eyes of all mankind are upon you. Life and death, the horrors of war, and the blessing of peace and tranquillity await the wisdom of your action. To-day old Kentucky salutes her sister States from Maine to California. She unfurls here triumphant banners, from her flaunting standard floats the signal, "All is well in old Kentucky." United we stand with that great and wise and patient chieftain who is, and in the Providence of God for four years more shall be, the President of the United States.

**The Tavenner Bill as a Proposed Amendment to the Fortification Bill.**

---

## EXTENSION OF REMARKS

OF

# HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. BROWNE. Mr. Speaker, so much has been said on this floor in opposition to enacting legislation by means of riders to appropriation bills that it is unnecessary at this time to do more than call attention to the fact that the proposed amendment was never discussed nor considered in the committee which had the appropriation bill under consideration.

It is not only an unfair way of legislating but is dangerous in the extreme, and I do not believe that anyone can justify it in a matter of such importance at a time like this.

The Advisory Board to the Navy, composed of the greatest engineers and scientific men in the country, headed by Thomas A. Edison, are emphatic in their condemnation of the legislation embodied in this amendment and believe it would be a great blow to efficiency.

In England the labor union officials voluntarily proposed a definite stop watch, time studies, and premium wage payments.

I have been unable to find a single engineer of prominence or a scientific society that does not believe in the time study and the premium or bonus system.

To-day more than 30,000 engineers and chemists, members of the five eminent American scientific bodies, are making for the first time in the history of the Government a minute sweeping survey of the industrial resources of America.

Their work will be the basis for creating in this country a true line of defense in time of war, the ability to produce swiftly, abundantly, and with sustained power all the thousand and one elements of modern warfare.

They are going to determine the extent of each plant—the equipment of each shop, the capacity of each machine, the ability of each man. This is the essence of industrial preparedness, and this is the task to which 30,000 engineers are pledged.

This work will supply the military authorities of the United States with information never before collected, and is carried forward without a dollar's cost to the Government. This work will be greatly facilitated by establishments that have the time study, and this great body could make little progress without it.

### EMPLOYEES TREATED FAIRLY.

The employees of the Ordnance Department, including the Watertown Arsenal, are given an eight-hour day. They are given a leave of absence of 15 days in the year with full pay. They are paid the going wage of employees engaged in similar occupations conducted by private employers, and under the premium system are receiving, on an average, over $10 a month in addition to the going wage. They also receive pay for seven national holidays that they are not required to work. They are given 13 Saturday afternoons during the summer season, making in all 28½ days when no work is required, and they receive full pay. This leaves 284 working days, or exactly 10 per cent of the working time they have off with full pay.

There has not been any proof produced that the employees at the Watertown Arsenal have met with more accidents or that their health has been impaired; but, on the contrary, it has been shown that the health of the employees is good, and they meet with fewer accidents than in private institutions of the same kind.

### ARBITRATION.

The employees have a right at any time to arbitrate their differences. If they are speeded up, if they are not treated fairly, if the time study and premium system is made oppressive, under the rules of the department they can arbitrate their differences. This certainly is fair, and yet we find that no employee has had a sufficient grievance under the time study and premium system to ask for any arbitration.

I herewith give the rules governing arbitration of the employees in the Ordnance Department:

### INSTRUCTIONS IN REGARD TO HEARING OF GRIEVANCES.

1. Shop board: Any grievance arising in an arsenal shop shall, in the first instance, be taken up for adjustment by a shop board consisting of an authorized representative, respectively, of the arsenal and the employees in the shop where the grievance arises.

2. Arsenal board: In case the shop board fails to adjust the grievance, it shall then be taken up by the arsenal board, consisting of an officer of the arsenal, to be selected by the commanding officer, and a representative of the employees of the whole arsenal, to be selected by the employees.

3. In case the members of the arsenal board can not agree, they shall prepare a brief statement of the subject in controversy and the respective positions of the members of the board, which statement shall be submitted to a mediation board, hereinafter provided for, which shall proceed either to hear the matter contained in the statement or in such other manner as it desires, and decide the same without unnecessary delay. Upon decision of said matter by the mediation board it shall submit its findings to the commanding officer, who is authorized to give them effect after notification and opportunity for appeal.

4. A decision of the mediation board may, at the instance of either party, within a reasonable time, be appealed to the supreme mediation board, whose conclusions shall be reported to the Chief of Ordnance, who will give them effect unless, in his opinion, they are contrary to the interests of the service. The right of appeal from the action of the Chief of Ordnance to the Secretary of War exists.

5. The mediation board shall consist of five members, to be appointed as follows: The commanding officer shall appoint from his staff an officer who, if practicable, shall act continuously on said board; the commanding officer shall also appoint an additional member, who may be an officer or an employee not from the rank and file of the employees, and who must not be a party to the grievance nor have participated in the subject under hearing. The employees, on their part, may also appoint two representatives on said board from among themselves; the first shall act as continuously on said board as may be practicable; the second shall, if possible, be representative of the craft which has the complaint before the board, except that he must not be personally involved in the question for adjudication. It will be understood that all the representatives shall be subject to removal at any time by the power appointing them. The commanding officer and the employees will select a fifth man, who shall act as chairman of the board, and who shall seek, as far as possible, to bring the parties together, and will cast the deciding vote on any matter before the board only when it is necessary to do so in order to reach a decision. If the commanding officer or the employees so elect, said board shall be limited to three members, selected as to representation at each hearing on the basis above, it being understood that, as far as practicable, each craft shall select a mediator to hear its complaints.

6. Supreme mediation board: This board shall consist of three members, one to be appointed by the Chief of Ordnance, one to be appointed by the crafts representing all the employees of the arsenal, and these two shall choose the third member, who shall act as chairman. The procedure of the chairman shall be the same in manner as that of the chairman of the mediation board. It is to be understood that for the purpose of having the benefit of special craft knowledge as mediator either side may for any hearing substitute another in his place.

7. While the question of a grievance is pending the commanding officer is instructed to have the work in question proceed as at the time the question at issue was raised.

8. As the arrangement outlined herein is new in the department, of a tentative nature, and necessarily must be subject to the test of practical experience, it is not desired to go into more detail at this time; but it is to be understood that the Chief of Ordnance will re-

ceive suggestions from the commanding officer or the employees as to any change in the procedure outlined herein which may appear to be desirable. Any suggestion submitted by the employees should be forwarded through the usual channels.

9. In carrying out these instructions all proper facilities will be afforded, with the object of avoiding expense, but it is understood that employees will pay their own expenses incurred in connection with any hearing of a grievance in the manner outlined herein, which can not properly be assumed by the Government, and that all joint expenses shall be equally divided between the Government and the employees.

10. While it is considered desirable that the chairmen of the mediation board and of the supreme mediation board shall hold office as long as agreeable to the Government and the employees, it is to be understood that they can be changed at any time.

11. The records of the shop and arsenal boards shall include entries of the name of the aggrieved party, the nature of the grievance, and the action taken. The mediation boards may make rules of procedure and keep such records as may appear desirable, which shall become permanent records of the department.

12. It is essential for the proper working of this form of procedure that all things required to be done shall be done promptly.

13. In issuing these instructions it is the purpose of the department to provide proper machinery for the adjudication of all grievances which may arise, but they are not to be understood as withdrawing any rights under the methods heretofore in practice.

14. In cooperating with the department in carrying out these arrangements the employees are understood as not waiving any objections which they may have to any method or manner of work which may be in force in said arsenal, such, for instance, as the stop-watch elemental time studies or the premium system of payment to employees, or any condition or grievance resulting therefrom, nor submitting their opposition thereto to arbitration, nor does the department waive its right to install such systems or to carry on the work in such manner as in its opinion is best for the service.

FEDERAL COMMISSION ON INDUSTRIAL RELATIONS DOES NOT CONDEMN SCIENTIFIC MANAGEMENT.

The gentleman from California [Mr. NOLAN], in speaking in favor of a similar amendment to the naval bill June 1, quoted from the Federal Commission on Industrial Relations—page 9128 of the CONGRESSIONAL RECORD—as follows:

Last year an investigation was made of scientific management as it affected labor under the authority of the Federal Commission on Industrial Relations. The work was done by Mr. R. F. Hoxie, of the University of Chicago, as chief investigator. * * * In view of the fact that it was a unanimous report, their findings are entitled to be accepted as authoritative.

As a matter of fact, the statement referred to with respect to scientific management was signed by only four out of the nine commissioners, the majority of the commission refusing to sign it.

The report made by Mr. Basil M. Manly, which was signed by a minority of the committee, makes no reference whatever to the time, study, or premium or bonus system in Government plants, which are the proposed subjects of this legislation.

Prof. John R. Commons, of the University of Wisconsin, a member of the Commission on Industrial Relations, writes regarding the report of the Commission on Industrial Relations as follows:

Owing to the way in which the Commission on Industrial Relations went to pieces it was impossible to compare and verify any of the investigations. Consequently whatever conclusions I may have reached, or anybody else on the commission, are not complete except in so far as Mr. Hoxie's report was indorsed by four members of the commission. This, however, is no part of my action nor of the majority of the commission.

Prof. Commons states in his letter that he is strongly opposed to the various propositions of the Tavenner bill, and says:

I am convinced that the unions have gone too far when they demanded that Congress prohibit these methods.

Prof. R. F. Hoxie, who has been quoted as against scientific management, says:

You are right in assuming that I took no stand of opposition to scientific management in my report to the United States Commission on Industrial Relations and also in assuming that I look upon time study, properly developed and applied, as an exceedingly valuable means in the development of industrial efficiency.

RESPONSIBILITY OF ADMINISTRATION IN POWER.

Can this administration afford to enact a law that has been given no more consideration than the proposed amendment over the protests of the chiefs of two great departments of the Government?

Secretary of War Baker writes as follows regarding the value of the time-study and premium system in the Watertown Arsenal. He closes his letter as follows:

As I am not in any sense personally responsible for the work which has been done at the Watertown Arsenal, I can be permitted to say that, in my judgment, it represents an achievement of which both the legislative and executive branches of the Government can be justly proud. The reproach is often made that the public can not conduct an economical and efficient industrial enterprise, but no such charge can be brought against the Watertown Arsenal, and I think it would be a grave misfortune to the public service and to the employees of the Government there engaged if any action were taken prejudicial to the system which is working so well, without a special investigation at the arsenal itself which would make a comprehensive study of the results of the system, both in output and upon the operatives. Similar studies have been made in other places; there are a great many experts who know exactly how to make such studies, and the information presented by them could be weighed and proper value given it in determining a future policy.

Sincerely, yours,

NEWTON D. BAKER,
*Secretary of War.*

The Post Office Department makes an emphatic protest:

OFFICE OF THE POSTMASTER GENERAL,
*Washington, D. C., May 18, 1916.*

HON. EDWARD E. BROWNE,
*House of Representatives, Washington, D. C.*

MY DEAR MR. BROWNE: With reference to your letter of April 28, asking for my views in regard to H. R. 8665, entitled "A bill to regulate the method of directing the work of Government employees," you are informed that it is my opinion that the enactment of the above-mentioned bill into law would be prejudicial to the best interests of the Post Office Department and Postal Service. I inclose herewith copies of memoranda submitted by several of my assistants covering the subject in detail.

Very sincerely, yours,

OTTO PRAEGER,
*Acting Postmaster General.*

In the discussion of this question June 1, on page 9128 of the CONGRESSIONAL RECORD, a chart, prepared by Mr. Minor Shipman, was referred to.

These same charts were presented before the Labor Committee by Mr. John P. Frey, and while it was admitted that the charts were not an indictment against scientific management, I herewith present the reply to Mr. Frey's argument and charts made by Gen. Crozier:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
*Washington, May 29, 1916.*

HON. EDWARD E. BROWNE,
*House of Representatives.*

DEAR MR. BROWNE: In further answer to your note of May 6 (O. O. 230.437/72), I inclose herewith a copy of a memorandum received from the commanding officer of the Watertown Arsenal, which partly analyses the testimony given by Mr. John P. Frey before the Committee on Labor when it had under consideration the bill H. R. 8665. You will note from the blue-print charts [charts omitted] which accompany this memorandum that the fluctuations in efficiency of a single workman, which were claimed by Mr. Frey to show that the jobs upon which the efficiency was based were unscientifically set, were exhibited in a high degree when this workman was engaged upon identical jobs at different times, and that the fluctuations were therefore personal and not in the setting of the jobs.

It appears from the charts which Mr. Frey himself presented that even if the workman's efficiency were shown to vary, from whatever cause, his average efficiency was such as to net him a very considerable gain over his regular daily pay, and that in his case the system was therefore highly beneficial. His average gain, as shown by Mr. Frey's chart, would be something like 50 per cent of his pay.

If you have occasion for any further explanation of the memorandum or of any other features of this subject, I shall be very glad to give it to you.

Sincerely, yours,

WILLIAM CROZIER,
*Brigadier General, Chief of Ordnance, United States Army.*

MEMORANDUM TO ACCOMPANY SECOND INDORSEMENT ON O. O. 230.437/72 — TAVENNER (W. A. 213-1092).

1. The following is a partial analysis of the testimony given by Mr. Frey in his hearings before the Committee on Labor on H. R. 8665, March 30 to April 4, 1916. The analysis is considered not to be complete, on account of the limited time understood to be available for the purpose.

2. Mr. Frey in his hearings before the Committee on Labor, stated as follows (p. 331 of Report of Hearings):

"Now, if there is anything scientific in time study and task setting, I will say it is something in the evenness of the jobs and in serious errors not being made in setting time for the task; but we discovered instances where the time-study man had made such serious mistakes as the difference between 8½ hours' time to make a job and 27 hours. I have here three charts showing the efficiency of certain workmen in the plant during a month, indicating that instead of the tasks having been studied with any degree of accuracy that the tasks were unbalanced, so that at times the men could make only 21 per cent efficiency on a job and sometimes 200 per cent. It is the best evidence I know of the absolute unworthiness and unsatisfactory character of time study. I think the committee should see this chart [exhibiting chart]. This is a record of employee No. 2518, being for the month of April, 1914. He was a very high-grade man. His average efficiency for the month was 121 per cent * * *. Had the job been set with scientific accuracy, a man working normally would show a straight line running along here [exhibiting], but instead of that he produced more than the standard and his average was 121 per cent. This zigzag line is a job he worked on. On this one he made 172.9 per cent efficiency, where here [exhibiting] he was able to accomplish 45 per cent efficiency. This is evidence, as far as this workman is concerned, that instead of the time being set accurately it was set very ridiculously and very carelessly—more carelessly than anything you would expect to find in any well-managed establishment * * *. [He was] working on some different jobs. A job would come in and he would be allowed so much time to perform the work. If the time were set accurately he would have 100 per cent efficiency.

"Mr. LONDON. Occasionally he fell below 60?

"Mr. FREY. He fell to 49.

"Mr. LONDON. Is not that a case where he was asked to do work he was not accustomed to?

"Mr. FREY. No, sir; but the time being set so short, it was impossible of accomplishment.

"Mr. KEATING. All this work was in line of his trade?

"Mr. FREY. He was a machinist, and these are different jobs given him on his machine.

"Mr. KEATING. You say this man was a high-class machinist?

"Mr. FREY. Yes, sir. His number is 2518. I have not his name, but he is a very high-class man and his work is a matter of Government record.

* * * * * * *

"Mr. KEATING. Have you a third man's record there?

"Mr. FREY. Yes, sir; this is a third man [exhibiting]. I do not want to take up more time. It is really an extraordinary one. It is the same workman—No. 2518. During this time his average efficiency was 121.35 per cent. In other charts his efficiency was only 121 per cent. This month his efficiency was a little higher. In this job he

actually did the job in one-half the time that had been set for it. On this job [exhibiting] he was only able to accomplish 21 per cent of the work which the time card called for."

Again he states, on page 349, in reference to these charts:

"An interesting and most valuable analysis of variation of output by the same workman under 'scientific management' has been made by Mr. Miner Chipman, and we give the following figures from the study which he made of the conditions existing at the Watertown Arsenal after the system had been introduced:

"The analysis of the men's output or so-called efficiency covered a period of one month, which makes it well representative of the unevenness with which the task had been set. For the month of March, 1914, employee No. 2518 worked on 224 jobs. His average efficiency was 121.35 per cent, but his efficiency on these jobs varied from 21 to 200 per cent. * * * Employee No. 2518 worked on 140 jobs during April, 1914. He was a most competent workman, as his average efficiency for the month was 121 per cent. His efficiency on the several jobs range from 45 to 172.9 per cent, this variation indicating largely the too short or too long time which has been set on the jobs by the time-study and task-setting man."

Again, quoting from Mr. Chipman's report, he states:

"What can be thought of the time set on these jobs when this workman on the 224 jobs of one month showed a range of efficiency (efficiency being the ratio of time taken to time allowed) from 21 to 200 per cent, with an average of 121 per cent, and the following month on 140 jobs a range of from 45 to 173 per cent, also with an average of 121 per cent? This workman may be rated as consistently of high efficiency. Why, then, this extreme variation in efficiency, unless the time allowed for each job was not set accurately and scientifically? Can we assume that the worker varied in efficiency to the extent shown by the chart? We do not believe so. The variation is one of time setting or inaccuracy of time study."

On page 329:

"Before going to Mr. Chipman's evidence, which you will find interesting and some of it charted, let me say that there has been a great deal of controversy over the Watertown Arsenal. * * * I merely want to call the attention of the committee first to some facts that came under my own observation. The jobs were set through time studies made very largely by Mr. Merrick. The jobs were set unevenly. Theoretically when a job has been time studied and motion studied by an efficiency expert, accurate time should be set. There should be no marked variation in the difficulty of performing one task over the other."

3. The testimony of Mr. Frey is, in the main, very general, but where it borders on details it becomes inaccurate, disingenuous, and in some cases trivial. In what he says about the charts and the workmen there is not a single accurate statement, excepting the one pertaining to the skill of the workman. For example, the jobs charted were not time studied by Mr. Merrick, and if the jobs had been set with scientific accuracy the line of efficiency of a normal man working normally would not be a straight line, as Mr. Frey states. He apparently wishes it to be inferred that a human being is like a machine, which, having been started, has a predetermined and constant rate of production, so that his efficiency line will be a straight one instead of zigzag; the charts for March and April do not pertain to the work of a machinist, as stated, but to the work of a molder; and an examination of the performance of employee No. 2518 during the months of March and April, 1914, the efficiency of whom for these two months has been plotted and attached to the hearings, indicates this man to have been an uneven worker.

4. A man, unlike a machine, can not repeat a series of operations in exactly the same time. The greater the percentage of hand labor in a job the more difficult it is to secure exact and uniform performance. The same molder in doing the same job varies considerably in the time he takes to do it. He will very likely work faster and more accurately in the morning than in the afternoon. If affairs are right at home, he will be in a frame of mind for better work than otherwise. This molder's work was handwork, and therefore considerable variation in his efficiency is to be expected. On machine work such great variations are not ordinarily probable, because in that kind of work a large proportion of the time set for a job, about 60 per cent, is determined by the speeds and feeds prescribed for doing the machine work. That the machine is run at the prescribed speeds and feeds is easily checked by the speed bosses. Hence, fluctuations in the efficiency of a machinist will naturally depend to a large extent on the amount of handwork, approximately 40 per cent, involved in the job, such handwork consisting in setting up his machine, changing tools, replacing work, etc. It is a well-known fact that, no matter how scientifically or accurately a rate may be set, based on a reasonable expectation, it is possible for an employee to show a record of variable efficiency; and this is especially true when an employee is called upon to perform a great variety of miscellaneous jobs, such as those indicated by the charts in question. An analysis of the charts for April and May, indicating the performance of employee No. 2518, shows that the workman's performance on the same jobs performed at different times during these months was so ununiform as to make these charts worthless for the purpose for which they were introduced; that is to say, to indicate that the rate setting was defective. These charts do not indicate that there was any defect in the rate setting. On the contrary, they do indicate the variation in efficiency of this workman, the zigzag line of efficiency being good evidence of the fact that this molder was an uneven worker, as I shall point out.

5. In figure 1 I have gathered together, side by side, identical jobs selected from among the 224 jobs that he worked on in March, and each grouping is indicated by a letter. The jobs in each grouping call for the same work, and, therefore, the time set for the performance of each job in each group is the same. It will be understood from these plottings that a job corresponds to an abscissa one-tenth of an inch long, or there would be indicated 10 jobs to the inch, the charts indicating efficiency plotted as a function of a job, irrespective of the time taken to perform the job. Under these conditions it is interesting to note how the time of performance varied. For example, in group "A" it will be noted that this man's efficiency varied on the same job performed at different times during the month from 60 per cent to 133 per cent; similarly in group "I" his efficiency varied from 60 per cent to 156 per cent. The variations in efficiency of performance in the other similar jobs grouped together are clearly indicated by the chart and need no further comment.

6. Figure 2 shows for the month of April a similar grouping of like jobs. Taking group "E," for example, it will be noted that his efficiency varied for the same work from 96 per cent to 180 per cent. It will, of course, be understood that the question of correctness of rates is eliminated by these groupings. Fifty-nine of the 140 jobs shown in the April chart, facing page 330 of the Hearings, are indicated in this figure. The man's average efficiency on these 59 jobs was 124.65 per cent, not greatly differing from his average efficiency for the month.

7. In figure 3 I have indicated groupings of the same jobs which were done in both March and April. Groupings of similar jobs in each month have the same letter. It will be noted from these charts that in group "A" in March the molder's efficiency varied from 120 per cent to 218 per cent. This group is the same as group "Y" in figure 1. While on the same work performed in April (group "A") his efficiency varied from 90 per cent to 124 per cent. Similarly with group "D." In March his efficiency varied between 96 per cent and 128 per cent, while in April the variation was between 98 per cent and 180 per cent. In order to investigate further the variableness of the work of this man I have collected together in figure 4, 23 jobs arranged in three groups. The jobs in each group are identical as before, but the performance on the jobs of these groups extends over a much longer period. The average efficiency of this man on these 23 jobs was 115.69 per cent. In group "A" the jobs were all executed in the year 1915, whereas in group "B" some of the jobs were done in 1912, some in 1913, and some in 1914, and in group "C" the jobs were performed in 1913, 1914, and 1915. The great variation in efficiency in executing identical jobs is well shown by the figure. For instance, in group "A" the efficiency varies between 72 per cent and 166 per cent. In group "B" the variation is from 65 per cent to 119 per cent; while in group "C" the variation is from 95 per cent to 194 per cent.

8. With such variations in similar work as is indicated by these charts it will be understood that the charts submitted by Mr. Frey are worthless as indicating incorrect setting of rates and have no value whatever excepting as showing how uneven the work performed by so-called employee No. 2518 has been. As a matter of interest I have plotted in figure 5 the curve of average monthly efficiencies of this molder for the year 1914, which, of course, includes his average efficiencies for the months of March and April, which have been stated in the charts contained in the hearings. The average yearly efficiency of this workman for 1914 was 106.8 per cent. This corresponds to an average premium earning for every day when working under the premium system of $1.37, or an increase in his wages from $3.52 to $4.89 per day. Mr. Frey, at the bottom of page 311, appears to wish to have the Committee on Labor consider scientific management a failure because it has no standard to determine the hourly wage rate for a class of labor or for a trade. The question which he brings up is one which has been discussed by political economists for many years. Just why a machinist should get an hourly wage of say 30 cents or a daily wage of $3 may be a question, but there appears to be no reason to expect that scientific management should settle this kind of a question any more than that scientific management should determine why a pattern maker should get $4.50 per day and a machinist but $3 per day or a molder $4 per day.

9. On page 321 Mr. Frey states: "While on our inspections we had a time study or two made in every plant." No such time studies were made at the Watertown Arsenal. The committee headed by Mr. Hoxie spent very little time in our shops, merely walking through to examine the character of the work. Practically the entire time of this committee was spent in my office in connection with the interview.

10. On page 330 of the hearings Mr. Frey refers, near the top of the page, to a little square band made in a flask 14 by 14 by 7 inches. I regret that I can not identify the pattern referred to in this case. In the second paragraph of that page he refers to steps for a gun carriage. These are not steps, but are floor plates, and the instruction cards concerning them are forwarded herewith. These jobs were made in the same flasks, the first job calling for but a single pattern in each flask and the time the work should take was stated as 2 hours and 36 minutes. It will be noted from an examination of the sketch of the pattern on the instruction card that it is reinforced on the bottom with strips in order to keep it from warping. After the pattern is drawn from the sand, the depressions which these strips make (stop-offs) have to be made up or filled in by the molder and smoothed over. The time set on this job was not from a time study but from previous performance under the day-wage system. On this job, the time of the molder, who is an old man, varied considerably. The maximum time he took on one lot (12 plates) averaged 3 hours, while the average time on another lot was 1 hour and 36 minutes. On the last 100 plates which this man made he averaged over 50 per cent premium, corresponding to an efficiency of 120 per cent, as figured in the hearings.

11. The other job which Mr. Frey compares with this one was for two floor plates, smaller in size, two of which were to be made in the same flask used in the other case. The time the job was to be done in was stated as 2 hours and 6 minutes; that is to say, there was a reduction of 30 minutes on this job. This job, however, was very much simpler than the first one, because there were no stop-offs or ribs to be made up, which is a delicate operation because the molder in doing it has to, with hand tools, repair a part of the mold. The point which Mr. Frey speaks of, as to the necessity of securing the sand between the molds, is correct, but this operation consists in sticking in a row of nails between the two patterns before they are drawn from the sand, which operation can be performed with great ease in probably a minute and a half. The time on this job is thought to be a liberal one and also a fair one, since the oldest and slowest molder in the shop made full premium on 80 per cent of the plates he made. In respect to this molder I may further state that his average efficiency for the year 1914 was only 81 per cent, corresponding to an average premium earning of 17+ per cent.

12. Referring to the handwheel job to which Mr. Frey makes reference, in the middle of page 330, the first handwheel was, as he states, for a 14-inch carriage, and the time on this job was set not from time study but from a record of the old daywork time. This time was approximately 12½ hours, and was set for the time basis, and 7½ hours was indicated as the time which the work should take to earn full premium. Twenty of these wheels were made and an average of 54½ per cent premium was earned on the job, which is one of the cases where the daywork time was shown to be very long, since the 20 wheels were made in an average of 5 hours and 45 minutes. The second handwheel was for a 16-inch carriage. The instruction card for this job, as well as for the preceding one, are shown herewith. The rate on this latter job was based on a study of previous performance and the time indicated as that which the work should take was 6 hours. It will be noted that on this second job the flask is 11½ per cent smaller and also that the pattern has a flat hub, while the former pattern had a hub about 6 inches long and the second pattern is rectangular in cross section (rim), while the first pattern is round. No argument is necessary to realize that these features reduced the time of molding the second job appreciably, since the joint is easier to make and also the gate, which has to be cut down through

the mold to the bottom of the hub, is less difficult to construct, irrespective of the amount of sand to ram. The reduction in the time set for doing the work was not 2½ hours, as stated by Mr. Frey, but 1½ hours. The time set on the second job is considered to be entirely just and proper. The average premium earned on this job was 33 per cent. When Mr. Frey was at this arsenal in connection with Mr. Hoxie's committee, he admitted on page 57 of the interview that the deeper hub in the drag made some difference in the time required. If given opportunity this arsenal could prove the correctness of the rates thus set.

13. Mr. Frey fails in his testimony before the committee to refer to a large number of other jobs which were shown the Hoxie committee, in which the rates set on previous records under the day-wage system were too short and considerable increases in the rate were made. On page 332, Mr. Frey refers to four cases of jobs in the machine shop. These are considered to be trivial and without importance. I am surprised that Mr. Frey should endeavor to make so much of these cases in view of our discussion of them at the time of the Hoxie interview. It will, of course, be understood that these cases were called to the attention of Mr. Frey by a member of the shop committee. This arsenal considered that if the shop committee could get only four cases against the rate-setting department in the four years that the premium system had been running in the machine shop, it was to be taken as a very good indication of the general satisfactoriness of the rates set in that shop.

14. Case No. 1 referred to by Mr. Frey refers to a machine which had been time studied and rates set for a particular job. Between that time and the time that another job came along, changes had been made in the feed gears of this machine which had not been reported to the rate-setting department. Therefore when another job came along for this machine the old instruction card was issued. When it was found that the machine could not be run as ordered, the matter was reported to the rate-setting department, as provided for by the instruction card, and proper adjustment was made to meet the new condition of the machine.

15. Case No. 2 can not be accurately identified at this time. It is believed, however, to refer to the machining of certain chassis castings for 16-inch disappearing carriage. The work on similar castings had previously been done under time study and the instruction card issued. When the new castings were received and placed on the machine for the work required under the instruction card, it was found that the castings were so warped that the instruction card could not be followed and no estimate in advance of the amount of work required on this job could be made. This job was then taken off premium. This is a case that seldom happens, but is occasionally met with.

16. Case No. 3. The particular job referred to as coming under case No. 3 is not known at the present time, but the recollection of those concerned is that this was clearly an error of the rate-setting department and occurred either in multiplying, adding, and dividing hours and minutes or hours and decimals of an hour. It is unnecessary for me to state that as soon as the error was discovered by the workman it was promptly corrected.

17. Case No. 4. This is clearly a mistake of the rate-setting department. The job required the turning of trunnions on a piece in which the center of gravity of the piece was not in the axis of the trunnions. The rate-setting department failed to note the fact that the piece was unbalanced and the result was that it could not run at the speeds called for by the instruction card. As soon as the error was called to the attention of the rate-setting department, a proper change in the instruction card was made. Referring to the last paragraph on page 332, it is proper to state in these cases that the machinist did not have to stand the burden of any of these errors. The adjustments were made promptly by the rate-setting department, and work was continued on premium, excepting in case No. 2, where it was impossible to do so.

18. There have been some errors made in the rate-setting department, due to the fact that time studies are made in hours and decimals of an hour, whereas the instruction cards are made up in hours and minutes. These have not been serious, and corrections have been easily made. It is proposed eventually to change the system of time keeping at this arsenal so that hours and decimals of an hour only will be used, thus avoiding the inconvenience of transforming hours and decimals of hours into minutes and the reverse. Referring to Mr. Frey's statement, at about the middle of page 333, in which he refers to a practice at this arsenal which seems to be unfair to labor, that of putting skilled men under the task-bonus system and paying helpers who are with them straight day wages, which made the mechanic on the job a taskmaster over the unskilled laborer, etc., I may add that this statement is not entirely true. We have at this arsenal a number of unskilled workers under the premium system, and where the labor of such unskilled men can be measured they are always, if possible, put under this system. For example, in the smith shop every helper of a blacksmith is under the premium system; similarly there are helpers in the machine shop under the same system; also laborers in the yard gang, and teamsters. There are, however, in the machine shop certain classes of work on large machine tools which at times have seemed to require the assistance of helpers at least for limited periods. It is very difficult for the management to control the detail of such helpers to assist a machinist at a machine. Oftentimes machinists ask for helpers when their services are not absolutely necessary, and if such helpers were under the premium system it would be impossible to pry them away from a machine if once assigned thereto. For this reason, let us say, on account of the difficulty of measuring the work of helpers so detailed, and oftentimes the difficulty of determining whether or not their services are necessary, it has not been customary to pay such helpers premiums. We have had the matter under consideration with a view of putting them under the premium system when it can be done satisfactorily.

19. At the top of page 334 Mr. Frey refers to the accidents at this arsenal, the evident intention being to indicate that accidents have greatly increased under the premium system. As I have stated in previous reports, the records indicate that there are relatively a less number of accidents in the cases of premium work than in the cases of daywork.

20. On page 336 Mr. Frey refers to the humiliation experienced in having a man stand over one's back with a stop watch checking off every movement, etc. It is well to state that time studies are only occasionally made, and it is not the practice to stand over every workman with a stop watch during his performance for a day, as some labor leaders seem to desire to have understood.

21. It appears from Mr. Frey's testimony that most of the information he imparted to the Committee on Labor was derived directly or indirectly from workmen or their committees, and, very likely, under instructions from outside sources. I have been much interested, in the various discussions of the subject of scientific management at this arsenal, to observe how very erroneous or incomplete information may find itself acceptable in the eyes of the labor or shop committees and the use that is made of it, often entirely disregarding the probability that it may prove a boomerang when examined in the light of the arsenal records. A case in point, although not directly connected with Mr. Frey's testimony before the Committee on Labor, occurred at the time of the interview with the Hoxie committee, at which time I was questioned by Mr. Frey regarding the costs of some 6-inch disappearing carriages on expenditure orders Nos. 5268 and 6682 and that of some naval mounts made under expenditure order No. 7055. I have called attention in other official papers to the holding back of the machinists on expenditure orders Nos. 6682 and 7055, a procedure which undoubtedly was well known to labor leaders themselves, it occurring at about the time the effort to introduce the premium system in the machine shop was being made. In this case the workmen were correctly informed as to the costs of the carriages made on the orders, the numbers of which were given to Mr. Frey to investigate, but in some manner they neglected to remember that a later order for 6-inch carriages had been completed under the premium system, the records of which were available. It may be interesting to quote herewith from the testimony given before the Hoxie committee:

"Mr. FREY. We have had certain information handed to us, with the evident objection that under scientific management it is more expensive to manufacture than the other way, and there are three cases upon which we have no detailed information, simply a statement of total costs, and I think Prof. Hoxie would like to have you give him some information on those. Expenditure order No. 5268, March 1, 1905; two 6-inch disappearing carriages; estimated cost, $31,000; actual cost, $36,819.24. Expenditure order No. 6682, March 1, 1905; two 6-inch disappearing carriages; estimated cost, $36,000; actual cost, $44,000. Expenditure order No. 7055; naval mounts; estimated cost, $81,564; actual cost, $90,447.97.

"Col. WHEELER. I have some figures referring to the orders to which you refer which I think will supply the information you desire. Order No. 5268 was received early in 1909 and order No. 6682 late in 1910. The first order was executed under the old day-wage system of management and the second order while the new system was being installed. So little work on this order was done under the premium system, it can be said that practically both orders were executed under the day-wage plan, and they are exactly comparable. I invite attention to the following tabulation, showing comparative costs of these two orders in the machine shop, in which I have included the same data pertaining to a more recently completed order of the same kind of carriages, which differs from the two preceding orders in that a greater number of carriages are included and in that the work was done under the new system of management, time studies and premium payments having been applied so far as the developing system permitted:

*Work in machine shop.*

| Expenditure Order No. | Direct labor per carriage, machine shop. | Premium per carriage, machine shop. | Shop expense per carriage, machine shop. | Material per carriage, machine shop. | Total machine shop cost per carriage, machine shop. |
|---|---|---|---|---|---|
| 5268 | $1,736.59 | ..... | $6,134.16 | $1,028.76 | $11,800.51 |
| 6682 | 5,826.06 | $46.36 | 6,700.54 | 774.36 | 13,347.32 |
| 7314 | 2,944.22 | 467.57 | 3,883.62 | 693.41 | 7,958.82 |

"The direct labor cost in column 2 of the above tabulation, is that of the productive labor in this shop, and it will be noted that in the case of order No. 6682, on which the work was performed under the same conditions as governed the preceding order (No. 5268), the cost of the labor of the productive workmen was 23 per cent higher than in the case of the preceding order. As previously stated, this was practically all daywork, which the management did not succeed in controlling, although it was known that this shop was not turning out as much work per day on this order as on the one that preceded. The inference is that this 'slowing up' was caused by an outside influence for the purpose of eventually using this as a case to demonstrate to those not familiar with the subject or who could not have the time or opportunity to investigate it even if inclined, that scientific management was inefficient and costly. The real and only reason why order No. 6682 cost more than the preceding one and therefore prevented this arsenal from meeting its estimates based on that order, was that the workmen in the machine shop worked so slowly on the second order that the cost of their labor was 23 per cent greater than on the previous one. Order No. 7055, to which you refer, was another order executed in our shops under the same conditions as to holding back or slowing up. If the workmen had performed their part of the work as satisfactorily as they had performed previous daywork there would have been no reason why the estimated cost should not have been realized. This order was also practically executed on daywork.

"In this connection it is interesting to note that the direct labor cost per carriage in the case of the last order, executed under scientific management, is only one-half of that of the preceding order, and the total cost of the machine-shop work was only 59½ per cent of that of the same order after paying a premium of $467.57. I have referred particularly to the machine shop in the above tabulation because during the period under consideration the installation of the system of scientific management was the most advanced in that shop. Below is a tabulation of itemized costs per carriage, considering all the shops:

| Expenditure Order No. | Direct labor per carriage. | Premium per carriage. | Shop expense per carriage. | Material per carriage. | Total cost per carriage. |
|---|---|---|---|---|---|
| 5268 | $7,010.85 | ..... | $8,992.38 | $2,442.91 | $18,446.14 |
| 6682 | 8,640.97 | $53.22 | 11,004.39 | 2,151.36 | 21,851.94 |
| 7314 | 4,200.11 | 545.65 | 6,779.02 | 1,993.39 | 13,660.17 |

"This tabulation is interesting in that it shows that the total cost per carriage on the last order was only 62 per cent of that of the preceding one.

"Prof. HOXIE. May I make a comment? This was the point. This was the statement made to us, that in 1905, Expenditure Orders 1 and 2 (referred to above) were for the same sort of thing, that the first order, the first estimate was made under the old system. This statement was made that when the second order came in they placed the estimate on the actual previous cost, that the premium system being in then, under the premium system, the actual cost was $44,000, as compared with the estimated cost of $36,000."

## The Democratic Tariff Plank.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. GREENE,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
*Saturday, June 17, 1916.*

Mr. GREENE of Massachusetts. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an editorial published in the Washington Post of this morning, entitled "The Democratic Tariff Plank." The editorial is as follows:

THE DEMOCRATIC TARIFF PLANK.

The Democratic platform makes this declaration regarding the tariff:

"We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine."

But the Underwood tariff has not provided sufficient revenue for the operation of the Government. Does the platform mean to infer, therefore, that the Government has not been economically administered?

The people do not object to the wise expenditure of money for the operation of the Government, even if this expenditure is large. There is little complaint of extravagance, except in connection with unwise policies such as the proposal to establish Government factories for manufacturing armor plate, nitrates, fertilizer, etc. The usual expenditures of the Government are not criticized as excessive, and all reasonable men concede that these expenditures must increase.

The weakness of the Democratic position on the tariff lies in the fact that its law is not successful, either as a measure of industrial preparedness or as a revenue producer.

The tariff plank goes on to say that "we recognize that tariff rates are necessarily subject to change to meet changing conditions of the world's production and trade," and it is admitted that the changes brought about by the war are "yet conjectural and wait to be disclosed."

The platform, however, makes no provision for meeting these changes beyond approving a plan for a nonpartisan tariff commission to gather facts. The party sticks to the old "doctrine" of a tariff for revenue only. There is not one word of hope for American industry in the platform. Not a single assurance is given that the American market will be protected for American producers against cheap-labor products of other countries. Since the Underwood tariff is held up as an exemplar of successful revenue raising through a tariff, it is evident that the people need not expect any relief from war taxes or direct taxes by an increase in tariff duties. The foreigner is not only let off without a tax but is given full access to the best market in the world without requiring from him any equivalent. He can dump into the United States all the goods he produces, at any price he pleases, and the American worker and producer has no protection. What will become of American wages and the American standard of living under such a plan when Europe's soldiers turn to production?

The plain warning of the war in Europe is lost upon the Democratic Party, so far as the tariff is concerned. "Preparedness" is not for the workingman. He is to have no protection. If he can not work as cheaply as the foreigner and produce goods as cheaply, he can quit. If the American manufacturer can not turn out goods as cheaply as the foreigner he can shut up shop. "Industrial preparedness" evidently means nothing to the Democratic Party. Its platform shows that it has learned nothing from the upheaval in Europe.

## On the Migratory Bird Law.

### EXTENSION OF REMARKS
OF
### HON. HARRY E. HULL,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
*Wednesday, May 3, 1916.*

Mr. HULL of Iowa. Mr. Speaker, that clause of this bill, on page 56, which provides an appropriation of $50,000 for the enforcement of the so-called migratory bird law should be stricken out, for it is vicious legislation and has no foundation in common justice or in the courts.

There can be only one purpose in appropriating this sum. It will give the Democratic administration an opportunity to feed a few more hungry office seekers from the public crib and a chance to add a few more cogs to its machine. Now, we all realize that many a lean party worker had waited a long time before the Democrats came into power four years ago to get a whack at some of its patronage, and in view of the fact that they all must know that their stay at the public pie counter will be brief, it is pardonable that they should all "take pie while pie was passin'." It seems to me, however, that this appropriation is so flagrant a violation of the laws of our land that any administration or any body of men would refuse to enact it into legislation.

The wording of the clause itself is a misnomer, for it says that the $50,000 is to be used for the necessary expenses for enforcing the provision of the migratory bird act, when, as a matter of fact, three of the lower courts have declared the law unconstitutional, and it is unconstitutional and will always so stand until the Supreme Court of the United States reverses the decision of the lower courts. This that august body has not done, as it now has the former decisions under consideration, and until a ruling shall be made any moneys appropriated to enforce the law is wrongfully appropriated and can not be used for the purposes stated in the bill.

The Bureau of Biological Survey of the Agricultural Department is charged with the enforcement of this so-called act. Its officers have openly stated, and I was personally informed, that the bureau would make no attempt to enforce this law until the Supreme Court had made a ruling on its constitutionality. If, therefore, this appropriation is allowed to remain in the bill, we shall be providing a fund for a purpose the object of which does not exist. Members of the bureau informed me that it was its purpose to collect such evidence as it could against those who might kill migratory birds contrary to the provisions of this so-called act, and in case the courts decided it was constitutional, later on to prosecute them. Rather a peculiar thing, it seems to me, for the Government to enter the business of collecting evidence against violators of an alleged act, not at the present time legal. This thin veil of an alleged purpose can not disguise the real object of the appropriation, namely, to provide berths and salaries for constituents who crave the crumbs that fall from the administration's dinner basket.

It seems to me that this clause should have been stricken out on a point of order, for as far as I can ascertain this Legislature has no right to appropriate funds to enforce the law the constitutionality of which has been legally denied.

So far, I have mentioned only the legal aspects that surround the appropriation of this fund. It might be wise to investigate the provisions of the migratory-bird law and analyze what it contains. It should be the purpose of this body to enact no legislation that would abridge the rights of any one class or those who reside in any particular section of the United States. This law does that very thing. Its provisions work a great injustice to those who reside in the great Middle Western States, one of which I have the honor to represent. Under the rules, as promulgated by the Bureau of Biological Survey, the people who reside north of an imaginary line, arbitrarily drawn by this bureau, are prohibited from shooting certain wild game, while those who reside south of said line have all the liberties in the world. The law provides that people who live in Iowa, Indiana, Illinois, Nebraska, Colorado, and other Central and Western States shall be prohibited from shooting waterfowl during any of the spring or summer months. Now, anyone who is familiar with the habits of wild ducks, geese, and other fowl of similar nature knows that it is only during these spring months that they inhabit these States. In other words, the hunters in that great middle western territory are allowed to shoot waterfowl only during the time when the waterfowl are not there. This regulation was made on the theory that in this territory the spring season was the breeding season of the bird. Time and again, however, an attempt has been made to prove to the Biological Survey that this theory is erroneous. It has refused repeatedly to accept any such evidence or to make the necessary investigation. The Biological officials admit they have made no scientific investigation and are not in possession of any authentic knowledge along this line. Their only excuse is that if they grant concessions to any of the States north of this imaginary line they would have to make the same concession to all.

The wild ducks and geese come north from their southern wintering places over the Middle Western States during the months of February and March, depending much upon the weather. They fly back and forth according to climatic conditions from two weeks to a month, and when the warm weather sets in they go on to that far northern territory which is their real breeding place. The birds, as a rule, tarry only a short time in the middle western territory, and during that time this

enactment absolutely prohibits the hunter from shooting them. Anyone who is familiar with the flight of these birds should know that the Middle West is not their breeding place, and that their propagation is not facilitated in any way should this act be declared constitutional and be enforced.

Another section of the law which is very unjust is that which prohibits the shooting of waterfowl at any time on or over the Mississippi or Missouri Rivers. I fail to see why it should be illegal to shoot birds on these two streams during the season the hunter is allowed to kill them elsewhere.

Another unjust and absurd provision is that which allows the Bureau of Biological Survey to make such arbitrary rules and regulations governing the hunting and killing of what are termed "migratory birds." The bureau has repeatedly demonstrated its inability to cope with the proposition. In some instances an attempt has been made to enforce the law; in other instances it has been knowingly and flagrantly violated. The result has been that the law-abiding element has been entirely prohibited from exercising its right in the killing of migratory birds, while the unruly element has regaled itself in all sorts of violations. The uncertainty of the constitutionality of the act has given rise to all sorts of abuses. The general public, as a rule, relies on the information it secures through the medium of the newspapers. Conflicting reports apparently eminating from the Biological Survey, have been published from time to time. Relying on these reports, sportsmen have gone hunting only to be confronted by some so-called deputy game wardens, who drag them in and make them put up a bond for their appearance. Numerous instances of graft by the deputies have been bruited about until the general public is in total ignorance of whether there is such a thing as a migratory-bird law or not.

So great has the confusion become that it has finally induced the bureau to announce that for the present time no prosecution against offenders of the alleged law will be made. On top of this statement, however, comes the absurd proclamation that while the law will not be enforced, evidence against those who killed birds in springtime will be collected and held in abeyance, so that if perchance the Supreme Court should declare the law constitutional, then those against whom evidence has been collected can be prosecuted.

I have spoken most particularly about the shooting of ducks and geese, but the same logic applies to the hunting of other birds included under the provisions of this alleged act of Congress. The absurdity of the regulation can be exemplified by the action in Iowa last year, when the farmers who were quarantined were ordered to shoot all pigeons, doves, and birds that alighted on their farms, even though they were liable to a fine for each one they killed under this so-called game law.

I believe in the protection of our wild game. I believe in such just rules and regulations as will provide for their propagation, and thus prevent their extinction. I believe, however, that if migratory birds are, as this alleged act assumes, the property of all the people and of all the States, then everyone should be given an equal and just right in enjoying them. In my mind, this appropriation is a ruthless waste of the moneys of the people. If our friends, the Democrats, have so many hungry constituents that an extra mess of porridge must be prepared, it seems to me that a scheme might be devised whereby the public need not be injured thereby, even though it would not be benefited.

## A Brief by the American Bar Association Favoring the Passage of the Bill H. R. 9428.

## EXTENSION OF REMARKS
OF
## HON. WARREN GARD,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. GARD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a brief for the American Bar Association, favoring the passage of a bill now before the House of Representatives of the United States, H. R. 9428, as reported by the Judiciary Committee February 26, 1916. The bill and brief are as follows:

A bill (H. R. 9428) relating to procedure in United States courts.

*Be it enacted, etc.*, That section 269 of the Judicial Code, approved March 3, 1911, be, and the same is hereby, amended by adding at the end thereof the following:

"No judgment shall be set aside or reversed, nor shall a new trial be granted, by any court of the United States in any case, civil or criminal, on the ground of misdirection of the jury, or the improper admission or rejection of evidence, or for error as to any matter of pleading or procedure, unless in the opinion of the court to which application is made, after an examination of the entire cause, it shall appear that the error complained of has injuriously affected the substantial rights of the parties."

A BRIEF FOR THE AMERICAN BAR ASSOCIATION FAVORING THE PASSAGE OF A BILL NOW BEFORE THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES, H. R. 9428, AS REPORTED BY THE JUDICIARY COMMITTEE FEBRUARY 26, 1916.

FIRST. THE PURPOSE OF THE BILL.

The first function of this bill is to amend section 269 of the Judicial Code, approved March 3, 1911:

"All of the said courts shall have the power to grant new trials in cases where there has been a trial by jury for reasons for which new trials have usually been granted in courts of law."

Ultimately the bill looks toward the expeditious furtherance of justice in the United States courts.

The deliberate manner in which the courts of this country move, sometimes toward the ends of justice, sometimes by reversal and retrial, appeal, reversal, and retrial, in the general direction of justice, though failing to attain to it, has been the subject of criticism at the hands of impartial observers and the source of reproach at the hands of those who have suffered because of the law's delay. No critic of the existing law would urge upon Congress legislation which might tend to hasten litigation at the expense of substantial justice; on the other hand, no one should wish to stand in the way of any measure intended at once to subserve the ends of the law and to reach them more quickly.

Under the existing rule the administration of justice by the Federal courts has been neither speedy nor complete. It has not been complete in the simplest sense of the word, since, in many instances, the parties were left where they began, with their differences undetermined. It has not been speedy, as everyone must know who has observed the conclusive fashion in which the English courts come to decision. In the one hundred and sixty-fourth volume of the United States Reports there may be found three cases whose history points the problem more clearly than argument. Allen *v.* United States, finally affirmed in 164 U. S., 492, was begun in 1893, was reversed in 150 U. S., 551, and was reversed again in 157 U. S., 675, before it was concluded in 1896. The case of Stair *v.* United States was reversed in 1894 (153 U. S., 614) and was reversed again in 164 U. S., 627. The case of Brown *v.* United States was reversed in 150 U. S., 93, reversed again in 159 U. S., 100, and for a third time in 164 U. S., 221. A notable instance of the delays under the present system is the Hillmon case (145 U. S., 285; 188 U. S., 208). Second judgment of reversal was 23 years after suit was begun. This was an action brought by a widow to recover life insurance. Another instance is that of Williams *v.* Delaware, Lackawanna & Western Railroad, reported in 155 N. Y., 164, and in many other New York reports. This case was tried seven times, and was in litigation 22 years. The plaintiff finally succeeded, but of necessity his victory was barren.

These cases represent in kind if not in degree what has occurred in the United States courts too many times during the last three-quarters of a century. This the proposed bill is intended to remedy.

SECOND. THE UNDERLYING CAUSE OF THE LAW'S DELAY.

*The handicap of the courts.*

It is idle to criticize effects without searching for the causes which conspire to produce them. In this instance the factors may be resolved into two: The attitude of mind of the judges on appeal and the legislation under which they act. If it were an original question an upper court would prefer to reach a settlement of the case while it lay within their hands rather than return the case to the court below for a revision, at an expense both to the State and to the parties. To keep a single cause oscillating between the lower court and the upper court over a period of time is not in itself a desirable end. But whatever may be the private convictions of judges in this matter, the statutes under which they are authorized to act constrain them to move cautiously. So, rather than take any step which, according to a conservative construction of the statute, they may not take, they send the case back to the lower court for a new trial.

THIRD. TECHNICAL ERRORS.

Under the laws of the Anglo-Saxons, the letter was much, the spirit little. The successful litigant was the one who could follow in the minutest detail certain forms, word for word. According to this test, he won or lost his cause. "I will say no more of its general characteristics," writes Sir Henry Maine in the sixth chapter of his Early Law and Custom, "than that it supplies in itself sufficient proof that legal technicality is a disease, not of the old age but of the infancy of societies." We are so far beyond this in temper of mind that it were hardly worth dwelling upon the matter if it were not for an occasional decision that compels us to believe that the ghost of formalism is still abroad. In a Massachusetts case, Ellis *v.* Short (21 Pickering, 142, 144) Morton, J., says in sending back the case for a new trial:

"We regret that we find it necessary to do this, because the action involves no principle of law, is attended with an expense disproportionate to its importance, has been fully and elaborately tried, and has been brought to a result which was entirely satisfactory and which there is very little reason to suppose will be changed on another trial by the exclusion of the evidence which was improperly admitted."

Lest it be objected that this is both a State decision and an early one, it may be well to refer to the cases of Waldron against Waldron, decided (or, rather, undecided) in One hundred and fifty-sixth United States, 380 (1894), and Northern Pacific Railway Co. against Hayes (1898), in Eighty-seventh Federal, 131—both sent back for a new trial on the principle enunciated in the first case: "It is elementary that the admission of illegal evidence over objection necessitates a reversal."

When such a rule is adopted with apparent indifference to individual and social consequences, when rules of evidence are regarded as an end in themselves rather than as a means toward the ascertainment of the inherent truth of the matter, one may confidently assume that the court is overriding its own better belief. With an apology that has almost become a formula, the court remands the case for a new trial, as if it were acting under compulsion. It is not the compulsion of its convictions but that of the statute applicable to the situation and of those judicial decisions which have given the statute the narrowest possible interpretation.

It is pointed out (1 Chamberlayne, Modern Law of Evidence, 413) that where a verdict essentially just is set aside and a new trial

granted merely because of some technical error, one of the four things may result:

(a) One of the parties in a civil action or the prosecutor or defendant in a criminal proceeding may find that the expense or delay of a new trial is too ruinous to justify him in continuing the action, and the litigation on this account or on account of the death or departure of witnesses may stop.

(b) The second jury may disagree or one of the parties may decease.

(c) The second jury may return the same verdict as the first.

(d) The second jury may return an opposite verdict to the first.

In every case but the third injustice will be done, and in the third case justice has been dealt to the person entitled to it from the beginning at a great price. In every instance unnecessary delay and expense have been occasioned; in three events out of four a perversion of justice has been worked. All this is possible under the two hundred and sixty-ninth section of the Judicial Code as it now stands. It is the purpose of the present bill so to modify the existing statute that the court shall neither be permitted nor compelled to reverse a judgment or order a new trial merely because error has crept into the record.

The two hundred and sixty-ninth section of the Judicial Code has been interpreted to mean that while a judgment should not be reversed nor a new trial granted merely for technical error, it should be reversed unless the appellee can show that the erroneous ruling or instruction did not affect the substantial merits of the case.

This was not the original American view. As early as 1828, in the case of McLanahan v. Insurance Co. (1 Pet., 170, 183), Judge Story said:

"If, therefore, upon the whole case justice has been done between the parties and the verdict is substantially right, no new trial will be granted, although there may have been some mistakes committed at the trial."

It is, however, certain that, in one form of words or another, the rule which prevails in many jurisdictions of America to-day is that adopted in the year 1835, in the case of Crease v. Barrett (1 C. M. & R., 932) by the English exchequer court, viz, that a new trial should be awarded if the error found by the appellate court could possibly have affected the jury. Of Baron Parke, who was largely responsible for the adoption of the technical rule, Goldwin Smith said "that he cleverly reduced the law of England to an absurdity."

This rule was changed in England by a rule of the supreme court (1883) after the judicature acts; yet—

"Until the passing of the judicature acts * * * if any bit of evidence not legally admissible, which might have affected the result, had gone to the jury, the party against whom it (the verdict) was given was entitled to a new trial." (Per Coleridge, C. J., in Regina v. Gibson (1887), Q. B. D., 537, 540.)

The burden of proof lay upon the appellee to show that the verdict could not possibly have been affected by the erroneous ruling. Similarly, the effect of the majority of decisions in this country is to cast the burden of proof upon the appellee. It was only natural that those courts which had taken up the "exchequer rule" should likewise adopt the exchequer construction.

In a vigorous and illuminating address before the Minnesota Bar Association in 1906, Judge Amidon, of the North Dakota district court, presented these comparative figures: "For the period 1890–1900 I find that of all the causes that were brought under review or appeal in that country (England) new trials were granted in less than 3½ per cent." In America during another period of time, from the first reports until the year 1887, the American Bar Association reported that 46 per cent of all the cases in the United States courts had been reversed, and 60 per cent of these on alleged errors in procedural matters. Does this summary disposition of cases by the English court of appeals tend to weaken popular confidence in its ability to administer justice? Let Judge Amidon answer:

"During the last 75 years, nowhere in the British Empire has a man been snatched away from the custody of the law and sacrificed to mob violence. That is respect for law organized into human character."

And what of our own record? The facts in general are too well known to repeat, too shameful to enumerate. The connection between lynch law and a certain proneness in the courts to grant new trials may be discovered by a glance turough two newspaper reports:

The New York Times for December 7, 1900, contains an account of the confession of a negro desperado who had been shot while resisting an arrest. He had been indicted for murder and had been tried three times for the offense. None of these was final. After each a new trial was ordered. While awaiting the fourth trial the culprit escaped.

The New York Times for July 16, 1903, contains an account of the lynching of a murderer who had been twice found guilty by a jury and twice been granted a new trial. After the third conviction the multitude, not wishing to have a murderer loose, took the law into their own hands.

FOURTH. HE THAT RUNS MAY READ WHAT LESSON THESE REPORTS CARRY WITH THEM.

So far as procedure in appellate courts is concerned, what we wish to accomplish is this: That in the consideration in an appellate court of a writ of error or appeal, judgment should be rendered upon the merits without permitting reversals for technical defects in the procedure below, and without presuming, as many courts now do, that if there has been a violation in some particular of some rule of law, that violation has been prejudicial to the result. The bill recommended by the American Bar Association, which has twice passed the House of Representatives, enacts that the presumption shall be that the decision below was right, and that if it was erroneous in some detail the error did not affect the result.

Perhaps no better argument can be stated for this proposition than a passage in the opinion of Mr. Justice Martin, of the Court of Appeals of New York. It expresses the great embarrassment that lawyers feel in the trial of important cases. In Lewis v. The Long Island Railroad Co. (162 N. Y., 50, 67) Judge Martin, delivering the opinion of the court, says:

"After carefully and studiously examining the great number of perplexing and difficult questions determined during the heat and excitement of a sharp and protracted trial, we can but admire and commend the scrupulous and intelligent care and ability evinced by the trial judge, and the almost unerring correctness of his rulings. When the trial and variety of the questions raised are considered, we are surprised, not that a single error was committed but that there were not many more."

Yet the court of appeals felt obliged to reverse and order a new trial. In other words, our procedure is such that it is impossible, even with a judge of "almost unerring correctness," to get a verdict on the trial of an intricate cause that will stand the test of an appeal. It needs no argument to show that such procedure needs revision.

The State of New York within a few years created a commission to inquire into the causes of the law's delay. Several judges of the supreme court of that State were examined before the commission. Presiding Justice Hirschberg said, in the course of his examination:

"I have always thought it was a fatal feature of our judiciary system * * * the idea that if a man tries a suit and loses he can appeal on the assumption that that was wrong instead of appealing on the assumption that it was right."

Mr. Justice Scott agrees with this view:

"Judge SCOTT. You should change that rule of presumption. In the first place, I think the appellant should have cast upon him the burden of establishing that there had been error below, and also of showing that that error had been prejudicial. None of us is so wise that he can try a long case without committing some error."

Mr. Justice O'Gorman (now Senator) says:

"One of the gravest faults with our present mode of trial is the ease and frequency with which judgments are reversed on technicalities which do not affect the merits of the case and which at no stage of the case have affected the merits.

"We have a rule in our State that the commission of an error upon the trial of a cause by a trial justice is presumptively prejudicial to the appellant, and instead of the appellant being required to persuade an appellate court that he has suffered substantial wrong, the moment that he can place his finger on a technical error the burden is at once shifted and the respondent required to persuade the court that there was no harm following that particular ruling. Now, we all know, and there are few who seek to vindicate the practice, that very many cases are sent back from the appellate division upon alleged errors which have never affected the merits of the case."

In opposition to all the rules of technicality which work such injustice and cause such delay we urge that laid down by Chief Justice Marshall in Church v. Hubbart (2 Cranch., 232):

"It is desirable to terminate every cause upon its real merits, if those merits are fairly before the court, and to put an end to litigation where it is in the power of the court to do so."

The amendment proposed is the equivalent to that already adopted by the Legislature of New York in criminal cases. We quote from the opinion of the court of appeals in People v. Strollo (191 N. Y., 42).

At pages 61 and 67 the court says:

"Under the statute our powers and duties in capital cases are strictly correlative. While we have power to reverse in the interests of justice, even where no exceptions are taken, it is also our duty to disregard errors which, although excepted to, do not affect the substantial rights of a defendant. Guided by this rule, we feel constrained to hold that none of the general criticisms referred to under this head present sufficient grounds for reversal. * * *

"These various elements of the question, considered in connection with the functions and powers of this court, bring us face to face with the situation that is apparently paradoxical but actually logical. That is to say, we might have a condition in which we would be compelled in a civil case to grant a new trial for a loss of original documentary evidence, although under similar conditions, in a case involving human life and liberty, we may be bound to deny such relief. And why should this seemingly anomalous difference exist? Because this is a court of statutory origin and vested with none but statutory jurisdiction. Thus it happens that in civil cases our powers are limited to the review of errors which are raised and presented by exceptions, while in criminal cases we are not only empowered but commanded to give judgment without regard to technical errors or defects or to exceptions which do not affect the substantial rights of the parties." (Code Crim. Pro., sec. 542.)

A similar provision was inserted in 1912 in the Code of Civil Procedure since the bar began this agitation to prevent delay and unnecessary cost in litigation.

NEW YORK CODE OF CIVIL PROCEDURE.

"SEC. 1317. After hearing the appeal the court must give judgment without regard to technical errors or defects, or to exceptions which do not affect the substantial rights of the parties."

The effect of this amendment has been salutary. No one now would return to the old rule condemned by Justice O'Gorman.

The reasons for the change is well stated by the Court of Appeals of the State of New York in People v. Gilbert (199 N. Y., 28), decided in 1910:

"The objection is purely technical, and technical objections are no longer regarded as serious unless they are so thoroughly supported by authority that they can not well be disregarded, even under the latitude of the statute relating to the subject. The criminal law is fast outgrowing those technicalities which grew up when the punishment for crime was so severe as in many cases to shock the moral sense of lawyers, judges, and the public generally. When stealing a handkerchief, worth 1 shilling, was punished by death, and there were nearly 200 capital offenses, it was to the credit of humanity that technicalities should be invoked in order to prevent the cruelty of a strict and literal enforcement of the law. Those times have passed, for the criminal law is no longer harsh or inhumane, and it is fortunate for the safety of life and property that technicalities, to a great extent, have lost their hold. We overrule the contention of the defendant in regard to the indictment, because it is founded on a technicality and was not excessive, and we should hesitate long before requiring the plaintiff to begin a new and weary pilgrimage through the courts."

One way of testing a proposition is to consider its converse. Who could possibly maintain the converse of these two recommendations or seriously support a bill or a rule of court which should provide:

1. That a new trial should always be granted if any error of law had been committed on the first trial, notwithstanding that the verdict of the jury upon the facts was satisfactory to the court.

2. That a judgment should be reversed and a new trial granted whenever any error of law had been committed on the trial, although it did not affect the merits. Yet in effect the practice which would be embodied in these last two propositions is the practice which we are seeking to change, and concerning which our proposals are said by some to be radical.

FIFTH.

In dealing with this important subject, we ask you to put yourselves in the attitude of a lawyer who has a righteous cause, and who naturally desires to bring it to trial and obtain final judgment for his client as soon as possible. Is not this the attitude you always wish

to occupy? Doubtless we are sometimes called upon to defend a client who has no defense upon the merits. As long as the law gives the right to interpose a technical defense and prolong the litigation, the lawyer is blamed by many if he does not exert his skill to the uttermost for that purpose.

When we look at our profession from the standpoint of the Commonwealth, when we consider that we are not only attorneys for a client but officers of the court and charged with an important part in the administration of justice, we must admit that we occupy a humiliating position whenever we undertake to defeat it. It may be a lawyer's duty to occupy this position under the existing system. All the more, therefore, is it our duty as citizens to endeavor to reform the system, so that these means of procrastination shall no longer be available.

An objection is often made that giving this power to the court impairs the value of a verdict. Our reply to this is that it misconceives the scope of the proposed reform. So far from depriving the verdict of the jury of its value it tends to establish the verdict. Long experience in the trial of cases before a jury and conversation with intelligent jurors of our acquaintance has convinced us that jurors pay much less attention to fine points of evidence or to nice distinctions in the charge than judges seem to suppose. In more than half the cases where judgments have been reversed on questions of evidence the ruling in the court below did not affect the verdict in the slightest degree. This being the case it is unjust that the parties should be put to the expense and delay of a new trial.

There are other cases which may be cited where courts on appeal, particularly in criminal cases, have stretched the rule of error to the farthest limit. It is not in the interest of justice that this should be permitted. The maxim of the common law was that the judge himself is condemned when he acquits the guilty. But we have come, in many jurisdictions, to the very opposite of that, dependent, we may say, a little upon the character and temper of the judges who happen to sit on the case. Some judges are more technical than others and attach more importance to technical points than others do.

That ought not to be the condition of the law. There ought to be a general rule formulated by Congress which shall control in all the circuits of the United States, so as to make these reversals for purely technical defects impossible in any of the Federal courts.

Society has an interest in the punishment of the guilty. Under our system the accused has every chance in the first instance. The judge must charge that he can only be convicted if the jury find him guilty beyond a reasonable doubt. His counsel will probably argue that it is better that ninety-nine men should escape than that one innocent man should be convicted. If, after all that, the jury find the accused guilty, there is a strong presumption of his guilt and it should not be possible for a person in that situation to be allowed to take advantage of such technical errors, which do not affect the merits, and which have nothing to do with the question of his guilt or innocence. We do not always get the most skillful prosecuting attorneys, and under the present rule, as it is often administered, there is required of them almost preternatural skill and foresight in order to guard against technical objections.

This act will give additional value to the trial by jury. It will prevent the delay, expense, and consequent injustice caused by new trials when there has been one trial, with the result of which the appellate court is satisfied.

To quote from the opinion of the New York Court of Appeals in a recent case (Walters *v.* Syracuse Rapid Transit R. R. Co., 178 N. Y., 50), "It frequently happens that cases appear and reappear in this court, after three or four trials, where the plaintiff on every trial has changed his testimony in order to meet the varying fortunes of the case upon appeal."

This is a direct encouragement to fraud and perjury. On the other hand, a just cause may be lost on the second trial because of the death of witnesses or their departure to other parts unknown.

SIXTH.

We annex an abstract of the statutes or decisions in various States and Territories, most of which have been adopted since the first recommendation of the American Bar Association in 1908. They show the progress that has been made during that period in local jurisdictions.

The American Bar Association, speaking for the bar of every State, urges upon Congress to reform existing abuses, and in the administration of justice in the Federal courts to redeem the promise of Magna Charta that justice shall be denied or delayed to no man, and that the administration of justice shall not be cumbrous, dilatory, and consequently expensive. We call especial attention to the language of President Taft on this subject in his annual message presented to Congress December 7, 1909:

"In my judgment, a change in judicial procedure, with a view to reducing its expense to private litigants in civil cases, and facilitating the dispatch of business and final decision in both civil and criminal cases, constitutes the greatest need in our American institutions."

For special committee, American Bar Association.

EVERETT P. WHEELER, *Chairman.*

---

## APPENDIX.

ABSTRACT OF STATUTES AND DECISIONS IN VARIOUS STATES AND TERRITORIES EMBODYING PROPOSED AMENDMENT TO FEDERAL PRACTICE.

*Alabama.*

Alabama Bar Association Report for 1915, page 145, report of the committee on jurisprudence and law reform, S. S. Pleasants, chairman.

Rule 45 of the Supreme Court of Alabama provides that no judgment will be reversed or new trial granted in any civil or criminal case on the ground of giving or refusal of special charges unless, in the opinion of the court after an examination of the entire cause, it appears that the error has injuriously affected the substantial rights of the party.

Mr. Pleasants continues (p. 147):

"Rule 45 is a step in the right direction, both with reference to reversals on account of instructions given or refused and with reference to other matters to which it relates. No judgment should be reversed for the improper admission or rejection of evidence, or for error as to any matter of pleading or procedure, unless in the opinion of the court, after an examination of the entire cause, it should appear that the error has probably injuriously affected the substantial rights of appellant. There might well be a statute following this rule."

*Alaska.*

Alaska Territory Compiled Laws, 1913:

"SECTION 1052. No exception shall be regarded on a motion for a new trial or on an appeal unless the exception be material and affect the substantial rights of the parties."

Error must affirmatively appear (McMahon *v.* Duffee, 59 Pac., 184).

*Arizona.*

Revised Statutes of Arizona, Civil Code, 1913 (tit. 6, Ch. IV, sec. 423):

"The court shall in every stage of an action disregard any error or defect in the pleadings or proceedings which shall not affect the substantial rights of such parties, and no judgment shall be reversed or affected by reason of such error or defect."

*California.*

Their statute is to be found in the California Code of Civil Procedure (1915), section 475:

"No judgment, decision, or decree shall be reversed or affected by reason of any error, ruling, instruction, or defect unless it shall appear from the record that such error, ruling, instruction, or defect was prejudicial, and also that by reason of such error, ruling, instruction, or defect the party complaining or appealing sustained substantial injury, and that a different result would have been probable if such error, ruling, instruction, or defect had not occurred or existed. There shall be no presumption that error is prejudicial or that injury was done if error is shown." (See People *v.* Warner, 147 Cal., 553.)

*Florida.*

The Compiled Laws of the State of Florida, Ann. 1914 (ch. 6223, May 26, 1911, sec. 1), 1608 d:

"No judgment shall be set aside or reversed or new trial granted by any court of the State of Florida in any cause, civil or criminal, on the ground of misdirection of the jury, or the improper admission or rejection of evidence, or for error as to any matter of pleading or procedure, unless in the opinion of the court to which application is made, after an examination of the entire case, it shall appear that the error complained of has resulted in a miscarriage of justice. This act shall be liberally construed."

*Illinois.*

Convert *v.* Bishop, etc., Co. (152 Ill. App., 516). At page 521 the court said:

"Upon the whole case it by no means appears that substantial justice has not been done by the verdict and judgment. In such case this court will not reverse a judgment even if errors have been committed by the court below upon the trial in the admission or exclusion of evidence or in the giving or refusal of instructions."

*Indiana.*

Burns's Annotated Indiana Statutes, 1914 (Vol. 1, sec. 700):

"No judgment shall be stayed or reversed in whole or in part by the supreme court for any defect in form, variance, or imperfection contained in the record, pleading, process, entries, returns, or other proceedings therein which by law might be amended in the court below, but such defects shall be deemed to be amended in the supreme court; nor shall any judgment be stayed or reversed, in whole or in part, where it shall appear to the court that the merits of the cause have been fairly tried and determined in the court below."

The burden is on the party claiming error to show injury. (Badger *v.* Merry, 139 Ind, 631, 636; 39 N. E., 309; 35 Ind. App., 167; 73 N. E., 1009.)

*Iowa.*

Code of Iowa (Ann.), 1897, section 3601:

"The court, in every stage of an action, must disregard any error or defect in the proceedings which does not affect the substantial rights of the adverse party, and no judgment shall be reversed or affected by reason of such error or defect."

Mosier *v.* Vincent (34 Iowa, 478). At page 480 the court said:

"An appellant must show error to his prejudice before he can ask a reversal."

*Kansas.*

General Statutes of Kansas (1909), page 1345:

"The appellate court shall disregard all mere technical errors and irregularities which do not appear to have prejudicially affected the substantial rights of the party complaining where it appears upon the whole record that substantial justice has been done by the judgment or order of the trial court."

*Kentucky.*

Kentucky Criminal Code, 1877, section 340, and amended by a statute of 1880:

"A judgment of conviction shall be reversed for any error of law to the defendant's prejudice appearing on the record whenever, upon the consideration of the whole case, the court is satisfied that the substantial rights of the defendant have been prejudiced thereby."

To the same effect are sections 134, 338, 756, Kentucky Revised Code of Civil Procedure. The briefest of these is section 338:

"No exception shall be regarded unless the decision to which it relates be prejudicial to the substantial rights of the party excepting."

*Michigan.*

Public acts, 1915 (No. 314, ch. L, sec. 28):

"No judgment or verdict shall be set aside or reversed or a new trial granted by any court in any civil case on the ground of misdirection of the jury, or the improper admission or rejection of evidence, or for error as to any matter of pleading or procedure unless, in the opinion of the court, after an examination of the entire cause, it shall affirmatively appear that the error complained of has resulted in a miscarriage of justice."

This went even further than the recommendation. The recommendation may be found in the report of the commission on revision.

*Minnesota.*

Lewis *v.* St. Paul, etc., Railroad (20 Minn., 261). At page 264 the court said:

"Even if it be admitted that some of the defendant's exceptions to testimony and instructions were well taken in point of law, this is a case in which we have no hesitation in disregarding such exceptions upon the ground that upon the uncontroverted facts of the case it is evident that a new trial would not change the result of the trial which has already taken place."

*Missouri.*

Section 1850, Revised Statutes (1909). Like the Arizona statute.

*Montana.*

Revised Codes of Montana (1907). Section 7118, civil; section 9415, criminal.

"After hearing the appeal the court must give judgment without regard to technical errors or defects or to exceptions which do not affect the substantial rights of the parties."

SEC. 7118. "The supreme court on such appeal shall consider such orders, rulings, and proceedings, and shall reverse or affirm the cause on such appeal, according to the substantial rights of the respective parties, as shown upon the record."

*Nebraska.*

Nebraska Code, 1913, section 7713:

"The court shall, in every stage of the action, disregard any errors or defect in the pleading or proceedings which shall not affect the substantial rights of the adverse party, and no judgment shall be reversed or affected by reason of such error or defect."

*Nevada.*

Revised Laws of Nevada (1912), 5066, section 124, civil code. Like Arizona.

*New Hampshire.*

The same reform was effected by the supreme court. Address Samuel C. Eastman. Proceedings New Hampshire Bar Association 1906, page 249.

*New Jersey.*

New Jersey practice act (1912), section 27, chapter 231:

"No judgment shall be reversed or new trial granted on the ground of misdirection, or the improper admission or exclusion of evidence, or for error as to matter of pleading or procedure, unless, after examination of the whole case, it shall appear that the error injuriously affected the substantial rights of a party."

*New Mexico.*

New Mexico Statutes Codification 1915, section 4167, subsection 101:

"The court shall, at every stage of the action, disregard any errors or defects in the pleadings or proceedings which shall not affect the substantial rights of the adverse party, and no judgment shall be reversed or affected by reason of such error or defect."

*New York.*

The amendments in this State are given in the body of the brief.

*Ohio.*

Their statute is to be found in Laws of Ohio, 1911, page 132. It is the same as that recommended by the American Bar Association.

*Oklahoma.*

Revised Laws of Oklahoma (Ann., 1910), No. 6005:

"No judgment shall be set aside or new trial granted by any appellate court of this State on any case, civil or criminal, on the ground of misdirection of the jury, or the improper admission or rejection of evidence, or as to error in any matter of pleading or procedure, unless in the opinion of the court to which application is made, after an examination of the entire record, it appears that the error complained of has probably resulted in a miscarriage of justice, or constitutes a substantial violation of a constitutional or statutory right."

Byers v. Territory of Oklahoma (103 Pac., 532) is excellent case. Gorman v. Shelton (43 Okla., 139). Producer's Oil Co. v. Eaton (44 Okla., 55, 61):

"If in the amount of the verdict or elsewhere there was any evidence of the influence of this argument to the prejudice of the defendant, we should be disposed to reverse, etc.; but in view of all the facts in this case it does not appear that the error has probably resulted in a miscarriage of justice or constitutes a substantial violation of a constitutional or statutory right."

Error was in outrageous language of counsel to jury.

*Pennsylvania.*

The subject is considered in Pennsylvania Bar Association Reports, 1915, page 62:

"The act was introduced to the legislature, but its passage was opposed by the Law Association of Philadelphia on the ground that it would not change the existing law of Pennsylvania."

Twenty-fifth Pennsylvania, page 332 (1855), was cited, which held that the appellant must show both error and prejudice. Affirmed in 188 Pa., 496, 503; 248 Pa., 598, 603.

*Texas.*

Revised Civil Statutes, 1911, article 1553:

"There shall be no reversal or dismissal for want of form, provided that the requirements of the law and the rules of court be sufficiently complied with in presenting the case to enable the court to determine the same upon its merits. In each case the supreme court shall affirm the judgment, reverse and render the judgment which the courts of civil appeals ought to have rendered, or reverse the judgment, and demand the case to the lower court, if it shall appear that the justice of the case demands another trial."

*Wisconsin.*

Wisconsin Statutes (1911), No. 3072m:

"No judgment shall be reversed or set aside or new trial granted in any action or proceedings, civil or criminal, on the ground of misdirection of the judge or the wrongful admission of evidence, or for error as to any matter of pleading or procedure, unless in the opinion of the court to which application is made, after an examination of the entire action or proceeding, it shall appear that the error complained of has affected the substantial rights of the party seeking to reverse or set aside the judgment or to secure a new trial."

Similar to chapter 192, Laws 1909.

*Wyoming.*

Wyoming Compiled Statutes (1910), Annotated, Mullen:

No. 4599: "No exception shall be regarded unless it is material, and prejudicial to the substantial rights of the party excepting."

[House of Representatives, Rept. No. 264, 64th Cong., 1st sess.]

JUDICIAL PROCEDURE IN UNITED STATES COURTS.

Mr. GARD, from the Committee on the Judiciary, submitted the following report.

The Committee on the Judiciary, having had under consideration the bill (H. R. 9428) to regulate the judicial procedure in United States courts, report the same back with certain amendments and with the recommendation that the bill as amended do pass.

The several amendments are reported, as follows:

Strike out the word "or" last appearing in line 7 and insert in lieu thereof the words "nor shall."

In line 8, insert, after the word "trial," the word "be."

The object of the law is to obtain and maintain speedy and exact justice, and with this establish a rule of procedure in the consideration of causes in the appellate courts of the United States

Complaint has been and is daily made of alleged miscarriages of justice because of strict interpretations of and adherence to some technical rules of procedure which could not in the least affect the substantial rights of the parties in litigation, and in very many State jurisdictions statutes have been enacted almost in terms with the language of this bill, these statutes being universally considered to be of great assistance in the administration of justice in courts. Certain courts have established, and entirely within their right, we think, rules practically giving effect to the sentiment of this bill, while other courts have construed it to be their duty to reverse for any error if such error be made affirmatively to appear.

It has been truly said that "justice delayed is justice denied," and we are all familiar with the hardships of loss of time and great expenditure of money made necessary by retrials when the first trial absolutely established the facts and the law, the reversal being for some trivial error occurring during protracted trial.

The trial of causes before juries, that fairest means of adjudication of disputes which jurisprudence has yet found, is frequently marred by long exhibits of most technical and immaterial objections, made often with no other purpose than to cloud the issues and to make weary the minds of the jurors, unmindful and unheeding of such matters so far outside any effect on the substantial rights of the parties.

Then, it is almost invariably true that the first trial is the one where is brought out in the most complete manner the contentions of the respective parties established and made manifest to the minds of the jury and of judge, and as the mind of the reasonable juror—and this is the average juror, we believe—skips over the trivial and immaterial, so the mind of the judge should be invested with this discretion and not be bound by arbitrary rule requiring reversal if any error be found.

A bill embodying the same general features and intended generally to effect the same remedy was passed by the House of Representatives in the Sixty-second Congress, but failed to pass the Senate.

Another almost similar bill was favorably reported in the Sixty-third Congress on December 12, 1914, by Hon. E. Y. WEBB, now chairman of the Committee on the Judiciary in the House of Representatives.

Mr. WEBB, in his report, adopted the language of Mr. DAVIS in reporting the bill to the House in the Sixty-third Congress, as follows:

"The bill as originally drawn was prepared by a committee of the American Bar Association, by which also it has been under discussion for five years. In an amended form it passed the House of Representatives unanimously on the 6th day of February, 1911, and in the message of the President sent to Congress on December 21, 1911, we find the following recommendation:

"'The American Bar Association has recommended to Congress several bills expediting procedure, one of which has already passed the House unanimously February 6, 1911. This directs that no judgment should be set aside or reversed or new trial granted unless it appears to the court, after an examination of the entire case, that the error complained of has injuriously affected the substantial rights of the parties, and also provides for the submission of issues of fact to a jury, reserving questions of law for subsequent argument and decision. I hope this bill will pass the Senate and become a law, for it will simplify the procedure at law.'

"Similar legislation to that now proposed has been adopted in Illinois, Kansas, Ohio, and Wisconsin, and by constitutional amendment in California; has passed both houses of the legislature of the State of New York, and on the 2d day of April, 1912, was before the governor of that State for his signature.

"No doubt a similar rule has been applied without express statutory mandate in the courts of other States. The necessity of Federal legislation on this subject is well illustrated by a comparison of the language of the Supreme Court of the United States in the case of Railroad Company v. O'Reilly (158 U. S., 334) and its language in the case of Cunningham v. Springer (204 U. S., 647). In the former of these cases it is said:

"'While an appellate court will not disturb a judgment for immaterial error, yet it should appear beyond a doubt that the error complained of did not and could not have prejudiced the rights of the party duly objecting.'

"On the other hand, in the latter case it is said:

"'These three illustrations * * * illustrate the importance of a strict application of the principle that the excepting party should make it manifest that an error prejudicial to him has occurred in the trial in order to justify an appellate court in disturbing the verdict.'

"In other words, in the first of these cases the Supreme Court holds that an error is presumed to be prejudicial until the contrary appears, and in the second that an error is presumed to be harmless until the contrary is made to appear. It is the purpose of the first section of the present bill to enact, in so far as the appellate courts are concerned, that in the consideration in an appellate court of a writ of error or an appeal judgment shall be rendered upon the merits without permitting reversals for technical defects in the procedure below and without presuming that any error which may appear had been of necessity prejudicial to the complaining party.

"Your committee believe that the reforms embodied in this bill are wise and consonant with the promise of Magna Charta—that justice shall be denied or delayed to no man and that the administration of justice shall not be so cumberous, dilatory, and consequently expensive that it shall be obtained only by the rich."

This bill has the approval of the committee appointed by the American Bar Association to present remedies and formulate proposed laws to prevent delay and unnecessary cost in litigation.

## The Mexican War.

EXTENSION OF REMARKS

OF

# HON. DAVID A. HOLLINGSWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. HOLLINGSWORTH. Mr. Speaker, a grave blunder has been made in Mexico by the present administration as inexcusable, in my judgment, as that at Balaklava, when the "Light Brigade" was ordered to useless slaughter. Its "watchful waiting" and its "in-again-and-out-again" policy have shown a total want of any definite, well-considered purpose, and has been fruitful only of unhappy results.

It is regrettable from any patriotic or dignified viewpoint. It is explicable only on the theory of seeking partisan advantage.

But actual war exists, call it what we may, and this, with patriots, should silence party differences and political scheming. At such a time, like it was with the troopers of the Light Brigade when ordered to advance, it is not for American patriots now "to reason why." "Forward" is the order of the President, and this, to my mind, fixes the duty of citizenship. American blood has been drawn; American soldiers have been ambushed and shot; the American flag has been insulted and American citizenship has been outraged beyond endurance or decency. An inadequate American force is to-day in peril, if not already annihilated, on foreign soil, and the Commander in Chief of the Army, made so by the Constitution and the suffrages of the people, asks of Congress authority to call our State reserves to the colors. It is not a time for partisan thought or accusation.

There is no middle ground for patriotism either at the White House or among the people.

I have been and am yet of the number of those called conservatives, old fogies, if you please, pacifists, if you must have a term of derision, who oppose radical changes in our republican form of government intended to conform it to the prevalent militaristic ideas of extremists. The Republic was founded as a protest against such despotic powers. Its spirit is opposed to big standing armies in times of peace, eating up the substance of industry; opposed to big battleship fleets, if in number and power sufficient to suggest only offensive warfare; and, to some extent, I have myself been subjected to criticism because of expressed convictions along this line, especially by a number of younger men, some young enough to enter the Army as volunteers, who are candidates for Congress, as they have a perfect right to be, and engaged, as they have a like perfect right to be, in canvassing the district which I have had the honor of representing in Congress as yet for only a part of one term, urging upon voters to deny me the usual courtesy of another term and give them early opportunity in Congress to display their own assumed superior patriotism and great love of country. Actual service in the Civil War is not sufficient to protect the patriotic motives of the present Member from selfish accusations and innuendo.

I have, however, implicit faith in the justice, fair dealing, and thoughtful common sense of a patriotic people, and feel sure they will appreciate better my staying here and attending to the public duties intrusted to me for one term than they would if I should desert my post temporarily in a time of stress like the present and go home to personally contend for a renomination with the worthy young gentlemen who seem to be, so to speak, in a marathon race by themselves, seeking to win the prize of political preferment.

If the Republicans of the district deem me worthy, they will likely renominate me, and I shall be grateful; if not, they will find me all the same at the election this fall, voting for Hughes and Fairbanks and for the congressional candidate on whom the mantle of their favor may fall at the primary.

The President is not of my political faith, but, in a sense, he is the Government, and must be until March 4, 1917, when—well, all signs indicate a coming change. And now that actual war is upon us, criticism of past acts—blunders, if such we choose to call them—should cease, especially on the floors of Congress. We are all a part of the Government, sworn and charged with vitally important duties, and the people at the elections may be trusted without undue influence to take care of any blundering inefficiency which may be found to exist.

It is amazing how accurate they are in their estimate of public servants.

I consider it my duty to vote for this resolution as a needful war measure, coming directly from the President, as I understand, through his favored Representative, Mr. HAY. If he is mistaken as to facts or the actual existence of war, his will be the responsibility. We can not know individually, for ourselves, exact conditions. The President is not only the elected Chief of the Republic, but under the Constitution he is the Commander in Chief of the Army and Navy. On him, as stated, rests the responsibility. On us rests a duty as patriotic citizens and Members of Congress to aid him in all proper endeavors to repel actual aggression against our country, defend American citizenship, the American flag, and American honor, wherever or however they may be assailed.

I am emphatically a man of peace. War is abhorrent. Although only a private soldier in the Civil War, I saw enough of its horrors to know that Gen. Sherman was right when in his blunt speech he said it was hell.

But peace may be purchased too dearly. Loss of honor and self-respect in a nation or individual is the beginning of the end, and I shall not knowingly be a party to such a beginning.

I regard this resolution also as a vindication of the antimilitaristic views of those who have consistently opposed the permanent absorption of the State National Guards into the Federal service, either as an active part of its standing army or as a reserve force subject only to the call of the President.

The prompt response of the Ohio guard to the call for mobilization by the Nation's Chief Executive has been a matter of pride to the Ohio delegation in Congress. No one doubted their patriotism or efficiency, although I have been just a little embarrassed in having to explain to the War Department why there are not more organized companies in my district.

The eighteenth Ohio has plenty of patriotism and sentimental preparedness in all the counties, but I have needed to explain that, being a busy people, they have awaited the actual imminency of war before organizing for actual fighting. They may not have as showy ideas of home soldiering as in some sections, but now that the tocsin of actual war has sounded I am told they are rushing to the colors as in 1861 to 1865 and again in 1898, when the district everywhere blazed forth with patriotic ardor. Even the heroes of the Civil War seem to have caught again the spirit of 1861, as I notice in the local papers that the first man to join the colors from the district under the President's call was my former pastor and a comrade of the Civil War, Rev. Dr. George B. Smith, of the First Methodist Episcopal Church of Bellaire, Ohio, who is now with his regiment, the Fifth Ohio, keeping step with the youngest of the boys. God bless him. He leaves, in the performance of duty, a wealthy and distinguished congregation, who will long cherish his memory should he not return. I commend his example to all who feel overburdened with patriotic anxiety for our beloved land.

As for myself, I have no apologies to make for my support of this resolution. The tocsin of war has sounded for my country, and this is a signal to me to sink party differences, and, figuratively speaking at least, joint the colors. What boots it if we have a Democratic administration? What boots it if he has made serious mistakes in his past Mexican policy? What boots it if his partisan followers are seeking to coin political advantage out of the discharge of simple, plain, patriotic duties? What boots it to whom the honors of success shall fall when Old Glory returns in honor from Mexican soil? We are all Americans, and patriotism should not have any dividing party lines. Only the selfish and self-seeking think otherwise.

## Pension Appropriation Bill.

EXTENSION OF REMARKS

OF

# HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. CLINE. Mr. Speaker, I am in favor of removing the limitation of June 27, 1890, by which a widow who had married a soldier after that date was debarred from receiving a pension. There was some justification in fixing the limit 26 years ago, after which the widow of a soldier would not be recognized by the Government in her application for a pension. The argument then was that such a statute would operate to defeat the purpose of young women to marry old soldiers for the purpose of getting a pension on the soldier's death. Of course,

that law did not bar a widow from getting a pension if the soldier died from a disease or injury, or the result of either, contracted in the service and in the line of duty. Undoubtedly no man will charge that for the last 26 years any woman married a soldier as a mere speculative venture so that she would profit by his death in getting a pension.

From an equitable viewpoint the woman who, having married a soldier 25 years after the war and lived with him, nursed and cared for him for 25 years more when he was enfeebled with age and diseases, is entitled to a pension. At this time and for many years there are many soldiers who are helpless and wholly dependent upon some other person for care and attention all the time. Persons who render this service in the capacity of a wife, who faithfully and honestly care for the soldier, have performed a patriotic duty and one worthy of the attention of the Government.

The sentiment in this country is strong for this legislation. A great rich and powerful Government does not discharge its whole duty simply by keeping the man who pledged all for the protection of the flag out of the poorhouses of the country. It is a matter of common knowledge that the very large percentage of the old soldiers have no means of support except their pensions. What assistance they receive comes from the sacrifices of friends or relatives. If it is from a woman who is discharging her obligations as a wife faithfully, the Government should see to it that she is taken care of. I do not know what the additional cost will be. I do know, however, that the amount will be cheerfully paid by a grateful people. We are appropriating this year more than four hundred millions for two branches of the Government service—the Army and Navy. We are anxious to spend many millions for the construction of battleships and necessary auxiliary ships to make our defense complete and effective—shall we not be as jealous in protecting those who ministered to the wants of the defenders of the country in its hours of sorest need? I do not want the Congress to say to the soldier:

> We paid you, but the woman who nursed you in sickness and in health until the end came, who was careful and tender of your wants during all these years, will have to look elsewhere for the scanty living that $12 a month would provide for her because we feel that it would be extravagant to appropriate the money for one thing, and the woman who has ministered to the soldier all these years has not earned the gratitude of the Government even though she has done the best she could in your declining days to care for you.

I am for amending the law for the reason that it is measuring up to a great patriotic duty. I have yet to find the man who regrets that the United States saw fit in the early days after the war to pay pensions and continuously increased the rate of pensions to worthy soldiers and widows as the occasion demanded. Congress performs no more sacred duty than to comfortably provide against the day of want for those who offered all upon the country's altar in times of greatest stress. One of the incidents of my service in Congress and one that gives me the greatest satisfaction is that I have never failed to vote for measures that made provision for the soldier, his widow and orphans.

---

**Army and the Navy.**

---

## EXTENSION OF REMARKS

OF

# HON. A. C. SHALLENBERGER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. SHALLENBERGER. Mr. Chairman, I ask unanimous consent to extend my remarks on the subject of the Army and the Navy.

The CHAIRMAN. The gentleman from Nebraska asks unanimous consent to extend his remarks in the RECORD on the subject of the Army and Navy. Is there objection?

There was no objection.

Mr. SHALLENBERGER. Mr. Chairman, I have asked leave to extend my remarks under the leave-to-print rule for the purpose of publishing in the RECORD certain observations of my own upon the Army and Navy bills for the information of the people in the district which I represent. I do not wish to take the time of the House in listening to them.

On June 1, 1916, my colleague [Mr. SLOAN], under general leave to print, inserted in the RECORD without delivering it upon the floor of the House, a copy of a speech of Hon. Silas R. Barton, which was published in the CONGRESSIONAL RECORD of October 10, 1913. As introductory to the speech of Mr. Barton, the gentleman from Nebraska [Mr. SLOAN] says:

> It has taken the majority of the House nearly three years to reach the point of putting into effect the views so well expressed by him [Mr. Barton] on the floor of the House October 10, 1913.

If the intent was to imply that his republished speech was delivered "on the floor of the House," Mr. Barton must have spoken very rapidly, as the RECORD of October 10, 1913, shows on page 6159 that Mr. Barton was yielded one minute of time only, and no extension of time was granted. As the speech covers six columns in the RECORD, it hardly could have been delivered "on the floor of the House." On the other hand, if it was intended to convey the idea that the speech influenced the views of Members of Congress upon the subject of Government manufacture of armor plate it must have affected the members of Mr. Barton's and Mr. SLOAN's party adversely. When the bill for an armor-plate factory was reported to the House from the Naval Committee, a minority report was filed, dated April 13, 1916, the first sentence of which is:

> We, the undersigned members of the Committee on Naval Affairs, dissent from the action of the majority of the committee in favorably recommending at this time the bill (S. 1417) to erect or purchase, or both, a factory for the manufacture of armor plate and appropriating $11,000,000 to erect or purchase the same.

This minority report condemning the Government armor-plate plant was signed by every one of the seven Republicans upon the Naval Committee. The Government armor-plate amendment to the naval bill passed the House June 2, 1916, with 235 votes for and 136 against it. Every one of the 136 votes against it were cast by Republicans except 3, and of the 235 votes that passed the amendment only 43 were cast by Republicans. The Government armor-plate plant, which is intended to release the Government from the clutches of the armor-plate monopoly, is solely Democratic in its origin, made possible by a Democratic Secretary of the Navy, and a Democratic Naval Committee of the House and Senate, and passed by Democratic votes against the determined opposition of the Republicans of both Houses of Congress who voted with an overwhelming majority against the proposition at every opportunity.

It is possible that my colleague [Mr. SLOAN] intends to convey the thought that because Mr. Barton and himself were with the Democrats upon this question they were right once. I am willing to admit that if for once he and Mr. Barton were with the Democrats they were not always wrong. It was only by maintaining a Democratic majority in both Houses of Congress and a Democratic President in the White House that the country secured this much-needed governmental agency for building up an adequate Navy. The same Democratic majority has given the United States its first great program of naval and military defense and has done more to properly arm this Nation against every possible danger than all the Republican administrations that have preceded it put together. In providing an adequate and efficient Navy, the Democratic Congress at this session will vote in numbers of ships, submarines, aeroplanes, arms, armament, ammunition, and personnel, and in money to provide for it all, far in excess of anything ever before attempted by an American Congress. The ships, the men, the money are all the result of Democratic foresight and determination to amply guard this Nation against any assault. The naval program has not yet been completed by the action of the Senate and the President, but will be hurried to an early conclusion. The Army-reorganization bill and policy of preparedness as worked out by this Congress has already been enacted into law and approved by the President. So much will be said about national defense and preparedness against possible dangers in the coming campaign that a statement from the highest military authority in the country, as to the adequacy and efficiency of the Army legislation enacted by this Congress is submitted herewith, as I have indicated.

The two measures before this Congress which have most engaged the attention of the country are the bills to reorganize the Army and the Navy. As a member of the Military Committee in the House of Representatives, I have given much time in committee in helping to shape the Army bill which has just been signed by the President. A great deal has been published in criticism of the Democratic Congress and the Army bill by newspapers and magazine writers, who seemingly have but little knowledge of the law or its provisions for national defense and who seek only to discredit Congress and the President.

So much has been said and written upon the subject that Senator CHAMBERLAIN, chairman of the Senate Military Committee, asked the Secretary of War to have the General Staff completely analyze the bill and to report their deliberate judgment as to the efficiency of the law. This request was com-

plied with. I submit herewith extracts from Senate Document 447, showing the conclusions of an expert of the General Staff:

WAR DEPARTMENT,
*Washington, May 2½, 1916.*

Hon. GEORGE E. CHAMBERLAIN,
*Chairman Committee on Military Affairs,*
*United States Senate.*

MY DEAR SENATOR: I have had the provisions of House bill No. 12766 carefully analyzed and compared with the provisions of the bill drafted by the General Staff for reorganizing the Army. The comparison and analysis were made by a member of the General Staff, and the memorandums embodying the results of that comparison and analysis are inclosed for your information.

I fully indorse the statement made in one of the memorandums that the bill recently agreed to is the most comprehensive measure looking to military preparedness that has ever been passed by Congress. Assuring you that the bill is very satisfactory to me and that the untiring efforts of the Senate and House to afford the people of this country adequate military protection are deeply appreciated, I am,

Sincerely, yours,

NEWTON D. BAKER,
*Secretary of War.*

—

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
*Washington, May 22, 1916.*

Memorandum for the Secretary of War.
Subject: Comparison of H. R. 12766 with the recommendations of the General Staff Corps.

After a careful analysis and comparisons covering 17 pages the report of the expert of the General Staff concludes as follows:

In general terms it may be said that this is the first comprehensive legislation for national defense. It provides, as far as can be foreseen, for the needs of men and material, and it has been pronounced by all who are competent to judge as the best military legislation that the country has ever had. Certain parts of it are more or less experimental, but without experiment no advance will be made, and if any part of the experiment does not work, that part can be corrected by new legislation.

The consensus of opinion in regard to this bill undoubtedly is that it is far and away the best bill that has ever been written for our Army on the subject of military organization. There undoubtedly are certain things in it which might be left out with advantage and other things that might be added with advantage, but, nevertheless, the statement can not be controverted that it is the first and only comprehensive measure looking to military preparedness that has ever been passed by Congress.

WM. D. CONNOR,
*Major, General Staff Corps.*

The above summarizes the opinion of the highest military authority in the Nation, the General Staff of the Army of the United States. This carefully considered statement answers completely the criticisms of the partisan or ignorant and shows unanswerably that this Congress has provided adequate preparedness and efficient protection for the Nation so far as the Army is concerned. The naval bill that has passed the House and which will soon be enacted into law will do a like service for the Nation in the matter of naval preparation.

## EXTENSION OF REMARKS

OF

# HON. WILLIAM W. HASTINGS,

OF OKLAHOMA.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. HASTINGS. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to print an address of W. A. Thompson, delivered at a reception given by the Colonel William Penn Adair Chapter, United Daughters of the Confederacy, to Confederate veterans at Tahlequah, Okla.

The address is as follows:

AN ADDRESS BY W. A. THOMPSON.

"Were I gifted with the splendid eloquence of the great orator of the American Revolution, whose persuasive pleadings kept so brightly burning the camp fires of our own Washington, I would yet be unable to appropriately voice the emotions I feel at rising to speak on this beautiful, consecrated spot. The subject and scene are alike inspiring. All is rest and peace about us. The gentle murmurs of the ripples of the waves of peace have chased away the rush and roar of the wild waves of war. The blue sky bends serenely above us, and when yon sun, shining now in all the splendor of his unclouded majesty, shall go into camp for the night, starry sentinels will in turn go on duty and keep watch and ward over the peaceful hearts and homes and destines of your people."

I think I need make no apology, Madam President, members of Colonel William Penn Adair Chapter, United Daughters of the Confederacy, veterans, ladies and gentlemen, for using as my introduction the preceding words of Gen. Fitzhugh Lee, spoken in Richmond, Va., at the unveiling of a monument to the Confederate dead. Those words, true when spoken in beautiful Hollywood Cemetery to the assembled beauty and chivalry of old Virginia, are true now when addressed to this representative gathering of the sons and daughters of our great new State of Oklahoma.

This very spot; these circling hills, clad in all their wondrous beauty; our crystal springs, sparkling and murmuring on to the sunlit, southern sea; our historic little city; yonder splendid temple of learning, once the pride of the Cherokee people, now the pride of a great State—all are vocal with history of the past and prophecy of the future.

It is eminently fitting, ladies and gentlemen, that we should honor our loved ones, the living as well as the dead. On last Sabbath, in accordance with the beautiful custom inaugurated by the women of our Southland, we assembled together on the spot sacred to the memory of those who have "loved long since and lost a while," and there, "wreathed with garlands and crowned with flowers, the holy spot where sleeps defeated valor." To-day, laying aside our accustomed pursuits and pausing a while in the never-ending march of events, we have met together in this elegant southern home for the purpose of honoring the living by bestowing upon a few Confederate veterans the Southern Cross of Honor. I would rather be entitled to wear that simple badge of bronze than to be covered with the jeweled decorations of Europe's proudest orders.

I shall not attempt to justify the course of the South further than to say that if it be true that a man's home is his castle, and if it be true that a man's country should be above all other countries, then, going from less to greater or from greater to less, by induction or by deduction, it follows as the night the day that one's State can not be put in second place. In my judgment, another war between North and South is impossible, but should one arise I would be found on the side of the South. My home, my town, my State, my South, my country against the world. Call this reason or call it treason, call it patriotism or call it sectionalism, call it what you will, but here I stand; I can not otherwise.

Feeling only pity for those who fear to praise their soldiers lest by so doing they wound the tender sensibilities of those who are of the opposite faith, I have scant respect for those who consider all praise of "the lost cause" as disloyalty to the Union. Shall we, to please such narrow foreheads, disown our glorious past? "Sooner, far, let evening blush to own a star." We are heirs "of all the ages in the foremost files of time." The past is ours—all the past, and the present. The future we know not of. We claim Cavalier as well as Puritan, Lee as well as Grant, Jamestown as well as Plymouth Rock, Manassas as well as Bunker Hill.

As a son of the South, in whose veins flows no drop of northern blood, as one whose pride it is that he is the son of a brave Confederate soldier, I can truthfully say that to me the most beautiful sight in all the world, next to woman, is the Stars and Stripes floating over a people reunited forever more, and I am glad to-day that in the Providence of God the war ended as it did. It was better so; better, perhaps, for the black man, but immeasurably better for the southern white man. As I see it, it was the southern white man who was freed by the Civil War. The great struggle of the sixties gave the negro personal liberty, but it did not, because it could not, make him free. Neither armies nor navies, neither presidential proclamations nor constitutional amendments, can make him free who is a slave to ignorance and superstition, a slave to prejudice and passion. But the South, purified in the seven-times heated furnace of affliction, and freed from the deadly incubus of human slavery, has risen by leaps and bounds to heights undreamed of in old antebellum days.

While I yield to no living man in admiration and honor to Lincoln and Grant and other brave men of the North, I should be false to myself, false to the land of my birth, false to the memory of my mother, false to the gray hairs of my father if I omitted on this occasion one jot or one tittle of the boundless admiration and love I feel for the dear, brave boys in gray, who fought so long and so well against such deadly odds. "All the world wondered" at "the noble six hundred" of the Light Brigade and the wild charge they made "into the jaws of death." But not the English at Balaklava, nor the French cuirassiers charging the living volcanoes of English infantry at Waterloo; not the Spartans at Thermopylæ, nor the Texans in the Alamo; not the world-conquering Romans, nor the early

Delawares, who, of old, fought their way from Atlantic to Pacific and back again—not any of these nor any other have surpassed in deathless courage our own ragged boys in gray. Their heroism was displayed, not in one desperate charge but in a thousand charges, throughout four long and bloody years.

At each recurring anniversary you have heard of the heroic figures of that titanic struggle. In imagination we may hear again the heavy roar of artillery, the long roll of musketry. We may see the milk-white steed of Ashby, the black plume of Stuart, the flashing sword of Jackson. On a thousand fields we see horse and rider, friend and foe, the blue and the gray, "in one red burial blent." But—

> Forth from its scabbard all in vain
> Bright flashed the sword of Lee;
> It sleeps the sleep of our noble slain,
> Defeated, yet without a stain.

All in vain was the valor of 800,000 men against the valor of 2,800,000 men.

And then came true the wish of that great soldier who sleeps on the bank of the Hudson, who was too chivalrous to accept in surrender "the stainless sword of Lee," and we had peace. The battle flags were furled, and "the war god reclining, sank on the white arm of beauty to rest." Folded away until the judgment day was the "conquered banner." But oh, there were those who loved it, there are those who love it with a love that can not die.

> Once ten thousands hailed it gladly,
> And ten thousand wildly, madly,
> Swore it should forever wave
> O'er their freedom or their grave.

But what shall I say of him, the great Cherokee for whom your chapter is named, Col. William Penn Adair? As I speak to-day there comes to me a vision of the days when for me the world was new and strange. I see a man taller than his fellows—tall, magnificently proportioned, and handsome as a Greek god. I see a man with piercing black eyes, long black hair, and wearing a wide-brimmed sombrero, but otherwise dressed in the height of Washington fashion. I see a man who was a leader of men in the days when every man was a law unto himself, a man equally at home in the Supreme Court, in governmental departments, in the whirlwind of battle, in the white heat of political campaigns, or in the home of some poor Cherokee. Now we see him, as the Civil War neared its close, organizing a confederacy of wild western tribes, being the last of his command to surrender; and now we see him after the war helping to organize the great Downing Party. Now we see him engaged in defeating the infamous Drum Creek treaty with the Osages; and now we see him signing the Cherokee treaty of sixty-six. Now we see him as senator representing his district in the Cherokee Council; and now we see him as assistant chief and delegate representing his people in the Nation's Capital. Now we see him driving across the old Cherokee Nation in a night in order to nail a clever campaign forgery on the eve of an election; and now we see him, single-handed and alone, defending his home against murderous foes.

But in all and through all we see the same engaging, magnificent personality, manly as the manliest, tender as the tenderest, absolutely peerless, absolutely fearless. He it was who in my humble cabin home first gave me a glimpse of the great world of politics, of eloquence, of history, and government. Near and dear he was to me by blood ties, for he was my mother's brother, and looking back across all the intervening years it seems to me that "Bill Penn," as his war comrades delighted to call him, was a very king among men. He died as he had lived, in the midst of big affairs. He died as Cæsar wished to die, as any man might wish to die, stricken in the plenitude of all his godlike powers, after a life of glorious achievement.

And what shall I say of the women of the South, whose radiant beauty, whose matchless courage, and whose supreme devotion have added new glory to the human race. How meaningless and vain are tricks of rhetoric and cunning combinations of words when applied to her in whose praise all hyperbole is tame, all glorification but little short of detraction. The highest praise, the supremest eulogy of which my stammering tongue is capable, is this: My mother was of the South. And to the Daughters of the Confederacy I would say that in all the surging tide of time no nobler task can be committed to your hands than that of keeping green the memory of your loved ones who fought and suffered for "the lost cause," not one of whom but could have been on the winning side. No nobler task can be yours than that of brightening the declining years of their few—alas! how few—surviving comrades.

To the few Confederate veterans assembled here I would say, in the language of Webster, "Venerable men, you have come down to us from a former generation. Heaven has bounteously lengthened out your lives that you might behold this joyous day, and God has granted you this sight of your country's happiness ere you slumber in the grave forever." Side by side you have stood with other brave men "when the mists were rolled in vapor and the winds were laid with sound." Shoulder to shoulder you have stood "where ebbed and flowed the crimson tide of battle." But how differently is the scene before you to-day. The guns of the Civil War have long since died away in silence. Gone are the sounds of combat and the scene of carnage. Gone to their long rest are the great majority of your comrades. Gone, too, let us hope, forever, are all the hate and bitterness engendered by that great struggle, and in their place are feelings of respect and admiration always felt by the brave for the brave.

In the veterans' camp at the last Confederate reunion, held in Mobile, Ala., were 500 Army tents, loaned by the Government for the occasion.

A movement is on foot, launched by the New York League of Republican Clubs, to raise $250,000 for the erection of a monument at some point on the Mason and Dixon line to commemorate the passing of the animosity between the North and the South. And I am glad that while this movement was started by northern Republicans it was first suggested by an old Confederate soldier, Col. James Gordon, of Mississippi, in his farewell address in the United States Senate.

The following is taken from the general orders of Commander in Chief Van Sant, of the Grand Army of the Republic:

> It is recommended wherever the grave of an ex-Confederate is found that flowers be placed thereon, as a tribute to the bravery of the man who fought on the other side, remembering that he, too, was an American soldier. We were once enemies but now friends. The long, dark night is over; at last we are a united people.

During the memorial exercises in the national cemetery at Fort Gibson on last Monday, I heard the band play "Dixie," and in the addresses delivered on that occasion I heard not one word of hate or bitterness, not one word in depreciation of the valor of the boys who wore the gray.

I mention these facts as showing that the Republican Party, the Grand Army, and the Government unite with the South in saying that the war is indeed over; that the Republic of our fathers is stronger and better for that great struggle, and that the dividing line between North and South has been effaced, not by blood and powder stains, but by the hands of brothers, clasped now in mutual confidence and esteem.

And in that "land of pure delight" beyond the stars, if there shall be any reminders of human courage and human faith, we shall see floating proudly side by side "the conquered banner" and "Old Glory," side by side "the Stars and Bars" and "the Stars and Stripes"—forever.

---

## Is President Wilson Weak?

---

### EXTENSION OF REMARKS

OF

### HON. JESSE D. PRICE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. PRICE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an editorial in the Baltimore Sun of yesterday.

The editorial is as follows:

IS PRESIDENT WILSON WEAK?

Wilson or Hughes; that is the alternative that confronts the American people in the matter of the Presidency.

The renomination of Mr. Wilson naturally invites an estimate of the man and his services to the American people. What account has he given of himself in the more than three years during which he has occupied the White House? What type of man has he shown himself to be? What reasons are there for believing that Mr. Hughes would make a more capable Chief Executive than he?

The most surprising development in our recent politics is the fact that the Republican Party, as is indicated by its platform and by the words of its candidate, proposes to appeal to the people in the coming campaign chiefly on the ground that the President is weak and vacillating; that he does not know his own mind; that he has no continuity of purpose. This is surprising, because it is the last charge in the world that would have been made against Mr. Wilson three years ago, or five years ago, or at any time prior to the outbreak of the European war. As president of Princeton University, as governor of New Jersey, as leader of his party during the first years of his presidential administration, when it was making its almost unprecedentedly successful record in the passage of domestic legislation, the complaints then made against Mr. Wilson were exactly the reverse of this. It was his tenacity of conviction, his obstinacy, his refusal to regard the rights and the views of others that formed the basis of the criticism directed against him then.

At Princeton, in his long and splendid battle for Democracy there, he was described as domineering, brutal, bigoted, inconsiderate, ruth-

less—but never as weak or vacillating. In the gubernatorial chair he was accused of being an ingrate, but the very machine politicians who charged that he had turned his back on them after electing him—the members of the Democratic caucus called to repudiate the governor's direct-primary bill, who, after listening to a speech of three hours' duration from him, voted to make it a party measure; the representatives of corporations who opposed his reform measures and were decisively beaten—none of these ever classed Wilson as a weakling. And during the first months of his term as President, when the tariff law, the income-tax law, the currency bill, the repeal of the Panama Canal tolls-exemption act, and all the other important measures included in the administration's program were being put through Congress with smoothness and dexterity, any talk of weakness and vacillation on the President's part would have been classed as highly absurd. It was not a partisan or a politician, but a dispassionate expert in economics, who, following the passage of the tariff act, made this comment: "To this success the attitude of the administration contributed most effectively. President Wilson had quietly but unhesitatingly assumed leadership and secured a hold on his associates and followers which astonished friend and enemy." And Prof. Taussig's statement but expressed common knowledge.

There is another class of people who find the idea of the President being a weakling one not easy of acceptance. That is those who have pondered carefully the facts in connection with his present undisputed leadership of the Democratic Party. Four years ago Mr. Bryan was easily the most influential leader of that party. He had far more followers than any other man and they were devoted to him. His word was law to them; their votes and their course of action were at his disposal. Outside of them the party was divided into numerous groups, each controlled by a political feudal baron, each independent, none of much more consequence than any other. The improbability of keeping an organization of this sort together, of making it an effective political agency capable of harmonious and unified action, was in everyone's mind and much harped upon by the Republican spokesmen. Bryan and Wilson were sure to split within six months after the latter's inauguration. The Democratic Party was incapable of concerted work. It had gone to pieces during Cleveland's administrations; it was sure to go to pieces during Wilson's. The Grand Old Party was the only one with sufficient coherency, sufficient unification, to enable it to do constructive work, to carry out a party program. The air was full of talk like this. The Republican orators assured us that it was true, and many fearful Democrats were more than half inclined to believe it.

Consider that situation and contrast it with the situation to-day. To-day Mr. Wilson is the supreme leader of his party. He has a splendid record of accomplishment behind him, a record the importance of which is conceded by his opponents, so far as domestic matters are concerned. The Democratic Party is the smoothly oiled machine from which results can be expected; the Republican Party is disrupt, dissevered, inharmonious. Mr. Bryan's following is back of Wilson. Mr. Bryan himself is supporting him. Mr. Bryan entered Mr. Wilson's Cabinet, and Mr. Wilson was master. When the rupture did come, Mr. Bryan left the Cabinet, carrying no one with him. Mr. Wilson was left in full possession of the field. "In one respect," said the independent and most sane Springfield Republican the other day, "Wilson is distinguished among Democratic Presidents since the time of Andrew Jackson, and that is for consummate ability and success in party leadership and masterful guidance of congressional legislation." The praise is justified. Could such words be said of a weak and vacillating individual?

In taking the course outlined, then, the Republican Party and Mr. Hughes are asking the people of the United States to believe this incredible thing, that a strong and masterful individual has overnight become timid and hesitating. They are asking us to believe that a sudden and incomprehensible change has taken place in Wilson's character. And in proof of their assertion they point practically to two things alone—his course with regard to Mexico and his course with regard to German submarine warfare. If the facts appeared to substantiate their charge, Mr. Wilson's record would at least justify fair-minded men in withholding judgment until the case with regard to these things is much clearer than it is to-day. History can not be written while the events composing it are still progressing. A man's character doesn't really change overnight. But do the facts even seem to justify the charge?

Mr. Wilson inherited the Mexican trouble from his predecessor, Mr. Taft. The policy of nonintervention and watchful waiting which he maintained was the one which Mr. Taft had adopted. There has been much talk of incidental events which have accompanied the maintenance of that policy—the refusal to recognize Huerta, the Vera Cruz expedition, the exportation of arms into Mexico, the A B C mediation, the recognition of Carranza, the border raids, and the punitive expedition—but too little talk of the policy itself. The revolutions in Mexico have grown out of the oppression and exploitation of four-fifths of the people of that country by the remaining one-fifth. Diaz was enabled to maintain his tyranny there for many years because of the ignorance of the people oppressed.

One of the chief weapons which he used in the doing of it was the threat of American intervention. But the leaven of education spread among the people he tyrannized over, and finally they rose up and overthrew him. Madero, who was the agent wherewith the people of Mexico accomplished this coup d'état, was himself overthrown by Huerta, the latter using the gentle method of assassination. Huerta was another, though a lesser, Diaz. Recognition of him might have meant temporary peace and order, but nothing is more certain than that the peace and order would have been temporary. To secure even this impermanent quiet American intervention might have been necessary; one of the proposals of those acting with Huerta was that after the recognition of that assassin the United States should enter and secure public order in northern Mexico. But in time Huerta must have inevitably fallen for the same reasons that Diaz fell, and then the same troubles would have to be gone through with again. President Wilson chose to act in the interests of permanent peace rather than immediate convenience; he chose to act in the interests of the exploited four-fifths rather that the exploiting one-fifth, and their allies in this country and Great Britain.

Immediately upon assuming office President Wilson publicly laid down the principles which he meant to follow with reference to Mexico and the other American Republics. "One of the chief objects of my administration," he said, "will be to cultivate the friendship and deserve the confidence of our sister Republics of Central and South America. * * * Just government rests always upon the consent of the governed, and there can be no freedom without order based upon law and upon the public conscience and approval. * * * We shall lend our influence of every kind to the realization of these principles in fact and practice, knowing that disorder, personal intrigue and defiance of constitutional rights weaken and discredit government. * * * We can have no sympathy with those who seek to seize the power of government to advance their own personal interests or ambition."

These principles he has adhered to. As a result the relations between the United States and the Latin-American nations are closer to-day and more friendly than they ever were before. The acceptance of the mediation of the A B C countries when the Mexican crisis grew acute did more to this end than all the visits of Root and Knox and McAdoo to South America combined. If we consider the various acts of the present administration with regard to Mexico as separate and isolated performances, we may naturally find fault with one or more of them; if we consider them as parts of a whole, it is easy to see that they form a consistent and logical outgrowth of the definite policy mentioned above. The thoughtful Mr. Dooley once said: "I have seen great changes in three years, but very few in fifty." Watching Mr. Wilson week by week, it may seem that he has appeared changeable and uncertain; taking his administration as a whole, it is seen that he has been steadfast, pertinacious, and determined in following out his policy with regard to Mexico. Those are characteristics of the strong not of the weak man.

And a similar thing is true of the President's handling of the submarine-warfare question. At the beginning of the war he made clear the principles that should govern his actions. The United States should remain neutral. It should keep clear of the conflict, if possible. It should adopt a position that would enable it to act in the interests of European peace whenever a propitious time should arrive. It should uphold the rights of its own citizens and the rights of neutral nations in every possible way. This policy also the President has maintained from the beginning of the war to this day. It has been a period of vexations and tragedies and momentous decisions. When the *Lusitania* was sunk a crisis arose. The President was confronted with the alternative of declaring war or of securing his ends—the same ends that would have been sought had war been declared—by diplomatic negotiation. He chose the latter. At times it has appeared that he chose unwisely, but the event has splendidly vindicated his judgment. We have obtained all that we could have sought from war, without the sacrifice of lives and treasure that war would have entailed. We have won a diplomatic victory far more glorious and far more valuable than any which could have been secured on the field of battle.

In brief, if the charges of the President's critics are examined it will be found that they have confounded weakness with patience. They say the President has been weak; their arguments prove only that he has been patient. But patience is a sign of strength, not of weakness. It implies perseverance and steadiness and tenacity of purpose. Only the strong man and the man conscious of the righteousness of his cause can afford or endure, to be long-suffering. A weak President of these United States, confronted with the problems which Mr. Wilson has had to face, would have been swept off his feet long ago. He likely would have declared war against Mexico or against Germany, but either would have been a dangerous and perhaps fatal blunder. Wilson has not been swept off his feet. He has remained master of the situation. And he has maintained peace with honor.

And so President Wilson and the Democratic Party can welcome the challenge which Mr. Hughes and the Republican Party have made. Mr. Wilson's strength in domestic affairs—his knowledge, his forethought, his leadership, his ability to get results—can not be successfully disputed. The more his record in connection with foreign affairs is studied, the more will it appear that he has been equally strong there. We predict that before the campaign closes the President and his supporters will have cause to thank Mr. Hughes and the astute gentlemen who conduct the affairs of the Republican Party for raising this issue.

---

**The Official Text of the Democratic Platform.**

---

## EXTENSION OF REMARKS
OF
## HON. JOSEPH J. RUSSELL,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. RUSSELL of Missouri. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the platform adopted by the Democratic national convention at St. Louis on yesterday.

The platform is as follows:

THE OFFICIAL TEXT OF THE DEMOCRATIC PLATFORM.

"The Democratic Party, in national convention assembled, adopts the following declaration, to the end that the people of the United States may both realize the achievements wrought by four years of Democratic administration and be apprised of the policies to which the party is committed for the further conduct of national affairs.

RECORD OF ACHIEVEMENT.

"We indorse the administration of Woodrow Wilson. It speaks for itself. It is the best exposition of sound Democratic policy at home and abroad.

"We challenge comparison of our record, our keeping of pledges and our constructive legislation, with those of any party of any time.

"We found our country hampered by special privilege, a vicious tariff, obsolete banking laws and an inelastic currency. Our foreign affairs were dominated by commercial interests for their

selfish ends. The Republican Party, despite repeated pledges, was impotent to correct abuses which it had fostered. Under our administration, under a leadership which has never faltered, these abuses have been corrected, and our people have been freed therefrom.

"Our archaic banking and currency system, prolific of panic and disaster under Republican administrations,—long the refuge of the Money Trust,—has been supplanted by the Federal Reserve Act, a true democracy of credit under Government control, already proved a financial bulwark in a world crisis, mobilizing our resources, placing abundant credit at the disposal of legitimate industry and making a currency panic impossible.

"We have created a Federal Trade Commission to accommodate the perplexing questions arising under the antitrust laws so that monopoly may be strangled at its birth and legitimate industry encouraged. Fair competition in business is now assured.

"We have effected an adjustment of the tariff, adequate for revenue under peace conditions, and fair to the consumer and to the producer. We have adjusted the burdens of taxation so that swollen incomes bear their equitable share. Our revenues have been sufficient in times of world stress, and will largely exceed the expenditures for the current fiscal year.

"We have lifted human labor from the category of commodities and have secured to the workingman the right to voluntary association for his protection and welfare. We have protected the rights of the laborer against the unwarranted issuance of writs of injunction, and have guaranteed to him the right of trial by jury in cases of alleged contempt committed outside the presence of the court.

"We have advanced the parcels post to genuine efficiency, enlarged the Postal Savings System, added 10,000 rural-delivery routes and extensions, thus reaching 2,500,000 additional people, improved the Postal Service in every branch, and for the first time in our history, placed the post-office system on a self-supporting basis, with actual surplus in 1913, 1914 and 1916.

ECONOMIC FREEDOM.

"The reforms which were most obviously needed to clear away special privilege, prevent unfair discrimination and release the energies of men of all ranks and advantages, have been effected by recent legislation. We must now remove, as far as possible, every remaining element of unrest and uncertainty from the path of the business men of America, and secure for them a continued period of quiet, assured and confident prosperity.

TARIFF.

"We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered and unreservedly indorse the Underwood tariff law as truly exemplifying that doctrine. We recognize that tariff rates are necessarily subject to change to meet changing conditions in the world's production and trade. The events of the last two years have brought about many momentous changes. In some respects their effects are yet conjectural and wait to be disclosed, particularly in regard to our foreign trade.

"Two years of a war which has directly involved most of the chief industrial nations of the world and which has indirectly affected the life and industry of all nations, are bringing about economic changes more varied and far-reaching than the world has ever before experienced. In order to ascertain just what those changes may be, the Democratic Congress is providing for a nonpartisan tariff commission to make impartial and thorough study of every economic fact that may throw light either upon our past or upon our future fiscal policy with regard to the imposition of taxes on imports or with regard to the changed and changing conditions under which our trade is carried on. We cordially indorse this timely proposal and declare ourselves in sympathy with the principle and purpose of shaping legislation within that field in accordance with clearly established facts, rather than in accordance with the demands of selfish interests or upon information provided largely, if not exclusively, by them.

AMERICANISM.

"The part which the United States will play in the new day of international relationships that is now upon us will depend upon our preparation and our character. The Democratic Party, therefore, recognizes the assertion and triumphant demonstration of the indivisibility and coherent strength of the Nation as the supreme issue of this day in which the whole world faces the crisis of manifold change. It summons all men of whatever origin or creed who would count themselves Americans, to join in making clear to all the world the unity and consequent power of America. This is an issue of patriotism. To taint it with partisanship would be to defile it. In this day of test, America must show itself not a Nation of partisans but a Nation of patriots. There is gathered here in America the best of the blood, the industry and the genius of the world, the elements of a great race and a magnificent society to be welded into a mighty and splendid Nation.

"Whoever, actuated by the purpose to promote the interest of a foreign power, in disregard of our own country's welfare or to injure this Government in its foreign relations or cripple or destroy its industries at home, and whoever by arousing prejudices of a racial, religious or other nature creates discord and strife among our people so as to obstruct the wholesome process of unification, is faithless to the trust which the privileges of citizenship repose in him and is disloyal to his country. We, therefore, condemn as subversive of this Nation's unity and integrity, and as destructive of its welfare, the activities and designs of every group or organization, political or otherwise, that has for its object the advancement of the interest of a foreign power, whether such object is promoted by intimidating the Government, a political party, or representatives of the people, or which is calculated and tends to divide our people into antagonistic groups and thus to destroy that complete agreement and solidarity of the people and that unity of sentiment and purpose so essential to the perpetuity of the Nation and its free institutions.

"We condemn all alliances and combinations of individuals in this country of whatever nationality or descent, who agree and conspire together for the purpose of embarrassing or weakening our Government or of improperly influencing or coercing our public representatives in dealing or negotiating with any foreign power. We charge that such conspiracies among a limited number exist and have been instigated for the purpose of advancing the interests of foreign countries to the prejudice and detriment of our own country. We condemn any political party which, in view of the activity of such conspirators, surrenders its integrity or modifies its policy.

PREPAREDNESS.

"Along with the proof of our character as a nation must go the proof of our power to play the part that legitimately belongs to us. The people of the United States love peace. They respect the rights and covet the friendship of all other nations. They desire neither any additional territory nor any advantage which can not be peacefully gained by their skill, their industry, or their enterprise; but they insist upon having absolute freedom of national life and policy, and feel that they owe it to themselves and to the rôle of spirited independence which it is their sole ambition to play, that they should render themselves secure against the hazard of interference from any quarter, and should be able to protect their rights upon the seas or in any part of the world. We, therefore, favor the maintenance of an Army fully adequate to the requirements of order, of safety and of the protection of the Nation's rights; the fullest development of modern methods of seacoast defense and the maintenance of an adequate reserve of citizens trained to arms and prepared to safeguard the people and territory of the United States against any danger of hostile action which may unexpectedly arise; and a fixed policy for the continuous development of a Navy worthy to support the great naval traditions of the United States and fully equal to the international tasks which this Nation hopes and expects to take a part in performing. The plans and enactments of the present Congress afford substantial proof of our purpose in this exigent matter.

INTERNATIONAL RELATIONS.

"The Democratic administration has throughout the present war scrupulously and successfully held to the old paths of neutrality and to the peaceful pursuit of the legitimate objects of our national life which statesmen of all parties and creeds have prescribed for themselves in America since the beginning of our history. But the circumstances of the last two years have revealed necessities of international action which no former generation can have foreseen. We hold that it is the duty of the United States to use its power, not only to make itself safe at home, but also to make secure its just interests throughout the world, and, both for this end and in the interest of humanity, to assist the world in securing settled peace and justice. We believe that every people has the right to choose the sovereignty under which it shall live; that the small states of the world have a right to enjoy from other nations the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon; and that the world has a right to be free from every disturbance of its peace that has its origin in aggression or disregard of the rights of peoples and nations; and we believe that the time has come when it is the duty of the United States to join with the other nations of the world in any feasible association that will

effectively serve those principles, to maintain inviolate the complete security of the highway of the seas for the common and unhindered use of all nations.

"The present administration has consistently sought to act upon and realize in its conduct of the foreign affairs of the Nation the principle that should be the object of any association of the nations formed to secure the peace of the world and the maintenance of national and individual rights. It has followed the highest American traditions. It has preferred respect for the fundamental rights of smaller States even to property interests, and has secured the friendship of the people of such States for the United States by refusing to make a mere material interest an excuse for the assertion of our superior power against the dignity of their sovereign independence. It has regarded the lives of its citizens and the claims of humanity as of greater moment than material rights, and peace as the best basis for the just settlement of commercial claims. It has made the honor and ideals of the United States its standard alike in negotiation and action.

PAN AMERICAN CONCORD.

"We recognize now, as we have always recognized, a definite and common interest between the United States and the other peoples and Republics of the Western Hemisphere in all matters of national independence and free political development. We favor the establishment and maintenance of the closest relations of amity and mutual helpfulness between the United States and the other Republics of the American continents for the support of peace and the promotion of a common prosperity. To that end we favor all measures which may be necessary to facilitate intimate intercourse and promote commerce between the United States and her neighbors to the south, and such international understandings as may be practicable and suitable to accomplish these ends.

"We commend the action of the Democratic administration in holding the Pan American Financial Conference at Washington in May, 1915, and organizing the International High Commission which represented the United States in the recent meeting of representatives of the Latin American Republics at Buenos Aires, April, 1916, which have so greatly promoted the friendly relations between the people of the Western Hemisphere.

MEXICO.

"The Monroe doctrine is reasserted as a principle of Democratic faith. That doctrine guarantees the Independent Republics of the two Americas against aggression from another continent. It implies, as well, the most scrupulous regard upon our part for the sovereignty of each of them. We court their good will. We seek not to despoil them. The want of a stable, responsible government in Mexico, capable of repressing and punishing marauders and bandit bands, who have not only taken the lives and seized and destroyed the property of American citizens in that country, but have insolently invaded our soil, made war upon and murdered our people thereon, has rendered it necessary temporarily to occupy, by our armed forces, a portion of the territory of that friendly State. Until, by the restoration of law and order therein, a repetition of such incursions is improbable, the necessity for their remaining will continue. Intervention, implying as it does military subjugation, is revolting to the people of the United States, notwithstanding the provocation to that course has been great and should be resorted to, if at all, only as a last recourse. The stubborn resistance of the President and his advisers to every demand and suggestion to enter upon it, is creditable alike to them and to the people in whose name he speaks.

MERCHANT MARINE.

"Immediate provision should be made for the development of the carrying trade of the United States. Our foreign commerce has in the past been subject to many unnecessary and vexatious obstacles in the way of legislation of Republican Congresses. Until the recent Democratic tariff legislation, it was hampered by unreasonable burdens of taxation. Until the recent banking legislation, it had at its disposal few of the necessary instrumentalities of international credit and exchange. Until the formulation of the pending act to promote the construction of a merchant marine, it lacked even the prospect of adequate carriage by sea. We heartily indorse the purposes and policy of the pending shipping bill and favor all such additional measures of constructive or remedial legislation as may be necessary to restore our flag to the seas and to provide further facilities for our foreign commerce, particularly such laws as may be requisite to remove unfair conditions of competition in the dealings of American merchants and producers with competitors in foreign markets.

CONSERVATION.

"For the safeguarding and quickening of the life of our own people, we favor the conservation and development of the natural resources of the country through a policy which shall be positive rather than negative, a policy which shall not withhold such resources from development but which, while permitting and encouraging their use, shall prevent both waste and monopoly in their exploitation, and we earnestly favor the passage of acts which will accomplish these objects, reaffirming the declaration of the platform of 1912 on this subject.

"The policy of reclaiming our arid lands should be steadily adhered to.

THE ADMINISTRATION AND THE FARMER.

"We favor the vigorous prosecution of investigations and plans to render agriculture more profitable and country life more healthful, comfortable and attractive, and we believe that this should be a dominant aim of the Nation as well as of the States. With all its recent improvement, farming still lags behind other occupations in development as a business, and the advantages of an advancing civilization have not accrued to rural communities in a fair proportion. Much has been accomplished in this field under the present administration, far more than under any previous administration. In the Federal Reserve Act of the last Congress and the Rural Credits Act of the present Congress, the machinery has been created which will make credit available to the farmer constantly and readily, placing him at last upon a footing of equality with the merchant and the manufacturer in securing the capital necessary to carry on his enterprises. Grades and standards necessary to the intelligent and successful conduct of the business of agriculture have also been established or are in the course of being established by law. The long-needed Cotton Futures Act, passed by the Sixty-third Congress, has now been in successful operation for nearly two years.

"A Grain Grades Bill, long needed, and a Permissive Warehouse Bill, intended to provide better storage facilities and to enable the farmer to obtain certificates upon which he may secure advances of money, have been passed by the House of Representatives, have been favorably reported to the Senate, and will probably become law during the present session of the Congress. Both Houses have passed a good-roads measure which will be of far-reaching benefit to all agricultural communities. Above all, the most extraordinary and significant progress has been made, under the direction of the Department of Agriculture, in extending and perfecting practical farm demonstration work which is so rapidly substituting scientific for empirical farming. But it is also necessary that rural activities should be better directed through cooperation and organization, that unfair methods of competition should be eliminated and the conditions requisite for the just, orderly and economical marketing of farm products created. We approve the Democratic administration for having emphatically directed attention for the first time to the essential interests of agriculture involved in farm marketing and finance, for creating the Office of Markets and Rural Organization in connection with the Department of Agriculture, and for extending the cooperative machinery necessary for conveying information to farmers by means of demonstrations. We favor continued liberal provision, not only for the benefit of production, but also for the study and solution of problems of farm marketing and finance and for the extension of existing agencies for improving country life.

GOOD ROADS.

"The happiness, comfort and prosperity of rural life, and the development of the city, are alike conserved by the construction of public highways. We, therefore, favor national aid in the construction of post roads and roads for military purposes.

GOVERNMENT EMPLOYMENT.

"We hold that the life, health and strength of the men, women and children of the Nation are its greatest asset, and that in the conservation of these the Federal Government, wherever it acts as the employer of labor, should both on its own account and as an example, put into effect the following principles of just employment:

"1. A living wage for all employees.

"2. A working day not to exceed eight hours, with one day of rest in seven.

"3. The adoption of safety appliances and the establishment of thoroughly sanitary conditions of labor.

"4. Adequate compensation for industrial accidents.

"5. The standards of the 'Uniform Child Labor Law' wherever minors are employed.

"6. Such provisions for decency, comfort and health in the employment of women as should be accorded the mothers of the race.

"7. An equitable retirement law providing for the retirement of superannuated and disabled employees of the civil service, to the end that a higher standard of efficiency may be maintained.

"We believe also that the adoption of similar principles should be urged and applied in the legislation of the States with regard to labor within their borders and that through every possible agency the life and health of the people of the Nation should be conserved.

LABOR.

"We declare our faith in the Seamen's Act, passed by the Democratic Congress, and we promise our earnest continuance of its enforcement.

"We favor the speedy enactment of an effective Federal Child Labor Law, and the regulation of the shipment of prison-made goods in interstate commerce.

"We favor the creation of a Federal Bureau of Safety in the Department of Labor, to gather facts concerning industrial hazards, and to recommend legislation to prevent the maiming and killing of human beings.

"We favor the extension of the powers and functions of the Federal Bureau of Mines.

"We favor the development upon a systematic scale of the means, already begun under the present administration to assist laborers throughout the Union to seek and obtain employment, and the extension by the Federal Government of the same assistance and encouragement as is now given to agricultural training.

"We heartily commend our newly established Department of Labor for its fine record in settling strikes by personal advice and through conciliating agents.

PUBLIC HEALTH.

"We favor a thorough reconsideration of the means and methods by which the Federal Government handles questions of public health to the end that human life may be conserved by the elimination of loathsome diseases, the improvement of sanitation, and the diffusion of a knowledge of disease prevention.

"We favor the establishment by the Federal Government of tuberculosis sanitariums for needy tubercular patients.

SENATE RULES.

"We favor such alteration of the rules of procedure of the Senate of the United States as will permit the prompt transaction of the Nation's legislative business.

ECONOMY AND THE BUDGET.

"We demand careful economy in all expenditures for the support of the Government, and to that end favor a return by the House of Representatives to its former practice of initiating and preparing all appropriation bills through a single committee chosen from its membership, in order that responsibility may be centered, expenditures standardized and made uniform, and waste and duplication in the public service as much as possible avoided. We favor this as a practicable first step toward a budget system.

CIVIL SERVICE.

"We reaffirm our declarations for the rigid enforcement of the civil-service laws.

PHILIPPINE ISLANDS.

"We heartily indorse the provisions of the bill, recently passed by the House of Representatives, further promoting self-government in the Philippine Islands as being in fulfillment of the policy declared by the Democratic Party in its last national platform, and we reiterate our indorsement of the purpose of ultimate independence for the Philippine Islands, expressed in the preamble of that measure.

WOMAN SUFFRAGE.

"We recommend the extension of the franchise to the women of the country by the States upon the same terms as to men.

PROTECTION OF CITIZENS.

"We again declare the policy that the sacred rights of American citizenship must be preserved at home and abroad, and that no treaty shall receive the sanction of our Government which does not expressly recognize the absolute equality of all our citizens irrespective of race, creed or previous nationality, and which does not recognize the right of expatriation. The American Government should protect American citizens in their rights not only at home but abroad, and any country having a Government should be held to strict accountability for any wrongs done them, either to person or to property. At the earliest practical opportunity our country should strive earnestly for peace among the warring nations of Europe and seek to bring about the adoption of the fundamental principle of justice and humanity, that all men shall enjoy equality of right and freedom from discrimination in the lands wherein they dwell.

PRISON REFORM.

"We demand that the modern principles of prison reform be applied in our Federal Penal System. We favor such work for prisoners as shall give them training in remunerative occupations so that they may make an honest living when released from prison; the setting apart of the net wages of the prisoner to be paid to his dependent family or to be reserved for his own use upon his release; the liberal extension of the principles of the Federal Parole Law, with due regard both to the welfare of the prisoner and the interests of society; the adoption of the probation system, especially in the case of first offenders not convicted of serious crimes.

PENSIONS.

"We renew the declarations of recent Democratic platforms relating to generous pensions for soldiers and their widows and call attention to our record of performance in this particular.

WATERWAYS AND FLOOD CONTROL.

"We renew the declaration in our last two platforms relating to the development of our waterways. The recent devastation of the lower Mississippi Valley and several other sections by floods accentuate the movement for the regulation of river flow by additional bank and levee protection below, and diversion, storage and control of the flood waters above, and their utilization for beneficial purposes in the reclamation of arid and swamp lands, and development of water power, instead of permitting the floods to continue as heretofore agents of destruction. We hold that the control of the Mississippi River is a national problem. The preservation of the depth of its waters for purposes of navigation, the building of levees and works of bank protection to maintain the integrity of its channel and prevent the overflow of its valley resulting in the interruption of interstate commerce, the disorganization of the mail service, and the enormous loss of life and property, impose an obligation which alone can be discharged by the National Government.

"We favor the adoption of a liberal and comprehensive plan for the development and improvement of our harbors and inland waterways with economy and efficiency so as to permit their navigation by vessels of standard draft.

ALASKA.

"It has been and will be the policy of the Democratic Party to enact all laws necessary for the speedy development of Alaska and its great natural resources.

TERRITORIES.

"We favor granting to the people of Alaska, Hawaii and Porto Rico the traditional Territorial government accorded to all Territories of the United States since the beginning of our Government, and we believe that the officials appointed to administer the government of these several Territories should be qualified by previous bona fide residence.

CANDIDATES.

"We unreservedly indorse our President and Vice President, Woodrow Wilson of New Jersey, and Thomas Riley Marshall of Indiana, who have performed the functions of their great offices faithfully and impartially and with distinguished ability.

"In particular, we commend to the American people the splendid diplomatic victories of our great President, who has preserved the vital interests of our Government and its citizens, and kept us out of war.

"Woodrow Wilson stands to-day the greatest American of his generation.

CONCLUSION.

"This is a critical hour in the history of America, a critical hour in the history of the world. Upon the record above set forth, which shows great constructive achievement in following out a consistent policy for our domestic and internal development; upon the record of the Democratic administration, which has maintained the honor, the dignity and the interests of the United States, and at the same time, retained the respect and friendship of all the nations of the world; and upon the great policies for the future strengthening of the life of our country, the enlargement of our national vision and the ennobling of our international relations, as set forth above, we appeal with confidence to the voters of the country."

## The Ashbrook Widows' Pension Bill.

EXTENSION OF REMARKS

OF

# HON. WILLIAM A. ASHBROOK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. ASHBROOK. Mr. Speaker, the House an hour ago passed the pension appropriation bill, carrying $158,000,000 for pensions for the next fiscal year. I offered as an amendment to this bill my widows' pension bill, but, objection being made, it was ruled out on a point of order, and no one can criticize the ruling. I am delighted, however, that so soon after the bill making the appropriation for the best sort of preparedness—pensions—was passed we are to have an opportunity to go on record for one of the most meritorious general pension bills ever proposed. I regret that it comes up for passage at a time when so many Members who desired to vote for it are absent, but it is more important to promptly pass this bill than it is to await their return.

The bill now under consideration, H. R. 11707, relates wholly to pensions of widows of soldiers of the Civil War. The act of June 27, 1890, was the first general pension law passed by the Congress for the relief of Civil War widows. It barred all widows who were married after that date except when it could be proven their soldier husband died of disabilities contracted in the service. The amount allowed by this act was $8 per month, and excepted from its provisions all widows who had an income of $250 or more per annum.

The first law, therefore, pensioning widows of Civil War soldiers was passed 25 years after the close of that great conflict between the North and the South. I had the pleasure of voting for and helping to pass on April 19, 1908, eight years and two months ago, a bill which removed the income-clause exemption and increased the pensions of all Civil War widows who married previous to June 27, 1890, to $12 per month.

When the Snerwood bill was being considered in the committee and in the House four years ago many were insistent that the soldier's widow was as well entitled to more liberal pensions as the veterans themselves, but it was deemed advisable at that time to only consider a bill for the veterans of the Civil War, with the understanding on the part of many, at least, that at a later date in the not far distant future a bill would be brought out increasing the pensions of the soldier's widow and removing some of the restrictions in the existing law. Since that time there has been a constantly growing demand to more generously recognize the widows of the old veterans.

About four months ago the House passed a bill without roll call giving a pension of $12 per month to the widows of all Spanish War soldiers. It is only 18 years since that brief war closed. I voted for this bill and am not finding fault because it slipped through so easily. I refer to it only for comparison and argument in favor of this bill. It was 43 years before the widows of Civil War soldiers received $12 per month, and the Spanish War, when compared to the Civil War, was but a skirmish. A bill for the Indian soldiers has been passed at this session and I believe is now a law.

I have the proud honor to be the author of House bill 11707, which was selected by the committee from over 25 widows' pension bills introduced by Members from more than a dozen States, as being the bill measuring nearest up to the best judgment of the Committee on Invalid Pensions, who carefully considered these bills and unanimously agreed to report it to the House. I might also say that, while I am a member of this committee, I asked no member of the committee to favor my bill and the motion to accept it was made by a Member who had a bill before the committee. The chairman of the committee, that grizzled and beloved old veteran, Gen. SHERWOOD, delegated me to take charge of the bill, and I have faithfully attempted to do so to the best of my ability.

I wish here to pay just a word of tribute to that grand old man, although I know that it is not necessary to eulogize Gen. SHERWOOD in this House. Very few of the Members of this great body ever were more generally loved and admired than my distinguished colleague, and it is with supreme satisfaction the House has learned that he has reconsidered his determination to retire from public service and is a candidate for reelection. The ninth Ohio district will honor itself more than it will my colleague by sending him back to Congress as long as he lives, and may that be a full century. Gen. SHERWOOD is the only Democratic Union soldier in Congress, and it is not likely there will ever be another. Gen. HOLLINSWORTH, also of my State, is the only Civil War soldier from the North on the Republican side, and likely is the last Civil War veteran from that side who will ever have a seat here. Three splendid gentlemen, the courtly Maj. STEDMAN, of North Carolina; Col. FRED TALBOTT, of Maryland, who has never voted against a pension bill during his over 20 years of service here; and the gentleman from Louisiana, Mr. ESTOPINAL, are the only Confederate soldiers in the House. Very soon, indeed, will the last participant in that great conflict disappear. It has been one of the most pleasant experiences of my service here to note the good fellowship which exists between those who wore the blue and those who wore the gray. There is now no bitterness or sectional feeling here. Time and men like Gen. SHERWOOD have obliterated forever that old-time hatred, and we are truly one indissoluble Union, with eyes and thoughts to the future, forgetful of the past, and striving only for the general good of our great Nation and the welfare of the 100,000,000 people.

The old soldiers will lose their best friend when Gen. SHERWOOD retires from Congress, and he should consent to continue to serve the country he has honored so highly on the field of battle and in public and private life as long as his strength and vigor will permit. The Sherwood bill has endeared his name to his old comrades, and they will speak his name gently, reverently, and gratefully with their last breath. Gen. SHERWOOD has passed the four score, and yet he stands to-day as erect as he did when he rode at the head of his command more than 50 years ago, his eye has the twinkle of youth, and his heart still bubbles with good cheer and love for his fellowman. There is not a stain on his long and honorable career and he has worthily won the plaudits of his countrymen. He has made his impress upon our hearts and his good deeds and memory will long endure.

But now, as to the widow's pension bill: The first section refers to those we commonly call war widows. By that I mean the widows who were married to the soldier before or during his service in the Civil War. To all such it increases their pension from $12 to $20 per month, regardless of age. Who will dispute the justness of their claim to this increase? Special acts are granted now, without question, to these war widows as rapidly as they can be reached, and this simply places all on an equal footing, as they should be.

Section 1 also gives all widows of Civil War soldiers who are now or who may hereafter be placed on the pension roll $20 per month when they reach the age of 70 years. Not more than one woman in a hundred after she reaches threescore and ten, the allotted age of mankind, is able to earn her own support. Twenty dollars per month is less by far than $12 per month when she was in the prime of life and able to make a livelihood. I am not prepared to state just what per cent live to the age of 70, but it is a very small per cent. Mortality tables, I believe, also show that men live to a greater age than women. Very few soldiers leave any estate to their widows. I am confident not more than 20 per cent of the soldiers own their own homes, and less than 10 per cent of their widows have sufficient income to enable them to live comfortably. If a soldier's widow is entitled to $12 per month when she is 40 and 50 and 60 years old, she is as rightfully entitled to $20 per month should she reach the age of 70. The same reason exists for this increase as warrants the giving of any pension to a soldier's widow and to an increase to soldiers by reason of age. This is simply an opportunity for Congress to show its gratitude to the faithful and, in the main, feeble old woman who nursed and cared for the old veteran with a woman's tenderness and devotion during his declining days. If the soldier who offered his life as a sacrifice for his country was your father and the widow who cared for and comforted him until the brittle thread of life was snapped asunder was your mother, my colleagues, would you say that $20 per month was too great or too generous? I think not, and believe that we should do unto others as we would have them do unto us.

Section 2 of the bill restores to remarried widows their former pensionable status. Under existing law when the widow of a Civil War veteran remarries her pension ceases, as it should; but should she again become a widow she can not be restored to the pension rolls unless she can prove that her soldier husband died of disabilities contracted in the service—a very difficult thing to do. The fact that a soldier's widow remarries should not penalize her from being restored to the pension rolls. The law should not penalize marriage, and doubly so since it is to the financial gain of the Government. During the period of her remarried state the Government is relieved from paying the pension she otherwise would be entitled to receive had she not remarried. This is simple justice to this class of widow. This

bill also restores the pensionable status to remarried widows who may have received a divorce from a later husband when the cause for divorce is shown to not be her fault. These two provisions of section 2 are plain, simply justice and, I take it, do not require further elaboration and certainly no apology.

Section 3 raises the marriage restrictions from June 27, 1890, to June 27, 1905, or for a period of 15 years. Under the act of June 27, 1890, no widow who married a soldier after that date is entitled to a pension. There was possibly good cause at that time for this restriction, for it is claimed young women quite often married old soldiers largely because of the prospect of securing a pension. Special acts have been passed for a number of years for widows who were married since the passage of the act of 1890, about 26 years ago. No woman who married a soldier during the past 11 years or who may hereafter marry a soldier will be entitled to a pension. No woman who has married a soldier during the past 26 years can be charged with having married the soldier with the expectancy of receiving a pension. The committee believed, therefore, that it was fully warranted in lifting this restriction for a period of 15 years.

Many complain because the age is placed at 70 before a pension of $20 per month is given on the grounds that a comparatively few live to or beyond the age of 70. Others complain because the marriage restriction is not brought down to a later date. If it would cost the Government no more to place the age limit at 60 and to raise the marriage limitations to 1915, or to make it $30 per month instead of $20, the committee would have been pleased to report such a bill, and I am sure that Congress would pass it. Each year, however, adds tens of thousands of dollars to the pension cost which many believe is already very generous. No general law will mete out strict justice to all, but this bill will bring relief to thousands of deserving widows, and those who are not beneficiaries will surely not selfishly begrude the benefits it will bring to others because it does not happen to benefit them. An arbitrary line must be drawn somewhere, and I believe the provisions of this bill will bring, in the aggregate, greater benefit to the Civil War widows than any bill which has ever been proposed.

Mr. Speaker, this bill will make more happy hearts and homes in this broad land of ours than any piece of legislation that has been or will be passed by the Sixty-fourth Congress, and I believe no Congress ever enacted into law as much wholesome legislation as the present Congress. My whole heart has been wrapped up in this bill. If all of the Members of this great body could read the thousands of pitiful, pleading letters I have received during the past three months from helpless and dependent old women from every State in the Union, I do not believe there would be a vote against the bill. I have as nearly as was possible answered all such letters whether from Maine or California with as much consideration as I would from an old widow who lives in my home town.

We are appropriating by the hundreds of millions for preparedness, but to my mind no equal amount of money appropriated for preparedness will do as much good in the interest of preparedness as the cost of this bill which is about half the cost of a battleship. Young men will more quickly enlist in the service of our country when they know that should disease or death overtake them that a grateful Government will provide not only for their own necessities but their wives and helpless children as well. A man who offers his life to defend his country can not be too generously rewarded by our Government, and the woman who gives the tender care and devotion of a loving wife to that man when sickness and death come is equally entitled to our generous consideration. My friends, the one who dares death to give birth to a boy who enlists to protect our Nation and our possessions, and who when disease and death raps at the door of the sick room of the old soldier is there as a ministering angel—the wife and mother—should not suffer for the bare necessities of an humble existence in the richest and most powerful Nation in the world. God bless and protect, and may we provide for these poor old women who have done so much for us and for whom we have done so little.

Mr. Speaker, I think you will bear me out when I say I have for more than three months hung about this Chamber like a hungry dog to the only bone in sight, watching, waiting, hoping, praying, pleading impatiently for the time to come when this bill might pass. But few Members have been here for the past two weeks on account of the attractions at Chicago and St. Louis. I dared not leave lest an opportunity would be missed to call up and pass this bill. I had longings not only to go to your State, Mr. Speaker, but back to my district. We have a primary election in Ohio soon. I have a worthy opponent who thinks I have been here long enough and would like to draw my salary. In fact, this appears to be the paramount issue, if I may judge by his campaign letters, in which he recites the amount of salary I have received, clerical allowances included. My good friend and opponent races up and down the district unhindered and unmolested, as is his right and privilege, urging the people to have me come back and live with them. I would rather, however, remain here, 500 miles away, on duty, as I have been constantly for the past six months, helping to pass important administration measures and be able to secure the passage of the widows' pension bill than to be reelected to Congress. It may be that I have been here long enough and drawn salary quite sufficient, but I think my old soldier friends back home know that no one or two termer would ever have been able to do as much for them as I have done. When the Ashbrook widows' pension bill becomes a law I will feel that I have been honored far beyond my due and will be willing and content to accept the verdict of approval or disapproval, as the case may be, at the approaching primary. I propose, however, to stick to the job until this bill is passed by the Senate and signed by the President and is the law of the land, primary or no primary, opponent or no opponent.

I wish here to acknowledge my thanks and obligation to those gentlemen who have assisted me in handling this bill, and also to that prince of good fellows and the soldiers' and soldiers' widows' good friend, Col. John McElroy, of the National Tribune, for creating favorable sentiment for this bill.

There are some who delight to loudly and eloquently proclaim their allegiance to the Stars and Stripes and their great admiration for the heroes who have defended it, but when it comes to giving practical demonstration and expression of their appreciation, they take to the woods or throw stones. Eloquence and honeyed words may sound pleasant to the ear, but it takes bread and butter to nourish, sustain, and keep life in the body. To whom does the hungry old woman offer her most fervent prayers and thanks and feel most deeply indebted; to the man who praises the heroic deeds of her soldier husband and vainly attempts to flatter, or to the man who seeks to place a $20 bill in her hand every month that she may buy food and clothe her frail old body? I may be prejudiced, but as I see it the best money spent by this Government is that paid for pensions to the soldiers who offered their lives as a sacrifice and to their wives and dependent children. And of all pension legislation enacted or proposed none is more meritorious, righteous, or just than this widows' pension bill.

I consider it an honor to be dubbed "Pension Bill," as I am often facetiously and sometimes disparagingly called. The passage of this bill and the knowledge that I have and hold the gratitude of the old soldiers and their widows, to whom the Nation's gratitude is forever due, will be a monument to my memory more appreciated by me than bronze tablet or marble shaft.

---

## Widows' Increased Pension Bill.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM R. WOOD,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. WOOD of Indiana. Mr. Speaker, if the pending measure to increase pensions for the widows of soldiers of the Civil War becomes a law, it will afford relief to four classes of widows:

First. It will increase the pension of a widow who was the lawful wife of a soldier during the period of his service in the Civil War from twelve to twenty dollars per month, no matter what the age of such widow may be. There will not be many, however, of this class who will be benefited by this law, for those who were the wives of soldiers during the period of the Civil War have for the most part passed away.

Second. This bill, if it becomes a law, will give a pension of $20 per month to all Civil War widows who have now reached, or may hereafter reach, the age of 70 years who are now on the pension rolls, or who may hereafter be placed thereon.

Widows of Civil War soldiers were not pensioned at all until 1890, nearly 25 years after the close of the war. Those who were then pensioned only received $8 per month, which was increased to $12 per month in 1908.

Third. This bill also restores to all widows of Civil War soldiers who were dropped, or who may hereafter be dropped, from the pension roll by reason of their marriage to another person, who is now or may hereafter become a widow by reason

of the death of her husband, or who may be divorced upon her own application, her former pensionable status.

Fourth. This bill raises the marriage limit 15 years by providing that all widows of Union soldiers will be entitled to the benefits of its provisions who married prior to June 27, 1905.

There is every good reason why this bill should become a law. There is no good reason why it should fail.

Under the act of June 27, 1890, which was the first act granting pensions to the widows of Union soldiers, it was provided that no woman who married a soldier after that date, and became his widow, should be entitled to a pension, unless it could be shown that he died from some wound or disease received by him in the line of his duty as a soldier. The theory upon which this restriction was placed in the act of 1890 was that women would become the wives of old soldiers for the sole purpose of obtaining pensions upon the death of their husbands. This act of 1890 also provided that if a widow of a soldier should remarry after the death of her former husband, she thereby surrendered whatever pension that may have been given her under the provision of that act, and this restriction was put in that bill upon the theory that her second, or subsequent husband, should be charged with the duty of her maintenance through life and of providing her with means of support after his decease. If there ever were reasons for these restrictions, or either of them, it seems to me that it is now high time that they should be removed.

There are hundreds and thousands of Union soldiers who became widowers after 1890 who were at the time in the very prime of their life. There were also hundreds and thousands of the widows of soldiers, who became widows after the law of 1890, who were in their prime. It was the most natural thing in the world that these widows and these widowers should want to remarry. Many times the soldier widower married a soldier's widow. Many times a soldier's widow married a man who was not a soldier. In either event, as a price of her second betrothal in marriage, she surrendered the pension that she was receiving or was entitled to receive.

In the lapse of 25 years many of these good women became widows again. With 25 years of labor and trial, and again widowed, they find themselves helpless, without physical strength to earn a livelihood, without means of support, and without relatives or friends to aid them, and with only the poorhouse to afford them a refuge.

There are hundreds and thousands of women who married soldiers of the Union Army after 1890 who became the real mothers to the children of these soldiers by former marriages, contributing a mother's love and a mother's care to the rearing of these children, and fitting them, as only a mother can fit them, for the duties and responsibilities of citizenship. There are hundreds and thousands of these women who became the wives of Union soldiers after 1890 who did it with no thought of money recompense, for they knew that they could not be pensioned under the then existing law, who gave years and years of their lives to the care and comfort of the old veterans of the Civil War. Each and all of these women now widowed, or who may hereafter become widowed, are entitled to the generous bounty of this Government that was made possible through the heroic sacrifice and devotion of their husbands.

Women are no less patriotic than men, and their patriotism should receive the same recognition that is accredited men. And, whether it was the wife who gave her husband to become a soldier at the outbreak or during the Civil War, or whether it was the wife who became a mother to the infant children of a soldier of the Civil War by a former marriage, or whether it was the wife who cared for and ministered to the wants of her soldier husband during the 25 years of his decline, each and all as they are left in their old age helpless and alone should be aided by the Government, and this aid should come as a recognition of their womanly worth and patriotic devotion.

At this time, when the thunder of war is being heard around the world and when its awful carnage is threatening our own fair land, and when we are appealing to the entire citizenship of our country to be prepared, what greater incentive can we offer or what brighter inducement can we hold out than to say, not only by words but by deeds, to the flower of this country that, if you enlist in your country's cause and the fates of war decree that you shall not return to your fireside as the protector and provider for those who are near and dear to you, the Government for which you gave your last full measure of devotion will see to it that those you left behind will not be left to the cold charities of a pitiless world but, on the other hand, they will receive some measure of support from the Government's generous bounty.

Whom do we find opposing this measure? There has been but one test vote on this bill. Thirty-two members of this body arose in opposition to its becoming a law. Thankful am I to say that but 1 of these 32 appeared upon the Republican side; the other 31 appeared upon the Democratic side. I have only pity for the Republican who voted against it. I have only regret for the Democrats who voted against it. A striking commentary this vote affords at this particular time. Within the week the Democratic Party adopted as a part of its national platform the following:

> We renew the declarations of recent Democratic platforms relating to generous pensions for soldiers and their widows, and call attention to our record of performance in this particular.

And here on this floor within a week after this fine-sounding declaration is adopted we behold a beautiful performance on the part of the Democratic majority in this House, where 31 of their members declare their unalterable opposition to the increase provided for in this measure.

This performance, however, is in keeping with the past performance of the Democratic Party with reference to pension legislation, and I do not believe the assertion will be seriously disputed that if the survivor of the Civil War had depended upon a Democratic Congress giving him a pension he would have been pensionless for all time. While it is true that some pension bills have passed Democratic Congresses, it is likewise true that no pension bill has ever passed by a majority of Democratic votes. In other words, if it had not been for the Republican votes, which are always practically unanimous upon these measures, there never would have been a single pension bill passed by a Congress with a Democratic majority.

The pension act of May 11, 1912, received in this House on its passage 176 votes for and 76 votes against. Of these 176 affirmative votes 109 were Republicans and only 67 of these affirmative votes were Democrats. Yet the House in 1912 was Democratic. Of the 76 votes that were cast against this measure every one was furnished from the Democratic side. Again, the Sherwood bill, when it first passed this House, was passed by a vote of 229, made up as follows: One Socialist, 76 Democrats, and 152 Republicans. There were just exactly two Republicans that voted for this bill for every Democrat that voted for it. Yet at this very time the House was almost two to one Democratic. Against the Sherwood bill there were 93 votes; 7 of these were cast by Republicans and 86 by Democrats.

Our Democratic brothers have been shedding bitter tears these last two or three days during the consideration of this bill, because, forsooth, the Republican platform adopted at Chicago failed to mention the subject of pensions. The Republican Party does not have to write a declaration favoring pensions in its platform. It measures its record for the old soldier and his widow by deeds and not by declaration. It has been Republican votes in this Congress that have written every pension law upon the statute books that was ever placed there. Platform declarations are idle when they are not followed up by action. The old soldier throughout the country knows who has been his friend in the past; he likewise knows upon whom he can depend in the future, and he would rather have the record of deeds done in pension legislation by the Republican Party than all the high-sounding phrases that can be coined by this or any other Democratic administration as to what they will do in his behalf.

I sincerely hope that the time may come when our entire country, through its Representatives in this body, will be of one mind upon this question of caring for the old soldier and his dependents and when there will be no one to raise his voice in opposition to the discharge of this sacred duty.

## Widows' Pension Bill.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM A. CULLOP,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, June 19, 1916.*

Mr. CULLOP. Mr. Speaker, I am glad to have the opportunity of voting for this measure. Its passage by this Congress will be hailed with delight by thousands of people in this great country who believe in doing justice to a most worthy class of citizens.

We live in the greatest, the richest, and most powerful country in the world; its possibilities no man can approximate; its boundless resources are too great for estimate by the statistician; and the genius of our people has no superior on the face

of the earth. Our capacities are expanded year by year by the unconquerable spirit of our people, until now we lead the world in production and furnish the example for the other nations to imitate in all the conquests of civil life which make a people truly great.

We honor the defenders of our country and recognize their patriotic services rendered when perils threatened our national existence. The heroic services of the men who preserved our country when disunion was imminent we recognized as the greatest benefaction bestowed upon our people, and we cherish it as one of the greatest heritages of posterity.

Their sacrifice, their courage, their heroism, records the most glorious examples ever emblazoned upon the pages of history. They earned not only our gratitude but their own immortality. They rescued our Government from the pitfall of dismemberment and gave opportunity for us to unfold the wonderful possibilities which have made us the envy of the world. They forever buried the hope for the dissolution of the union of the States and reared the banner of liberty so high that the hand of treason can never touch nor tarnish it.

The men who bared their breasts to the pitiless lead of a courageous enemy deserve the praise and generosity of a grateful people who appreciate their patriotic services. They made patriotism mean something and proclaimed to all the world the Union of the States is and shall be indivisible.

This great Nation, by far the richest in the world, must not and will not be parsimonious with them. It must and does declare to the world its recognition of their achievements, the result of which is beyond the computation of the finite mind.

An undivided country, a united people, an imperishable union, marching onward and leading the nations of the world in working out the destiny of the human race are the fruits of their imperishable victories.

Good women made great sacrifices and bore burdens that tested human fortitude when they surrendered their loved ones to the country's call, when they turned from womanly duties to men's toil; when they nursed the sick and wounded, cared for the broken in health, the crippled carried from battle fields, and fed the hungry. Gratitude demands and patriotism requires that we make substantial provision for them to lighten their burdens as they travel onward to the gaping tomb which awaits to receive them. Justice and humanity demand that the pensions of widows over 70 years of age be increased from $12 to $20 per month, and that the marriage embargo of 1890 be repealed and the later date of 1905 be substituted therefor. The liberty-loving people of this great Nation will commend this measure and approve its early enactment into law.

Out of the bounty of our boundless resources we should show our appreciation and bestow our testimonial for their sacrifice, their loyalty, and their patriotism. Their interest in the preservation of the Union by the care of those who survived the battles waged when its life was in the balance deserves generous recognition at the hands of a grateful people who are the recipients of a princely heritage as the result of the victories won.

Our Nation has been more generous in this regard than any other in the world, and for this reason it has cultivated and stimulated the spirit of patriotism, which is stronger and more earnest here than can be found elsewhere, travel the world over.

Because of this policy, if an assault be made on our flag, more volunteers from the civil walks of life would freely respond to repel the attack than for a similar purpose in any other nation in the world.

We rejoice in this fact; we encourage the thought because it is a distinguishing trait in which every true American takes pride and to which he can point with pardonable exultation. Streaming from every parapet in this great country, from ocean to ocean, from the Lakes to the Gulf, we see the flag of this Republic, with its stripes of white and red and its starry field of blue, representing the sisterhood of 48 States, containing a population of more than 100,000,000 people, who rejoice as one man over the triumphs of these gallant men in the days when the life of the Nation was in peril. It is most fitting, therefore, that we offer substantial recognition as the evidence of our sincere appreciation of their unselfish services.

From the foundation of our Government down to the present time we have paid approximately in pensions $5,000,000,000. A far greater sum than that paid by any other Government, but it has been money well spent—money paid as an inspiration to patriotism, cheerfully expended by the gratitude of a liberty-loving people. It has inspired patriotism and made the citizen know that when he offers his life as a sacrifice in defense of his country the people will appreciate his patriotism; that a grateful Government will recognize his services and reward his courage.

This policy has fortunately saved this country from the expense of a large standing army, discouraged the spirit of militarism, which has been the bane of European countries, where military chieftains brood over battle fields and widows and orphans protest in vain. It has cultivated the spirit of patriotism in every citizen in the land, who stands ever ready to take up arms in defense of his country and do battle for its preservation, and when peace is restored to return to the civil walks of life and follow their pursuits. Aye, this policy has its reward, a most glorious reward, one that inures to the promotion of the common welfare of the greatest Republic in all the tide of time, a policy that assures the perpetuity of our Nation, the greatest in the world.

---

## Widows' Pensions.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM A. AYRES,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. AYRES. Mr. Speaker, I am heartily in favor of this bill. While this Congress has been very liberal indeed in granting pensions, and I feel that no just complaint can be made that it has in any sense been penurious, and, so far as I am concerned, it can not be too liberal.

I believe in pensions; I believe in protecting in every way possible those who protected and defended the Nation whenever necessary. I have voted for every pension bill so far that has come up for passage in this session, both general and private, including the allowance of pensions for the widows of the Spanish-American War veterans, also the old Indian fighters, and for increases reported by this committee. I did it because I thought it right.

I think this bill, which provides for the widows of the soldiers of the Civil War, is a good and wise act and in keeping with the feelings of the American people on such matters.

This bill increases the pension of a widow who was the lawful wife of a soldier during the Civil War from $12 to $20 per month, and it also provides for $20 per month to all Civil War widows who are now on the pension rolls or may be hereafter placed on the pension rolls. I do not believe that any fair-minded man can say other than that this is just and equitable. It was many years after the close of the Civil War before the widow of the old veteran was placed upon a pensionable basis or given a pensionable status. I have never felt that this was an act or an oversight that we could be particularly proud of, for it has always seemed to me, or at least ever since I have been old enough to investigate such matters, that the widow of the man who risked his life for the protection and preservation of the Nation was entitled to some consideration and recognition at the hands of the Government when she is left upon her own resources. In thousands of cases she has been left prematurely upon her own resources, because of the broken health of the husband caused by such service.

The committee having charge of this bill has wisely said that $20 per month for a widow who is 70 years of age means less than $12 per month for younger women who are still able to work and support themselves. Under the law as it now exists, a widow who may have married again is dropped from the pension rolls. She may have made a wise choice in her second marriage and married a most exemplary citizen, but not possessed with much of this world's goods. Death may again visit her domicile; she is the widow of a civilian, not a soldier. Although she may be destitute, she is deprived of the small annuity allowed her as the widow of her soldier husband. She may have made an unwise choice in her second marriage, for we must admit that all men are not model husbands. A divorce from her second husband would not restore her to her former status of a pensioner under the present law, but this bill makes provision that in case of a remarriage, upon the death of her second husband she is restored to her former rights as the widow of the soldier husband; also, where the unfortunate widow marries the second time and is divorced upon her own application, she is restored to her former status under the provisions of this bill. This is just and equitable.

Mr. Speaker, there has been a great deal said about the act of 1890, which provides that no widow who had married a soldier after June 27, 1890, was entitled to a pension. There were prob-

ably at that time good reasons to be assigned why it was necessary to pass that act. I do not care to discuss that, because so far as I am concerned it is past history. That was 26 years ago this month, and as I have said that the reasons for passing it in that form might have been good and they might not have been. Every Congressman knows that many special acts have been passed during the past few years for widows who were married since the passage of that law.

This bill raises the marriage limit 15 years, or until June 27, 1905. I am glad to support a measure which raises the limit or the date nearer our own time.

The Nation has come to believe that it owes much to these women for their self-sacrifice; that no longer should they be looked upon as objects of charity. It is a debt of gratitude that we owe them, and we are doing but our duty when we make such provision as this bill contains for their old age.

That it will take a little more revenue to meet this increased expense there is no doubt, but as the committee has well said:

It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur. All patriotic men will enlist more freely in defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and the mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood. It is the wife who gives birth to all of the soldiers and heroes of the past, the present, and the future. It is the wife who gently ministers in loving tenderness to the old comrade when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfully and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty Nation for the frail old woman left behind."

I hope this measure will pass this session of Congress and become the law.

## Widows' Pensions.

### EXTENSION OF REMARKS
OF
### HON. ISAAC BACHARACH,
OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. BACHARACH. Mr. Speaker, the debt of gratitude which this great country of ours owes to the "Boys in Blue," who, when duty called, left every comfort and happiness of home and community to take up the dangers and rigors of war that the Union might be saved, is seconded only by the benign recognition which she owes to the mothers, wives, and sweethearts of those gallant men, who have since become their widows, many of them who are now too old to longer perform labors which will help in their support in their twilight of life, and who—and justly so—are too proud to beg.

These good women shared equally in the heat and burdens of those days that so sorely tried men's souls. Many of them were left at home to care not only for themselves but for their children, and they were forced to take up the duties of supporting their homes where their fathers, husbands, and sons had left off to answer the call to arms; and by their vigorous energy and untiring efforts they were able to keep up their homes during that mad struggle for existence and the trying times that followed.

The bill provides that the sum of $20 per month shall be paid to the widow of any officer or enlisted man in the Army or Navy who was his lawful widow during his service, and that the rate of pension for a widow who has reached or shall hereafter reach the age of 70 years shall be $20 per month.

It provides further that any widow whose name has been on the pension roll, and whose name has been dropped by reason of her remarriage to another person, who has since died, shall be entitled to have her name again placed on the pension roll at the rate she was formerly pensioned, unless she is entitled to a greater amount under section 1 of the act. And this provision is extended to those widows whose husbands died of wounds, injuries or disease incurred during the period of their military or naval service, but who were deprived of pension under the act of March 3, 1865, because of their failure to draw pension by reason of their remarriage.

The bill provides also that any widow who married a veteran soldier or sailor prior to June 27, 1905, shall have title to pension, to commence from the date of filing of application, after the passage of this act. Heretofore the widow of a soldier or sailor who married the said soldier or sailor subsequent to 1890 was not entitled to a pension under the act of 1908. This provision takes care of those good women who married Civil War veterans at a time when they were in need of the sympathetic care and kindly ministrations of a loving wife. Many of these veterans were suffering from ailments directly or indirectly attributable to their military or naval service, but notwithstanding this these good women were willing to become their constant companions and to assume the responsibility and duty of caring for these old soldiers in their failing health until such time as they were called to their final reward. But because these angels of mercy took up these burdens at a date subsequent to the year 1890 they were denied the right of a widow's pension. The provision, therefore, gives to those good women who married soldiers or sailors prior to June 27, 1905, the same pensionable standing as the widows of all other veterans.

I have a deep place in my heart for those good women who bravely sent their husbands and sons and their sweethearts to fight for the preservation of the Union, and who without flinching or quailing took up their duties where they left off and showed themselves to be women of metal and of the greatest moral and physical courage. I also have great respect for those good women who took upon themselves in after years the responsibility of ministering and caring for those brave veterans in their declining years, and I am happy to know that this bill provides for them.

Mr. Speaker, to support this bill is a privilege, as I believe it to be my duty, that is extremely pleasing to me. I hope that the Senate will see fit to give the bill early and favorable consideration and that it shall become a law before the close of this session of Congress.

## The Widows' Pension Bill.

### REMARKS
OF
### HON. C. W. RAMSEYER,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. RAMSEYER. Mr. Speaker, the Committee on Invalid Pensions, of which I have the honor to be a member, present for the consideration of the House a bill to increase the pensions of widows of soldiers and sailors of the Civil War. This bill was prepared with great care, and represents the unanimous judgment and sentiment of the committee. Widows of veterans of the Civil War did not receive any pension until 1890, and the law then allowed them only $8 per month. The pension for widows was increased in 1908 to $12.

This bill gives $20 per month to the widow who was the wife of a soldier or sailor during his service in the Civil War and the same sum to a widow of a Civil War veteran who has reached or shall hereafter reach the age of 70 years. Another provision of this bill is that a soldier's or sailor's widow who has lost or shall hereafter lose her right to pension because of her marriage to another person shall, upon again being widowed, be entitled to have her name restored on the pension roll. Heretofore a widow of a soldier or sailor was not entitled to a pension if she married subsequent to June 27, 1890. Under this bill such a widow is entitled to pension if her marriage to the soldier or sailor was prior to June 27, 1905. This bill does not change pensions to orphans of Civil War veterans.

This is no mere gratuity extended to the widows of the veterans of that great war, but the demands of justice require that the bill should speedily pass this Congress. We talk a great deal these days of preparedness. In cases of emergency this country has always relied on the volunteer soldiers, and our citizen soldiers in such times have never failed the country with their all of property and of life. A just and grateful country can best show its appreciation of such sacrifices by making generous provisions for the widows and orphans of those who offered their all in response to their country's call. At this time, when young men are invited and urged to train themselves for any future emergency, let us assure them by the passage of this bill that if their lives are sacrificed in defense of our flag, their loved ones will have the protection and care of this great Republic.

A further consideration should prompt us to be generous toward the widows of the veterans of the Civil War. That was not only the greatest war in which any citizen of the Republic was ever called upon to do and to dare, but up to that period was the greatest and bloodiest war of all times, whether judged from

the number of lives lost or from the loss of money and property. Speaking of the magnitude of that war I desire to quote to you Gen. Joe Wheeler, who fought on the side of the Southern Confederacy and who for many years was a distinguished and honored Member of this House, but he also, who when our country's call came for volunteers to relieve the oppressed in Cuba, was among the first to offer his services to President McKinley.

Gen. Joe Wheeler says:

Take the killed and wounded in all the battles of the French and Indian war, take the aggregate killed and wounded in the War of 1812, take the aggregate killed and wounded in the Mexican War, take the aggregate killed and wounded in all our wars with the Indians and they amount to less than the killed and wounded in Grant's army in the struggle from the Wilderness to Spotsylvania. The killed and wounded of the Federal Army in six out of nearly a thousand severely contested struggles during the four years of war is as follows:

| | |
|---|---|
| Murfreesboro | 8,778 |
| Seven Days' Fight | 9,291 |
| Chickamauga | 10,906 |
| Antietam | 11,426 |
| Gettysburg | 16,426 |
| Wilderness to Spotsylvania | 24,481 |

In the battle of Marengo the French lost in killed and wounded, 4,700; the Austrians, 6,475. In the battle of Hohenlinden the French loss in killed and wounded was 2,200, the Austrian loss was 5,000; at Waterloo Wellington lost 9,061 in killed and wounded, Blücher lost 5,613, making a total loss of the allies, 14,674. By comparison we see that in the greatest of battles fought on European soil the loss was nearly 2,000 less than the loss at Gettysburg, and nearly 10,000 less than the loss of the Federal Army at the Wilderness and Spotsylvania.

Mr. Speaker, at this point I desire to incorporate in the RECORD certain tables furnished by the Commissioner of Pensions, showing the liberal attitude of our Government in pensions toward the veterans of all our wars:

The following table, furnished by the Commissioner of Pensions, shows the amounts paid by the Government in pensions to soldiers, sailors, and marines, their widows, minor children, and dependent relatives, on account of military and naval service since the foundation of the Republic:

| | |
|---|---|
| War of the Revolution (estimated) | $70,000,000.00 |
| War of 1812 (service pension) | 45,972,895.76 |
| Indian wars (service pension) | 13,315,227.19 |
| War with Mexico (service pension) | 49,618,948.68 |
| Civil War | 4,614,643,267.43 |
| War with Spain and Philippine insurrection | 49,944,441.84 |
| Regular Establishment | 35,472,408.77 |
| Unclassified | 16,508,447.41 |
| Total | 4,895,475,637.08 |

The following table, also compiled from the annual reports of the Commissioner of Pensions, shows the number of pensioners on the roll, the annual value of pensions, the disbursements on account of pensions, the number of original applications filed, and the number of original claims allowed each fiscal year from 1879 to 1915, inclusive:

| Fiscal year. | Number of pensioners on the roll. | Annual value of pensions. | Disbursements on account of pensions. | Total number of applications filed, original. | Total number of claims allowed, original. |
|---|---|---|---|---|---|
| 1879 | 242,755 | $25,493,742.15 | 33,664,428.92 | 57,118 | 31,343 |
| 1880 | 250,802 | 25,917,906.60 | 56,689,229.08 | 141,466 | 19,545 |
| 1881 | 268,830 | 28,769,967.46 | 59,583,405.35 | 31,116 | 27,394 |
| 1882 | 285,997 | 29,341,101.02 | 54,313,172.05 | 40,939 | 27,664 |
| 1883 | 303,658 | 32,245,192.43 | 6.,427,573.81 | 48,776 | 38,162 |
| 1884 | 322,756 | 34,456,600.35 | 57,912,387.47 | 41,785 | 34,192 |
| 1885 | 345,125 | 38,099,985.25 | 65,171,937.12 | 40,918 | 35,767 |
| 1886 | 365,783 | 44,708,027.44 | 64,091,142.90 | 49,895 | 40,857 |
| 1887 | 406,007 | 52,821,641.22 | 73,752,997.08 | 72,465 | 55,194 |
| 1888 | 452,557 | 56,707,223.92 | 78,950,501.67 | 75,726 | 60,252 |
| 1889 | 489,725 | 64,246,552.33 | 88,842,720.58 | 81,220 | 51,921 |
| 1890 | 537,944 | 72,052,143.49 | 106,094,250.39 | 105,044 | 66,637 |

[1] Does not include 72 pensioners, class, "Brothers, sisters, sons, and daughters" under "general law," formerly carried on the New York agency roll.

The veterans of our Civil War are rapidly passing from our midst. They lived during—yea, they made—a great epoch of our country's history. The following table shows the loss and percentage of loss to the pension roll by death of Civil War soldier pensioners from the year 1911 to 1915, inclusive:

*Losses to pension roll, 1911 to 1915.*

| Year. | On roll at beginning of year. | Loss by death during year. | Percentage of loss. |
|---|---|---|---|
| 1911 | 562,615 | 35,243 | 6.2 |
| 1912 | 529,884 | 33,981 | 6.3 |
| 1913 | 497,263 | 36,064 | 7.2 |
| 1914 | 462,379 | 33,639 | 7.3 |
| 1915 | 396,370 | 33,255 | 8.4 |

There has been objection to the bill on account of the cost. This objection has been completely answered in the committee's report, in the following language:

It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur. All patriotic men will enlist more freely in defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and the mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood. It is the wife who gives birth to all of the soldiers and heroes of the past, the present, and the future. It is the wife who gently ministers in loving tenderness to the old comrades when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfully and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty Nation for the frail old woman left behind.

Mr. Speaker, this bill should pass. I hope there will not be a vote in opposition. In conclusion I wish to quote you the closing paragraph of Lincoln's second inaugural address. It is as true and applicable to-day as it was when it was first uttered on March 4, 1865:

With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

## Widows' Pension Bill.

## EXTENSION OF REMARKS
OF
## HON. FINLY H. GRAY,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. GRAY of Indiana. Mr. Speaker, this Nation will not have discharged its just obligations to its defenders until this bill providing for the further relief of the widows of the veterans of the Civil War and the bill already passed by the House and now pending in the Senate, granting a pension to the widows of the soldiers of the Spanish-American War and their minor children, shall have been enacted into laws.

Whatever may have been the justification for the law passed 26 years ago, denying a pension to widows who were married to soldiers after January 27, 1890, no reason can now be shown for its continuance. The surviving soldiers of the Civil War have long passed from the strength of manhood to the feebleness of their declining years. They have laid down the sword to rest upon the supporting staff in the sunset of life. The firm, resolute steps of vigorous youth have given way to the faltering tread of advancing years. The ravages of time have reopened the wounds of battle, and the infirmities of age have aggravated disease and disability, brought on by hardship and exposure.

The woman who has lived with the soldier during all these declining years, and faithfully nursed him, cared for him, attended him through disease, the infirmities of old age, and the trials of his helpless dependency, has performed a duty as patriotic as the soldier upon the field of battle, and for which she is deserving of a pension as a just reward for faithful service to her country.

The constant care, the patient attention, the devotion of years in attending these soldiers who have become helpless and dependent from wounds and disabilities, aggravated by old age and advancing years, are services which can not be measured

in money or compensated for by a pension. A debt of gratitude will still be remaining.

The soldiers in the time of their health, in the vigor of their young manhood, at great sacrifice to their families as well as themselves, have given their services and the best of their lives to their country, and by reason of wounds and of disabilities resulting from hardship and exposure, they have been disabled from providing for those dependent upon them in their old age, and for their support after they are gone. The pay of soldiers is merely nominal and in no way commensurate with the value of the service performed. Pensions are, in a way, deferred payments in discharge of the obligations of the Government to its defenders, and distributed to meet the wants and needs of soldiers in their dependent and declining years.

Pensions are not only granted to soldiers for their own support in the days of their impairment and old age, but are, as well, for the support of their families and those dependent upon them. Every reason that exists for a pension to soldiers exists for a pension to their widows who are left the bread-winners after the soldiers have gone. While the soldier lives, he may be able with his own labor to contribute to the support of his family and those dependent upon him, but after he is gone his mite is withdrawn. The widow and her family must still live, and even with the same pension paid to the soldier the widow is left more dependent than before. The soldier's pension should be substantially continued to the widow instead of cut off or reduced.

But there is another and a higher consideration due to woman than support as a widow. She is entitled to a pension in her own right for heroic and patriotic service in the hour of her country's need. The woman who remains at home to care for the soldier's family and to take his place to fight the battles of life for those dependent upon him, has performed a duty as brave and courageous as ever a soldier who won the honor of his country upon the field of battle. The woman at home who weeps in silence, while cheering the soldier on to victory, has served the country as bravely in war as ever its heroic defenders in arms. But the poet has already told my story of the heroism of woman and her service to her country:

The maid who binds her warrior's sash
With smile that well her pain dissembles,
The while beneath her drooping lash
One starry teardrop hangs and trembles,
Though Heaven alone records the tear,
And fame shall never know her story,
Her heart has shed a drop as dear
As e'er bedewed the field of glory!

The wife who girds her husband's sword
'Mid little ones who weep or wonder,
And bravely speaks the cheering word,
What though her heart be rent asunder,
Doomed nightly in her dreams to hear
The bolts of death around him rattle,
Hath shed as sacred blood as e'er
Was poured upon the field of battle!

The mother who conceals her grief
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses,
With no one but her secret God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on freedom's field of honor!

## Woman Suffrage.

### EXTENSION OF REMARKS
OF
### HON. JOHN M. EVANS,
OF MONTANA,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 22, 1916.*

Mr. EVANS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the Judiciary Committee June 1, 1916, in advocacy of the adoption of a Federal amendment for equal suffrage.

Statement made before the Judiciary Committee is as follows:

"Mr. EVANS. Mr. Chairman and gentlemen of the committee, the question of woman suffrage in my State has come along so rapidly that possibly my vision has been warped a little bit on what ought to be done on the subject. When the matter first came before our people years ago it was looked on as a good deal of a joke. In the assembly at that time the proposition got 2 votes out of 150, or maybe 100; two years afterwards the matter came back to the legislature and it lacked only two votes of having a majority; two years afterwards the matter came back to the legislature and it got all but two votes in the legislature. In a period of six years the whole public sentiment of that State had been changed on that question.

"Mr. NELSON. How do you account for that remarkable change in such a short time?

"Mr. EVANS. We have a lot of active women there—local women, fine, upstanding women; and we had some bad politics in the State—and we believed that possibly if we got good women voting there it would clarify our politics, and it did, particularly in local matters, questions of morality, and so on.

"Mr. CARAWAY. Do you not think it is a slander on the men of your State to say that they were so morally bad that they had to bring the women in to clarify and purify the politics of the State?

"Mr. EVANS. I do not think it is a slander; no.

"Mr. CARAWAY. It certainly is not a good advertisement for them.

"Mr. EVANS. I do not know what the conditions are in your State, but if you know anything about politics you know that sometimes in local matters there are influences at work which control the election of all the minor offices, the so-called immoral interests and the other interests that surround them. It was the women who put those people out of control of such affairs.

"Mr. CARAWAY. Your proposition is that you needed the women to put a certain class of people out of control?

"Mr. EVANS. We did need the women to help us do that, yes; and much good has resulted from the fact that women have suffrage in our State.

"Mr. WILLIAMS. Do you not think that women are stronger on all moral questions than the men?

"Mr. EVANS. I think so; yes.

"The CHAIRMAN. Everybody knows that the larger percentage of the women is good.

"Mr. EVANS. I am willing to confess that is true. In my State no political party ever adopted a platform for woman suffrage until four years ago. In the Democratic convention, the first convention in which we had a contest over it, I was for suffrage. I would like to have you pardon the use of the personal pronoun, but I made a fight on the floor of the convention for it and had the convention adopt a platform for woman suffrage, and every convention in the State immediately followed. They knew they had to if they met with any success. They did follow, so that we out there are for woman suffrage; every single platform has included it. As I have told you, it got every vote but two in the legislature; we then submitted it to the people and the amendment carried overwhelmingly last fall.

"Mr. CARAWAY. I can not understand why it was necessary to have the women help purify politics if such an overwhelming majority of the men were susceptible to this influence. Why could not the men have purified politics without the interference of the women?

"Mr. EVANS. Well, it was the result of the development of that sentiment and because I think we were making some progress in the Northwest. I do not know about other sections of the country, but I know we are progressing out there. The suggestion has been made that this has been made the subject of party politics, and some of us feel some little resentment toward somebody who comes out and makes a fight against those of us who have been in favor of woman suffrage simply because we are members of the Democratic Party. If you will pardon the use of the personal pronoun, let me say again that I made a fight in the convention for the carrying of this proposition in the platform, and my colleague, Mr. STOUT, who is with me, introduced the resolution in the legislature that carried the constitutional amendment. So the two of us have had something to do with the granting of woman suffrage in Montana. Now, they tell me that some of the members of the Congressional Union are against me, and in that connection I am reminded of a story told about an Irishman who was captured by Indians in the early days. They tied the Irishman up to a tree, danced war dances around him, jabbed knives into him and drank his blood. The Irishman finally said, 'I do not give a blankety-blank about your kiyiing, but I do not like to be stuck for the drinks every time.'

"It seems to me that if a few women are going to make fights against members of the Democratic Party, they are not going to meet with much success, or if they make fights against members of any other party. The majority of the women are going to vote for those men who will best serve their country, the United States of America, and they are not so very much concerned with anything else, no matter what party the man may represent. I can appreciate that some of the gentlemen from southern districts have territorial conditions that are not like ours and they may not want this matter. However, I am con-

fident it is a matter that should be passed. I think we want to be fair with ourselves and with our country, and for one I am in favor of reporting the resolution, and as long as I am here I shall continue to urge a vote on the proposition and will keep working to that end until it becomes a law."

## Efficiency of the Department of Commerce.

### EXTENSION OF REMARKS

OF

### HON. RICHARD OLNEY, 2D,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 22, 1916.*

Mr. OLNEY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I wish to insert the following letters and papers pertaining to the efficiency in the Department of Commerce:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
*Washington, June 13, 1916.*

Hon. RICHARD OLNEY, 2d,
*House of Representatives, Washington, D. C.*

MY DEAR CONGRESSMAN: On June 6 Hon. JOHN J. ROGERS, of Massachusetts, caused to be printed in the CONGRESSIONAL RECORD, page 9300, certain remarks, in which he reflected very severely on the commercial attaché service of this department. The inclosed article, which was printed in the Annalist for March 6, will give the facts.

I wish you would read so much of ROGERS'S statement as refers to this subject—it is but brief—and perhaps you will see your way to replying to it, using the material herein.

My chief purpose, however, is to hand you copy of letter sent by me to Mr. ROGERS on the 12th, and to suggest that if you do see fit to take the matter up, possibly you can have my letter to him inserted in the RECORD. There have been few worse cases of absolute misrepresentations than Mr. ROGERS'S speech, so far as it relates to the commercial attachés, and it would be very simple for you to knock it out and show up the complete untruthfulness of what he says.

Yours, very truly,

WILLIAM C. REDFIELD, *Secretary.*

—

JUNE 12, 1916.

Hon. JOHN J. ROGERS,
*House of Representatives, Washington, D. C.*

MY DEAR CONGRESSMAN: I have read with deep interest your remarks in the CONGRESSIONAL RECORD of June 6 referring to the service of commercial attachés conducted by the Bureau of Foreign and Domestic Commerce of this department. Your information seems so wide, so varied, and so far exceeds that which I possess that I trust I may be pardoned for addressing you in the public interest some questions to which I beg your direct and categorical replies:

(1) Kindly say exactly in what ways do "these 10 men (commercial attachés) hinder the work of the consuls." Kindly give one or more instances in which any commercial attaché has hindered the work of any consul. No such case has ever been reported to the department; rather the reverse.

(2) Kindly give citations of time and place showing "repeated cases where a commercial attaché would ask a consul to collect information for him bearing upon a certain subject," and state the actual cases wherein "the attaché, without giving any credit whatever to the consul, would forward the information to the Department of Commerce and it would be blazoned forth to the country with a great hurrah."

(3) Kindly say what consuls and where have "notified the attachés that they no longer could do their own work and that of the attaché as well." Please name the consul or attaché concerned. In view of the publicity given the statement by you doubtless your informant on this alleged matter will probably not object to our knowing his name. Kindly transmit it to me, that the matter may have closer inquiry. No such case has ever come to my knowledge save through your lips.

(4) Please name the attachés who "were selected for political reasons," and kindly say on whose authority the statement is made.

(5) You are invited to name the attachés who "had no apparent qualifications for the task to which they are assigned." How do you know this? What qualifications do you suggest for a commercial attaché, and which of these qualifications are not required by this department? Have you read the examination papers showing what is required from an attaché?

(6) Name the attachés who are not able to speak "the tongue of the country" to which they were sent or a language current in commercial circles therein. Is there one such? On whose authority do you say "knowledge even of the tongue of the country were apparently not deemed essentials to appointment"? The reverse is true. The facts were available to you. Please give particulars and details to justify your statement.

(7) On what authority do you say the commercial attachés "have no official standing abroad"? All the attachés are accredited through the Department of State and by a ruling of that department rank after the first secretary of the embassy or legation. The facts are available and are the reverse of your statement.

(8) Kindly state a case to verify your statement that any "foreign government can not understand why they are in the country at all." To what government do you refer? If you prefer not to mention any government, kindly state the source of your authority, that inquiry may be made.

(9) Under foreign governments is it always "the practice" to place the commercial attaché service under the direction of the foreign ministry? Your alleged information seems so complete that I ask you to kindly tell me what other countries have commercial attachés, and how many and how controlled.

(10) What did the Chamber of Commerce of the United States determine with reference to the commercial attaché service?

(11) What did the national foreign trade council, from whom you quote, say about the commercial attaché service?

(12) What did the American Manufacturers' Export Association say about the commercial attaché service?

(13) What special and direct service to a large manufacturer in your own city was rendered by a commercial attaché and publicly acknowledged by the manufacturer?

I hope you will not be too busy to answer fully the questions asked. You are invited, nay, you are respectfully challenged, to publicly state the truth, and the whole truth, respecting what the commercial attaché service has accomplished. The facts are open for all the world to know, and are available to you as a public man. Tell them without fear and favor. I purpose to do so not only because there is nothing in them to be concealed but because the business world has the right to know what has been done for them and how it has been done. The record is one of which this department and the country has just reason to be proud and your attack upon it is most welcome as affording a basis for bringing the truth to light.

Yours, very truly,

WILLIAM C. REDFIELD, *Secretary.*

—

WHERE GOVERNMENT AND BUSINESS MEET.

[Article by Hon. William C. Redfield, Secretary of Commerce, in the Annalist, New York, Monday, Mar. 6, 1916.]

Six lines are printed in the form of a "Trade opportunity" in the daily Commerce Reports, and new orders from a Portuguese firm come to American producers aggregating over $100,000.

A suggestion is made by a commercial attaché to a European monarch, and a preferential tax working against America is removed and orders for many thousand tons of coal follow. A new market has thus been opened.

In South America a commercial attaché cooperates with large American interests, and a new smelting industry is brought to the United States. By it credits are opened here permitting foreign purchases heretofore impossible.

In Asia a commercial attaché cooperates with an American salesman, and orders for the machinery equipment of two cotton mills result.

A department circular brings to a southern city a large order for hospital equipment from Her Majesty Queen Olga of Greece.

The facilities of the service in New York are put at the disposal of a visiting Russian buyer, who places an order for 40,000 bales of cotton per annum for five years.

An Australian buyer landing on our west coast is met by salesmen on his arrival through the advance action of the service; he buys double the amount he had expected to purchase in America.

Information gained in Central America through a traveling "special agent" provides new sources of logwood supply for an American industry requiring that product.

These incidents represent in different ways some results of the various activities of the department's service. They are not complete, for the illustrations could be indefinitely multiplied, but they are typical of the results which the work of the department secures.

The operations of the Department of Commerce in advancing American trade may be classified as direct and indirect. In the former are those services whose work immediately promotes commerce and industry. The latter includes the services which assist and safeguard the commercial operations which the other services enhance. In the former class may be reckoned the Bureau of Foreign and Domestic Commerce, the Bureau of Standards, the Bureau of Fisheries; in the latter class the Lighthouse Service, the Coast and Geodetic Survey, the Navigation Service (which includes the Radio Service), the Steamboat-Inspection Service, and the Bureau of the Census.

The services which work for the direct advance of commerce may themselves be divided into those which are purely promotive and those which operate through research. The latter lay foundations for industry and trade. The former develop the work upon these foundations.

PROMOTIVE WORK.

Taking first the directly promotive work, in which the Bureau of Foreign and Domestic Commerce is the spearhead of the department, let us see how this is carried on. It operates through two forces—the foreign force and the domestic one—and each has a threefold character—the general staff, the local units, and the traveling staff.

Abroad the general staff consists of 10 commercial attachés, stationed at Petrograd, Rotterdam, London, Paris, Peking, Melbourne, Lima, Santiago, Buenos Aires, and Rio. These are trained men, familiar with the commercial methods of the countries to which they are assigned, speaking their language or the language current in commercial circles therein. They are accustomed to export trade and give their whole time to the single duty of promoting American commerce.

The local foreign force consists of the United States Consular Service, comprising several hundred active men stationed all over the world. This force is under the Department of State, but works in cordial cooperation and in daily touch with the Department of Commerce. Let those, if any there be, who think the Consular Service the refuge of worn-out ministers and political hacks forget this moss-back viewpoint and bring their judgments up to date. The Consular Service is alert, active, capable; every day it brings definite good to American business through its intelligent and earnest work.

The foreign traveling staff of the department consists of its "commercial agents." These are specialists in some particular line of industry. Being familiar with that special business as it is conducted at home, and having made a careful review of it before they leave, they go abroad and proceed from country to country hunting for opportunities in that line. On their return they go through the ranks of the industry here informing that portion of our business world of what they have learned abroad. Officers of this special service are now working in India, the West Indies, South America, Japan, China, and South Africa.

The domestic general staff of the Bureau of Foreign and Domestic Commerce is at its main office in Washington. There it receives the information coming daily from all over the world through the sources above named, adds to it knowledge obtained from foreign commercial and technical publications, and puts this into the hands of American producers throughout the land.

COOPERATION.

The local domestic force consists of eight branch offices of this service, located in New York, Boston, Chicago, St. Louis, Atlanta, New Orleans, San Francisco, and Seattle. Each of these is in charge of a trained

commercial manager who maintains close relations with the commercial organizations throughout the district of which his city is the center, and with the commercial press therein. He has in stock publications of the service and brings to the local community all the facilities which the head office has. A recent development of this part of the work is the creation of "cooperating branches" in other cities than those where branch offices exist. The plan of cooperation provides that the local chamber of commerce shall establish a foreign trade bureau, in the hands of a man devoting his whole time to it; that the work so carried on shall be open to the inspection of the officers of the Department of Commerce and shall cooperate fully with the Government service. Such cooperating branches are supplied with the literature and information which the department has and receive and furnish information as fully as the branch offices of the service itself. Under the auspices of the chambers of commerce in the respective cities named these cooperative branches are now operating in Cleveland, Cincinnati, Los Angeles, Detroit, Chattanooga, and Philadelphia. There are therefore 14 important centers from which this local work is carried on.

The traveling local staff of the department may be said to consist of the officers of the bureau and of the department, all of whom make it their practice to visit the branch offices frequently, to address commercial bodies all over the country, pointing out what the service is able to do, giving and receiving suggestions as to how that service can be made more helpful. The managers of the eight branch offices are expected in like manner to visit from time to time the important centers in their own districts.

EDUCATIONAL WORK.

The commercial agents on their return are sent throughout the country among the industries in whose interest they have specially studied abroad to lay the results of their work before these industries, as has been already indicated. A special officer is detailed to go throughout the country, meeting manufacturers in many lines for the sole purpose of explaining to them how to develop export trade.

All this is supplemented by the publication of one of the most valuable daily papers of its kind in the world, the daily Commerce Reports. This is not the old Consular and Trade Reports under another name. It is its child and successor, but the child has outgrown the parent, who would hardly recognize his offspring. It is no longer gratuitously distributed, for men place a higher value on a publication for which they pay. About 5,000 copies go each day to public and semipublic centers of information, libraries, boards of trade, universities, and exchanges with other publications. Something over 9,000 copies a day go to actual subscribers, who pay $2.50 a year for the paper.

It would be easy to fill this number of The Annalist and others with the letters from the subscribers to this little daily who speak of its value to them:

"A manufacturing house writes that it has just delivered to a Russian firm $2,500 worth of merchandise, saying it cost them just 7 cents to get the order, as the name was given them by us. A hosiery manufacturer writes the branch office in Atlanta that he had the day before received an order for about a thousand dozens from Santo Domingo, obtained through the use of our Trade Opportunities. To another branch office a subscriber states that he has sooner or later secured business from about 20 per cent of the Trade Opportunities published in the Commerce Reports, and that one of these has brought him business from India amounting to about $3,000 a month.

"In Ohio a manufacturer says he is now receiving the fourth order obtained from a party with whom Trade Opportunities brought him into touch. The St. Louis office is told that a firm in their district had secured a customer who had been purchasing from ten to eighteen thousand dollars per annum, and a large machinery house informed us that our service had put them in touch with at least five countries at little or no cost to them, and that they were at the time of writing working on a cable order started through our Trade Opportunities system, which cost them approximately 25 cents postage and a few cablegrams.

"The consul general at Copenhagen in January writes that as the result of the publication in Commerce Reports of Trade Opportunities and other articles much new American trade was opened there, covering such lines as canned fruit, molasses, typewriter parts, grass seed, salmon, fruits low-grade butter, flour, curtain poles, egg albumen, twine, leather, and dress goods. The service does nothing whatever to further the sale of war munitions of any nature."

Special supplements, each relating to one country, are frequently published with Commerce Reports. These are numbered in succession, so that as they accumulate they can be bound into a volume for each separate country, which will represent our continuous commercial touch with that country through a series of months or years.

COMPETITIVE GOODS.

A special point is made of collecting samples of the foreign-made goods which are either sold in competition with our industries or which it is thought can be advantageously produced here. Full details of prices, sizes, weights, materials, designs, etc., are obtained with each sample. About 350 specimens of such foreign cotton goods, poplins, etc., were shown during February and March in the New York office in the customhouse. They were previously exhibited in Boston. As this is written a collection of hardware and tools made in the markets of England, Holland, Russia, Sweden, Norway, Denmark, Brazil, Peru, and Uruguay, comprising several thousand specimens, accompanied by the foreign catalogues, is being prepared for exhibition at the New York office. It will be shown later in 18 or more prominent cities. Specimens of a like character are being collected in other countries.

Business houses which are interested in any particular market are invited to so inform the service, which records their names and furnishes them directly with any special information concerning that market which may come. Of course, some information reaches the service which is not intended for the use of our international competitors. It may be noted here that these same competitors pay us the compliment of seeking to learn the knowledge we acquire. Confidential circulars are therefore sent in particular cases to all houses interested in the subject matter. A recent circular of this kind brought to the notice of our manufacturers a cablegram from a consul general abroad giving the name and address of a foreign buyer of paper. The reply to this circular said that an American house had, by reason of it, secured an order for $20,000 from the person named in it. This branch of our service, like every other, is open to any American house that wishes it.

There thus exists at home and abroad an efficient, trained, commercial organization, active and zealous in the development of American business.

APPROPRIATIONS FOR SERVICE.

The service is happy in the recognition by the commercial world of what it has done and is daily doing. Most of this work is new. Two years ago there were no commercial attachés. Two years ago there were no branch offices, nor were there any cooperating branches. Commerce Reports in its present form is little over a year old. The appropriations for promoting American commerce in 1909 were $40,000. They stayed at the same figure in 1910 and 1911. In 1912 they rose to $60,000, and remained so in 1913 and 1914. I speak in each case of the fiscal year ending June 30 in the years named. For the fiscal year 1915 the sum for promoting commerce grew to $125,000; the next year to $150,000. The estimate for the coming fiscal year is in the sum of $250,000.

There were, of course, no appropriations for commercial attachés before the fiscal year ended June 30, 1915, for none existed. The sum of $100,000 per annum has been appropriated since, and the present estimates contemplate an addition of 10 more attachés. The ambassador at Italy has requested one, and others are needed in different parts of the world.

The service has made good, and men of all parties urge its development. If the current estimates of the service are allowed by Congress, a sum will be put at the disposal of the bureau during the coming fiscal year which will be five times greater than it was six years ago.

Supported with growing funds by Congress and approved by business opinion, this service, under the leadership of young, trained, and competent men, looks eagerly toward larger conquests for American trade. It believes that American industry can compete in foreign markets to its profit. It knows that it is so competing. It earnestly desires to extend those markets into other and larger fields. The demands upon it from American business men already strain its resources to the full; yet it feels that the great mass of American business men hardly know of its existence, and that some are, to say the least, doubtful of the value of the service which is bringing wealth into the coffers of their domestic competitors.

With a view, therefore, to spreading further among American business men the knowledge of the work, a conference was called during the early days of February of the commercial secretaries of the chambers of commerce of all cities in the United States of 150,000 population and over. These gentlemen were shown from the inside out every detail of the department's work which they could grasp in the two days devoted to it. The cordial sympathy with which this movement was received, the delightful relations that were established by it, lead to the belief that it will mean enhanced usefulness for the department in its work for American commerce.

## How the Progressives Were Betrayed at Chicago.

## EXTENSION OF REMARKS

OF

## HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 22, 1916.*

Mr. BORLAND. Mr. Speaker, under leave given to extend my remarks, I desire to quote a recent article in a Republican newspaper, the Kansas City Journal, of June 20, 1916, telling the true story of the Progressive convention at Chicago.

The article is as follows:

[From the Kansas City Journal, Tuesday, June 20, 1916.]

BULL MOOSE NOT READY TO YIELD—LOCAL FOLLOWERS OF ROOSEVELT BRAND HIM AS "GREATEST TRAITOR"—HOT SHOT FOR ROBINS—DELEGATES TO NATIONAL CONVENTION TELL HOW "FAITHFUL" WERE BETRAYED.

Delegates to the recent Progressive national convention at Chicago met with the Jackson County Progressive committee in the clubroom of the Coates House last night and explained minutely just how the steam roller rolled and how the loyal Progressives felt after they had been thoroughly flattened.

Fifty pioneer Bull Moose adherents attended the meeting, and while there were a few who were willing to wait before passing judgment on Theodore Roosevelt, the majority of them spoke in scathing terms of the colonel. One speaker called him the "greatest traitor in the world's history."

Other members declared that the steam rolling at the Progressive convention in Chicago was "one of the greatest crimes in history." Roosevelt was scorned, ridiculed, and condemned. A member of the committee openly declared that he would "rather vote for a yellow dog than vote for Roosevelt." This remark was loudly applauded.

Among the charges launched against the men who ruled the Bull Moose convention at Chicago were these:

The Chair ruled arbitrarily. Delegates outside the ring were unable to get the attention of the Chair. J. F. Fontron charged that the Chair recognized only those delegates who were picked for recognition. He said that James R. Garfield was the "patsy" for the Chair when he wanted to ignore a delegate. The Chair would say: "The Chair recognizes Mr. Garfield," although Mr. Garfield would be doing something else besides demanding the attention of the Chair. In these instances, when Mr. Garfield was selected as "fall guy" by the chairman, he would have to ask on what subject he was expected to talk. In other words, Mr. Garfield, member of the inner circle, was a safe man to talk to the Chair.

T. R.'S INTENTIONS DOUBTED.

It was charged that Theodore Roosevelt and his friend George W. Perkins, knew that Theodore Roosevelt never had any intention of accepting the Progressive nomination.

It was charged that the whole scheme between the leaders of the Progressives and the Republicans was a frame up to dump the Progressive rank and file.

It was charged that Republican leaders and Charles Evans Hughes knew all along that Roosevelt would not accept the Progressive nomination.

Delegates asserted that Roosevelt's telegram declining the nomination was received in the convention hours before adjournment and that the telegram was held back until a few minutes before adjournment in order to keep the delegates from nominating another man.

It was charged that Chairman Raymond Robins didn't put the vote for adjournment, but in a most high-handed and wholly unwarranted manner slapped the gavel down on the rostrum and declared the convention adjourned.

It was admitted that Gov. Hiram Johnson's nomination would probably result in the reelection of Woodrow Wilson, but the members of the Progressive committee of Jackson County declared that that was a matter of no concern to them whatever.

The platform, speakers declared, was not satisfactory to the majority of the delegates, and there were evidences on all sides that some one had pussy-footed with this new Progressive platform. It was not the great challenging human document, calling for human rights, such as the platform of 1912. There were many things that were left out. There were many undesirable things that were put in. The referendum and recall plank of 1912 was ignored. For this platform dickering an accusing finger is pointed at George W. Perkins, who is generally regarded as the sly fox in the whole proceedings.

SIDETRACKED THE PARTY.

Theodore Roosevelt was accused of having passed up the Progressive Party for the last two years. Instead of boosting his party, he devoted his time to talking preparedness and Americanism, and in other ways flirting with the Republicans.

After talking for three hours, during which time the Jackson County Progressives exhausted their supply of insanitary adjectives in describing the person and the general characteristics of Theodore Roosevelt, C. C. Outhier offered a resolution to be forwarded to the Progressive national committee. Several of the cooler heads thought that the resolution was a little too strong.

Some one suggested that the resolution shouldn't antagonize the national committee.

"Oh, give 'em hell," shouted another Progressive in a disgusted tone. "What do we care for the national committee?"

J. P. Fontron thought that it was not time to adopt such a drastic resolution. He said that Roosevelt had not yet positively refused to accept the nomination. There was a chance that he might run. At this point everyone laughed.

The Outhier resolution was read. It follows:

*"Resolved,* That we indorse the principles enunciated in the platform adopted by the recent Chicago convention and the nomination of John E. Parker, of Louisiana, for Vice President.

*"Resolved further,* That we deeply deplore the conduct of the officers of the national convention and their advisers, which prevented the nomination of a candidate for President upon the declination of Theodore Roosevelt; and we call upon the national committee, at its meeting on June 26, to nominate a tried and true Progressive like Gov. Johnson, of California, or Hon. Victor Murdock, of Kansas, for President, and we pledge such nominee our loyal support."

After this resolution had been read a representative asked how they were to know that Gov. Johnson or Victor Murdock wouldn't desert the party, just like Roosevelt had done. Assurances were given that Johnson and Murdock died game at Chicago and were on the level.

RESOLUTION IS TONED DOWN.

The resolution, however, was not offered. It was considered better to adopt one in milder form. The resolution finally adopted follows:

*"Resolved,* That we indorse the principles enunciated by the recent Chicago Progressive convention and the nomination of Theodore Roosevelt, of New York, for President and the Hon. John M. Parker, of Louisiana, for Vice President; and

*"Resolved further,* That in the event of the declination of the nomination by Col. Roosevelt, we call upon the national committee, at its meeting June 26, to nominate a true and tried Progressive like Gov. Hiram Johnson, of California, or Hon. Victor Murdock, of Kansas, for President, and we pledge such nominee our loyal support."

The meeting adopted the resolution unanimously, although a majority of those present believed that the first resolution should have been adopted. It was taken for granted by them that Roosevelt is not going to accept the Progressive nomination, and there is no use in wasting words over the matter.

The hat was passed for a collection to enable the committee to telegraph the resolution to John M. Parker, of Louisiana. L. A. Laughlin, chairman of the meeting, said that the resolution would be the means of comforting Mr. Parker, who, it was admitted, must feel decidedly uncomfortable in the present state of affairs.

L. A. Laughlin, J. P. Fontron, C. R. Pence, and C. C. Outhier, all delegates to the convention, did most of the talking, although S. J. Williams, a pronounced Roosevelt man, John A. Kerr, another who is still loyal to the colonel, and J. M. Jackson, who is emphatically opposed to the colonel, did some talking, too. W. O. Cardwell also hammered an attack on Roosevelt.

While S. J. Williams was praising Roosevelt for the things he has done, J. M. Jackson groaned heavily, and finally thundered out: "Oh, write it in a book and let's go on with other things."

Mr. Williams made the interesting statement that "Charles Evans Hughes has 3,000,000 German-American votes in his vest pocket, and that's about all."

Mr. Cardwell declared that Roosevelt had stabbed the Progressives in the back. "We were stabbed when we had no opportunity to defend ourselves," Cardwell shouted. "We got it in the neck and we might as well admit it."

FOOL CARDWELL TWICE? NEVER!

Cardwell asserted that the "dirty work" at the Progressive convention was planned at the Gary dinner of the "Invisible Government," which on that occasion had Roosevelt as a guest of honor. "A man can fool me once," Cardwell said, "but he can't do it the second time. I am against Roosevelt. He is a traitor."

C. C. Outhier declared that the steam roller at the Progressive convention rolled 2 to 1 better than the steam roller at the Republican convention four years ago. "And 90 per cent of the delegates," Outhier continued, "didn't wake up to the fact that they were in a steam roller convention until they had been rolled upon."

Outhier charged that the whole matter was prearranged, and that George W. Perkins, who controlled a telephone line to Oyster Bay, knew that the Progressives were being ditched all along.

When the meeting broke up the representative Bull Moose of Jackson County had virtually decided that another national convention ought to be held and in the event of this not being practicable, then the Bull Moose should vote for Bull Moose electors, regardless of a beheaded ticket, and thus keep the party intact.

"Will the Progressives in other States do the same thing?" was asked.

"Sure, they will," was the assurance from a half dozen of the local Moose.

## Widows' Pension Bill.

### EXTENSION OF REMARKS

OF

### HON. LINCOLN DIXON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. DIXON. Mr. Speaker, I am glad of the opportunity to vote for this bill that will give to the widows of soldiers of the Civil War an increase in their pension, and will also give to a large number of worthy widows now deprived of a pension under existing law an opportunity to secure a pension. This bill will give assistance by an increase of pension and will also give pensions in the following cases: It will give to every widow who was the wife of the soldier during his service in the Civil War an increase in her pension from $12 to $20 per month. This will also apply to those women who will hereafter become widows who were the wives of their soldier husbands during the period of their service in the Civil War. This measure will also give a pension of $20 a month to all Civil War widows who have now reached or who may hereafter reach the age of 70 years, who are now on the pension rolls or who may hereafter be placed thereon. In addition, this bill will restore to all widows of Civil War soldiers, who were dropped or who may hereafter be dropped from the pension rolls by reason of their subsequent marriage and who are now or may hereafter again become a widow, to their former pensionable status and a pension upon application. Another provision, and a very important one, is the provision that any widow who married a soldier prior to June 27, 1905, shall have title to pension under the provisions of the act of April 19, 1908. Such are the provisions of this meritorious measure.

Personally I would have been glad to have seen no restriction by reason of age and have given this increase at once to all widows, instead of limiting to those of 70 years of age or over; but legislation can never in every particular please all, and I rejoice to support this bill and hope for its early enactment into law.

I was for six years a member of the Invalid Pensions Committee of the House. During that service that committee reported the bill that became a law increasing the pension of widows from $8 to $12 a month. We supported the McCumber bill, that gave increased pension, based upon age, and reported and passed in the House the Sulloway bill, increasing the pensions allowed under the McCumber law. In the Sixty-third Congress the Sherwood bill became a law, and this was the most liberal pension measure yet enacted, but the soldiers were deprived of its full benefits by its amendment in the Senate. The Senate amendment provided that the disease or other causes resulting in disability to perform manual labor should be traced to Army service before the allowance of $30 per month to those who were unable to perform manual labor.

On the 30th of June, 1915, there were 748,147 pensioners upon the roll, and of this number 691,606 are pensioners by reason of the Civil War. Of this number 396,370 are soldiers, 289,218 are widows, 275 are nurses, and the remainder are soldiers' dependents. Of these widows 281,827 were, June 30, 1915, drawing a pension of $12 a month under the general pension laws and 2,404 were drawing the same amount under special laws. The total amount paid to the widows for the year ending June 30, 1915, was $41,561,924.

By the passage of this bill we not only honor the memory of the soldiers dead, whose widows we thus assist, but we impress upon the soldiers living our gratitude for their valor and service in time of need, and give them the assurance of the Nation's watchfulness over their widows when they are deprived of their husbands' support. The widows are entitled to this consideration. Most of them are advanced in years and many have no other income than their small pension. Their husbands came to the support of this Government in its hour of need, and it is the duty of a generous Nation to save their widows from want and afford them the comforts of life. This is not a measure of charity but an act of justice; not as a matter of sympathy but a token of gratitude. The people do not begrudge this money for the care and comfort of these widows. They remember the hardships and sufferings endured by their husbands and recall the heroic patriotism of those soldiers in the time of the country's need. It is true that the widows did not fight upon the field of battle, but in their homes they were battling for the sup-

port of their families, while their husbands were fighting the battles of their country. They were as faithful and loyal to their country as were the soldiers in battle, and should never be forgotten by a generous people and a prosperous Nation.

On the 30th of June, 1915, there were on the pension rolls 396,370 soldiers of the Civil War, of which number 382,231 were drawing pensions under the general laws and 14,139 under special laws; 3,643 were drawing pensions of $12 or less; 249,200 were drawing $24 and more than $12; 124,226 were drawing $30 and more than $24; 1,810 were drawing $40 and more than $30; 1,654 were drawing $50 and more than $40; 1,021 were drawing $60 and more than $50; and 677 were drawing pensions above $60 per month.

Under special laws there were 301 drawing pensions of $12 and under; 5,278 drawing $24 and more than $12; 6,470 drawing $30 and more than $24; 1,544 drawing $40 and more than $30; and 546 drawing over $40 per month.

Of the total number of soldiers of the Civil War on the pension rolls June 30, 1915, the number of 347,081, or a little over 87 per cent, were drawing their pensions under the Sherwood law, act of May 11, 1912. In the 11 months since that date the losses from said rolls by death have been 50,857, an average of 4,623 per month or 231 daily. It is thus seen how rapidly the list is being diminished by death. Hardships borne and exposure suffered have hastened that event. A few more years and the last of that great Army will be laid to rest and the history of their deeds be but a sacred memory. But while men are mortal, their deeds are immortal and will be forever cherished in the memory of a grateful people. Let the soldiers, their widows, and orphans be the cherished beneficiaries of our generosity, not only as a matter of gratitude but as a matter of justice and right.

## The Late Representative Witherspoon.

### MEMORIAL ADDRESS
OF
### HON. CHARLES O. LOBECK,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Sunday, March 5, 1916.*

The House had under consideration the following resolutions (H. Res. 157):

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. SAMUEL A. WITHERSPOON, late a Member of this House from the State of Mississippi.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. LOBECK. Mr. Speaker, we are gathered here to-day to show our love and respect for our dear departed colleague, the Hon. SAMUEL A. WITHERSPOON.

It was my great pleasure to personally become acquainted with this splendid man. For a time we lived at the same hotel and therefore we were much together walking to and from our daily duties. In these walks through the beautiful grounds of the Capitol, we talked over the affairs of the day, of the needs of our country, of our people, and our loved ones at home. In our conversation about our homes his uppermost thought was for the comfort of his loved ones, which, to my mind, shows the very best traits in a man, for when the husband and father have the welfare of his family uppermost in his mind, I know that he is a manly man, a dear husband, and a loving father.

We talked about our people. He would tell me of his affection for the people of his district and in turn I would tell of my people, and no Congressman was more true to his constituency than Judge WITHERSPOON.

Again our conversation would be on the needs of the people, of the needs of the Nation, of our duties to them as Members of Congress. Judge WITHERSPOON's opinions on legislation were of the highest order. I did not always agree with him as to methods of legislation, but I delighted to hear him state his views, for I was benefited by them. He made a close study of legislation and we eagerly listened to his views, for he had studied the subject on which he would express an opinion.

In oratory he excelled; his speeches on the flag were marvels of diction and rarely excelled by any Member. He gave special study to the defense of the Nation. His addresses on the needs of the American Navy were probably the best prepared by any Member in Congress in many years. He had given the subject the most earnest and careful study and research, and his remarks were listened to with greatest respect because of his intimate knowledge of the subject.

I became a Member of Congress at the same time with Judge WITHERSPOON, and from the very first he commanded my admiration and respect, which grew into a lasting friendship. I had not heard of his illness and the day the news came that Congressman WITHERSPOON was no more, to me it came as a personal loss. I felt that a dear friend had gone away to be with us no more. I said "no more"—no, no, I do not mean that—as long as memory shall last, Judge WITHERSPOON will be with me in spirit. His kindly face comes to me again and again. I remember his friendly advice and it spurs me on to live a better life, to lend a helping hand to my fellowmen, to love and give my very best efforts to my loved ones, to be a manly man in all the words imply. No longer is Judge WITHERSPOON with us, but his memory is dear, for it leads us that knew him to better thoughts, to higher ideals of living. My memory of Judge WITHERSPOON and his character recalls the words of Channing, who once wrote:

The greatest man is he who chooses the right with invincible resolution; who resists the sorest temptations from within and without; who bears the heaviest burdens cheerfully; who is calmest in storms, and most fearless under menace and frowns; and whose reliance on truth, and on God, is most unfaltering.

Judge WITHERSPOON fully measured up to this tribute of great men, and he will ever be remembered by his associates and neighbors as a high minded, pure, and strong man.

## Pensions.

### EXTENSION OF REMARKS
OF
### HON. HENRY A. BARNHART,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. BARNHART. Mr. Speaker, in my first campaign for election to Congress I especially advocated three items of justly needed legislation, namely, better pensions for the old soldiers who fought to preserve our splendid country, better conditions for labor, and the shifting of the burden of Government taxes from the toiling millions to the rich. I have helped to enact such legislation, and more, too, in behalf of fair play between man and man, and I hope the record of my work and votes in this and all other duties I assumed as a Representative of a deserving people has not been disappointing to any who have trusted me with this confidence. I helped to pass the Sherwood age-and-service pension law that gives most old soldiers a dollar a day and increases the allowance of nearly all other Civil War veterans; I have introduced and have seen passed special pension bills for nearly 200 deserving veterans in the thirteenth district; and I have helped more than twelve hundred other veterans to increases of pension justly due them.

I do not say this boastfully, for doubtless other Congressmen have been able to do more, but I call attention to it as an illustration of what has been done for the soldiers in contrast to what has not been so liberally done for their widows who either shared the awful hardships of war with them by suffering the disadvantages of a soldier's wife or cared for invalid soldier husbands as the direct result of military service. True we give many of these widows meager pensions, but many others, on account of marriage restrictions, are left in need with no present means of helping them. For instance, if a soldiers' widow, who may have spent the best years of her life helping her soldier husband, remarries she can not have her pension restored if she be again left a widow. And again the widow of a soldier who married him within the last 26 years can not have a pension, however much of her life and means she may have given to his care and comfort. This, I insist, is not showing the gratitude to the widows of soldiers they deserve.

Now, we have a bill pending in this Congress and reported for passage which I hope will become a law before the end of this term, which will be next March. It proposes to give widows of soldiers who were wives of soldiers during the war an increase; it proposes to give soldiers' widows an increase when they are past 70 years old; it will restore widows who

were once the wives of soldiers to the pension rolls; and it will give all widows pensions who married their soldier husbands prior to 1905.

Quite recently this House passed a bill giving pensions to the widows of Spanish-American War soldiers. Now, we ought to take care of all the widows of Civil War soldiers, and we must do so if we are just to the soldiers of the past and fair to those we expect to become such hereafter when their country calls. If it is right that we spend "millions for defense" as the great majority is now advocating, it is but answering the call of common humanity that we liberally provide for the women and children made helpless or needy by the patriotic sacrifices of life or health of the husbands and fathers who volunteer to die that their country may live.

Pass this bill and be just to those who are already the victims of war's cruel hardships and thereby assure those of the future that they shall not suffer neglect.

---

**Ashbrook Pension Bill.**

---

## EXTENSION OF REMARKS

OF

# HON. W. FRANK JAMES,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. JAMES. Mr. Speaker, this is a statement regarding the Ashbrook pension bill—not a speech. In fact, there were no speeches made on this bill. On bills of this great importance—considering, especially, what it is going to cost this Government—there is generally unlimited debate. There was no time allowed for general debate. Very few people knew that the bill was going to come up at this time. Some people who have roared loudly all session about "gag rule" on other bills because there was not enough time for general debate made no protest at this particular time—another case of "it depends upon whose ox is gored."

The attempt was first made to attach it as a "rider" to the pension appropriation bill, but it went out upon a point of order. However, some of those who objected very strenuously to the so-called "Borland rider," stating they were against legislation by "riders," seemed to have no objection to the "Ashbrook rider"—another case of "whose ox is gored."

On page 10993 of the CONGRESSIONAL RECORD Mr. RAUCH, of Indiana, stated as follows:

Mr. Speaker, I move that the House resolve itself into Committee of the Whole on the state of the Union for consideration of the bill H. R. 15775, the pension appropriation bill, and pending that motion I would like to ask the gentleman from Illinois [Mr. CANNON] if he cares to enter into an agreement as to general debate?

Mr. CANNON replied as follows:

I have some requests for time on this side. It occurs to me that we had better talk a little while, and if it runs too long, then an agreement can either be made or general debate may be closed. There is no disposition on this side to delay the passage of the bill beyond the day. For the present, I suggest that we let general debate run without limit.

Mr. RAUCH. Very well; I am satisfied to proceed in that manner.

During this general debate, among other things, the distinguished gentleman from Texas [Mr. DAVIS] made the statement:

I want to suggest to the gentleman [Mr. SHERWOOD, of Ohio] that Texas, while in her infancy, sustained a successful war against Mexico, and if the United States does not want to do it now we will take care of it.

Mr. SHERWOOD. Does the gentleman not think that Texas alone could take care of Mexico?

Mr. DAVIS of Texas. Surely.

Mr. SHERWOOD. Certainly it could. You do not need any more Regular Army there. The National Guard alone could take care of Mexico.

During our whole national life of 127 years no nation on either continent has ever declared war against the United States. All our wars with foreign nations have been of our own seeking. If no nation ever attacked us when we were weak, there is not the remotest probability that we shall be attacked when we are in population and resources the most powerful Nation in the world, with no enemies anywhere.

During this general debate, the old-age pension law was discussed; the gentleman from Missouri [Mr. BORLAND] made an attack on Justice Hughes and was answered by the gentleman from New York [Mr. BENNET]. Mr. BENNET also discussed a portion of the Democratic national platform.

When the House went into the Committee of the Whole on the Ashbrook bill, there were, according to page 9569 of the CONGRESSIONAL RECORD, 58 Members present. There was no agreement made as to time of general debate. Instead of that Mr. ASHBROOK later on made the following request:

Mr. ASHBROOK. Mr. Speaker, I ask unanimous consent that all Members have five legislative days in which to extend remarks in the RECORD on this bill.

There was no objection.

The matter came up for a final vote on Monday, June 19, and as there was no quorum present, I made a point of no quorum. I was informed that practically all of the opposition had "melted away" and I did not insist upon my point of order. I believe now that I made a mistake, as I was informed afterwards that there was opposition to the bill, and it may have been possible to have had the bill recommitted with instructions that would have taken care of the deserving "war widows" and eliminate the wealthy and the undeserving widows.

I could not understand this "wild rush" to have the bill passed on that particular day. I did not know that there was an exciting primary back in Ohio.

I will quote part of page 11058 of the CONGRESSIONAL RECORD of June 19, without comment:

Mr. ASHBROOK. Mr. Speaker, I think you will bear me out when I say I have for more than three months hung about this Chamber like a hungry dog to the only bone in sight, watching, waiting, hoping, praying, pleading impatiently for the time to come when this bill might pass. But few Members have been here for the past two weeks on account of the attractions at Chicago and St. Louis. I dared not leave lest an opportunity would be missed to call up and pass this bill. I had longings not only to go to your State, Mr. Speaker, but back to my district. We have a primary election in Ohio soon. I have a worthy opponent who thinks I have been here long enough and would like to draw my salary. In fact, this appears to be the paramount issue, if I may judge by his campaign letter, in which he recites the amount of salary I have received, clerical allowances included. My good friend and opponent races up and down the district unhindered and unmolested, as is his right and privilege, urging the people to have me come back and live with them. I would rather, however, remain here, 500 miles away, on duty, as I have been constantly for the past six months, helping to pass important administration measures and be able to secure the passage of the widows' pension bill than to be reelected to Congress. It may be that I have been here long enough and drawn salary quite sufficient, but I think my old soldier friends back home know that no one or two termer would ever have been able to do as much for them as I have done. When the Ashbrook widows' pension bill becomes a law I will feel that I have been honored far beyond my due and will be willing and content to accept the verdict of approval or disapproval, as the case may be, at the approaching primary. I propose, however, to stick to the job until this bill is passed by the Senate and signed by the President and is the law of the land, primary or no primary, opponent or no opponent.

I wish here to acknowledge my thanks and obligation to those gentlemen who have assisted me in handling this bill, and also to that prince of good fellows and the soldiers' and soldiers' widows' good friend, Col. John McElroy, of the National Tribune, for creating favorable sentiment for this bill.

I consider it an honor to be dubbed "pension bill," as I am often facetiously and sometimes disparagingly called. The passage of this bill and the knowledge that I have and hold the gratitude of the old soldiers and their widows, to whom the Nation's gratitude is forever due, will be a monument to my memory more appreciated by me than bronze tablet or marble shaft.

After reading the first sentence, we find that it is another case of "watchful waiting" and "weary watching."

The text of the entire bill is as follows:

An act (H. R. 11707) to amend an act entitled "An act to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late Civil War, the War with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late Civil War," approved April 19, 1908, and for other purposes.

*Be it enacted, etc.,* That from and after the passage of this act the rate of pension for a widow who was the lawful wife of any officer or enlisted man in the Army, Navy, or Marine Corps of the United States, during the period of his service in the Civil War, shall be $20 per month, and the rate of pension for a widow who has reached or shall hereafter reach the age of 70 years shall be $20 per month; and nothing herein shall be construed to affect the existing allowance of $2 per month for each child under the age of 16 years and for each helpless child; and all acts or parts of acts inconsistent with the provisions of this act are hereby repealed: *Provided, however,* That this act shall not be so construed as to reduce any pension under any act, public or private.

SEC. 2. That any widow whose name was placed or shall hereafter be placed on the pension roll, under any existing law, and whose name has been or shall hereafter be dropped from said pension roll by reason of her marriage to another person who has since died or shall hereafter die, or from whom she has been heretofore or shall be hereafter divorced upon her own application and without fault on her part, shall be entitled to have her name again placed on the pension roll at the rate allowed by the law or laws under which she was formerly pensioned, unless she be entitled to a greater rate of pension under the provisions of section 1 of this act, such pension to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *Provided, however,* That where the pension of said widow on her second or subsequent marriage has accrued to a helpless or idiotic child, or a child or children under the age of 16 years, she shall not be entitled to renewal under this act unless said helpless or idiotic child, or child or children under 16 years of age, be then a member or members of her family and cared for by her, and upon the renewal of pension to said widow payment of pension to said child or children shall cease: *And provided further,* That the provisions of this act shall be extended to those widows, otherwise entitled, whose husbands died of wounds, injuries, or disease incurred during the period of their military or naval service, but who were deprived of

pension under the act of March 3, 1865, because of their failure to draw any pension by reason of their remarriage.

SEC. 3. That any widow, as described in section 2 of the act approved April 19, 1908, who married the soldier or sailor prior to June 27, 1905, shall have title to pension under the provisions of said section of said act, to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *Provided, however*, That the benefits of this act shall include those widows whose husbands, if living, would have a pensionable status under the joint resolutions of February 15, 1895, July 1, 1902, and June 28, 1906.

SEC. 4. That no claim agent or attorney shall be recognized in the adjudication of claims under the first and second sections of this act.

If I had an opportunity to make the motion I would have made a motion to recommit the bill, with the recommendation that everything be stricken out after the enacting clause and the following be substituted:

*Be it enacted, etc.*, That from and after the passage of this act the rate of pension for a widow who was the lawful wife of any officer or enlisted man in the Army, Navy, or Marine Corps of the United States during the period of his service in the Civil War shall be $30 per month, and all acts or parts of acts inconsistent with the provisions of this act are hereby repealed: *Provided, however*, That this act shall not be so construed as to reduce any pension under any act, public or private: *And provided further*, That no pension shall be paid to any widow whose annual income is $1,000 or more.

Thirty dollars a month is not too much to the deserving widow, but 30 cents per month is too much to the undeserving.

Now, let us examine the Ashbrook bill. It has some good qualities, but it is mostly bad, and as I do not believe in voting for bills where you have to "swallow" too much bad, I voted against it.

The rivers and harbors bill had some good qualities, but far more that were rotten, and I therefore voted "no."

The public buildings bill will undoubtedly have some good items, but also some bad, and therefore expect to vote against it.

In the first paragraph it takes care of the so-called "war widows" by increasing her pension from $12 to $20 per month. There could be no objection to this; in fact, as I have stated above, $30 per month would be far better.

It goes further; it gives $20 per month to any widow in the future (war widow or not) who reaches the age of 70. I believe that widows having a yearly income of $1,000 per year or more should not have their pensions increased.

Now let us analyze the next part of section 1.

Part of chapter 17, of the book of Genesis, reads as follows:

15. And God said unto Abraham, As for Sarai thy wife, thou shalt not call her name Sarai, but Sarah shall her name be.

16. And I will bless her, and give thee a son of her; yea, I will bless her, and she shall be a mother of nations; kings of people shall be of her.

17. Then Abraham fell upon his face and laughed, and said in his heart, Shall a child be born unto him that is a hundred years old? And shall Sarah, that is 90 years old, bear?

19. And God said, Sarah thy wife shall bear thee a son indeed: and thou shall call his name Isaac; and I will establish my covenant with him for an everlasting covenant, and with his seed after him.

The distinguished gentleman from Ohio [Mr. ASHBROOK] evidently believes that we have "Sarahs" in abundance in these days, and, of course, wants to take care of their children; but there was only one "Sarah," and she was not on the pension roll.

Section 2 provides for the restoring of pensions to all widows who were dropped by reason of remarriage, and he would restore pensions to them regardless of the fact of the income they might have and regardless of the fact of the amount of money they might receive by the death of the second husband.

The report of the committee reads as follows:

This bill also restores to all widows of Civil War soldiers who were dropped or who may hereafter be dropped from the pension roll by reason of their marriage to another person, who is now or may hereafter again become a widow by reason of the death of her husband or who may be divorced upon her own application, to her former pensionable status. Had such widows not remarried they would have continued to draw widow's pension. Their marriage, therefore, resulted in a saving to the Government, and the committee feels that no pension legislation should discriminate or operate against marriage, and that the existing restriction should be repealed.

The committee seems to feel that the Government has saved a little money by remarriage. I am surprised that the committee did not carry the idea a little further and recommend that anyone who would marry a widow now on the rolls be given a bonus of half the present pension, so as to show a still further "saving to the Government," and still further evidence that the committee believes that "no pension legislation should discriminate or operate against marriage."

The pension bill for the relief of widows and minors passed on May 9, 1900, reads in part as follows:

That if any officer or enlisted man who served 90 days or more in the Army or Navy of the United States during the late War of the Rebellion, and who was honorably discharged, has died, or shall hereafter die, leaving a widow without means of support other than her daily labor and an actual net income not exceeding $250 per year, or minor children under the age of 16 years, such widow shall, upon due proof of her husband's death, without proving his death to be the result of his Army service, be placed on the pension roll from the date of the application therefor—

And so forth.

This bill let down all the bars, not only to "war widows" but to young girls who married veterans with one foot in the grave, regardless of the wealth she might inherit. She might have an income of $10,000 to $15,000 per year, but still she would be entitled to a pension.

It is possible under this bill—absolutely no restrictions in it—for a young girl of 20 to have married years ago a veteran, and inherit $100,000 at his death, to be placed on the pension roll. She could have married at the age of 22 a civilian and forfeit the pension. At his death she might have inherited $50,000 more. Now, this widow, who was not a "war widow," who did not "set the light in the window," and who did not "patiently and anxiously await the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood," is placed on a far better plane, everything considered, than the wife who really did sit anxiously waiting for the return of her hero husband, broken in health and weary.

As in other pension bills, the really deserving fare the worst.

My attitude on pensions has been criticized by those who never belonged to anything except the "Home Guards," by deserters, by those who enlisted for bounties, and things of that kind; by men whose applications for pensions have been turned down because their illness is the result of drunkenness or vicious habits, and by those who are drawing pensions and still able to hold down good jobs; but the man who saw real service and who is really entitled to a pension has a different opinion. Have had letters from all over the country from Civil War veterans, their widows, and from Spanish War veterans regarding this matter. I expect to have a few words to say about the other kinds the next time a pension bill is brought up, giving in detail some interesting things I have discovered regarding pensions now paid.

The following letter from a veteran in Maine illustrates the stand taken by the great majority of soldiers who saw service:

HON. W. FRANK JAMES, M. C.

MY DEAR SIR: I have not taken the pains to look up your party affiliations to see whether you are of the G. O. P., Dem., or Prog. stamp, and I do not care to know, but I do know that in the stand you have taken on the pension question you are heartily indorsed by every deserving veteran.

I speak for many of them whom I know, that we admire your courage, justice, and patriotism in saying what you did to Mr. George A. Dick, who is quite likely one of the same kind you have hit, "the woods are full of them" and the pension roll is crowded with their names, and many of them ought to be ashamed to see their names there. Many of them are well to do and need it not; if the Government has so much money to throw away let it pay some of the deserving ones a decent living pension in their declining years, as many have no other income, and the country owes them this much for the work they have done in preserving the Union.

Would to God there were a lot of such men in Congress who would look after the interests of the deserving veterans. One-quarter of the men whose names are on the pension roll are no more entitled to be there than if they were unborn at the time, but we are compelled to witness this outrage and are powerless to stop it.

While we are thus compromised there are still those who are clamoring for a law that will give all so-called soldiers the maximum of $30 per month, although they have, many of them, no earthly right to it—all the service they rendered was to eat their rations, draw their wages, and attend surgeon's call whenever there was any duty or danger.

This is an amazing gall and needs a corrective.

Many of us old soldiers had to fight every inch of the way to get even the minimum. I stayed at the front 34 months and was in 27 battles, from Fredericksburg to Appomattox Courthouse, and when I asked a pension in 1879 I was given the magnificent sum of $4 per month. Now it is an easy matter for any bum to get onto the roll at the maximum, and if the law don't give it to them then Congress is invoked. I am too indignant to say more, and will close by thanking you in behalf of many more for the attitude you have taken.

Stick to it, and you will have an approving conscience, if nothing more.

Many of the Members of this House believe that every Spanish War veteran is in favor of indiscriminate pensions and that they will be "killed politically" if they do not vote in favor of pensions to the undeserving as well as to the deserving. I believe that the Spanish War veterans all over the United States are the same as in my district, and I can not better illustrate the way we feel about pensions than quoting an editorial from the Houghton Mining Gazette, of Houghton, Mich., written by the editor, Mr. Homer A. Guck, a member of Company D, Thirty-fourth Michigan, and one who knows what it is to suffer from malaria:

PENSIONS.

On Monday evening the Calumet News printed an extract from the CONGRESSIONAL RECORD. It was the first speech that our Congressman, Mr. JAMES, of Hancock, delivered in the House of Representatives. We read it all the way through with a good deal of interest. If all the other speeches our Congressman makes are as sensible, as patriotic, and as square to the point as that one, or if he never makes another speech,

his record will be good for a first termer. Mr. JAMES talked about pensions. He is a member of the Pension Committee. He talked about pensions for soldiers and he told something of his own experience. Notwithstanding the fact that he is a veteran of the Cuban War, he is opposed to the Key bill. So is every other veteran of that Cuban War, excepting the comparatively few who are professional veterans and who believe that their patriotism in serving their country at that time calls for a recompense in dollars and cents. We have none of that kind in the copper country. We know personally most of the men who went to Cuba from the copper country. And they are not seeking pensions for themselves, for their wives, or their families. And they are not in accord with the practices of a large number of the so-called Spanish-American War veterans who are trying to make a political machine out of the organization. Mr. JAMES takes the attitude that no soldier, no veteran of any war ought to draw a pension unless he is in need of the money. And in that attitude he is correct. There are thousands and thousands of men of wealth, men of big income, men of high financial rating who continue to draw pensions from the Government. Many of them never saw actual fighting in any war. Many of them never were in danger of their lives for a moment. Yet they continue to graft on the body politic. The idea that accepting a pension turns their patriotism into political pap never enters their mind. Or if it does enter it never stays for any length of time. Here is one paragraph from the CONGRESSIONAL RECORD'S verbatim report of Congressman JAMES'S speech:

"I believe in paying pensions to those who are deserving and who really need the pensions, but I would like to see legislation passed to take every undeserving and wealthy pensioner off of the roll. If we do not want to save this money, pay it to the needy and deserving."

The pension graft to-day is one of the worst there is in the United States. It is quite as rotten as the pork-barrel graft. It is quite as indecent as the war-tax graft when there is no war. We spend more for pensions in the United States than the German nation spends to maintain its much-talked-about militarism. That's an actual fact. And Germany is not stingy when it comes to spending money for its war machine. And while the War of the Rebellion now is 52 years old, it keeps right on costing the United States more and more each year for pensions instead of less and less. There is a Congressman now who wants to pay a dollar a day for every man who was in that war or to the widow of his old age. And he will get away with it, too. The political machine of the veterans of wars is a machine that few newspapers ever dare talk plainly to and politicians are awfully afraid of. The attempt to use the organization of veterans of the Spanish War and the Chinese Boxer uprisings and every other war as a political machine is a shame and a disgrace.

We agree absolutely with the Congressman from this district in his attitude on pensions. We believe firmly that every veteran who needs a pension ought to get one. We believe, however, that he ought to be a bona fide veteran. We believe that he ought to have seen some service for his country. We believe, further, that the widows of men who fought for their country ought to be cared for if the veteran didn't leave an estate. But we don't believe in paying widows' pensions to a lot of girls who married doddering old men on the brink of the grave for the very purpose of collecting from the Government the day after the funeral. It is a good thing to note that one Congressman had the nerve to express real sentiment on this subject. We know it ought to have weight, coming as it does from a man whose record in the Spanish War was a good record and who has suffered physical ills resulting from that war, yet who would scorn a pension as he would an entrance order to the poor farm.

Have many more from all over the country, and shall read them the next time we have a pension matter up.

Then there is another kind of Spanish War veterans, but they do not represent the rank and file of the Spanish War veterans. I believe that I can show this kind by repeating two letters that I have written to the department commander of the Spanish War Veterans of Michigan, Mr. George A. Dick, the gentleman mentioned by the Civil War veteran above. The letter sent to Mr. Dick was dated May 31, but have received no reply and expect none. I sent some similar letters to other politicians among the Spanish War veterans on or about February 20, and have received no replies and expect none.

MAY 17, 1916.

Mr. GEORGE A. DICK,
*Department Commander, Detroit, Mich.*

DEAR SIR: One of my comrades of Camp George Miller, United Spanish War Veterans, of Houghton, Mich., has sent me a copy of General Order No. 5, series 1915-16, issued from the Headquarters Department of Michigan, United Spanish War Veterans, at Lansing, Mich., on April 20, 1916, in which you state in part as follows:

"Our thanks and appreciation are due the Michigan Congressmen, who were a unit (but one exception, Congressman W. FRANK JAMES, twelfth district) in voting for this bill. In view of the fact Representative JAMES asserts that he rendered service in the Spanish-American War, his antagonistic attitude is unexplainable. Some appropriate action will be taken at the next encampment.

"By order of

"GEORGE A. DICK,
"*Department Commander.*

"Official:
"F. H. PRESLEY,
"*Department Adjutant.*"

I presume you are the George A. Dick mentioned in General Order No. 5. From this you make it appear that I am opposed to all pensions. But this is not the fact. I am in favor of pensions to the worthy and deserving, but I am against pensions to the undeserving, to deserters, and to the wealthy.

As a member of the Committee on Pensions and on the floor of Congress I have opposed many applications for pensions which I regarded as unworthy, and also general pension bills which seemed to me to be solely designed to force the Pension Department to recognize these unworthy would-be pensioners.

Among other bills rejected by the Committee on Pensions I find one which, if approved, would have granted you back pay from August 19, 1903, to March 21, 1913.

I could not better illustrate the sort of pensions I am opposed to than to cite the history of your case, which is as follows:

From affidavit made by you on January 3, 1916, I note that you state you were a member of Company K, Thirty-second Michigan Volunteer Infantry, and while stationed at Tampa and Fernandina, Fla., you contracted typhoid fever and malarial poison. You further state that on January 14, 1899, you made application for pension on account of the disability arising therefrom. On December 22, 1903, you state that you were allowed a pension at the rate of $6 per month under certificate No. 1027648, with a voucher inclosed for the full amount of back pay from January 14, 1899, to August, 1903, inclusive. You make affidavit further to the effect that when the pension ceased you produced and filed a claim for restoration on the ground that your disability still existed, which claim was rejected by the Commissioner of Pensions.

It would appear as if the Bureau of Pensions became convinced on August 19, 1903, that any disability you may have had ceased to exist. I understand that on March 21, 1913, pension was restored to you at the rate of $6 per month, and on January 20, 1916, you had introduced in your behalf a bill for back pay from August 19, 1903, to March 21, 1913. You make affidavit also to the effect that you are a clerk in the United States customs at the wage of $4.44 per day.

I am inclosing you herewith a copy of the rules of the Committee on Pensions. On page 3 you will find as follows: "It is not the intention to have Congress flooded with pension bills, but simply to afford a means of relief in cases of exceptional merit."

I desire to also call your attention to rule No. 6, which states as follows: "In no case will the allowance of arrears be recommended, nor application for increase of pension be favorably considered, if claimant is regularly employed by and in receipt of a salary from the Government of the United States. A claim of destitution in such a case can not be considered."

From the evidence that I have been able to gather I find that you are a very healthy individual weighing about 250 pounds. You also seem to be receiving a salary of $4.44 per day from an "ungrateful" Government, in addition to your pension.

Under all the circumstances it appears to me that you are very lucky indeed to be receiving a pension of even $6 per month, and possibly if the Pension Bureau were to investigate your case at the present time they would again recommend the discontinuance of your pension, the same as they did on August 19, 1903. It is such cases as yours which bring the whole matter of pensions into disrepute.

I wish it distinctly understood that I am opposed to pensions to healthy young men who never saw a single day's service and who are well enough to hold down lucrative positions.

To further illustrate my position in the matter of pensions, I wish to quote you part of my speech on the Key bill on February 16, 1916, which reads as follows: "I believe in paying pensions to those who are deserving and who really need the pensions, but I would like to see legislation passed to take every undeserving and wealthy pensioner off the roll. As a member of the Pension Committee I have voted for every pension that I thought was deserving, whether it affected the soldier or his widow, and expect to do so, but will not vote to give pensions to the wealthy and undeserving. It is not necessary to pass this law to take care of the needy and deserving widows and children. If they can not get a pension from the Bureau of Pensions, it is not hard for them—if their case has any merit whatever—to get a pension from the Pensions Committee."

In the concluding sentence of your order you state "some appropriate action will be taken at the next encampment," which I understand will be held at Bay City, Mich., on June 20, 21, and 22. This would seem to be intended as a threat. If so, I wish to assure you that it is entirely wasted, as I wish to state that so long as I am in Congress I shall always oppose pensions to the undeserving, the kind of which yours is one of the most flagrant.

It is with a good deal of satisfaction that I wish to state, however, that during the past three weeks I have visited my entire district and met most of the Spanish War Veterans in my district, all of whom saw service in Cuba in 1898. Every one of them stated that I was absolutely right in my attitude on pensions. I am convinced that every Spanish War Veteran who enlisted from patriotism in 1898 feels absolutely the same as I do on this matter of pensions to grafters or the undeserving.

The society of Spanish War Veterans is a magnificent organization and will continue to be such unless some of its members try to make a political organization of it.

In my speech on the Key bill on February 16, 1916, I pay my respects to some of the politicians among the Spanish War Veterans in the following words: "I realize it is hard to vote against some of the politicians among the Spanish War Veterans. They do not deny that they have a political pull—they not only admit it, they boast of it. I read an article some time ago where some of these politicians took credit for defeating for the supreme bench of the State of New York one of the most respected Members of this House, Mr. FITZGERALD, because he had dared to vote against the Key bill. They did it all with their little hatchet. If any man here is going to vote for this bill contrary to his own better judgment, I want to say to him that I believe the Spanish War Veterans are the same in his district as they are in mine; they are not in politics—as Spanish War Veterans.

I wish further to state that if you, or any of your friends who hold similar views as you on pensions, believe that you have any political influence, I cordially invite you to come up in the twelfth district of Michigan next fall and campaign against me on the matter of pensions to the undeserving.

Trusting that I have made myself clear to you in the matter, I am,
Yours, very truly,

W. FRANK JAMES,
*Congressman Twelfth District of Michigan.*

—

MAY 31, 1915.

Mr. GEORGE A. DICK,
*Department Commander, Detroit, Mich.*

DEAR SIR: I am in receipt of your letter of the 26th instant.

You do not deny that you are getting $4.44 per day from the Government, and I do not presume that you will deny that you are not physically capable of earning this $4.44 per day, do you? If you are capable of earning this amount daily, why should you draw a pension of $6 per month for being partially disabled?

You seem to believe that a man should be paid for defending the honor of his country. This the Spanish War Veterans in my district, including myself, do not believe. A man should not expect to be paid for defending the honor of his mother, and neither should a soldier expect to be paid, by receiving a pension, unless he really needs it.

It was not necessary to pass the Key bill to give pensions to the widows and children of those who lost their lives in service, or who contracted fatal diseases in the service of their country. As I stated

in my remarks on the Key bill, "When I first heard of the Key bill, or, as it was then known, the Crago bill, I presumed it was intended to pension the wives and children of those who either lost their lives in the Spanish-American War or died from wounds or disease contracted in the Army. There could be no possible objection to such a bill. But, Mr. Speaker, this is not the intent of the bill; the advocates of this bill claim that a bill of that kind is not good because wives and children of soldiers, dying, as I have stated above, are already taken care of.' I am yet to have anyone give me a good reason why the bill should take care of the wives and children of any but those "who either lost their lives or who died from wounds or disease contracted in the Army."

In order to get your views on the matter of pensions, would like to have you answer the following questions, if you care to answer:

If you were a member of the Pension Committee and the evidence showed that the applicant was suffering from disease, but that the disease resulted from his own vicious and licentious habits, would you believe it your duty as a Spanish War Veteran to vote favorably on his request for a pension?

If you were a member of the Pension Committee and the evidence showed that the soldier became intoxicated and laid down in front of a street car and had his leg cut off, would you vote to grant him a pension because he had seen service?

If you were a member of the Pension Committee and the evidence showed that the soldier had put in 90 days in '98, of which 75 days was on furlough, and 15 days in an inland camp; that the soldier had never been sick, never been wounded, never seen active service, would you consider that his widow was entitled to a pension because he had been a soldier?

If you were a member of the Pension Committee and the evidence showed that the soldier had never seen service and that he committed poisoning while drunk, would you consider that his widow should receive a pension because the late lamented had been a soldier?

If you were a member of the Pension Committee and the evidence showed that a soldier had left his widow $5,000 in cash, that the husband had never seen service, that he had never been sick or wounded in the Army, that he had not been sick for 17 years after he was mustered out of the Army, would you consider that the widow was entitled to a pension because her husband was a soldier?

If you were a member of the Pension Committee and you had an application from a soldier and the evidence showed that he had called his sergeant names so vile that they could not even be printed in the RECORD, that he had been shot in the leg by the sergeant and court-martial acquitted the first sergeant on the ground of self-defense, would you believe it your duty to give this soldier a pension because you were both Spanish War soldiers?

If you had an application for a pension on the ground of total disability and you knew that the soldier worked practically every day in the year and had a good position, as a member of the Pension Committee would you vote to grant him a pension?

These are some of the things that the Pension Committee is asked to pass on.

You want to know when and where I put up a fight against paying pensions to deserters. If you had read the daily papers of your city, you would have read that I introduced the following bill regarding deserters:

"*Be it enacted, etc.*, That from and after the passage of this act no officer or enlisted man who once deserted from an enlistment in the United States Army, Navy, or Marine Corps and who was apprehended and by court-martial decision was dishonorably discharged from said service shall be entitled to receive a pension under any law: *And it is further provided*, That neither his widow, minor children, or any other dependent relative shall be entitled to receive a pension under any law."

At the time I introduced this bill I made the following statement:

"According to the present pension law it is possible for a man to enlist, desert, be apprehended, court-martialed, found guilty, sentenced, serve sentence, receive a dishonorable discharge, and yet be eligible to receive a pension, providing that alleged disabilities are shown to have been incurred in service and in line of duty. This refers to the general pension law affecting all soldiers, sailors, and marines regardless of time of service. Many who desert and who are afterwards dishonorably discharged for that account are to-day receiving a pension from the United States. In order to take care of this matter I have introduced a bill."

Whenever I run across a case, as I have in several instances, where wealthy widows of officers have asked for large pensions I have opposed their pension claims as vigorously as I have yours.

My opposition to claims like yours is nothing personal; it is the system that I am against. The same applies to my vote of the so-called free-seed graft, the rivers and harbors pork-barrel bill; my opposition to the public buildings in towns that do not need them, and all such pork-barrel legislation.

As I stated, I am not against widows and children receiving aid where they need, as I had the honor of being one of the introducers of the Michigan mothers' compensation act, which has worked so well in the State of Michigan, and especially so in your county.

Have not investigated your statement yet regarding pay to retired Army officers, retirement of judges, etc., but expect to take that up after I get through with the maters I am now on. At that time I hope that your friends here in Congress will help me out better than they are now doing.

At the time I took my position on pensions and pork I did not know whether or not it would be popular, but because I thought it was the right thing to do. If it is any satisfaction to you, I wish to say that I have in my office letters from many of the Spanish War veterans in my district, and none of them feel any different than I do about this pension matter, and neither did I find a single Spanish War veteran on my late trip home who did not approve of my stand on this pension matter.

Have also had letters from all over the country from Spanish War veterans, and Civil War veterans as well, who state that I am absolutely right.

Yours, very truly. W. FRANK JAMES.

In the report issued on the Ashbrook bill on February 29 it states as follows, in part:

The committee at this time is not able to present an estimate of the increased cost resulting from the passage of the bill. No accurate or reliable estimate can be given of the number of beneficiaries, for the good reason that there is absolutely no available figures upon which to base an estimate. Conservative estimates are being prepared and will be presented to the House by the time the bill is reached for consideration. It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur.

This was nearly four months ago; the bill has passed the House, but no figures have been given to the House. The author of the bill evidently believes that the cost will not exceed $8,000,000. Perhaps he is right. According to the report of the Commissioner of Pensions, issued on June 30, 1915, there were 50,985 widows, and so forth, drawing a pension under the general law, Civil War, and 235,087 drawing pensions under the widows' act of April 19, 1908, or a total of about 286,000. If 80,000 out of the 286,000 were to receive an increase of approximately $100 per year it would be an increase of $8,000,000 per year. This is not, of course, taking into effect the very large number of widows who will go on the roll on account of marriage from 1890 to 1905. Neither will it take into account the increase on account of widows who were dropped on account of remarriage being again placed on the rolls.

This can not very well be called an ungrateful Government when it is possible for a man to enlist, desert, be apprehended, court-martialed, found guilty, sentenced, serve sentence, receive a dishonorable discharge, and yet be eligible to receive a pension, providing that alleged disabilities are shown to have been incurred in service and in line of duty. Why talk about an ungrateful Government when the above is the case?

The report further states as follows:

All patriotic men will enlist more freely in the defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government.

It was not necessary to pass this bill to further illustrate that fact. The fact that there were in 1915 over 700,000 persons drawing pension, and that this included 128 widows of the veterans of the War of 1812, is sufficient evidence.

I believe, gentlemen, that the sentiment in my district is not any different than it is in your districts.

We are not of the opinion that in order to get volunteers for the next war you have to spend millions of dollars each year for pensions.

We are more concerned that this country shall pay some attention to preparing for war so that the volunteers of the next war will have a better chance for their lives from disease than we are in pensions.

We are more concerned that the honor of this country shall be upheld, even at the price of war, than we are in pensions.

The other day the first man to answer the call of the martyred President Lincoln for 75,000 volunteers in 1861 was buried. In delivering the funeral oration one of his best friends said, in part, as follows:

We hear much of peace-at-any-price sacrifice. Peace with honor, yes. Peace to the honor of our country, yes. But if it means that we are to be the prey of international ambition, if it means that we are to do the bidding of every nation on earth, and that our flag must dip in disgrace, then we must not have peace. No nation can be weak to-day in preparedness and strong to-morrow in efficiency.

If sharing these sentiments gives a man the right to call himself a patriotic American citizen, then the Spanish War veterans in my district and myself are patriotic Americans. But if believing that patriotism consists in no personal sacrifice yourself, if it means that voting money for pensions to the worthy and unworthy alike, the rich and poor alike, and that this counts for more than answering your country's call, then we are not patriotic American citizens.

## EXTENSION OF REMARKS

OF

## HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. SIEGEL. Mr. Speaker, the chairman of the Committee on Military Affairs, Mr. HAY, of Virginia, having told us here to-day, in the name of the President of the United States, that an emergency exists, I believe that it is for us to show to the world that we present a united front and to pass this resolution authorizing him to use the militia outside of the United States in this emergency. It is useless to hide the fact that we are on the verge of war, and, as has been truly said by the gentleman from Illinois [Mr. CANNON] and my colleague

from New York [Mr. FITZGERALD], that men must indeed be blind to the facts, as we have daily read them in the newspapers, to fail to see the true situation. I can not, however, allow myself to forget that one of the greatest blunders was made in withdrawing our forces from Vera Cruz in 1914, and in the interim permitting millions of rounds of ammunition to be shipped into Mexico, and which, I fear, will now come back to us embedded in the flesh and bodies of our boys who are responding to the Nation's call.

It has indeed thrilled the heart of every true-blooded American citizen to see how swiftly the National Guard has answered the President's call to duty. Regardless of where born and regardless of diversified views on various important questions confronting our people, they need not be urged to do their duty. It is ingrained in them. You need not preach Americanism to them, as they are all demonstrating their loyalty and devotion to our flag and country by the most practical proof that men can require. They are ready to make the greatest sacrifices that men can ask of them, giving up positions and leaving family and home at a moment's notice. To those pessimists who feared that the call would go unheeded, the answer has come quicker than they had anticipated.

A large number and entirely out of proportion to the total population of the land are either immigrant or the sons of immigrants, who have turned out as part of the militia and who are now making up our forces along the border and in Mexico.

What I said in this House on March 25, 1916, is as apropos as anything that I might repeat here to-day. I said that—

some gentlemen have harped on the fact that the immigrant lacks patriotism and loyalty to our country. Facts should be our guide and not mere surmise.

Last year the gentleman from Massachusetts [Mr. GARDNER] gave a dinner to the Army Reservists of Class B. No doubt we are interested in knowing whether any foreign-born citizens were in that party that gathered around his table. I had a personal investigation made. From it I learned that 11 were foreign born, 6 were native born, and that the remaining 7 can not at present be located, but the names indicate that more than half were foreign born.

Let me recall to you a scene in New York City which occurred on May 11, 1914. As far as the eye could see the streets were packed with people. You hear the muffled drums and the soft, sweet, never-forgotten strains of Saul's Death March. Our boys are passing by. Yes; some of them on foot, but a number of them have passed to the far beyond and are coming home, escorted by the President. On each coffin you see our glorious flag. Across the Brooklyn Bridge the procession slowly winds its way and enters the gates of the navy yard. Tenderly each coffin is brought to the space before which a large stand has been erected. The roll is called and the names that are read off are as follows: Louis Frank Boswell, Gabriel Defabblo, Francis P. De Lowry, Frank Devorick, Elzie C. Fisher, Louis Oscar Fried, E. H. Frohlichstein, Dennis J. Lane, George Poinsett, John F. Schumacker, Charles Allen Smith, Albin L. Watson, Daniel Aloysius Haggerty, Samuel Marten, Rufus Edward Percy, and Randolph Summerlin. [Applause.] The President speaks, and in his speech he says:

"Notice how truly these men were our blood—I mean of our American blood, which is not drawn from any one stock, which is not drawn from any one language of the modern world; but free men everywhere have sent their sons and their brothers and their sisters and their daughters to this country in order to make that great compounded Nation which consists of all the sturdy elements and of all the best elements of the whole globe. I listened again to this list of the dead with a profound interest because of the mixture of the names, for the names bear the marks of the several national stocks from which these men came. But they are not Irishmen or Germans or Frenchmen or Hebrews or Italians any more. They were not when they went to Vera Cruz; they were Americans, every one of them, and with no difference in their Americanism because of the stock from which they came. They were, in a peculiar sense, of our blood, and they proved it by showing that they were of our spirit—that no matter what their derivation, no matter where their people came from, they thought and wished and did the things that were American; and the flag under which they served was a flag in which all the blood of mankind is united to make a free nation."

Were these soldier dead loyal to their country? Yet the majority of them were either immigrants themselves or the sons of immigrants.

Examine the records of those who have fallen or been wounded up to date and further confirmation is immediately found.

I have read a number of editorials that have appeared in the daily press during the past two days, but I know of none that must awaken and renew the faith of our people in their fellow citizens as the one that appeared in the New York Tribune yesterday and which I take the liberty of reading at length:

THOSE WHO MARCH.

It is no little thing, this marching of the first hundreds of our volunteer soldiers. Despite the fact that the crowds that collect disperse, the bands pass, and the flags come down again, those days on which our young men go forth to serve must remain forever memorable in our history and in our hearts.

On the foundation of such sacrifice as this volunteering supplies is built the whole edifice of our national life. All that we have, that we own, that America means to Americans and to the world, flows from the sacrifice of lives, flows from the willing and ready response of the hundreds and thousands to the call of our common country.

Not all the years that have passed since the first soldiers, soldiers only in the fact that they carried muskets, assembled on Lexington Green to this present hour have changed the fundamental fact that if men have a faith, a loyalty, a clinging to ideas and to ideals, to a dream of a race and of a country, they must be prepared to fight for them, to die for them, from time to time.

In 1775, in 1812, in 1846, in 1861, in 1898, and now in 1916, Americans have marched. Not a generation has been entirely free from sacrifice, and on several there has been laid a burden almost beyond endurance. To-day that which threatens seems a little war. No such effort as Germany or France is now making, no such need of volunteers as Britain has faced and met is foreseen or even conceived. Yet not less great, not less real is the sacrifice that is asked of the thousands who are going.

The departure of troops for war, or even toward war, is the most unreal thing in human life. Those who go first are young, proud with the sense of new dignity and duty, glad as youth is always glad when adventure beckons and the romance of service calls. They march before us, bringing our cheers, perhaps calling forth our tears, too; but it is a spectacle about which there is only that which inspires.

But when they are gone the change comes. Slowly, steadily the realization arrives. Those who marched from us to camp disappear from the camp into the distance, which at the horizon meets the thing we call vaguely "the front." Little by little there come back the veracious chronicles of suffering, of hardship, at last of sacrifice and death. Those who went so willingly and so gladly become in a sense a sacred memory.

It is a cruel thing, this penalty that life exacts of a Nation. It is a brutal tax, this blood tax which is laid upon successive generations. And yet we who can not escape it are compelled at the last to see, with the cruelty, the splendor, the transformation in the lives of those who go and those who stay, that the great fact works. So much that is mean and ignoble slips out of the lives of the people whose sons and brothers and husbands are doing something heroic and unselfish for all of us and for what our Nation means.

It is in this sense, with sadness, with a feeling of bitterness at the necessity of sacrifice, with a sense of pride in the grandeur of the thing done, that we shall now watch the best of another generation of Americans leaving us for a duty whose extent may not yet be measured or circumscribed.

For those who have marched, for the survivors of '61 and '98, what is now taking place brings a very real sense of tragedy. From them the future is not hid. They see the long drudgery, the privation, the weariness, the pain, and the agony that may lie ahead. In their own time they have seen other generations march out in the sunshine of the first hours, and beyond into the darkness of camp, battle field, and hospital. Behind all that is brilliant, stirring, appealing they perceive that which is terrible.

Yet, seeing all this, they can put it aside to rejoice that the spirit that existed when they marched and when those who marched with them and did not come back were also young still survives; that the same flag is carried by hands not less worthy and defended by hearts not less indomitable.

It is, indeed, no little thing that is taking place in our lives to-day. Rather it is something so big and enduring that it must crowd out the common and trivial cares and concerns of our lives. Thousands of men, young, surrounded by all that happiness and comfort can bestow, are willingly, gladly giving up what life holds of present promise and of future hope, giving up all they have and all they hope to have because a single word has been spoken, the simple call of duty has come.

The glory of war that is the tinsel and the uniform, the pomp and the ceremony, is an empty sham. But the glory of war that is the duty, the sacrifice, the unselfishness, the submission of the individual to the common weal, is an enduring fact. And it is this fact that stands disclosed to us to-day in all its true nobility.

No man can now say how far those whom we love and send are to march. No man or woman can foresee now to what dangers, to what perils, they are not willingly but yet with complete consent sending those they love. We shall not easily keep our tears back; we shall not even in our pride completely control our sorrow. There has been asked of us the greatest sacrifice that can be demanded. We have made it. More one can not say.

But for those who march, with what wishes for good fortune, with how many prayers for their safety, with what pride in their devotion they are going! Their action has lifted us all out of the sordidness of our everyday concerns; their willingness to go has brought a new, a nobler understanding to us of our country and our race. Because of them we have again lived through a great day—another great day in our history.

And whatever of pain, of trial, of sacrifice may still be demanded of those who have gone, of one thing they must remain assured—our love, our admiration, our faith is all with them. What they have done makes all that we can say seem trivial; it is not by word that we shall even try to appraise their deeds. They have not failed us. In so far as we are able we shall not fail them.

We have given further proof to the world to-day that in this Republic of ours we are living in an advanced age of humanitarianism, by appropriating the sum of $1,000,000 to be used by the War Department for the payment of monthly sums of $50 to any of the close members of any families dependent upon any of the men who have responded to the call as part of the National Guard. It shows the real feeling of the entire House, when it was adopted unanimously and without discussion. Action, not talk, is the duty of the hour.

As I have repeatedly said, the mission of the United States is peace, and this country is neither desirous nor seeking war. If it does come, however, the responsibility must be placed upon those who have been the aggressors. One thing I am sure of, that at all times in its hour of need the men and boys of this country will sacrifice willingly all they possess, whether it be life or property, or both, if necessary, in its defense, and give proof to the world that we stand united against a foreign foe regardless of who that foe may be. Our citizens must be protected wherever they be and wherever they go. Our lives, homes, and property in our own land must have the same protection or we would be unworthy of being called a "Government of the people, by the people, and for the people."

## Pension Legislation.

### EXTENSION OF REMARKS

OF

# HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. HELVERING. Mr. Speaker, we hear the subject of industrial and military preparedness discussed freely by every citizen of this country, and the events as they are rapidly transpiring in Mexico and on our borders bring home the thoughts of past wars and the manner in which our Government took care of its survivors. A pension system for soldiers who served their country was established at the foundation of this Republic, and history proves that our forefathers were very liberal in granting pensions and bounties to their veterans of the Revolutionary War.

In looking over some data relating to the pensions granted our Revolutionary War soldiers, I was greatly astonished to find that the American people provided for more pensions and bounties to the soldiers of the American Revolution than we have granted to the veterans of our Civil War. I find that the officers of the Revolutionary War residing in Virginia had been more liberally provided for than any other class of men in America or any other country. In addition to their salary they were promised half pay after their retirement from the Army and received large tracts of fertile land. Each officer from a major general down to ensign had his lands.

In 1828 a law was enacted retiring all soldiers of the Revolutionary War and all officers on full pay for life, who had served two years in the continental line. Then, in 1832, Congress passed a law retiring for life on full pay all the minute men, all the militia and militia officers who served intermittently for two years. Just a year later Congress amended this law and made it still more liberal. Every soldier of the Revolutionary War was allowed approximately $8 a month, which would be equivalent to $40 to-day, besides land on which he might build a home and live comfortably the rest of his life.

Virginia gave every colonel 5,000 acres of land, every captain 3,000 acres, every noncommissioned officer 400 acres, and the private soldiers 200 acres. I will not take time to cite further instances where different States made additional allowances to those granted by the Federal Government to their Revolutionary War veterans.

In the War with Mexico, where 105,000 of our boys were recruited in two years, 1,049 of these heroes lost their lives in battle. Forty years after the Mexican War we pensioned all soldiers who served 60 days in that war, and in many cases these soldiers were pensioned because of their voluntary enlistment and not because of actual service, for in those days it required more than 60 days to reach the border.

The Civil War stands out as the most costly and disastrous war in the annals of the history of this Republic. Many of us have heard our fathers tell of its horrors and sufferings, but even then most of us do not realize the magnitude of that war. A study of its records reveals the fact that more soldiers lost their lives in the one battle of this memorable war—the Battle of Gettysburg—than were lost in the entire Revolutionary War, the Mexican War, or Spanish War. We find that the Revolutionary War lasted about seven years, and in that time 56 battles were fought. The War of the Rebellion saw more than 2,000 battles, and in the Battle of Gettysburg 3,070 men were killed and wounded. In looking over the appalling numbers of lives lost, and the consequences of all that bloodshed, I turn with reverence to the survivors of that war and pay tribute to those battle-scarred veterans who are so rapidly departing from our midst to that great beyond where they will receive their final reward. I have a high regard for those veterans who made it possible for me to enjoy a united Nation and a wonderful prosperity, which was only brought about by their patriotism and valor. I do not want it said of me that I denied any beneficial legislation to our heroes of the Civil War.

A recent report from the Commissioner of Pensions shows that our veterans are rapidly passing from us. In 1900 we still had 993,529 soldiers of the Civil War on the pay roll, but last year that number diminished to 748,147, or a decrease of 245,382 in 15 years. Only last year we buried 33,255 heroes who helped make up the most important pages of our history. Thus we see the amount of pensions rapidly decreasing; the year 1915 saw the amount of pensions paid out decrease $6,000,000. This should allow the continuation of a more generous policy on the part of the Government toward the remaining veterans and their widows. The United States is rich enough and liberal enough to help the needy veterans who in most instances are entirely dependent on their pensions. Fifty-five years ago they were the boys who became aroused to their patriotic duty and readily responded to the call of the country.

History repeats itself, and to-day, with events transpiring so rapidly in Mexico, and when we know not at what hour we may be called to defend our borders in Mexico, we see here in the city of Washington recruiting offices established for the purpose of urging our young men to train themselves for a future emergency, just as our veterans of the Civil War did 55 years ago, when they constituted the prime of American youth.

In times of great stress we have always depended upon our volunteer soldiers, who have proved the most persevering and courageous, to fight our battles, and they have never refused to do their duty. In these stirring times let us be prepared to care for all emergencies that might arise as a result of war. What better inducements have we to offer our recruits than the assurance that should they return from service incapacitated for work Uncle Sam will provide for them, and should perchance their blood be shed on the battle field, they will at least be assured of the protection and care of their loved ones at home.

The present administration has kept its pledges to the soldiers by enacting several pension bills. We have thus proved a friend to the soldier and his widow. This House, I believe, realizes that the life of this Nation is dependent on the patriotism of its people, and recognizes the patriotic service of its soldiers rendered in time of war. We have sought to care for the veteran during his declining years, and recently have enacted a most worthy bill that will take care of our dependent widows.

On March 4, 1865, a man, who is dear to the hearts of every American, said in his inaugural address, which was shortly after the war, "Let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who has borne the battle and for his widow and his orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations." God grant that we may be spared from future conflicts, but if it should be necessary I hope that we can play the part that "legitimately" belongs to us. I am an advocate of peace, and trust that we may never have to swell the list of pensioners now numbered on our rolls—"a roll of honor" which is a history in itself.

Our Government, administered for the welfare of the people, has from time to time recognized the necessity of pensions for its soldiers, and our veterans thus inspired have evinced a deeper devotion to ideals of democracy—ideals that bring hope and confidence to all nations of the world.

#### THE WIDOWS' PENSION BILL.

Mr. Speaker, coming now to the immediate bill before the House, I first desire to commend the Pension Committee for its careful preparation of the widows' pension bill and the favorable report they have given to this meritorious measure.

This bill as it is now presented to the House provides pensions to four classes of widows:

In the first place it will increase the pensions of widows who married their soldier husbands prior to or during the Civil War from $12 to $20 a month.

Second. It grants a pension to those widows of Civil War veterans who have now reached the age of 70 years, who are at present on the pension rolls. Thus the old and infirm wives of our soldiers will be allowed a more liberal amount than they have received in the past.

Third. The widows' pension bill also provides for pensions for widows of Civil War soldiers whose names were dropped from the pay roll by reason of their marriage to another person, but who are now widows again.

Fourth. The most important feature, in my opinion, of this legislation is the extension of the marriage limit. All widows of Union soldiers who married subsequent to 1890 are now entitled to a pension, even though they married the soldier as late as 1905. Personally, I would have favored the removal of all time limitations, as I believe every woman who had the care and responsibility upon her shoulders of an old soldier during his last years is justly entitled to a pension.

Many widows have written me praying for the passage of some legislation which would grant relief to them during their declining years. I am sure that this Congress will receive the blessings and gratitude of all those deserving women who will now be benefited by this provision of the bill. In reality, the women who married the soldiers subsequent to 1890, and who have cared and comforted the old veterans during their last years and illness, have made great sacrifices, for in many cases

the soldier was an invalid or enfeebled for several years prior to his death and was absolutely dependent upon others for help. Was it not the wife who could best administer with care and tenderness the wants of the old soldier, and was she not performing a patriotic duty, and one worthy of the attention of the United States Government? I do not believe, Mr. Speaker, that any thinking, charitable man would begrudge a liberal pension to those widows who have given the best years of their life to the care and comfort of the veterans. I am strongly in favor of liberal pensions to widows of all soldiers, because we come to them in time of need and ask for their husbands and sons. We can not perform a more beneficent duty than to comfortably provide for the welfare of those women who so willingly offered their loved ones for their country.

We have had so many facts presented to us in regard to the necessity of liberal pensions for veterans as well as their widows that I need scarcely go into the details of the things that should prompt us to deal generously with the widows of our soldiers.

In conclusion, Mr. Speaker, I would like to repeat the fitting remarks made by the Pension Committee in submitting this bill before the House:

> It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur. All patriotic men will enlist more freely in defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and the mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband or son, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood; it is the wife who gives birth to all of the soldiers and heroes of the past, present, and future; it is the wife who gently ministers in loving tenderness to the old comrade when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfuly and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty nation for the frail old woman left behind.

The sentiment for widows' pension legislation is strong throughout this country, and it is my hope that the Senate will expedite the passage of this bill in order that it may become effective at this session of Congress.

In speaking of these women who figured in the Civil War I am reminded of the words of the Ohio poet, Thomas B. Read, who said:

> The wife who girds her husband's sword,
> 'Mid little ones who weep and wonder,
> And bravely speaks the cheering word,
> What, though her heart be rent asunder,
> Doomed nightly in her dreams to hear
> The bolts of death around him rattle,
> Has shed as sacred blood as e'er
> Was poured upon the field of battle.

## Widows' Pensions.

### EXTENSION OF REMARKS
OF
### HON. CHARLES O. LOBECK,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. LOBECK. Mr. Speaker, since becoming a Member of this honorable body in the Sixty-second Congress I have voted for numerous important measures and have had various matters to present to the different governmental departments, none of which gave me more pleasure than my support of pension legislation and attention to the claims of the soldiers and widows of soldiers before the Pension Office. Therefore I am glad to have the privilege of supporting this bill which gives to the widows of the veterans of the Civil War substantial increases in their pensions.

Four years ago we passed the Sherwood pension bill, which gives to the Civil War veterans a pension according to their age and length of service. We believed, then, in providing for them in their declining years, and to compensate them in a small degree for the immeasurable service which they performed in preserving for us a strong united country. But at that time we made no provisions for the widow who was dependent upon that small pension, and who would receive but a fraction of her husband's pension after he was called to his eternal reward.

The soldiers' pension roll is rapidly decreasing. For instance, in the month of February of this year, there was a falling off on account of death of approximately 3,500. In March of this year the number was about 4,000, and in April it was about 3,000. The widows' pension roll decreased during the same months at the rate of 2,400, 2,200, and 1,700, respectively. Therefore, it is a very opportune time for us to assist these deserving women by enacting this legislation at this session of Congress.

This Congress has been generous in passing beneficial pension legislation. None of us regret the enactment of the Sherwood law. Personally, I favored a straight pension of $1 a day for the Civil War veterans. I was also glad to support legislation giving the soldier coming under the provisions of that law their increase of pension automatically, which did away with the routine of filing a new application each time an increase was due, and which expedited the payment of the soldier's pension. The special bills which have passed from time to time have benefited a number of deserving soldiers and widows.

Early in this session I considered it an honor and patriotic duty to vote for the bill granting to the widows of the soldiers of the Spanish-American War a pension at the rate of $12 per month, and which will also help to take care of the minor children of those soldiers who gave up their lives in fighting for the flag in Cuba and the Philippine Islands, or who died since then as the result of wounds or diseases contracted in that war. I was also glad to vote to pension the Indian fighters, who are entitled to this consideration for the services which they rendered and which were so helpful in developing our great Western States. I trust this bill, which we have approved in this House, will become a law before the close of this session of Congress.

This Ashbrook bill is fair, just, and reasonable. It is raising the pension of the aged widow of a Civil War soldier when she becomes 70 years of age to $20 per month. It gives the widow who was the wife of the soldier during his service in the Civil War the same amount and brings the remarriage limitation down to June 27, 1905. This provision will assist a great many deserving women who married Civil War soldiers since July 1, 1890, many of whom were widows of soldiers of the Civil War, thereby losing their former pensionable status.

For some reasons it was thought proper by a former Congress to pass a law denying pensions to women who married Civil War soldiers after June 27, 1890. For some time past Members of Congress have believed that it was working an injustice to the many worthy women who have married the Civil War soldiers since then, and have cared for them, nursed them, have been their helpmates and faithful companions in their last days and years. Congressmen have believed, and justly so, that these faithful women should be remembered. So, this bill provides that women who married Civil War veterans up to the year of 1905 shall be entitled to a pension upon the death of the soldier.

I feel certain and am sure that all patriotic people of our country will approve of this act, and my hope is that the bill will be approved speedily by the Senate so that it may be immediately enacted into law.

The United States has been more liberal in its pensions to defenders of the flag than any other nation on earth. I am proud of being an American, because Uncle Sam is generous to his defenders. I am glad that I am a Member of a United States Congress, in which I have had the privilege to vote for liberal pensions. No men have been braver on land and sea in defense of their country's honor than the American soldier and sailor. Whether he was American born or an adopted son of our country, he has fought shoulder to shoulder, side by side, and faced death in his devotion to the Stars and Stripes and to our country. These brave boys and men kissed good-by to their mothers and wives and sweethearts, and to these brave and patient women we are, in this bill, showing, as far as money can do, our appreciation of these splendid women of America.

We can as a nation, as a people, to my mind, never fully reward these patriotic men and women, but we can do our part to make the later days of their lives more pleasant and more comfortable.

## The Widows' Pension Bill.

### EXTENSION OF REMARKS
OF
### HON. JOUETT SHOUSE,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. SHOUSE. Mr. Speaker, since the beginning of the Sixty-fourth Congress I have served as a member of the Committee on Invalid Pensions. In many respects that service has been

both the most pleasant and the most unsatisfactory work I have done as a Member of Congress—pleasant because of the result of efforts expended in a good cause, unsatisfactory because many deserving cases could not be reached. Before that committee thousands of bills have been presented, the object of them all being to help care more liberally for the men who defended the integrity of the Union during the Civil War, or to give to the widows of those men some part of the material recognition which their husbands so richly earned. With few exceptions the thousands of cases brought to the attention of our committee were worthy. The evidence in connection with a large majority of them disclosed conditions pitiful in the extreme—poverty, sickness, loneliness—all of the heart-rending circumstances that surround destitute old age.

The Committee on Invalid Pensions has done its work well. The clerks and examiners of that committee have been diligent and faithful. A large number of the special pension bills have been enacted into law. But no matter how zealous or persevering a committee, it could not consider 7,000 individual bills in one session of Congress. The men who wore the blue are all old men now. Few of them are capable of further labor; many are without income aside from their pensions, and those pensions for the most part are inadequate to a comfortable living. Therefore the labors of the committee have been directed principally to selecting the most needy of the cases of the old soldiers themselves and giving those cases attention. But among the widows of old soldiers were found innumerable instances equally appealing. And in order to meet the situation it was strikingly apparent that some general legislation for these widows was necessary. Nothing has been done for them for years. Where allowance is now made by law it is pitifully meager, and no widow who married her soldier husband subsequent to 1890—more than 25 years ago—has claim for pension at all.

To remedy this unjust state of affairs, several bills were introduced in Congress and were referred to our committee. After careful consideration the Ashbrook bill was selected as meeting the views of a majority, and with certain amendments it was reported to the House for passage. That bill is before you to-day. Let us see just what it proposes.

At the present time the widow's pension is $12 per month. This bill increases the allowance to $20 a month where the widow married the soldier preceding or during the Civil War, or where the widow is now 70 years of age or when she may reach 70 years of age. Can such increased allowance be considered either extravagant or excessive? I think not.

The bill further restores to pensionable status those widows whose names were dropped from the pension rolls on account of remarriage and whose subsequent husbands have since died. It also restores those who were compelled to seek divorce where fault did not attach to themselves. Can reasonable objection be raised to these provisions? I am sure I voice the sentiment of this House when I say they are proper and worthy.

And then the bill makes eligible to pension any widow who married her soldier husband prior to June 27, 1905, instead of June 27, 1890. In other words, the widows who have cared for the soldiers in their old age, whether first, second, or third wives, who have done the tender duty of nursing at the time the old soldiers needed it most, are to be given recognition by the Government and reward for their faithful service. Surely no man familiar with the circumstances and conditions which have surrounded Civil War veterans of recent years can object to this feature of the bill. The only fault with it is that it does not go far enough. If I could have my way I would give to every old soldier in the land a minimum of $30 per month and to every widow of an old soldier, without reference to the date of her marriage, a pension of $20 per month.

Mr. Speaker, there used to be a notion broadcast in the country that the Democratic Party was antagonistic to pensions. I regret to say that even during the past year I have known of literature sent out at the instance of men prominent in the Republican Party in which appeared the false charge that the present Democratic administration is unwilling to do anything for the old soldier; that it is impossible for him to get justice at Washington under present conditions; that he can hope to come into his own only if the Republican Party is returned to power. What false and absurd statements! How unworthy of men who aspire to leadership in any organization! Is it possible that the old soldiers will fall for such misrepresentation?

Why, Mr. Speaker, it was a Democratic House which indorsed and passed in the Sixty-second Congress the famous Sherwood bill, granting for the first time a pension to every old soldier who served for 90 days, and for the first time giving the sum of $30 per month to every old soldier who served as much as two years upon the attainment of 75 years of age. Our Republican friends had promised such legislation for years, but they failed to pass it, and it remained for a Democratic Congress to do justice to the old soldier.

Now let us supplement that achievement by doing justice to the soldiers' widows. Let a Congress overwhelmingly Democratic in both branches pass the pending bill by unanimous vote and a Democratic President have the honor of signing it. For, my friends, this bill is but mere justice.

I represent a State which was settled largely by old soldiers. The homestead lands of Kansas were open for entry at the close of the Civil War, and many of the men who had worn the blue went there to make their homes. They gave to Kansas its bone and sinew, its courage and progressiveness, its honesty and its fighting spirit. The women who shared with their husbands the privations and the perils of frontier life did their part as nobly as the men. Surely they, too, are entitled to consideration at our hands; they, too, deserve the gratitude and help of their Government.

Let us, therefore, pass this bill, not as partisans but as patriots—performing an act of simple justice in which we should all rejoice.

---

**Increases in Widows' Pensions.**

## EXTENSION OF REMARKS

OF

## HON. ASHTON C. SHALLENBERGER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. SHALLENBERGER. Mr. Speaker, the Ashbrook bill, which the Committee on Invalid Pensions has reported to the House, and which will undoubtedly pass by a good majority, is a further proof of the earnest intention of this administration and the present Congress to take good care of the interests of the soldiers of the Nation who have been willing to make the last sacrifice for their country in time of war. The bill, I am informed, has the unanimous support of the Committee on Invalid Pensions. It provides a well-deserved and much-needed increase from the provisions provided under the existing law. As old age creeps upon the survivors of the great war for the preservation of the Union the soldier's widow finds herself equally needful of increased support along with the veteran himself. Under the Sherwood bill the soldier received a material increase, and this bill is in line with the purpose of the Sherwood Act.

This bill provides a pension of $20 per month for the widow who was the wife of a soldier during his war service and the same sum for the widow of a Civil War veteran after she shall have reached the age of 70 years.

An additional provision contained in the bill is that a soldier's or sailor's widow who may have remarried and thus lost her right to a pension as a widow of a veteran shall upon again being widowed have the right to again be placed upon the pension rolls as a widowed pensioner.

Under the law as it now stands the widow of a soldier or sailor is not entitled to a pension if her marriage took place subsequent to June 27, 1890. The Ashbrook bill provides that the widow may receive a pension if the marriage was not later than June 27, 1905, thus adding 15 years to the period of marriage for which the widows may receive pension. By the provisions of this bill a widow whose name has been on the pension rolls and dropped because of her remarriage to another person, who has since died, shall be entitled to have her name again placed on the pension roll at the rate she was formerly pensioned, unless she is entitled to a greater amount under section 1 of the act. And this provision is extended to those widows whose husbands died of wounds, injuries, or disease incurred during the period of their military or naval service, but who were deprived of pension under the act of March 3, 1865, because of their failure to draw pension by reason of their remarriage.

The bill provides also that any widow who married a veteran soldier or sailor prior to June 27, 1905, shall have title to pension, to commence from the date of filing of application, after the passage of this act. Heretofore the widow of a soldier or sailor who married the said soldier or sailor subsequent to 1890 was not entitled to a pension under the act of 1908. These provisions take care of those good women who married Civil War veterans at a time when they were in need of the sympathetic

care and kindly ministrations of a loving wife. Many of these veterans were suffering from ailments directly or indirectly attributable to their military or naval service, but notwithstanding this these good women were willing to assume the responsibility and duty of caring for these old soldiers in their failing health until such time as they were called to their final reward.

The provision, therefore, gives to those good women who married soldiers or sailors prior to June 27, 1905, the same pensionable standing as the widows of all other veterans. A widow of a soldier who is divorced through no fault of her own is restored to her pensionable status under this bill. She may have made an unwise choice in her second marriage. A divorce from her second husband would not restore her to her former status of a pensioner under the present law, but this bill makes provision that where the unfortunate widow marries the second time and is divorced upon her own application, she is restored to her former status under this bill. This is just and equitable. The committee in its report of this bill states the justice embodied in this meritorious measure very ably when it says:

It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur. All patriotic men will enlist more freely in defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and the mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the Old Flag and the Nation's honor with his life's blood. It is the wife who gives birth to all of the soldiers and heroes of the past, the present, and the future. It is the wife who gently ministers in loving tenderness to the old comrade when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfully and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty Nation for the frail woman left behind.

Mr. Speaker, I most earnestly hope this bill will very soon be passed by the Senate and become a law. I have supported all pension legislation reported to this Congress because I believed the relief was merited and well deserved. We are preaching preparedness and are right now asking young men to go to the colors and service of their country by the thousands, a generous action upon the part of the American Congress by taking good care of the veterans of other wars and their dependent families will encourage those whom we now need to rally to the Nation's defense. I am glad to vote for the bill and hope it will speedily become a law.

## The Question to be Decided.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM S. BENNET,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Albany Journal.

The article is as follows:

[Albany Journal.]

THE QUESTION TO BE DECIDED.

In recent years circumstances and personal activities have combined to put into the minds of a large part of the people of the United States the un-American idea that the President is a ruler instead of the people's highest servant. Attention has been given to men which properly belongs to principles.

The tame submission of a Democratic Congress to Executive dictatorship has contributed much to the temporary fixation of this false idea. Much has been written and spoken in which the personality of the President has been presented as the thing of paramount importance. The highly important fact that it is the principles and policies of the party in power that count for or against the Nation's welfare has been obscured. That it is the legislative branch of the Government which has the authority to give effect to party policies, through the enactment of laws in accordance with them, has been almost lost to sight. The people have been deluded, because they have not thought enough into the belief that the Executive head of the Nation controlled its affairs and must alone be relied upon to direct its fortunes, to shape its destiny.

In order to vote intelligently at the November elections the people of the United States must rid themselves of that delusion. They must give thought to the fact that the question to be decided is whether the Democratic Party, whose incapacity for good government has been again demonstrated, shall be retained in power, or the Republican Party, under whose control of Government the Nation always prospered and was respected throughout the world, shall be called back to administer American affairs; whether sound, beneficial policies shall be put in place of unstable, blundering ones; whether we shall continue to have a wavering, vacillating, incompetent Government, pandering to this class or to that for favor and disregarding the welfare of all the people, or we shall have again a strong, determined, able Government, seeking special favor from no class, but having the single purpose to secure prosperity for all the people, and respect for the rights of this Nation and for those of any and all individuals constituting it.

Because this is the question, the restoration of a Republican majority in the Congress is of equal importance with the election of the Republican candidate for the presidency. A Republican President could do nothing toward carrying into effect the policies of his party if the Congress should remain in control of the Democrats. Such a condition would be a striking lesson to those who have come to regard the President as the Government of the United States, but it would be bad for the country.

The Congress can be made Republican, and to accomplish that purpose should be the special effort of all who are disgusted with the kind of government that we have had in recent years.

In the present House of Representatives there are 230 Democrats, 196 Republicans, 7 Progressives, and 1 Socialist. The Democratic plurality over the Republicans is 34. To gain a bare plurality, the Republican membership must be increased by 18. But more than that increase is necessary to give the Republican Party the strength that it ought to have in the House.

That it can be secured is shown by the fact that in the elections of 1914 the Democratic plurality, which had come in with the election of Woodrow Wilson, was reduced from 163 to its present figure. The Republican gain was 69. That Democratic setback showed the trend of popular sentiment against the Democratic administration. What was well begun then can be and ought to be consummated at the next election.

In the United States Senate, the Democrats have a majority of 16. A gain of 9 will suffice to give the Republicans the majority. The term of a Democratic Senator will expire in 1917 in 17 States. In Indiana, the death of Representative Shively left an additional vacancy to be filled. The States are Arizona, Florida, Indiana, Maine, Maryland, Mississippi, Missouri, Nevada, Montana, Nebraska, New Jersey, New York, Ohio, Tennessee, Texas, Virginia, and West Virginia. Among these are seven southern States, in which the election of a Republican Senator is to be regarded as out of the question. There are left, then, 10 States in which 11 Democratic Senators may have as successors men who are not members of the Democratic Party, and the chances are good that at least the 9 Republicans who are required to make a majority will be elected. They will certainly be if the fact is borne in mind that thus restoration of Republican principles and policies shall be effected.

The defeat of Woodrow Wilson is important only because it means the defeat of the Democratic Party, since the vote that defeats him will almost certainly take control of the Congress from the Democratic Party.

## Tavenner Amendment to the Fortifications Appropriation Bill.

### EXTENSION OF REMARKS
OF
### HON. EUGENE BLACK,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 21, 1916.*

Mr. BLACK. Mr. Speaker, under leave to extend my remarks in the RECORD on the Tavenner amendment I wish to print what Mr. Louis D. Brandeis, now Associate Justice of the Supreme Court of the United States, had to say in a letter concerning this proposed legislation. Mr. Brandeis in a letter to the Efficiency Society of New York City, dated January 21, 1916, wrote as follows:

Referring to the proposed congressional legislation to prohibit the introduction or use of time study and premium payments in Government establishments:

In my opinion any such restriction upon the conduct of Government establishments would be highly inadvisable. The purpose for thus proposing the legislation is doubtless one which all of us would approve. Increased efficiency ought not to be purchased at the expense of health and other qualities essential to good citizenship and the general welfare, but no one can doubt that increased efficiency is essential to the public welfare, that we have not yet learned how best to secure that efficiency, and that the most important element in securing efficiency is the knowledge of facts, to the ascertainment of which time study is a means.

To prohibit time study and premium payment is as crude a method of affording to the workingman proper protection as the proverbial "burning of the house to roast the pig."

Mr. Speaker, for the reason that I believe that in adopting an amendment of this kind that we are "burning the house to roast the pig," I have voted against it.

From letters which I have received, I am aware that organized labor is in favor of this amendment, and I am always very willing to listen to and fully consider any argument which they offer on propositions of this kind. I am a friend to organized labor, but a Representative in Congress should never forget that he is a servant of all the people, and should vote upon every question with the one end in view of promoting the public good.

I have not been able to agree to the arguments of those favoring this amendment, and therefore out of a sense of duty I have voted against it.

It is my settled conviction that the amendment will neither benefit the laboring man in these Government arsenals nor the general public. On the other hand, it will deprive those laborers who are now earning extra money of that privilege. It will simply impede the efficiency and economy of public work without furnishing any compensatory reason for its enactment.

### Pensions for Widows.

## REMARKS
OF
## HON. ROBERT M. McCRACKEN,
OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. McCRACKEN. Mr. Speaker, if the pending measure to increase pensions for the widows of soldiers of the Civil War becomes a law it will afford relief to four classes of widows:

First. It will increase the pension of a widow who was the lawful wife of a soldier during the period of his service in the Civil War from $12 to $20 per month, no matter what the age of such widow may be. There will not be many, however, of this class who will be benefited by this law, for those who were the wives of soldiers during the period of the Civil War have for the most part passed away.

Second. This bill, if it becomes a law, will give a pension of $20 per month to all Civil War widows who have now reached, or may hereafter reach, the age of 70 years, who are now on the pension rolls or who may hereafter be placed thereon.

Widows of Civil War soldiers were not pensioned at all until 1890, nearly 25 years after the close of the war. Those who were then pensioned received only $8 per month, which was increased to $12 per month in 1908.

Third. This bill restores any widow of a Civil War veteran to her former pensionable status when she has been dropped or may hereafter be dropped from the pension roll by reason of her remarriage and after the husband of such subsequent marriage shall have died, or from whom she may, upon her own application, be divorced.

Fourth. This bill raises the marriage limit 15 years by providing that all widows of Union soldiers will be entitled to the benefits of its provisions who remarried prior to June 27, 1905.

Naturally more revenue will be required to meet this increase, but the committee has well said:

> It will certainly cost much less than a battleship and is the sort of preparedness that would be worth many times its cost should a crisis occur. All patriotic men will enlist more freely in defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and the mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood. It is the wife who gives birth to all of the soldiers and heroes of the past, the present, and the future. It is the wife who gently ministers in loving tenderness to the old comrade when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfully and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty Nation for the frail old woman left behind.

If this bill could be referred to the people of this Nation I am sure that it would meet with their approval, for the American people have never yet shown ingratitude to the men who have come to its defense in its hour of peril.

As the son of a veteran of the Civil War and as a Representative in the American Congress I have no apology to offer to anyone for my record upon pension legislation for the old veterans and their widows and orphans. I have voted for every pension bill so far that has come up for passage in this session, both general and private, including the acts granting pensions for the widows of Spanish-American War veterans and for the men who fought in the Indian wars in the West, and I am glad to have had the privilege.

The one feature of this bill which I think is particularly commendable is that which restores a widow to the pension roll after she has been dropped because of her remarriage and when she is left a widow again either by the death of her husband or when she may have been divorced because of no fault on her part.

I am glad that the law no longer requires a widow to show that the soldier died from wounds or disease incurred in line of duty before she can be given a pensionable status. Such proof has always been hard to secure and its requirement by the Pension Office in Washington has worked a real hardship to the widow. The time was when even the Civil War veteran could not secure a pension unless he could show disability which he suffered in line of duty, but happily that restriction has been removed. I can remember how my father suffered and finally died from wounds received and disease contracted by him while in the service of his country from 1861 to 1865.

I know of some of the difficulties he had in the procurement of his proof. I remember also how he labored to secure an increase of peasion to which he was entitled under the law, and after long and seemingly needless delays a notice of allowance of increase was received a few days after his death. I remember how patiently and lovingly my mother nursed and cared for my father in the years of suffering he experienced prior to his death, and that when she was left a widow she was compelled to wait nearly two years before she could receive her pension, during which time I was obliged to leave school and my home in order to earn a living for her and the younger children. It has always seemed to me that the time required by the Pension Department in passing upon many applications for pensions is too long, and I sincerely hope that under this act, if it becomes a law, the widow may receive her pension very soon after her application has been submitted.

I am heartily in favor of this bill and hope that it may become a law at this session of Congress.

In conclusion I desire to call the attention of the House to a bill which I introduced last January, permitting railroad companies to grant half-fare rates at all times to veterans of the Civil War. I can see no good reason why this bill should not pass, and it shall be my purpose to urge its consideration until it shall have been finally enacted into a law.

### The Fighting Sixty-ninth.

## EXTENSION OF REMARKS
OF
## HON. MURRAY HULBERT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. HULBERT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an editorial from the New York American of yesterday on the subject of mobilization.

The editorial is as follows:

[From the New York American, June 22, 1916.]

FIGHTING SIXTY-NINTH FIRST OFF TO BEEKMAN.

Again the Sixty-ninth was first to answer.

The fighting Irish showed again that they know how to be ready, which is the first fundamental of dandy fighting men.

Early yesterday morning they marched from their armory to entrain for Camp Whitman, and a fine sight they made, and well they deserved the cheers that rolled down the long lane of onlookers.

There were many in the living hedges that lined that lane who did not cheer. One does not expect cheers from mothers, wives, sisters, and sweethearts when their lads march away to fight for their country and their flag.

But Irish lads do not come by their courage through any craven women folk, and if there were no cheers on their lips the eyes of mother and wife and sister and sweetheart shone with pride in their men—and their hearts were high and glad with the valor that is just as splendid as the valor of men who look death steadily in the eyes for the dear sake of the land they love above life.

We are all Americans, and a poor sort is he whose loyalty is confined to the borders of any State. Still, there is nothing unbecoming in the pride that we men and women of New York take in the fine, soldierly readiness of our citizen soldiers.

The guard has honored New York, and among all the regiments it has fallen to the Sixty-ninth to be first to blazon the name and fame of the city before the eyes of the Nation.

We are particularly glad and proud that this is so, because there have been little Americans who have not been ashamed to oppose military preparedness because a great part of the cost of that preparedness must be spent to make New York City secure.

The answer the Sixty-ninth gave yesterday, and other gallant regiments will give in quick succession, is that this city is always more than willing to do her own part in the general defense, and that the men of New York are just as ready to defend with their lives the States of the West and South as they are to ask the States of the West and South to contribute to the defense of New York.

To this cheap and mean political propaganda of the little Americans our soldier men give the generous answer of practical deeds, and the effect in binding us Americans all together in stronger bonds of common citizenship, common loyalty, and common affection is bound to be very great, and, we trust, very permanent.

We haven't all the good soldiers in New York State, of course. The country is full of good soldiers, trained or ready to be trained. But there are none better than our New York citizen soldiers, and among the New York citizen soldiers there are none better than the fighting Irish lads who swung along to the music of their band through the streets lined with cheering thousands yesterday morning.

Heaven bless the lads and send them safe home again to the women who wait.

**The Ashbrook Bill and the Resolution to Provide for the Dependents of Soldiers.**

EXTENSION OF REMARKS

OF

# HON. JOSEPH TAGGART,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. TAGGART. Mr. Speaker, on the 19th instant it gave me pleasure to vote for the Ashbrook bill, whereby the pensions of widows of soldiers and sailors of the Civil War and of certain Indian wars, as well as the Mexican War, are to be increased to $20 per month. The bill provides that a widow who was married to the soldier at any time while he was serving in the war, shall receive a pension of $20 a month. As the law has stood for the past 21 years, any woman who married a soldier since June 27, 1890, can not receive a pension unless she is able to prove that the soldier died as a result of disease or wounds originating during his service in the Army. In 99 cases out of 100 it is impossible after this lapse of time to prove that the death of a man resulted from disease or wounds of service origin. Under the provisions of this bill, any widow who married the soldier at any time before June 27, 1905, shall receive a pension, regardless of what may have been the cause of the soldier's death.

Heretofore the regular rate of pension has been $12 a month for all widows. This bill will increase the rate to $20 a month for all widows of soldiers who have attained the age of 70 years, and this increase will be granted to every widow when she reaches the age of 70, provided she was married to the soldier before June 27, 1905.

The pension laws have been unjust and unfair to the widows who were in receipt of pensions and then remarried and again became widows. It was cruel and unjust not to restore the pension of a widow whose second husband died and left her, perhaps, destitute and without means of support. She has been refused a pension except where she was married to the soldier during his service, and then she would have to how at the soldier drew a pension, that he died, that she drew a pension after his death, and lost her pension by remarriage, and again became a widow. Under the law the widow who lost her pension by reason of remarriage was actually punished on account of the money that she saved the Government by giving up her pension. Under the provisions of this bill she will be restored to the pension roll, not only if her subsequent husband died but in case she was obliged to separate from him on account of his fault. Some of the saddest cases that I have known were those of women who, through the fault of their soldier husbands, were obliged to secure a separation.

The claim of these women on the sympathy of the public and on the consideration of Congress, to my mind, is quite as strong as the claim of those who were widowed by death. They were denied pension even where they were married during the war. The Government has granted pensions to wealthy women who lived with their fortunate husbands until death separated them and has absolutely ignored the woman who did her part quite as well and whose life was desolated by domestic unhappiness. Under the humane and just provisions of this bill, where the woman had to leave the soldier, without fault on her part, she will be entitled to a pension after his death.

This increase will cost $9,000,000 for the first year, and probably will never cost any more than that amount annually—not half as much as one battleship. The cost of pensions is being diminished so rapidly by the death of aged men and women that the whole amount paid for pensions will be less from year to year, notwithstanding this increase of widows' pensions. Everybody thought when we passed the Sherwood pension bill four years and a half ago that the increased cost of it would be tremendous, but the cost of pensions this year is not any greater than it was the year before we passed the Sherwood bill. The number of men and women whose names have been dropped from the rolls on account of death, over and above the new names that have been added in the past five months, is as follows:

| | |
|---|---|
| January, 1916 | 4,949 |
| February, 1916 | 4,859 |
| March, 1916 | 4,959 |
| April, 1916 | 3,442 |
| May, 1916 | 3,482 |
| Total | 21,691 |

This 21,691 represents the net loss of names on the pension roll—an average of 4,308 each month, which, if it continues, will mean a net loss of 52,056 names dropped from the roll in the present calendar year—that many more names than will have been added to the roll during the year. The Bureau of Pensions has furnished these figures. The exact amount of pension drawn by these deceased pensioners, and the amount of increase or original pension granted to those who have been added to the roll is not stated, but it is plain that those who are passing away will relieve the Government of a greater expense than we have incurred or will incur by this bill.

This bill is fair and just. If it is the policy of the Government to pension widows, we should provide them with at least enough to live on. We should have the dignity not to do anything by halves. No woman can live on $12 a month in our day. The widow of a Revolutionary soldier, who perhaps received $4 a month, could take her market basket and bring home more of the necessaries of life with a dollar of the money, than $5 will purchase now.

We who have opposed a standing army of 250,000 men, and were satisfied with increasing the army to 175,000 men, were abused because it was said we were not in favor of preparedness. We stood for the National Guard in preference to the Regular Army. The extra 75,000 men would cost $75,000,000 a year. We can not get men to enlist in the Regular Army, but our brave boys have not failed anywhere to fill up the ranks of the National Guard at the call of the President. These citizen soldiers represent the true national defense of this country. They are called upon now to rally to the defense of the flag, and to-day the House almost unanimously passed House Joint Resolution No. 242, which, for the time being, will make the National Guard a part of the armies of the United States, and will provide for the wives and families and dependents of the soldiers of the National Guard.

This resolution is the first of the kind ever passed through the House of Representatives, as far as I have examined the record. It is the most generous provision that has ever been made for those who are dependent upon soldiers in the field. The resolution is as follows:

> The sum of $1,000,000 is hereby appropriated, to be expended under the direction of the Secretary of War and under such rules and regulations as he may prescribe, for the purpose of maintaining at a cost of not more than $50 per month the family of each enlisted man of the National Guard called or drafted into the service of the United States until his discharge therefrom, which family during the term of service of said enlisted man has no other income, except his pay, adequate for the support of said family; and the word "family" shall include dependent mothers, fathers, and sisters, as well as brothers, under the age of 14 years.

I had the honor of suggesting that the word "wife" was not in this resolution, although a liberal construction of it might mean that the wife of a soldier without children would be included in the meaning of the word family. The amendment was carried, and the dependent wife without children will certainly be provided for.

In passing this resolution, we were not unmindful of the fact that in all ages women have been among the chief sufferers in war. The brave young man in the midst of his comrades has such pride in serving his country that he is often unconscious of hardship or privation. Light-hearted and care free, as young soldiers always are, full of enthusiasm and of the spirit of battle, always animated by the highest hopes and looking forward to the proud day in which they will return as honored and respected veterans, there is a measure of happiness in braving the dangers of the campaign.

But what shall we say of her who takes leave of him who is nearest and dearest to her heart? We have not forgotten her. We of this House who represent the whole American people have carried out their wishes in passing this resolution. The brave woman at home and her children shall not want. In this hour the great heart of the American people goes out to her who has bidden the defender of her country hail and farewell! Until he returns the wife, the children, the aged or dependent father or mother, or the dependent sister or brother shall be provided for, and the man at the front shall know that those that are dearest to him are dear to all the people. The beautiful verses of Thomas Buchanan Read, the Civil War poet, come back to us in this hour, the verses entitled "The Brave at Home":

> The maid who binds her warrior's sash
> With smiles that well her pain dissembles,
> The while beneath her drooping lash
> One starry teardrop hangs and trembles,
> Though heaven alone records the tear,
> And fame shall never know her story,
> Her heart has shed a drop as dear
> As e'er bedewed the field of glory!

The wife who girds her husband's sword
Mid little ones who weep or wonder,
And gravely speaks the cheering word.
What though her heart be rent asunder,
Doomed nightly in her dreams to hear
The bolts of death around him rattle,
Hath shed as sacred blood as e'er
Was poured upon the field of battle!

The mother who conceals her grief
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses,
With no one but her secret God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on Freedom's field of honor!

All honor to the brave men who have responded to the call of the President. They have shown the old-time spirit, and I can not fail to repeat with pride that more than a thousand young men have left the second district of Kansas for the front. I have heard of no other district that has responded in such numbers. They have the honor of serving under their neighbor and their friend, Maj. Gen. Funston, upon whose military genius and whose tremendous will and energy we can most implicitly rely.

The representatives of the people have not forgotten those who mourn nor those who endure the agony of war at home.

---

**Address of W. P. G. Harding, Member of the Federal Reserve Board, Before the Alumni Society of the University of Alabama, at Tuscaloosa, Tuesday Morning, May 30, 1916.**

## EXTENSION OF REMARKS

OF

# HON. WILLIAM B. OLIVER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 24, 1916.*

Mr. OLIVER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I desire to insert a very scholarly and informing address delivered by Hon. W. P. G. Harding, member of the Federal Reserve Board, before the Alumni Society of the University of Alabama, at Tuscaloosa, Tuesday, May 30, 1916, on the important subject of "Efficiency and Industrial Preparedness."

The address is as follows:

ADDRESS OF W. P. G. HARDING, MEMBER OF THE FEDERAL RESERVE BOARD, BEFORE THE ALUMNI SOCIETY OF THE UNIVERSITY OF ALABAMA, AT TUSCALOOSA, TUESDAY, MAY 30, 1916.

We are celebrating the one hundredth anniversary of the historic city of Tuscaloosa and the eighty-fifth annual commencement of our great university. Although upon such an occasion our thoughts naturally take a retrospective turn, I shall not in my remarks dwell upon the past, rich as it is with lessons of its trials and triumphs, nor will I pose as a prophet and attempt to rend the veil of the distant future. I shall speak instead of the present and of that immediate future which lies within our horizon, and which is ours to make what we will.

LESSONS OF THE EUROPEAN WAR.

We are living in a most critical period of the world's history, a stupendous era, full of opportunity and fraught with grave responsibility. The frightful holocaust on the other side of the Atlantic, with its appalling sacrifice of human life, with its enormous waste, and with its pandemonium of calamity and woe, has aroused in the hearts of the people of this country mingled feelings of horror and of pity, but also it has instilled in our minds a better and higher appreciation of our duty to ourselves, to our country and the world. No longer are we lulled into a false sense of security because of our splendid isolation, no longer do we feel that we enjoy permanent immunity because of the 3,000 miles of ocean waves that separate us from the shores of Europe; but we have as a nation come to realize that our surest guaranty of peace lies in preparedness for war, or, rather, against war. The first steps for military and naval preparedness have already been taken, and because of this we are confident that we shall escape any part of the tragedy now being enacted on the three continents of the Old World. This confidence is intensified because of the calm judgment and consummate skill of the President of the United States, Woodrow Wilson, who has so successfully handled a grave international crisis, maintaining friendly relations while preserving our national honor and dignity. It is not necessary, therefore, to discuss at length at this time and place preparedness from a military sense, but it is well that we should consider it from a commercial and industrial standpoint.

EFFECT OF WAR UPON AMERICAN COMMERCE.

Out of the misfortunes of others has come to a great extent the marvelous prosperity with which this country is blessed today. The temporary depression in the United States which followed immediately the outbreak of the war and which was due to the sudden and complete collapse of credits and to the interruption of the accustomed means of transportation and communication throughout the world, was followed by a speedy readjustment which brought with it from the warring nations and from noncombatant countries, whose trade had been principally with the powers at war, millions upon millions of dollars' worth of orders, not only for munitions but also for the ordinary necessities of life, which have been pouring in upon this country so that it has been enriched, according to the estimate of some authorities, to the extent of about three billions of dollars. This golden flood has fairly deluged some of the States to the north and west of us. Alabama and her sister States of the South, while feeling to some extent the impetus of better times, have not enjoyed that full measure of prosperity that would have come to them had their natural resources been more highly developed.

POSITION OF THE SOUTH.

Yet the South, since that day, back in 1881, when we members of that class made our final bows upon the rostrum in Woods's Hall, has made great progress in all lines of industry—in agriculture, in manufacturing, in mining, in banking, and in commercial pursuits—as may be exemplified by the statement that the banking power of the Southern States is now greater than that of the entire United States at that remote day. But our section, nevertheless, has not yet become highly specialized in the arts and sciences, and in manufacturing, but is still essentially an agricultural region and still has cotton as its principal money crop. Because of the inability of the central powers to import cotton on account of the rigid blockade which is being maintained, the South has, during the past year, been deprived of a market for nearly one-fourth of its export crop, so that neither its manufacturers nor its farmers have reaped that measure of profit which has come to the same classes in other sections. The South is, however, an important part of the United States and is interested, in common with all other sections, in the maintenance of national prosperity. Already there are some indications that a wearied Europe is beginning to turn its thoughts toward peace, and perhaps it may be the mission of our southern-born President to point out the way.

AFTERMATH OF THE WAR.

Restoration of peace will necessarily bring about important changes in the world's trade, and just what these changes will be and how they will affect business conditions in this country are problems which are being studied carefully by publicists and business men. These are vital questions here in the South as in other parts of the country, although we may not be as directly affected as other sections, for the reason that a smaller part of our business has come from foreign countries or has been connected with war material. We should, however, stand ready to support the Government in any measures that it may be necessary to adopt in order to retain the legitimate foreign trade that we have already secured, to extend still further our business intercourse with South American countries, and to maintain a proper balance in our trade relations with the nations now at war. American bankers are permitted under the Federal reserve act to establish branches in foreign countries, and can thereby facilitate transactions involving the importation or exportation of goods; and it is practically certain that a law will soon be on our statute books creating a tariff commission, whose duty will be to make a close study of changing conditions and to recommend, from time to time, such modifications of our present tariff laws as may be advisable.

I do not speak authoritatively, but I hope that, as a measure of commercial preparedness, steps will be taken to encourage the manufacture of dyestuffs in this country, to protect American firms against foreign dumping, and to provide heavy penalties for foreign concerns engaged in unfair competition in the United States. American merchants and manufacturers seeking to compete with those of other nations in the markets of the world should be permitted to engage in the contest on equal terms with their competitors, and we should therefore favor some arrangement that will enable American exporters to secure foreign trade in competition with the cartels and combinations of Germany and other countries.

AMERICAN MERCHANT MARINE.

A serious drawback to the development of our foreign trade is the utter inadequacy of our American merchant marine. The South has felt this perhaps as keenly as any other section of the country. We have been handicapped very greatly in exporting cotton by lack of ship room and by abnormally high ocean freights. Rates to Liverpool on cotton have for several months past frequently ruled as high as $15 per bale, or 3 cents per pound, or about 10 times the normal rate, and this excess has, to a great extent, come out of the pockets of the southern farmer. Coal is selling in Buenos Aires at $35 a ton, and yet no ships are available to transport a pound of Alabama coal to that market. American shipyards have been very bsuy for the past year or more, as private capital has been attracted to shipping by the unusual profits obtainable, but in normal times this activity can not be expected to continue.

Our wage scales are much higher than those of foreign countries, whose shipping is also, in many cases, subsidized, and in order to establish an American merchant marine which can be used in the carrying trade in time of peace and as a naval auxiliary in time of war, Government intervention and aid seems necessary. The shipping bill passed the House of Representatives a few days ago, with the support of practically all the Southern Members, and will, in all probability, pass the Senate and become a law before the adjournment of Congress.

RURAL CREDITS.

Another measure of supreme importance to the South is now in conference—the rural credits bill. The South for a great many years has labored under the curse of absentee landlordism and it has suffered from the evils of the tenant-farming system. Hardly more than a tithe of its productive capacity has been utilized for lack of both capital and labor. With the exception of Texas, the Southern States have not attracted their proper share of immigration, either foreign or domestic. Too many of our rural population have found it impossible to make any substantial headway, and finding themselves year after year lacking all of the luxuries and many of the necessities of life, have lost ambition and have settled down to breathe the sodden atmosphere of a hopeless and aimless existence. The rural-credits act will open the way for the organization of national farm-loan associations which, in cooperation with the 12 Federal land banks to be established, will make loans on farm lands on long time; payments being amortized so that the total annual installment, including interest and reduction of principal, will amount to not more than 8 per cent of the principal, the interest in no case to exceed 6 per cent. Landowners will thus be afforded an opportunity of improving their farms by ditching, fencing, and by the erection of silos and buildings, diversification of crops will be encouraged, cattle raising will be promoted, and the thrifty tenant farmer will be given an opportunity of becoming his own landlord. Many who have heretofore been without hope or definite ambition will find a new incentive to work and to accumulate with a view to ultimate independence. Southern agriculture will thus receive a wonderful stimulus, and many of the young men growing up on the farms whose ambition now is to go to a town will find it to their advantage to make a study of scientific farming and to practice it as a life vocation. Better living conditions in farming districts and greater prosperity for the farmer mean decreased cost of living, less concentration of population in the towns and cities, more schools, better morals, and a happier and more contented people. Prosperity on the farms means larger orders for the merchant, the coal operator, the lumberman, and for the manufacturer; more business for the railroads, steadier employment of labor, increased deposits for the banks, and a greater demand for loans. Consider what Europe has done for its farmers and how, up to the outbreak of the deplorable war, it had improved their condition, and how the continental powers have been able, through scientific farming methods, to support themselves during abnormal conditions. While the methods adopted in Europe may not be best adapted to the United States, surely with some modifications they can be made effective here.

Let us never lose sight of the fact that farming is the most important industry in the world. Some facts can not be repeated too often, and let us remember that without the farm all other business would stagnate and die, the railroads would cease to run, the banks and mercantile establishments could no longer operate, and grass would grow in the streets of our cities, which would no longer be thriving marts of commerce, but would become, through famine, whited sepulchers of the dead. No other business can succeed without the farmer, but the farming business can survive, if left unfettered, without the aid of any other business.

WATER POWERS.

Let us now consider for a moment the subject of water. For some years past we in Alabama have heard a great deal about another liquid, and I am sure that it will be refreshing to turn our thoughts to pure and unadulterated water. We need not discuss its superlative merits as a beverage or as a cleansing agent, but rather let us consider its utility as a means of transportation and as a source of power. Bountiful nature has favored our State in the matter of waterways. Through the Warrior, the Tombigbee, the Alabama, and the Coosa the waters springing from the hills in the mineral regions flow through rich agricultural sections and discharge themselves into the Gulf of Mexico. The work of nature has been supplemented by the National Government and by means of locks and dams on the Warrior and Tombigbee Rivers perennial navigation has been provided from the coal fields to the Gulf. Already barges laden with black diamonds pass every day down the river just below the university, bound for Mobile and New Orleans. Through a beautiful valley in northern Alabama flows the great Tennessee River, a majestic stream which springs from the mountains of North Carolina and Virginia, and flowing through east Tennessee, enters our State near its northeastern corner, and leaving it at its northwestern extremity, turns again through Tennessee, and passing through Kentucky unites with the Ohio, and finally discharges its waters into the mighty Mississippi. Most of this wonderful stream is already open to commerce, but in its course through Alabama its waters plunge through a series of shoals and rapids, known as Muscle Shoals, which block navigation, but which, if properly harnessed, will furnish one of the greatest water powers in the United States. Locks and dams at Muscle Shoals would render the Tennessee River navigable from Knoxville to Paducah, and would at the same time offer to industries electric energy of approximately 500,000 horsepower.

When we speak of Muscle Shoals, there results a triangulation of ideas. On one side is transportation, on another the fertilization of our farms, and on the third military preparedness. We all know that niter or saltpeter is an essential ingredient in the manufacture of gunpowder and of fertilizers, and that the world's great natural deposits of niter are in northern Chile. We know, furthermore, that the oxygen in the air we breathe is heavily diluted with nitrogen, and that science has found the way through mechanical means of accomplishing the fixation of air nitrogen into nitrates. The marvelous efficiency of Germany as a nation is admitted by her friends and enemies alike, by her sympathizers, and by her critics. Some years ago German manufacturers began, under adverse conditions, the manufacture of nitrates from the air. When I refer to adverse conditions I mean that this process of fixation requires enormous power and calls for a tremendous expenditure of energy; and in a country like Germany, having no great water powers, this energy can be supplied at high cost only by the consumption of an enormous amount of fuel. I understand that not less than 300,000 horsepower must be produced in order to manufacture air nitrates on an adequate commercial scale, and the only nitrate manufacturing plant on the American continent is located on the Canadian side at Niagara Falls. The bill that has recently passed both Houses of Congress to increase the efficiency of the Military Establishment of the United States recognizes the necessity of an adequate nitrate supply and empowers the President of the United States to make such investigation as he may deem to be necessary to determine the best, cheapest, and most available means for the production of nitrates and other products for munitions of war and useful in the manufacture of fertilizers by water power, and he is further authorized and empowered to "designate for the exclusive use of the United States such site or sites upon any navigable or nonnavigable river as may, in his opinion, be necessary to carry out the purposes of the act, and he is further authorized to construct, maintain, and operate, at any site or sites so designated, dams, locks, improvements to navigation, power houses, and other plants and equipment, or other means than water power as in his judgment is the best and cheapest, necessary, or convenient for the generation of electrical or other power, and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers and other products."

The bill furthermore appropriates the sum of $20,000,000, available until expended, to enable the President of the United States to secure this nitrate supply. I do not know what recommendations the War Department will make to the President, nor can I predict what his choice of a site will be, but I do know that no site in the United States is superior to Muscle Shoals from the standpoint of strategic location, the power that

can be developed, and the proximity to large deposits of phosphate rock. I wish that I were a word painter, so that I could picture to you the great opportunity that is presented to the people of Alabama, and the far-reaching results that would come from the location of this nitrate plant within the borders of our State. Imagine a gigantic dam across a broad and majestic river, a great power house, and beyond, a nitrate plant, on one side of which will be built a large factory, where nitric acid will be produced for use in the manufacture of explosives; on the other side works for the production of ammonium phosphate, where the phosphate rock brought from near-by fields will be combined with the nitrates and converted into that important ingredient of all commercial fertilizers, ammonium phosphate, for use in enriching millions of acres of land in the United States. The waters of the Tennessee, in their ceaseless flow toward the Ohio and the Mississippi, can generate at a minimum cost, after the initial expenditure has been made, the large amount of power necessary for the operation of these plants. This power, contrary to the fears of many, would not interfere with the consumption of Alabama coal, for it would develop an entirely new industry which can not be established if dependent upon coal as a fuel. I wish that I could picture to you the other important industries that would follow the establishment of this plant, such as electric furnaces for the manufacture of the highest grades of steel and establishments for the production of aluminum from the vast deposits of bauxite which abound in east Alabama. I would point out to you the wonderful opportunity that would thus be opened to the young men of Alabama, and I can see in my mind's eye a great school of technology here at the university, where future generations can be taught the principles of efficiency and of applied science, which have done so much for the development of Germany during the past 40 years. Surely every man of influence in Alabama will do all in his power to induce the President to locate this plant on the banks of the Tennessee. Many other States have eligible locations to offer, though none, in my opinion, can at all compare with the one at Muscle Shoals. Every possible influence will be brought to bear by these States to present their own locations in the most favorable light, and it behooves the people of Alabama during the next few months to work as they have never worked before, if we wish to win this great prize, which would mean an immediate expenditure within our borders of $20,000,000, with industries to follow which will cost at least thirty millions more.

DEVELOPMENT OF ALABAMA'S RESOURCES.

There has been too much talk about the great natural resources of Alabama and of the South. The time has come for action. We must develop them. About two months before the surrender of the armies of the Confederacy a conference was held by Abraham Lincoln with three Confederate commissioners at Hampton Roads. I do not know whether it is history or whether it is fiction, but the story is that at that conference Mr. Lincoln, holding a sheet of white paper in his hand, said to Alexander H. Stephens, "Let me write Union at the top of this page and you may write whatever else you please." If this story be founded on fact, what an opportunity for the South was lost. If we could bring the people of Alabama to a proper realization of the importance of organization and cooperation, of constant and unflagging effort, and of efficiency in work; if we could be justified in taking a map of Alabama and in writing across that map in outstanding letters, reaching from the Tennessee to the Gulf and from Georgia to Mississippi, the word "efficiency," we would have a great and prosperous State no matter what else might be written there. In the South to-day we have some highly developed and well-organized industrial plants, but our economies, as a rule, are neither scientific nor potentially efficient, nor do our activities contribute to stop waste and to increase efficiency. We find waste and more waste everywhere. We have made only a beginning in the manufacture of by-products. We can see in half a day's journey thousands of coke ovens illuminating the midnight skies with flames which contain many elements of wealth, but which are absolutely thrown away. Because of the nitrogen which it contains, a million tons of cottonseed meal are put back every year into the soil of the cotton fields of the South, although overhanging every acre there are over 33,000 tons of atmospheric nitrogen which the water powers of Alabama now going to waste could take out of the air and fix ready for use as a fertilizer for increasing our production of agricultural staples.

EFFICIENCY VERSUS WASTE.

But waste and inefficiency are not to be found alone in agriculture. They are found in the forest and in the factory as well as on the farm. In mechanical arts and in scientific achievements we lag behind. The Secretary of the Navy, a southern man by birth, rearing, and residence, recently selected 23 engineers and scientists as a civil naval advisory or efficiency board, not one of whom was taken from any activity or association of the Southern States. We are proud of our traditions, yet we have seen other States forge ahead, even the arid States in the rainless regions of the West, which have in 20 years secured from the Federal Treasury $116,000,000 for the accomplishment of their irrigation projects. Traditions may be a curse unless we find in them an inspiration for continued effort and progress. We are afflicted too much with traditions, apathy, indifference, and self-satisfaction. Too many of the sons of Alabama have left their paternal rooftrees and have sought their fortunes in other States. We must do something worth while, not only to make it to the interest of the youth of Alabama to remain at home but something that will induce the best elements of the citizenship of other States and of other countries to cast their lot among us. According to a poetic fancy, the name "Alabama" signifies "Here we rest." Let no one think that this means "Here we do not work; here we take our ease." But let us seek to justify the construction of the word "rest" as meaning "remain," so that the name of Alabama henceforth shall signify to the young men of the State as a matter of choice and because of the glorious opportunities offered, "Hence we will not go; here we remain."

## The Hay Resolution.

### EXTENSION OF REMARKS
OF
### HON. CYRUS CLINE,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. CLINE. Mr. Speaker, we are considering a resolution of which the following is the principal paragraph:

That in the opinion of the Congress of the United States an emergency now exists which demands the use of troops in addition to the Regular Army of the United States, and the President be, and is hereby, authorized to draft into the military service of the United States, under the provisions of section 111 of the national-defense act approved June 3, 1916, so far as the provisions of said act may be applicable and not inconsistent with the terms thereof, any or all members of the National Guard and of the Organized Militia of the several States, Territories, and the District of Columbia, and any and all members of the National Guard and Organized Militia Reserves, to serve for the period of the emergency unless sooner discharged.

The marked characteristic of American citizenship is the solidarity with which it meets an emergency when American rights and American honor are involved. When troublesome times come there is no division, no partisanship, no halting, no quibbling about what ought to be done. We meet the emergency as one man. It has always been recognized that to offer himself as a defender of his country in imminent danger was the very highest duty of a citizen and expressive of the deepest patriotism.

I shall freely vote for this resolution. In the discussion some very evident facts have developed. Men who fought the National Guard in the bill to reorganize the Army when the friends of the National Guard sought to retain it as a constituent but independent organization of the Regular Army, have been compelled to give up the fight. The contest was waged by the Regular Army, not because it disliked the National Guard, but because it wanted the offices and the promotion that were sure to come to it if the National Guard could be eliminated. The rapidity with which the National Guard responded to the call for mobilization completely surprised the Regular Army. While I freely support the resolution, there is still some question for its absolute necessity, in that no apparent reason exists why there should be a doubt of the willingness of the National Guard to go into any alien territory to defend the flag when it is called upon to do so. I vote for this resolution, not because we are in a state of war with Mexico, but because the resolution correctly expresses my view of the situation. An emergency exists that demands additional troops to that of the Regular Army that we may be prepared if the Mexican Government should precipitate war. We are in Mexico because we went in under authority of the de facto government to hunt down bandits that destroyed the lives and captured the property of our people on American soil. No professed doctrinaire can minimize the fact that whatever has been done by us in Mexico was done by Mexican authority. We do not want war, and hope it may be averted. The people will not consent to it until the honor of the United States and the peace and property of

American citizens shall demand war. If the time shall come when it is clearly demonstrated that the de facto government can not restore tranquillity on our southern border, then we shall do those things, and those only, that shall result in our protection and the maintenance of national honor.

In 1898 when the call came to avenge the wrongs done to Cuba by Spain no guardsman protested because there was a liability that his services might be wanted beyond the border of Continental United States. I have an intimate acquaintance with many National Guard men and not one ever suggested to me that his voluntary service would be conditioned upon an agreement not to take him beyond the confines of his own country. Every man expects to serve wherever he may be called upon to go. The patriotism of the National Guard is not climatic but responsive to the requirements of the country wherever he is needed. I have never missed an opportunity to say that no more patriotic organization was ever enrolled in the defense of the country than the National Guard. I personally know of organizations that have given freely of their time and money to maintain their organizations when they could not well afford to do so solely to promote a patriotic sentiment in the community. The States and Federal Government have not dealt liberally with these organizations. Their quick response, their patriotism, their sacrifices entitle them to consideration in the distribution of places in line and in official appointments and promotions on an equal footing with any other military organization. The National Guard is constituted of the finest and most capable young men in the country; men of character and integrity worthy of great consideration and who will give a good account of themselves.

One of the most commendable actions of Congress was to provide for the maintenance of those who left dependent families at home while they went to the front to defend the flag. This great and wealthy country could not make a lesser provision and escape the censure of a great civilization. Congress did not do it grudgingly. It did it voluntarily and graciously. It sought the opportunity to show its loyalty to those who had made such sacrifices. The following is the paragraph:

> The sum of $1,000,000 is hereby appropriated, to be expended under the direction of the Secretary of War and under such rules and regulations as he may prescribe, for the purpose of maintaining, at a cost of not more than $50 per month, the family of each enlisted man of the National Guard called or drafted into the service of the United States until his discharge therefrom, which family during the term of service of said enlisted man has no other income, except his pay, adequate for the support of said family; and the word "family" shall include dependent mothers and sisters, as well as brothers under the age of 14 years.

Nothing more patriotic was ever done by any other people. It is an act worthy of a great, rich, and powerful Republic. It was an appropriate recognition of its duty when it said to the soldier that it would see to it that though dependent upon his labor for subsistence his family should not want while he was at the front defending the honor of the flag of his country. The resolution was passed in the House without a dissenting vote.

## Widows' Pensions.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CARY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, June 19, 1916.*

Mr. CARY. Mr. Speaker, ever since I have been a Member of Congress I have consistently voted for every bill to increase the pensions of the veteran soldiers who fought our country's battles, and I have always been in favor of legislation to take good and proper care of these soldiers' widows and orphans. It is therefore with feelings of the deepest and most heartfelt gratification that I vote for the present bill to increase the pensions of the widows of Civil War veterans and to make the issuance of pensions to the worthy widows of the veterans a little more free from red tape.

Mr. Speaker, the soldier who gives his manhood to the service of his country, who fights and dies for his flag has been praised in verse and oratory for generations; his heroism has been pictured in countless paintings of the world's greatest artists and monuments of imperishable bronze have been erected to his memory. This is as it should be, for each succeeding generation should hear anew of the bravery and devotion of those who went before and learn to emulate the patriotism of his fathers and grandfathers, as our brave boys are doing to-day in Mexico.

Little, however, has been said of the patient devotion of the wives who stayed behind. Women have sent their husbands forth to battle, have given the sons of their tender care to suffer and die for their country, and have waited in sorrow and anguish for news of their near and dear ones, sometimes looked in vain for a happy home-coming and learned too soon that all their fondest hopes were shattered, that the object of their love and devotion was sleeping his last sleep on some far-off battle field.

Through the long night watches they have prayed for husband, brother, or son, and when the last sad news has come they have patiently taken up the burden of life alone, sometimes with young children to support or other responsibilities to shoulder. And to me one of the saddest, though noblest, pictures of human life is the picture of a woman bravely taking up the battle of life, caring for her family when the bread-winner has left them forever, and struggling breast-high with the waves of adversity.

Sometimes the husband returned a crippled wreck of manhood, with health and efficiency destroyed by wounds or disease, and with naught to save him from complete shipwreck but the tender care of his faithful wife.

All over this country to-day are feeble old men who are being nursed and cared for by devoted women, into whose last remaining years what little sunshine comes is brought by the loving wife who stays faithful unto death. All over this country are noble women who patiently nursed and tended broken-down men—sat at their bedside in sickness, cheered their hours of sorrow, and tenderly closed their eyes in death. Now they are alone with their grief, the last few years of their life devoted to sad yet tender memories, and awaiting the call that shall summon them to join the one who went before. It is good legislation, it is good patriotism, it is good humanitarianism cherish these sisters of our mothers and make their last years as free from want and suffering as we possibly can. It will only be for a few years. It will take a comparatively small appropriation, it will prove that the old adage of the ingratitude of Republics is not true in our great country, and it will be a message of love and cheer to thousands of women in every town and hamlet of the United States.

## Address of Hon. Addison C. Harris, Former Minister to Austria.

EXTENSION OF REMARKS
OF
HON. WILLIAM R. WOOD,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
*Saturday, June 24, 1916.*

Mr. WOOD of Indiana. Mr. Speaker, under leave given to extend my remarks I desire to say that the Hon. Addison C. Harris, former minister to Austria, who delivered the following splendid address before the State Bar Association of Wisconsin, has long been recognized in Indiana as an authority upon constitutional law. An active practitioner for more than half a century, assisting in the trial of some of the most important cases ever tried in the country, involving legal question of great moment, whatever he says upon any legal subject is always interesting:

ADDRESS BY HON. ADDISON C. HARRIS, OF INDIANAPOLIS, IND., DELIVERED JULY 15, 1915.

Mr. President and gentlemen of the bar, when your president extended to me the kind invitation to address the State Bar Association of Wisconsin I accepted with pleasure, because I have spent many summers on the beautiful lakes and shady trout streams in the northern part of this State, and this affords me an opportunity to make some poor compensation for the pleasures I have had here.

The subject I am to present is one which has occupied the attention of the bar in my State somewhat actively for the past years, and which I have occasion to know has attracted more or less the attention of the bar of this State, and that question is:

Whether there be power in these five States, covered by the ordinance of 1787, to destroy the republican form of Government, power to take away from their legislatures the supreme legislative power and allow every man to present any law at his pleasure, and require all the people to pass it or reject it at the polls, to refer every act of the legislature to the people

to be again passed before taking effect, and to call down the judgment of any court whenever it does not meet with public approval, and remove from the bench any judge whose decision for the hour is not satisfactory to the majority of the people.

This subject naturally takes on at first something of an historical inquiry and character because forms of government are not instantly created by some fiat, but develop and grow. And this institution of the American republican State, or State form of republican government, with republican State constitutions and laws, is a matter of historical growth, and that takes us back to the time when this Nation was founded and the form of our republican State government established for the five States erected on this land northwest of the river Ohio.

When Thomas Jefferson wrote the Declaration of Independence, which made the United States a Nation, this land upon which we live was the property of the British Crown. It had been taken by Gen. Wolf on the Plains of Abraham but a few years before. It was known to the statesmen of the time that here was a great body of rich land which was capable of being converted from a wilderness into a civilized and populous country. You will remember that Benjamin Franklin, shortly after the Battle of Quebec, in writing a letter to Lord Kames, speaking of this land, said: "If we keep it," meaning if the French did not get it back, "in 100 years this land will be populous with English-speaking people." I do not know that Franklin then clearly foresaw, but he certainly had a vision that there was coming to be born on this continent a new nation, and when that birth should come this land would naturally be a part of that empire.

Now, how did this land on which we live come to be a part of this Republic? I have but to mention the name of Gen. George Rogers Clark, who brought this land to us. He was born in sight of Monticello. He was a young man at the time this Nation was founded. Being of courage he chose for his work that of a pioneer surveyor, which in those days was a profitable but venturesome profession. Washington began life as such. Shortly after the beginning of the Revolutionary War Clark went with Daniel Boone to Kentucky and at once became a leader of the pioneers in repelling the invasions of the Indians. This led him down to what was then called the Falls of the Ohio, now Louisville. While there it came to him that he could take all this land lying north of the Ohio River by his sword. At once he walked back over the mountains to Virginia, called upon Thomas Jefferson, whom he well knew and who was the most far-sighted and constructive statesman of that day. When young Clark laid the scheme before Jefferson he espoused it eagerly and went with the young man to see Patrick Henry, who was then governor of Virginia. To him Clark said, "If you will give me authority and a sufficient military force, I will take by conquest from Great Britain all the land that lies north of the Ohio River." Gov. Henry approved of the venture because he was patriotic and far-sighted, but he could not call upon the Army under the command of Gen. Washington, because that was entirely engaged in the campaign on the other side of the mountains. And so it was agreed that the governor should, and he did, give George Rogers Clark a commission in what I may call the Virginia Militia, as distinguished from the force that Virginia had given to the Continental Army. The governor authorized Clark to fit out an expedition consisting of a sufficient number of men, to be enlisted and organized at the Falls of the Ohio, and money, powder, and lead for the enterprise.

The story of the heroism of Gen. Clark and his frontiersmen has no parallel in American history. Suffice it to say that Clark organized and led his force across the prairie to Kaskaskia, and made himself the master of that British post in the summer of 1778. He then turned his attention to the capture of Post Vincennes. The story of the march across the prairie in midwinter without tents or transportation, living on the wild game, fording the streams, and crossing the Wabash, boldly attacking and taking the English post at Vincennes, pulling down the British flag and running up his own, makes the beginning of the history of your State and mine. Gen. Clark did not raise the banner of the Republic, because he was not in the military service of the United States, but he raised the banner of his own State—Virginia—and by the rules of international law, this land by this conquest became the property of the State of Virginia. That State took possession at once by virtue of the conquest, of all this land lying north of the river Ohio, established at Vincennes a court of Virginia; and the laws of Virginia became the laws of this entire northwest. I know not with particularity of your State constitution and form of government, but in my State, we trace back our form of constitution and county and State government to the Old Dominion.

After this had been accomplished, then the people of the Nation at large began to say: "We are all engaged in the same great struggle with Great Britain, and Virginia ought to give all this land to the Government of the United States to be by it sold and the proceeds applied in payment of the public war debt." Jefferson, Madison, and other leading men of Virginia acquiesced in this general opinion, and answered in effect that Virginia will deed this land to the United States, provided they will reimburse the State for the expenses incurred in making the conquest, and take the land on condition that the United States shall never part with the title, but in time, when populated sufficiently, shall divide the same into States to be admitted into the Union; and with the further condition that the States, when created, should adopt and maintain the American form of republican State government. And in furtherance and fulfillment of this proposition, the State of Virginia, on December 20, 1783, passed the act of cession, reciting:

> Whereas this Commonwealth did on the 2d day of January, 1781 yield to the Congress of the United States for the benefit of said States, all right, title, and claim which the said Commonwealth had to the territory northwest of the river Ohio subject to the conditions annexed to the said act of cession.

And then, reciting the acceptance by the United States, proceeded with these words:

> That it shall and may be lawful for the Delegates of this State to the Congress of the United States, and they are hereby fully authorized and empowered for and on behalf of this State by proper deed or instrument in writing under their hands, and seals, to convey, transfer, and assign and make over unto the United States in Congress assembled for the benefit of the said States, all right, title, and claim, as well of soil as jurisdiction which this Commonwealth hath, to the territory or tract of country within the limits of the Virginia charter situate lying and being northwest of the river Ohio; subject to the terms and conditions contained in the before recited act of Congress of the 13th day of December last; that is to say, upon condition that the territory so ceded shall be laid out and formed into States containing suitable extent of territory * * * and that the States so formed shall be distinct republican States and admitted as members of the Federal Union.

The act also sets forth other conditions already mentioned, and that Gen. George Rogers Clark and the officers and soldiers of his regiment who marched with him when the posts of Kaskaskia and St. Vincents were reduced should have a tract of land set apart for them. The act having met the approval of Congress, Virginia, on the 1st day of March, 1784, ceded this land to the United States by deed signed by Thomas Jefferson, James Monroe, Arthur Lee, and Samuel Hardy, which deed was delivered to and accepted by the Congress of the United States. This deed also sets forth in the same words the consideration, purpose, and conditions set forth in the above-mentioned act of cession.

At that time Thomas Jefferson was chairman of the committee of the Congress on the public lands; and on the same day he, on behalf of the committee, made a report at some length touching these lands and embodying a resolution formulating a plan of temporary or territorial government until the land should be divided into States, and then "that their respective governments shall be in republican forms * * * and that after the year 1800 of the Christian era there shall be neither slavery nor involuntary servitude in any of said States."

The report also contained other articles and provisions touching the number and names of the States and the like, and concluded with these words:

> That the preceding articles shall be formed into a charter of compact, shall be duly executed by the President of the United States in Congress assembled under his hand and the seal of the United States, shall be promulgated and shall stand as fundamental constitutions between the thirteen original States and those now newly described, unalterably, but by the joint consent of the United States in Congress assembled and of the particular State within which such alteration is proposed to be made.

This report was written by Jefferson, and remains in his handwriting on file at Washington. A facsimile is found in the fourth volume of the "Works of Thomas Jefferson," edited by Paul Leicester Ford.

Here, then, we have a clear view of what was the conception of Jefferson and the men of that time who then had in mind and were providing for the future of this land now composing these five great Central States of the Union.

The report was not then adopted, because some of the Congressmen were not quite willing to say at that time that there should not be slavery on this land after the first of the new century. The matter thus stood until the year 1787, at which time Jefferson was no longer a member of Congress. That Congress took up Jefferson's report, accepting and adopting in the main all the chief features and provisions embraced therein, and enacting the same on July 13 of that year, which is known as the ordinance of 1787. Provision is first made in the ordi-

nance for a territorial form of government, and then the ordinance proceeds as to the future States, saying:

And for extending the fundamental principles of civil and religious liberty, which form the basis whereon these republics, their laws, and constitutions are erected; to fix and establish those principles as the basis of all laws, constitutions, and governments which forever hereafter shall be formed in the said territory; to provide, also, for the establishment of States and permanent government therein, and for their admission to and share in the Federal councils, on an equal footing with the original States, and at as early periods as may be consistent with the general interests;

It is hereby ordained and declared by the authority aforesaid, that the following articles shall be considered as articles of compact between the original States, and the people and States in the said territory, and forever remain unalterable unless by common consent.

The articles are six in number, and before proceeding with the consideration of so much thereof as is material to this discussion, I pause to impress upon you the fact that this ordinance is not, and was not, intended to be a simple act of legislation, but was, as the words declare, a compact; that is, an acknowledgment and contract of a public character made to secure and establish unalterably the provisions, considerations, and conditions embodied in the act of cession and deed of Virginia already mentioned.

I need not say that if I give my land to your President to be held and used by him for certain specific public purposes and for the benefit of persons then living and thereafter born, that is a charitable trust which can not be destroyed without the consent of the beneficiaries themselves. And this, no doubt, was the reason for declaring that the articles should stand permanently for the welfare of the States thereafter to be formed and their people to be born. I do not intend to occupy your time in reading these articles at length, but I wish to read such parts thereof as are essential and necessary in the discussion of the subject in hand.

The first article establishes religious freedom. Article II establishes habeas corpus, trial by jury and "a proportionate representation of the people in the legislature." The same article declares that "should the public exigencies make it necessary for the common preservation to take any person's property, or to demand his particular services, full compensation shall be made for the same." These clauses, I will show later, are material in the consideration of the question whether the ordinance still remains in force. The fourth article provides for the freedom of all the navigable waters in this territory leading into the Mississippi and the St. Lawrence. The fifth article provides that the land in time shall be divided into States, and concludes in these words:

And whenever any of the said States shall have 60,000 free inhabitants therein, such State shall be admitted by its delegates into the Congress of the United States, on an equal footing with the original States in all respects whatever; and shall be at liberty to form a permanent constitution and State government: *Provided*, That the constitution and government so to be formed shall be republican, and in conformity to the principles contained in these articles; and so far as it can be consistent with the general interests of the confederacy, such admission shall be allowed at an earlier period and when there may be a less number of free inhabitants in the State than 60,000.

That was then the least population of any one of the 13 States. The sixth and last article declared that slavery should never be on this land.

No court, no lawyer, no man has ever honestly declared that slavery could or can exist on this land so long as the ordinance stands in force.

I now come to inquire, What did Jefferson, the framers of this ordinance, the Congress, and the people understand was meant by the compact that the constitutions and State governments of these States shall be republican?

What did the Legislature of Virginia mean in the act of cession when it was provided as one of the considerations and conditions that the "States so formed shall be distinct republican States"? There had been republican governments before that time. There had been republics where every man had an equal voice in the presentation and passage of laws, and where the judicial power was exercised by the people en masse. I refer to Athens and some of the Greek cities and States. Jefferson, Madison, and their compatriots had studied this subject of republican government diligently and carefully for many years; they knew more than the living men of the present time know of the old forms of government and why they had failed. What, then, was meant by the requirement that the constitutions and State governments of your State and mine and the others erected on this land should be republican in form?

I have but to mention, and you will recall, that shortly prior to the Declaration of Independence, a body called the Continental Congress had passed a resolution recommending that each of the 13 States should adopt a constitution suitable to its own condition. In pursuance of that resolution the State of Virginia, early in the year 1776, adopted a State constitution, in which it was declared:

We ordain and declare the future form of government to be as follows: The legislative, the executive, and the judiciary departments shall be separate and distinct. The legislature shall be formed of two distinct branches, who together shall be a complete legislature.

There is no hint or opportunity under these words for the initiative and referendum form of government.

Early in the year 1777 a constitutional convention sat in the State of New York. The form of the constitution adopted was written by John Jay. He was held to be the foremost lawyer of that time. He was the first Chief Justice of the Supreme Court of the United States. In that constitution it was provided:

This convention in the name and by authority of the good people of this State, ordain and determine and declare that the supreme legislative power within this State shall be vested in two separate and distinct bodies of men who together shall form the legislature.

When the supreme legislative power is vested in a legislature, there remains no legislative power superior thereto or otherwise than that power vested in the legislature. Each of these constitutions vested all and the supreme legislative power of the people in their general assemblies. Without stopping to detail, I will say that every other of the 13 States, except 2, shortly following the Declaration of Independence adopted similar State constitutions, vesting all legislative power of the people in their legislatures, and all the judicial power of the people in their courts; and all the executive power in their governor and other executive officers. It follows that at that time it was universally understood that a "distinct republican State" was in this form; all the supreme legislative power of the people was vested in their representatives in the legislature; all supreme judicial power of the people was vested in the courts; and all supreme executive powers of the people were vested in the governor.

The convention which formed our present Federal Constitution was sitting at the time the ordinance of 1787 was passed. The first article of that Constitution declares:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of the Senate and the House of Representatives.

The two States that did not then adopt written constitutions and representative forms of government are Rhode Island and Connecticut. They did not, because they already had these powers under their charters.

So that it seems to me there is no question as to the intent and meaning of the phrase found in the Acts and Deed of Cession and the ordinance; that is, that the constitutions and forms of government of these five States on this land should be and remain distinctly republican. That is to say, all supreme legislative power vested in the legislative department, all supreme judicial power vested in the judicial department, and all supreme executive power vested in the executive department.

Unless I am in error, it follows with the certainty of a mathematical demonstration that as to your State and my State and the three other sisters, children under the Acts and Deed of Cession and Ordinance, there can be no other form of government while these acts and deed and the ordinance stand, or until another form is adopted by the common consent of the people of these States and the Congress.

I now proceed to show that no court or legislative body ever denied the validity and continuance of the ordinance, and that it was a compact, as distinguished from a mere statute, until the question of slavery became a political issue. It was the better judgment of the sagacious and far-sighted statesman engaged in establishing this Nation that slavery should be discontinued. Indeed, many thought that it was illegal under the clause in the declaration that all men are born free. And Jefferson publicly advocated the abolishment of slavery with the beginning of the nineteenth century. And, looking to this end, it was enacted in the Constitution of the United States that the importation of slaves might be prohibited after 20 years.

Returning now to this land covered by the ordinance: When the new century came around slavery was not abolished. There was a church at that time (I mean the Quakers) that held an annual meeting in Philadelphia. This church issued a letter to all its members in America, saying in substance that it was against the laws of God for one man to hold another in bondage. My ancestors then lived in North Carolina. They were Quakers. They were slaveholders. Moved by this common emotion of the Quaker Church, as well as by a sense of right, they sold their lands, but they could not free their slaves, because of the laws of that State which inhibited it; and so they came across the Ohio River, bringing their slaves, in order that they might be made free. Why free? Because the ordinance of 1787 said

there should be no slavery on this land. Many other people brought their slaves from the same and other States and made them free. Many others, not slaveholders, came from slave States in order that they might make homes for themselves and their children on this land that was dedicated to freedom forever. All the people of that time believed the ordinance to be in full force.

I now undertake to show briefly that no court ever questioned the continuing existence of the ordinance of 1787 until the slavery question arose and became a political issue. I will also show that, generally speaking, every court held on this land and having to consider the ordinance affirmed that it was in existence and a part of the law of the land.

I shall not undertake to read from these cases one by one, or even to cite them by name and volume, but I will give to the Secretary a list of legislative and judicial authorities to be added as an addenda at the close of the address. But I must run over the cases historically, because, it seems to me, that it is entirely essential that the judicial history be carefully considered and understood. Let us first take the cases decided in the Federal circuit courts sitting in these States.

Mr. Justice McLean was judge of the circuit in which were the States of Ohio and Indiana before he became a member of the Supreme Court of the United States. The question whether the ordinance was a part of the law of this land came before him on circuit as early as 1838. He gave the question most careful consideration, and wrote and published in McLean's Reports an elaborate opinion, holding that the ordinance not only was in force but that it was a compact, indestructible except by the common consent of the State of Ohio, in which his court was sitting, and the Congress of the United States. The same holding was made in the same circuit in the years 1843, 1845, and 1853.

Let us next take the five States one by one. In 1832 the Supreme Court of Ohio declared in an elaborate opinion that the ordinance was a compact and a part of the law of that State. This adjudication was followed and reaffirmed in 1839, in 1848, and again in 1911.

I asked you to bear in mind the clause in the second article of the ordinance to the effect that no State established on this land should take any man's particular services without making full compensation. A few years ago the State of Ohio passed a statute to the effect that every physician attending the birth of a child must make a report to the State, not only of the birth but of the nationality of the father, and the mother, and also the nationality and other facts concerning the lives of the four grandparents. No provision was made for compensating the attending physician for the time and labor necessary to ascertain these facts. A certain physician was indicted under this statute for failing to obey its provisions. The question came before the Supreme Court of Ohio, as I have said, in 1911. It was set up in defense that the State had no right or power to compel the physician to make this biographical examination and report without compensation. There was no provision in the constitution of the State of Ohio of similar import, so the defense was made under the above-mentioned clause of the ordinance of 1787, and the court held unanimously that that provision of the ordinance was part of the law of Ohio, and consequently that the statute was void. The court did not pass over the matter lightly, but gave it a careful investigation, as will be seen upon reading the opinion. Now, it happens that shortly after the people of Ohio inserted in the constitution provisions for the initiative and referendum, and some new members came upon the bench of the supreme court and some of the old judges remained. In this status in 1913 a majority of the court in another case held that the ordinance was not in force, and overruled the long line of cases for more than 60 years, declaring it was the law of Ohio.

The Supreme Court of Indiana has always held, with perhaps one or two obiter exceptions, that the ordinance of 1787 was part of the fundamental law of my State. In 1912 the question again arose in this wise: I called your attention to the fact that the second article of the ordinance provides that there shall always be proportionate representation of the people in the legislature. At the session of the legislature of 1911 that body, under the leadership of a friend of mine who was then governor of Indiana and who is now Vice President of the United States—I will not say for political purposes—induced the legislature to draft and pass and submit a new constitution to the people for adoption, in which provision was made for the initiative and referendum form of government. In that proposed constitution no regard whatever was paid to proportionate representation in the legislature. The least populous counties, having a population less than 4,000, were given the same representation as other counties having more than 40,000 population. Before the proposed constitution could be submitted, a suit was brought in a State circuit court to enjoin the submission to the electors; and for one reason, among others, that it was a gross violation of the fundamental principle of proportionate representation guaranteed by the ordinance of 1787. The case was thoroughly tried by eminent counsel and before a judge of great ability. Under our statute the judge was required to find the fact whether the ordinance of 1787 was a part of the law of Indiana. The fact was so found to be, and a decree was made enjoining the submission. Gov. Marshall was one of the defendants. He and his coparties appealed the case to the Supreme Court of Indiana. As I have said, there were other legal questions involved, one being whether under the present constitution of the State the legislature had power to perform and discharge the duties of a constitutional convention. The supreme court held not, and affirmed the case; not deciding because it was not necessary whether the provision of the ordinance of 1787 above mentioned was a part of the law of the State.

The Supreme Court of Illinois early held that the ordinance was part of the law of the State. Later, the court said that the counsel conceded it was not, and so held without any careful presentation or consideration.

In Wisconsin I find several cases to the effect that the ordinance is a part of the law of your State, and in 1892 the court, in a legislative apportionment case, said that proportionate representation is "guaranteed by the ordinance of 1787."

In 1880 Judge Cooley in an opinion, seems to indicate that the ordinance is a part of the law of Michigan; and the notes to the later editions of his great work on constitutional limitations point to the same conviction.

I know you will now ask how it comes that the impression prevails that the Supreme Court of the United States holds that by the adoption of the present Federal Constitution the ordinance of 1787 was supplanted or annulled; and I will try and show in a simple, short way how this comes about.

The slavery question was agitating the public mind and became a political issue shortly before 1850. At that time a statute of Kentucky made it unlawful for any man running a steamboat on the Ohio River in front of Kentucky to receive any slave aboard, except by the permission of his master. A certain slaveholder in Louisville owned three slaves, who were musicians. He was accustomed to send them across the river to give public concerts, after which they returned to Kentucky and to the mastery of their owner. Finally, on one occasion these three slaves went aboard a steamboat at Louisville without permission of the master and were carried to Cincinnati, where they disembarked and escaped to Canada via the "Underground Railroad." Thereupon the slaveholder brought an action in a local court in Louisville against the owner of the boat for damages for the loss of his slaves. In defense, the defendant set forth that the three men were not slaves when they took passage on his boat, because theretofore the plaintiff had voluntarily sent them across the river where slavery was prohibited by the ordinance of 1787; and thereby they were made free; and thereby being made free men, although they returned, they had not again become slaves, for no man can of his own will make himself to be the slave of another. The trial court held otherwise and gave judgment for damages. Defendant appealed to the Supreme Court of Kentucky and the case was affirmed. The steamboat owner then took the case into the Supreme Court of the United States. That court held: First, that whether the three men were slaves when they embarked on the steamboat was a question of fact for the courts of the State of Kentucky to decide, and the Supreme Court of the United States had no jurisdiction on a writ of error to determine any question of fact. And so the case was rightly dismissed. Yet Chief Justice Taney, in writing the opinion, took up the matter whether the ordinance of 1787 was still in force, and said not; giving as the reason that the Federal Constitution was adopted by the people of the States two years after the ordinance of 1787 was ordained, and that this was a change or cancellation by common consent within the provision thereof. Mr. Justice McLean dissented on the ground that the ordinance was in force. This was in 1850.

A few years later the Dred Scott case came on for trial in the Supreme Court of the United States. The facts were agreed to by the counsel of both parties, and were briefly these:

Dred Scott was born a slave in Missouri. While there held a slave his owner, an officer in the Army of the United States, took Dred Scott as his slave to Rock Island, Ill., and held him there as such for two years. Then he took Dred Scott to Fort Snelling, on the western bank of the Mississippi River, where the ordinance of 1787 never existed. From there he

took Dred Scott back to Missouri. Then Dred Scott brought an action in the Circuit Court of the United States in Missouri against his then master for his freedom. The master answered that he was not a citizen of the United States, and that he did not become a free man by being taken into a free State, or the Territory of Minnesota. In the Supreme Court of the United States the first question necessarily presented upon the record was, Whether the Federal Circuit Court had jurisdiction to entertain Dred Scott's case. Was he a citizen of the United States? The next question was whether, under the ordinance of 1787, he became a free man upon being taken into and held in the State of Illinois. And the third and last question was, On being taken to Fort Snelling, did he become free under the act of Congress of 1820, commonly known as the Missouri Compromise law, which declared there never should be slavery north of a certain parallel, which was far south of Fort Snelling. These questions were all answered in the negative by a majority of the court. Every assenting and dissenting justice of the court wrote a separate opinion giving individual reasons. Of course if the act of Congress known as the Missouri Compromise law was valid, Scott was free thereby upon crossing the river to Fort Snelling, because that part was then in a territory governed by the said act of Congress. And so, to sum up briefly, the conclusion and judgment of the Supreme Court was to the effect: First, that an African was not a citizen of the United States; second, that the ordinance of 1787 was not in force in Illinois, and, third, that the Missouri Compromise law was in violation of the Constitution of the United States, because thereby any citizen of the United States had the right to take to and hold in any territory of the United States any kind of property, including slaves, and so that act was in violation of the Constitution itself. It is enough to say that that decision was reversed at the mouth of the cannon in the Civil War.

Since that case was decided, that court has held more than once that that part of the fourth article of the ordinance relating to the free navigation of navigable waters in these five States is not in force, but was supplanted by that clause in the Constitution giving Congress exclusive power and jurisdiction over commerce between the States; and in some of these cases it is said without careful notice being given to the act of cession and its acceptance and to the deed of cession and its acceptance; and without any mention of that provision in the sixth article of the Constitution of the United States, providing that all "engagements" entered into before the adoption of the Constitution shall be valid against the United States under this Constitution.

No case has ever been presented to that court where the issue was whether any one of these five States has a right to take a man's services for nothing, over the provision of the ordinance of 1787 prohibiting the same. No question has gone from any of these five States as to whether the people now have the right and power, notwithstanding the considerations and conditions and provisions I have mentioned concerning the form of our State governments, to abolish these forms of distinct Republican States and set up some other form as a monarchy or the initiative and referendum, and thereby destroy in whole or in part the legislative department in a distinct Republican State. Neither has any case gone from either of these States to the Supreme Court of the Nation where the question in issue was whether the people may destroy the judicial department and decide at the polls any or all judicial controversies. Neither has any case been presented where the people in any of these five States have undertaken to destroy the executive department and execute the laws en masse; or to take a man's services for public benefit without compensation in violation of the ordinance, or do what was attempted in Indiana, that is to say, abolish proportionate representation in the legislature of any or all of these five States and give the counties representation without any regard whatever to population.

Thus far I have only attempted to prove that the people and the courts on this land taken by Virginia and ceded to the United States under the terms and conditions already stated have generally thought and held that the ordinance was a compact indestructible and inviolable.

It only remains to show that from the beginning the Congress itself has often affirmed the existence of the ordinance of 1787. Thus in 1802 Congress passed an act enabling the people in the Territory of Ohio to form a State constitution and State government and enable the State to enter the Union. The same was done in Indiana in 1816, and to Illinois in 1818.

Now each of these acts of Congress declare in the same words that the constitutions and forms of government authorized to be made shall be republican and not repugnant to those articles of the ordinance of the 13th of July, 1787, which are declared to be irrevocable. Let me read the language of these acts. I read the act of April 19, 1816, to enable the people of Indiana Territory to form a constitution and State government. After providing for a constitutional convention, the act continues that the convention "shall then form for the people of said Territory a constitution and State government: *Provided*, That the same, whenever formed, shall be republican, and not repugnant, to those articles of the ordinance of the 13th of July, 1787, which are declared to be irrevocable between the original States and the people and States of the territory northwest of the River Ohio; * * *."

I find that in the act creating the Territory of Wisconsin it was declared that the people were entitled to enjoy all the rights and privileges of the ordinance of 1787.

Is it not strange that all the Members of these several Congresses, Senators and Representatives, and each of the Presidents signing these several acts were ignorant of the fact that the ordinance was annulled when the Federal Constitution was adopted? Yet you will find it stated in Chief Justice Taney's opinion in the Dred Scott case that the ordinance was annulled in this way and then reenacted by a subsequent act of Congress. The act to which he refers is that of August 7, 1789, passed by the First Congress under the Federal Constitution. The answer to such contention is found in the preamble, which reads:

> Whereas, in order that the ordinance may continue to have full effect, it is requisite that certain provisions should be made so as to adapt the same to the present Constitution of the United States.

Washington was the first President of the United States, but he was not President when the ordinance of 1787 was passed. Then there was no President of the United States; only a President of Congress. That part of the ordinance relating to the territorial government provided that the territorial offices should be appointed by, and report to Congress. The Constitution of the United States provides that Territorial, as well as other officers, shall be appointed by and report to the President of the United States; and it was to "adapt" the law to the ordinance in this temporary regard only that the act was passed. Washington, who signed this act, was chairman of the Constitutional Convention, and many of the Senators and Representatives in the First Congress were members of the same convention. Are we to be told that these men who made the Constitution, and found it necessary to adapt the temporary provisions of the ordinance touching the appointment of Territorial officers to the new conditions, did not know that that very Constitution made by them annulled the ordinance?

It was argued on behalf of Gov. Marshall in the case I have mentioned that the Supreme Court of the United States had just before held that any State might set up any form of State government it pleased, including that of the initiative, referendum, and recall. And this was based on the Oregon case decided by the Supreme Court of the United States in 1912. It was not so held. Oregon shortly before had adopted the initiative and referendum form of government. A taxpayer refused to pay because he insisted that that was not a representative form of government, and therefore violated that provision of the Constitution declaring that the United States shall guarantee to every State a republican form of government. And the insistence was that only a legislature could pass laws. Of course, the case could not be rested on the ordinance of 1787, because that never was in force on that soil. Oregon did not come to the United States in the same way as the land upon which we live came.

Now all that is decided in that case is, that whether or not the form of government of any State is or is not republican is a political question for Congress, and not a judicial question for the Federal courts.

If that be so, then it remains alone for the courts of Wisconsin and Indiana and the three other States to decide finally for each State whether the ordinance of 1787 is a part of the law of these five States.

And yet I think it is not improbable that a case may arise in any one of these five States and reach the Supreme Court of the United States, where it will be necessary to decide whether these fundamental articles of the ordinance are each and all annulled. If that case shall come, it will be the duty of some member of the bar to lay before that court in good form the conquest of Clark, the cession of Virginia, including the considerations and conditions and purposes therein set out and imposed in the deed to the Government itself, the acts of Congress I have mentioned, and the many decisions in these five States upon the subject, with much more care, learning, and ability than I have done.

While the Supreme Court of the United States is the highest judicial tribunal in the world, yet that court when convinced of an error retracts it. I have in mind a case from Philadel-

phia—the Girard Will case—which involved the law of public charities. When the case came on for hearing in the Supreme Court of the United States it was pointed out that that court had theretofore, in an opinion written by the great Chief Justice, held the law to be such as to defeat the case.

Notwithstanding this, the court said since that decision very strong additional light had been thrown upon the subject which convinced the court that the former decision was wrong, and it was overruled. There are other like instances. And I have confidence to believe that when some lawyer with patience and diligence has accumulated all the historical, legislative, and judicial authorities touching the question as to the existence of the ordinance in your State and mine and presents them to the Supreme Court of the United States, and points out with accuracy that which I have attempted to do, he will be able to convince the court and secure a judgment to the effect that, when Virginia and the United States made a compact as to what form of government should be erected and maintained on this land at the time and as a consideration for the grant that that compact will stand.

I thank you, Mr. President and gentlemen, with all my heart for the patience with which you have listened to what I have said. You have had in this State the question whether you would destroy this American form of republican State government and adopt another. Will it come again? Will it come again in Indiana? It is likely to come again and soon. And no one can present the case to a court but a member of our profession. A judge can not do it. A court can only take a case as presented. And there is no higher service to the States of our citizenship or to the present or future than for the members of the bar to stand, and to continue to stand, firmly and unflinchingly for the fundamental principles of our American republican form of government, with written constitutions vesting the supreme power to make laws in the legislature, the supreme power to adjudge cases in the courts, and the supreme power to execute the laws in the executive. These are the indestructible essentials of a distinct republican State. These, I submit, are guaranteed to us, and to all the people of these five States, to be and remain distinct republican States.

## Pension for Widows of Civil War Veterans.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM R. GREEN,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. GREEN of Iowa. Mr. Speaker, I have long favored such a measure as is included in the bill before the House and am very glad to assist in its passage. It has been little less than a disgrace to the country that the widow who was the wife of the soldier during his war service should receive but $12 a month. One who did not live during the trying days of the Civil War can hardly understand the privations undergone by the families and soldiers who went to the front leaving wife and children often with nothing upon which to live except what the soldier could send them out of his pay of $15 a month.

Those who speak of the high cost of living of the present day have never made comparison with the prices of that time. All of the necessities of life cost at least double what they do now, and many of them several times as much. A yard of plain calico cost 60 to 75 cents and refined sugar was 3 pounds for $1. Coffee was too expensive for the soldier's family to use and they generally prepared some substitute. To the lasting credit of the wife of the soldier of that day it should be said that she endured the privations of war without a murmur or complaint. It is little to the credit of this Government that it has been so slow to recognize her claims. Some day, along with the monuments that have been erected to our gallant soldiers, whose patriotism saved this country in the dark days of the Civil War, I hope to see a monument erected to the patriotic women of that time, who gave husbands and sons to their country and endured want and privation in order that the Nation might be reunited.

Mr. Speaker, I also favored that portion of the bill which provides for a pension of $20 per month to a widow of a Civil War veteran after she has reached the age of 70 years. It is perfectly plain that a woman of this age who has little or no means—and the greater portion have none—can not live upon $12 per month. This provision also was much needed.

Mr. Speaker, it is often said that republics are ungrateful. We have never intended to be ungrateful to the soldiers of the Civil War and we should always remember that they are entitled to consideration not alone for themselves but for those who were loved by and dear to them. By reason of service in the Civil War and disabilities incurred therein it was seldom that a Civil War veteran was able to leave his family a competence. It is our duty now in some degree to make up for this loss and to show to the present generation the regard which we have not only for the defenders of the Nation but for those who were dependent upon them.

## An Account of a Remarkable Meeting of the Commission for Relief in Belgium, Held at Mansion House, London.

### EXTENSION OF REMARKS
OF
### HON. J. A. ELSTON,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 24, 1916.*

Mr. ELSTON. Mr. Speaker, under the leave granted to me I include extracts from an account appearing in the London Times of May 5, 1916, of a remarkable meeting of the commission for relief in Belgium held at the Mansion House, London, and presided over by the lord mayor, at which Mr. Asquith, the prime minister of Great Britain, publicly expressed the appreciation of his Government and the nation for the philanthropic action of the American ambassador, the American people, and particularly of Mr. Herbert C. Hoover, of California, the organizer of the commission for relief in Belgium, in relieving the sufferings occasioned by this war. The article is as follows:

The prime minister spoke at the first annual meeting of the national committee for relief in Belgium held at the Mansion House yesterday. The lord mayor presided, and those present included Cardinal Bourne, the Duke of Norfolk, Lord Bryce, the American and Spanish ambassadors, the Belgian minister, and many members of Parliament and representatives of the over-sea dominions.

The lord mayor said that it was absolutely essential that the work of the committee should be continued. He read the following message from King Albert:

"I am deeply gratified to learn of the magnificent results obtained by the past year's working of the national committee for relief in Belgium. I tender my sincerest thanks to all who in Great Britain and in the British Dominions have so generously contributed to this work of aid and fellowship."

The Duke of Norfolk presented the report, which showed that the total of the donations to the fund has been £1,657,418. Of this, £1,600,000 had already been expended in food for the destitute Belgians. Of the total received to April 26, £415,511 came from the United Kingdom and the balance from the dominions over seas.

Mr. Asquith, in moving the adoption of the report, congratulated the national committee heartily on the results they had achieved, and expressed to the American ambassador, and through him to the great American Nation, the gratitude which the British Government and the British people had for the untiring humanity of the United States. "The extent to which the suffering inevitable in a war in which half the civilized world was engaged had been alleviated," he said, "through the good offices of the United States Government and its diplomatic representatives, as well as by humane sentiment of the American people, could not be exaggerated.

"Thanks to energetic action on the part of the United States and Spanish ambassadors and ministers in London, Brussels, and Berlin, negotiations were concluded whereby relief supplies could be sent to these suffering people. But that was only a beginning. The practical problem of how to feed a nation suddenly confronted with the prospect of starvation presented unexampled difficulties. Mr. Herbert Hoover undertook to form, under the auspices of the American and Spanish diplomatic representatives, what was now known as the neutral commission for relief in Belgium."

Lord Curzon had described Mr. Hoover's work as a miracle of scientific organization. "That, I believe," said Mr. Asquith, "is not an overstatement." Mr. Asquith continued: "With the people in that part of Northern France occupied by Germany added to those for whom Mr. Hoover and those associated with him are providing every-day food, the number is over 9,000,000, 5,000,000 of whom are practically destitute.

"I desire to express on behalf of the Government our deep gratitude to Mr. Hoover and those American citizens who have so nobly given up their time and occupations without recompense, and largely without recognition, to this work of purchasing food and distributing these supplies which alone enable the population of Belgium to keep body and soul together. It is one of he finest achievements in the history of humane and philanthropic organization. We learn from the report that over £30,000 a week is being voluntarily subscribed from British sources to alleviate Belgian distress. It is a large sum, but I am not sure that it is an adequate sum. I trust that in the months before us it will be substantially exceeded."

Cardinal Bourne seconded the resolution, which was carried.

The Belgian minister expressed the appreciation of the Belgian Government and people of the work of the relief committee.

Mr. Herbert Hoover, Sir Thomas Mackenzie, Sir Peter McBride, and the chief rabbi also spoke.

**Note of the Secretary of State of the United States to the Secretary of Foreign Relations of the de Facto Government of Mexico.**

## EXTENSION OF REMARKS

OF

# HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. FLOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the note of the Secretary of State of the United States to the secretary of foreign relations of the de facto government of Mexico, dated June 20, 1916.

The note is as follows:

NOTE OF THE SECRETARY OF STATE OF THE UNITED STATES TO THE SECRETARY OF FOREIGN RELATIONS OF THE DE FACTO GOVERNMENT OF MEXICO, DATED JUNE 20, 1916.

DEPARTMENT OF STATE,
*Washington, June 20, 1916.*

SIR: I have read your communication, which was delivered to me on May 22, 1916, under instructions of the Chief Executive of the de facto government of Mexico, on the subject of the presence of American troops in Mexican territory, and I would be wanting in candor if I did not, before making answer to the allegations of fact and the conclusions reached by your Government, express the surprise and regret which have been caused this Government by the discourteous tone and temper of this last communication of the de facto Government of Mexico.

The Government of the United States has viewed with deep concern and increasing disappointment the progress of the revolution in Mexico. Continuous bloodshed and disorders have marked its progress. For three years the Mexican Republic has been torn with civil strife; the lives of Americans and other aliens have been sacrificed; vast properties developed by American capital and enterprise have been destroyed or rendered nonproductive; bandits have been permitted to roam at will through the territory contiguous to the United States and to seize, without punishment or without effective attempt at punishment, the property of Americans, while the lives of citizens of the United States who ventured to remain in Mexican territory or to return there to protect their interests have been taken, and in some cases barbarously taken, and the murderers have neither been apprehended nor brought to justice. It would be difficult to find in the annals of the history of Mexico conditions more deplorable than those which have existed there during these recent years of civil war.

It would be tedious to recount instance after instance, outrage after outrage, atrocity after atrocity, to illustrate the true nature and extent of the widespread conditions of lawlessness and violence which have prevailed. During the past nine months in particular, the frontier of the United States along the lower Rio Grande has been thrown into a state of constant apprehension and turmoil because of frequent and sudden incursions into American territory and depredations and murders on American soil by Mexican bandits, who have taken the lives and destroyed the property of American citizens, sometimes carrying American citizens across the international boundary with the booty seized. American garrisons have been attacked at night, American soldiers killed and their equipment and horses stolen; American ranches have been raided, property stolen and destroyed, and American trains wrecked and plundered. The attacks on Brownsville, Red House Ferry, Progreso Post Office, and Las Peladas, all occurring during September last, are typical. In these attacks on American territory, Carranzista adherents, and even Carranzista soldiers, took part in the looting, burning, and killing. Not only were these murders characterized by ruthless brutality, but uncivilized acts of mutilation were perpetrated. Representations were made to Gen. Carranza and he was emphatically requested to stop these reprehensible acts in a section which he has long claimed to be under the complete domination of his authority. Notwithstanding these representations and the promise of Gen. Nafarrete to prevent attacks along the international boundary, in the following month of October a passenger train was wrecked by bandits and several persons killed 7 miles north of Brownsville, and an attack was made upon United States troops at the same place several days later. Since these attacks leaders of the bandits well known both to Mexican civil and military authorities as well as to American officers have been enjoying with impunity the liberty of the towns of northern Mexico. So far has the indifference of the de facto Government to these atrocities gone that some of these leaders, as I am advised, have received not only the protection of that Government, but encouragement and aid as well.

Depredations upon American persons and property within Mexican jurisdiction have been still more numerous. This Government has repeatedly requested in the strongest terms that the de facto government safeguard the lives and homes of American citizens and furnish the protection which international obligation imposes to American interests in the northern States of Tamaulipas, Nuevo Leon, Coahuila, Chihuahua, and Sonora, and also in the States to the south. For example, on January 3 troops were requested to punish the bands of outlaws which looted the Cusi mining property, 80 miles west of Chihuahua, but no effective results came from this request. During the following week the bandit Villa, with his band of about 200 men, was operating without opposition between Rubio and Santa Ysabel, a fact well known to Carranzista authorities. Meanwhile a party of unfortunate Americans started by train from Chihuahua to visit the Cusi mines, after having received assurances from the Carranzista authorities in the State of Chihuahua that the country was safe and that a guard on the train was not necessary. The Americans held passports or safe conducts issued by authorities of the de facto government. On January 10 the train was stopped by Villa bandits and 18 of the American party were stripped of their clothing and shot in cold blood in what is now known as "the Santa Ysabel massacre." Gen Carranza stated to the agent of the Department of State that he had issued orders for the immediate pursuit, capture, and punishment of those responsible for this atrocious crime, and appealed to this Government and to the American people to consider the difficulties of according protection along the railroad where the massacre occurred. Assurances were also given by Mr. Arredondo, presumably under instructions from the de facto government, that the murderers would be brought to justice and that steps would also be taken to remedy the lawless conditions existing in the State of Durango. It is true that Villa, Castro, and Lopez were publicly declared to be outlaws and subject to apprehension and execution, but so far as known only a single man personally connected with this massacre has been brought to justice by Mexican authorities. Within a month after this barbarous slaughter of inoffensive Americans it was notorious that Villa was operating within 20 miles of Cusihuiriachic, and publicly stated that his purpose was to destroy American lives and property. Despite repeated and insistent demands that military protection should be furnished to Americans, Villa openly carried on his operations, constantly approaching closer and closer to the border. He was not intercepted, nor were his movements impeded by troops of the de facto government, and no effectual attempt was made to frustrate his hostile designs against Americans. In fact, as I am informed, while Villa and his band were slowly moving toward the American frontier in the neighborhood of Columbus, N. Mex., not a single Mexican soldier was seen in his vicinity. Yet the Mexican authorities were fully cognizant of his movements, for on March 6, as Gen. Gavira publicly announced, he advised the American military authorities of the outlaw's approach to the border, so that they might be prepared to prevent him from crossing the boundary. Villa's unhindered activities culminated in the unprovoked and cold-blooded attack upon American soldiers and citizens in the town of Columbus on the night of March 9, the details of which do not need repetition here in order to refresh your memory with the heinousness of the crime. After murdering, burning, and plundering, Villa and his bandits, fleeing south, passed within sight of the Carranzista military post at Casas Grandes, and no effort was made to stop him by the officers and garrison of the de facto government stationed there.

In the face of these depredations, not only on American lives and property on Mexican soil but on American soldiers, citizens, and homes on American territory, the perpetrators of which Gen. Carranza was unable or possibly considered it inadvisable to apprehend and punish, the United States had no recourse other than to employ force to disperse the bands of Mexican outlaws who were with increasing boldness systematically raiding across the international boundary.

The marauders engaged in the attack on Columbus were driven back across the border by American Cavalry, and subsequently, as soon as a sufficient force to cope with the band could be collected, were pursued into Mexico in an effort to capture or destroy them. Without cooperation or assistance in the field on the part of the de facto government, despite repeated requests by the United States, and without apparent recognition on its part

of the desirability of putting an end to these systematic raids, or of punishing the chief perpetrators of the crimes committed, because they menaced the good relations of the two countries. American forces pursued the lawless bands as far as Parral, where the pursuit was halted by the hostility of Mexicans, presumed to be loyal to the de facto government, who arrayed themselves on the side of outlawry and became in effect the protectors of Villa and his band.

In this manner and for these reasons have the American forces entered Mexican territory. Knowing fully the circumstances set forth the de facto government can not be blind to the necessity which compelled this Government to act, and yet it has seen fit to recite groundless sentiments of hostility toward the expedition and to impute to this Government ulterior motives for the continued presence of American troops on Mexican soil. It is charged that these troops crossed the frontier without first obtaining the consent or permission of the de facto government. Obviously, as immediate action alone could avail, there was no opportunity to reach an agreement—other than that of March 10 to 13, now repudiated by Gen. Carranza—prior to the entrance of such an expedition into Mexico if the expedition was to be effective. Subsequent events and correspondence have demonstrated to the satisfaction of this Government that Gen. Carranza would not have entered into any agreement providing for an effective plan for the capture and destruction of the Villa bands. While the American troops were moving rapidly southward in pursuit of the raiders, it was the form and nature of the agreement that occupied the attention of Gen. Carranza rather than the practical object which it was to attain—the number of limitations that could be imposed upon the American forces to impede their progress rather than the obstacles that could be raised to prevent the escape of the outlaws. It was Gen. Carranza who suspended, through your note of April 12, all discussions and negotiations for an agreement along the lines of the protocols between the United States and Mexico concluded during the period 1882–1896, under which the two countries had so successfully restored peaceful conditions on their common boundary. It may be mentioned here that, notwithstanding the statement in your note that "the American Government gave no answer to the note of the 12th of April," this note was replied to on April 14, when the department instructed Mr. Rodgers by telegraph to deliver this Government's answer to Gen. Carranza. Shortly after this reply the conferences between Gens. Scott, Funston, and Obregon began at El Paso, during which they signed on May 2 a project of a memorandum ad referendum regarding the withdrawal of American troops. As an indication of the alleged bad faith of the American Government, you state that though Gen. Scott declared in this memorandum that the destruction and dispersion of the Villa band "had been accomplished," yet American forces are not withdrawn from Mexico. It is only necessary to read the memorandum, which is in the English language, to ascertain that this is clearly a misstatement, for the memorandum states that "the American punitive expeditionary forces have destroyed or dispersed many of the lawless elements and bandits, * * * or have driven them far into the interior of the Republic of Mexico," and further, that the United States forces were then "carrying on a vigorous pursuit of such small numbers of bandits or lawless elements as may have escaped." The context of your note gives the impression that the object of the expedition being admittedly accomplished, the United States had agreed in the memorandum to begin the withdrawal of its troops.

The memorandum shows, however, that it was not alone on account of partial dispersion of the bandits that it was decided to begin the withdrawal of American forces, but equally on account of the assurances of the Mexican government that their forces were "at the present time being augmented and strengthened to such an extent that they will be able to prevent any disorders occurring in Mexico that would in any way endanger American territory," and that they would "continue to diligently pursue, capture, or destroy any lawless bands of bandits that may still exist or hereafter exist in the northern part of Mexico," and that it would "make a proper distribution of such of its forces as may be necessary to prevent the possibility of invasion of American territory from Mexico." It was because of these assurances and because of Gen. Scott's confidence that they would be carried out that he stated in the memorandum that the American forces would be "gradually withdrawn." It is to be noted that, while the American Government was willing to ratify this agreement, Gen. Carranza refused to do so, as Gen. Obregon stated, because, among other things, it imposed improper conditions upon the Mexican government.

Notwithstanding the assurances in the memorandum, it is well known that the forces of the de facto government have not carried on a vigorous pursuit of the remaining bandits, and that no proper distribution of forces to prevent the invasion of American territory has been made, as will be shown by the further facts hereinafter set forth. I am reluctant to be forced to the conclusion which might be drawn from these circumstances that the de facto government, in spite of the crimes committed and the sinister designs of Villa and his followers, did not and does not now intend or desire that these outlaws should be captured, destroyed, or dispersed by American troops, or, at the request of this Government, by Mexican troops.

While the conferences at El Paso were in progress, and after the American conferees had been assured on May 2 that the Mexican forces in the northern part of the Republic were then being augmented so as to be able to prevent any disorders that would endanger American territory, a band of Mexicans, on the night of May 5, made an attack at Glenn Springs, Tex., about 20 miles north of the border, killing American soldiers and civilians, burning and sacking property, and carrying off two Americans as prisoners. Subsequent to this event the Mexican government, as you state, "gave instructions to Gen. Obregon to notify that of the United States that it would not permit the further passage of American troops into Mexico on this account, and that orders had been given to all military commanders along the frontier not to consent to same." This Government is, of course, not in a position to dispute the statement that these instructions had been given to Gen. Obregon, but it can decisively assert that Gen. Obregon never gave any such notification to Gen. Scott or Gen. Funston or, so far as known, to any other American official. Gen. Obregon did, however, inquire as to whether American troops had entered Mexico in pursuit of the Glenn Springs raiders, and Gen. Funston stated that no orders had been issued to American troops to cross the frontier on account of the raid, but this statement was made before any such orders had been issued, and not afterwards, as the erroneous account of the interview given in your note would appear to indicate. Moreover, no statement was made by the American generals that "no more American troops would cross into our territory." On the contrary, it was pointed out to Gen. Obregon and to Mr. Juan Amador, who was present at the conference, and pointed out with emphasis, that the bandits, de la Rosa and Pedro Vino, who had been instrumental in causing the invasion of Texas above Brownsville, were even then reported to be arranging in the neighborhood of Victoria for another raid across the border, and it was made clear to Gen. Obregon that if the Mexican government did not take immediate steps to prevent another invasion of the United States by these marauders, who were frequently seen in the company of Gen. Nafarrete, the constitutionalist commander, Mexico would find in Tamaulipas another punitive expedition similar to that then in Chihuahua.

American troops crossed into Mexico on May 10 upon notification to the local military authorities, under the repudiated agreement of March 10–13, or in any event in accordance with the practice adopted over 40 years ago, when there was no agreement regarding pursuit of marauders across the international boundary. These troops penetrated 168 miles into Mexican territory in pursuit of the Glenn Springs marauders without encountering a detachment of Mexican troops or a single Mexican soldier. Further discussion of this raid, however, is not necessary, because the American forces sent in pursuit of the bandits recrossed into Texas on the morning of May 22, the date of your note under consideration—a further proof of the singleness of purpose of this Government in endeavoring to quell disorder and stamp out lawlessness along the border.

During the continuance of the El Paso conferences, Gen. Scott, you assert, did not take into consideration the plan proposed by the Mexican government for the protection of the frontier by the reciprocal distribution of troops along the boundary. This proposition was made by Gen. Obregon a number of times, but each time conditioned upon the immediate withdrawal of American troops, and the Mexican conferees were invariably informed that immediate withdrawal could not take place, and that therefore it was impossible to discuss the project on that basis.

I have noted the fact that your communication is not limited to a discussion of the deplorable conditions existing along the border, and their important bearing on the peaceful relations of our Governments, but that an effort is made to connect it with other circumstances in order to support, if possible, a mistaken interpretation of the attitude of the Government of the United States toward Mexico. You state in effect that the American Government has placed every obstacle in the way of attaining the pacification of Mexico, and that this is shown by the volume of diplomatic representations in behalf of American interests which constantly impede efforts to reorganize the political, economical, and social conditions of the country; by

the decided aid lent at one time to Villa by American officers and by the Department of State; by the aid extended by the American Catholic clergy to that of Mexico; by the constant activity of the American press in favor of intervention and the interests of American business men; by the shelter and supply of rebels and conspirators on American territory; by the detention of shipments of arms and munitions purchased by the Mexican government; and by the detention of machinery intended for their manufacture.

In reply to this sweeping charge, I can truthfully affirm that the American Government has given every possible encouragement to the de facto government in the pacification and rehabilitation of Mexico. From the moment of its recognition it has had the undivided support of this Government. An embargo was placed upon arms and ammunition going into Chihuahua, Sonora, and Lower California in order to prevent their falling into the hands of the armed opponents of the de facto government. Permission has been granted from time to time, as requested, for Mexican troops and equipment to traverse American territory from one point to another in Mexico in order that the operations of Mexican troops against Villa and his forces might be facilitated. In view of these friendly acts, I am surprised that the de facto government has construed diplomatic representations in regard to the unjust treatment accorded American interests, private assistance to opponents to the de facto government by sympathizers in a foreign country, and the activity of a foreign press as interference by the United States Government in the domestic politics of Mexico. If a denial is needed that this Government has had ulterior and improper motives in its diplomatic representations, or has countenanced the activities of American sympathizers and the American press opposed to the de facto government, I am glad most emphatically to deny it. It is, however, a matter of common knowledge that the Mexican press has been more active than the press in the United States in endeavoring to inflame the two peoples against each other and to force the two countries into hostilities.

With the power of censorship of the Mexican press, so rigorously exercised by the de facto government, the responsibility for this activity can not, it would seem, be avoided by that government, and the issue of the appeal of Gen. Carranza himself in the press of March 12, calling upon the Mexican people to be prepared for any emergency which might arise and intimating that war with the United States was imminent, evidences the attitude of the de facto government toward these publications. It should not be a matter of surprise that after such manifestations of hostile feeling the United States was doubtful of the purpose for which the large amount of ammunition was to be used which the de facto government appeared eager to import from this country. Moreover, the policy of the de facto government in refusing to cooperate and in failing to act independently in destroying the Villa bandits and in otherwise suppressing outlawry in the vicinity of the border so as to remove the danger of war materials while passing southward through this zone falling into the hands of the enemies of law and order is, in the opinion of this Government, a sufficient ground, even if there were no other, for the refusal to allow such materials to cross the boundary into the bandit-infested region. To have permitted these shipments without careful scrutiny would, in the circumstances, have been to manifest a sense of security which would have been unjustified.

Candor compels me to add that the unconcealed hostility of the subordinate military commanders of the de facto government toward the American troops engaged in pursuing Villa bands and the efforts of the de facto government to compel their withdrawal from Mexican territory by threats and show of military force instead of by aiding in the capture of the outlaws constitute a menace to the safety of the American troops and to the peace of the border. As long as this menace continues and there is any evidence of an intention on the part of the de facto government or its military commanders to use force against the American troops instead of cooperating with them, the Government of the United States will not permit munitions of war or machinery for their manufacture to be exported from this country to Mexico.

As to the shelter and supply of rebels and conspirators on American territory, I can state that vigorous efforts have been and are being made by the agents of the United States to apprehend and bring to justice all persons found to be conspiring to violate the laws of the United States by organizing to oppose with arms the de facto government of Mexico. Political refugees have undoubtedly sought asylum in the United States, but this Government has vigilantly kept them under surveillance and has not hesitated to apprehend them upon proof of their criminal intentions, as the arrest of Gen. Huerta and others fully attests.

Having corrected the erroneous statements of fact to which I have adverted, the real situation stands forth in its true light. It is admitted that American troops have crossed the international boundary in hot pursuit of the Columbus raiders and without notice to or the consent of your government but the several protestations on the part of this Government by the President, by this department, and by other American authorities, that the object of the expedition was to capture, destroy, or completely disperse the Villa bands of outlaws or to turn this duty over to the Mexican authorities when assured that it would be effectively fulfilled, has been carried out in perfect good faith by the United States. Its efforts, however, have been obstructed at every point; first, by insistence on a palpably useless agreement which you admit was either not to apply to the present expedition or was to contain impracticable restrictions on its organization and operation; then by actual opposition, encouraged and fostered by the de facto government, to the further advance of the expedition into Villa territory, which was followed by the sudden suspension of all negotiations for an arrangement for the pursuit of Villa and his followers and the protection of the frontier; and finally by a demand for the immediate withdrawal of the American troops. Meantime, conditions of anarchy in the border States of Mexico were continually growing worse.

Incursions into American territory were plotted and perpetrated; the Glenn Springs raid was successfully executed, while no effective efforts were being made by Gen. Carranza to improve the conditions and to protect American territory from constant threat of invasion. In view of this increasing menace, of the inactivity of the Carranza forces, of the lack of cooperation in the apprehension of the Villa bands, and of the known encouragement and aid given to bandit leaders, it is unreasonable to expect the United States to withdraw its forces from Mexican territory or to prevent their entry again when their presence is the only check upon further bandit outrages and the only efficient means of protecting American lives and homes—safeguards which Gen. Carranza, though internationally obligated to supply, is manifestly unable or unwilling to give.

In view of the actual state of affairs as I have outlined it above, I am now in a position to consider the conclusions which you have drawn in your note under acknowledgment from the erroneous statements of fact which you have set forth.

Your government intimates, if it does not openly charge, that the attitude of the United States is one of insincerity, distrust, and suspicion toward the de facto government of Mexico, and that the intention of the United States in sending its troops into Mexico is to extend its sovereignty over Mexican territory, and not merely for the purpose of pursuing marauders and preventing future raids across the border. The de facto government charges by implication, which admits of but one interpretation, that this Government has as its object territorial aggrandizement, even at the expense of a war of aggression against a neighbor weakened by years of civil strife. The Government of the United States, if it had had designs upon the territory of Mexico, would have had no difficulty in finding during this period of revolution and disorder many plausible arguments for intervention in Mexican affairs. Hoping, however, that the people of Mexico would through their own efforts restore peace and establish an orderly government, the United States has awaited with patience the consummation of the revolution.

When the superiority of the revolutionary faction led by Gen. Carranza became undoubted the United States, after conferring with six others of the American Republics, recognized unconditionally the present de facto government. It hoped and expected that that government would speedily restore order and provide the Mexican people and others who had given their energy and substance to the development of the great resources of the Republic opportunity to rebuild in peace and security their shattered fortunes.

This Government has waited month after month for the consummation of its hope and expectation. In spite of increasing discouragements, in spite of repeated provocations to exercise force in the restoration of order in the northern regions of Mexico, where American interests have suffered most seriously from lawlessness, the Government of the United States has refrained from aggressive action and sought by appeals and moderate though explicit demands to impress upon the de facto government the seriousness of the situation and to arouse it to its duty to perform its international obligations toward citizens of the United States who had entered the territory of Mexico or had vested interests within its boundaries.

In the face of constantly renewed evidences of the patience and restraint of this Government in circumstances which only a government imbued with unselfishness and a sincere desire to respect to the full the sovereign rights and national dignity of

the Mexican people would have endured, doubts and suspicions as to the motives of the Government of the United States are expressed in your communication of May 22, for which I can imagine no purpose but to impugn the good faith of this Government, for I find it hard to believe that such imputations are not universally known to be without the least shadow of justification in fact.

Can the de facto government doubt that, if the United States had turned covetous eyes on Mexican territory, it could have found many pretexts in the past for the gratification of its desire? Can that government doubt that months ago, when the war between the revolutionary factions was in progress, a much better opportunity than the present was afforded for American intervention, if such has been the purpose of the United States as the de facto government now insinuates? What motive could this Government have had in refraining from taking advantage of such opportunities other than unselfish friendship for the Mexican Republic? I have, of course, given consideration to your argument that the responsibility for the present situation rests largely upon this Government. In the first place, you state that even the American forces along the border whose attention is undivided by other military operations, "Find themselves physically unable to protect effectively the frontier on the American side." Obviously, if there is no means of reaching bands roving on Mexican territory and making sudden dashes at night into American territory it is impossible to prevent such invasions unless the frontier is protected by a cordon of troops. No Government could be expected to maintain a force of this strength along the boundary of a nation with which it is at peace for the purpose of resisting the onslaughts of a few bands of lawless men, especially when the neighboring State makes no effort to prevent these attacks. The most effective method of preventing raids of this nature, as past experience has fully demonstrated, is to visit punishment or destruction on the raiders. It is precisely this plan which the United States desires to follow along the border without any intention of infringing upon the sovereign rights of her neighbor, but which, although obviously advantageous to the de facto government, it refuses to allow or even countenance. It is, in fact, protection to American lives and property about which the United States is solicitous and not the methods or ways in which that protection shall be accomplished. If the Mexican government is unwilling or unable to give this protection by preventing its territory from being the rendezvous and refuge of murderers and plunderers, that does not relieve this Government from its duty to take all the steps necessary to safeguard American citizens on American soil. The United States Government can not and will not allow bands of lawless men to establish themselves upon its borders with liberty to invade and plunder American territory with impunity and, when pursued, to seek safety across the Rio Grande, relying upon the plea of their Government that the integrity of the soil of the Mexican Republic must not be violated.

The Mexican government further protests that it has "made every effort on its part to protect the frontier" and that it is doing "all possible to avoid a recurrence of such acts." Attention is again invited to the well known and unrestricted activity of de la Rosa, Ancieto Piscano, Pedro Vinos, and others in connection with border raids and to the fact that, as I am advised, up to June 4 de la Rosa was still collecting troops at Monterey for the openly avowed purpose of making attacks on Texan border towns and that Pedro Vinos was recruiting at other places for the same avowed purpose. I have already pointed out the uninterrupted progress of Villa to and from Columbus, and the fact that the American forces in pursuit of the Glenn Springs marauders penetrated 168 miles into Mexican territory without encountering a single Carranzista soldier. This does not indicate that the Mexican government is doing "all possible" to avoid further raids; and if it is doing "all possible," this is not sufficient to prevent border raids, and there is every reason, therefore, why this Government must take such preventive measures as it deems sufficient.

It is suggested that injuries suffered on account of bandit raids are a matter of "pecuniary reparation" but "never the cause for American forces to invade Mexican soil." The precedents which have been established and maintained by the government of the Mexican Republic for the last half century do not bear out this statement. It has grown to be almost a custom not to settle depredations of bandits by payments of money alone, but to quell such disorders and to prevent such crimes by swift and sure punishment.

The de facto government finally argues that "if the frontier were duly protected from incursions from Mexico there would be no reason for the existing difficulty"; thus the de facto government attempts to absolve itself from the first duty of any government, namely, the protection of life and property. This is the paramount obligation for which governments are instituted, and governments neglecting or failing to perform it are not worthy of the name. This is the duty for which Gen. Carranza, it must be assumed, initiated his revolution in Mexico and organized the present government and for which the United States Government recognized his government as the de facto government of Mexico. Protection of American lives and property, then, in the United States is first the obligation of this Government, and in Mexico is, first, the obligation of Mexico, and second, the obligation of the United States. In securing this protection along the common boundary the United States has a right to expect the cooperation of its neighboring Republic; and yet, instead of taking steps to check or punish the raiders, the de facto government demurs and objects to measures taken by the United States. The Government of the United States does not wish to believe that the de facto government approves these marauding attacks, yet as they continue to be made, they show that the Mexican government is unable to repress them. This inability, as this Government has had occasion in the past to say, may excuse the failure to check the outrages complained of, but it only makes stronger the duty of the United States to prevent them, for if the Government of Mexico can not protect the lives and property of Americans, exposed to attack from Mexicans, the Government of the United States is in duty bound, so far as it can, to do so.

In conclusion, the Mexican government invites the United States to support its "assurances of friendship with real and effective acts" which "can be no other than the immediate withdrawal of the American troops." For the reasons I have herein fully set forth, this request of the de facto government can not now be entertained. The United States has not sought the duty which has been forced upon it of pursuing bandits who under fundamental principles of municipal and international law ought to be pursued and arrested and punished by Mexican authorities. Whenever Mexico will assume and effectively exercise that responsibility the United States, as it has many times before publicly declared, will be glad to have this obligation fulfilled by the de facto government of Mexico. If, on the contrary, the de facto government is pleased to ignore this obligation and to believe that "in case of a refusal to retire these troops there is no further recourse than to defend its territory by an appeal to arms," the Government of the United States would surely be lacking in sincerity and friendship if it did not frankly impress upon the de facto government that the execution of this threat will lead to the gravest consequences. While this Government would deeply regret such a result, it can not recede from its settled determination to maintain its national rights and to perform its full duty in preventing further invasions of the territory of the United States and in removing the peril which Americans along the international boundary have borne so long with patience and forbearance.

Accept, etc.,

ROBERT LANSING.

---

**Good Roads, Rail, and Water Transportation.**

## EXTENSION OF REMARKS
OF
## HON. JAMES WICKERSHAM,
OF ALASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. WICKERSHAM. Mr. Speaker, the people of Alaska are greatly interested in good roads and rail and water transportation. No one obstacle has more greatly retarded the development of the Territory and its many natural resources than the want of facilities for transportation. The Congress has responded to this demand by authorizing the construction of a trunk line of railroad from the southern harbors to an intersection with the great river waterways of the interior. When that railroad shall have reached the Tanana and the Yukon Rivers, a distance of about 450 miles from the Seward terminal, there will be added nearly 6,000 miles of open navigable river transportation at the end of the Government railroad for one-half of the year. This main trunk line of railroad and river, however, needs many branch extensions of wagon roads that the mining camps, settlements, and towns may reach the main line and have traffic relations with each other. The proposed appropriation of $500,000 carried in the bill before the House is intended to do that in part. The appropriation is authorized for

the construction, repair, and maintenance of military and post roads, and the money will be expended in connecting the military posts in Alaska and completing the general preparedness plan of the United States. But the roads thus constructed are not to be limited to the use of the military forces, and will be equally as useful to the people of Alaska as if constructed merely as public highways.

Then, too, the people of Alaska pay nearly one-half the tax or appropriation for the construction of these roads. In 1905 Congress passed the act of January 27, 1905 (30 Stat. L., 1336), "An act to provide for the construction and maintenance of roads," and so forth, in Alaska. Section 1 of that act provided—

That all moneys derived from and collected for liquor licenses, occupation, or trade licenses outside of the incorporated towns in the district of Alaska shall be deposited in the Treasury Department of the United States, there to remain as a separate and distinct fund, to be known as the "Alaska fund," and to be wholly devoted to the purposes hereinafter stated in the district of Alaska.

At present 25 per cent of the Alaska fund is expended in Alaska under direction of the governor for school purposes, 10 per cent under the direction of the judges of the district courts for charitable purposes, and the remainder, 65 per cent, is expended under War Department supervision by the Alaska board of road commissioners, composed of three Army officers, in the construction and maintenance of wagon roads. These two funds, the appropriations made by Congress, and the 65 per cent of the Alaska fund, representing the license fees and taxes of the citizens of Alaska outside of the incorporated towns, are both expended by the board of Army officers created by the act of Congress of 1905.

The following table shows the total amount of appropriations made by Congress and the total sum used from the Alaska fund in the construction, repair, and maintenance of military and post roads, bridges, and trails in Alaska from 1900 to January 1, 1916, under the jurisdiction of the Alaska board of road commissioners:

| Year. | Appropriation. | Alaska fund. | Total. |
|---|---|---|---|
| 1900 | $100,000.00 | ..... | $100,000.00 |
| 1904 | 27,500.00 | ..... | 27,500.00 |
| 1905 | 7,131.15 | $5,000.00 | 12,131.15 |
| 1906 | 185,000.00 | 83,500.00 | 268,500.00 |
| 1907 | 250,000.00 | 148,584.00 | 398,584.00 |
| 1908 | 250,000.00 | 117,750.00 | 367,750.00 |
| 1909 | 350,000.00 | 145,428.27 | 495,428.27 |
| 1910 | 100,000.00 | 74,881.67 | 174,881.67 |
| 1911 | 150,000.00 | 206,311.24 | 356,311.24 |
| 1912 | 125,000.00 | 152,061.77 | 277,061.77 |
| 1913 | 100,000.00 | 227,932.05 | 327,932.05 |
| 1914 | 125,000.00 | 166,423.74 | 291,423.74 |
| 1915 | 165,000.00 | 171,983.78 | 336,983.78 |
| 1916 | ..... | 40,085.27 | 40,085.27 |
| Total | 1,934,631.15 | 1,539,941.79 | 3,474,572.94 |

From the foregoing table it appears that while Congress has expended the sum of $1,934,631.15 in the construction of military and post roads in Alaska in connecting its posts and military establishments, it has also levied and collected license fees and taxes upon the people of Alaska for the construction and maintenance of the same roads in the sum of $1,539,941.79, making a total of $3,474,572.94 expended by the military board having charge of the work.

The joinder of the United States and the Territorial taxes in this work of road building under the charge of a military board in the War Department has led to much misunderstanding on the part of the people of Alaska, who too frequently, for the want of exact information, demand action from their representative, the Delegate from Alaska, that he can not lawfully or practically give them. Many demands come to me from every part of the Territory that I introduce a bill or bills and secure appropriations for the extension of the road work in Alaska, and even those who know the true situation, for personal or political reasons, too often add to the confusion by charges of failure on my part to secure such appropriations.

A brief statement of the law and the official facts leading to the appropriation in this bill of $500,000 for road work in Alaska will be instructive and interesting to those in Alaska, who also pay millions to the same fund.

If appropriations could be had from the United States Treasury as easily as most people imagine, there would never be a cent in it. Those who are responsible for the disbursement of the public moneys are constantly on guard, and, as a protection to themselves and the funds under their charge, have from time to time adopted rules and regulations for the careful management, appropriation, and expenditure of the same. Not a cent can be obtained from the Treasury of the United States for departmental work, such as that carried on by the Alaska Board of Road Commissioners, except by following the law of estimates for the control of appropriations. The matter of appropriations for the support of the bureaus and departments of the Government, for salaries, maintenance, and carrying on the various activities authorized by law is not left to chance or to appropriation bills introduced by any Congressman. The whole matter is carefully systematized by law, and the appropriation bills are the result of careful and systematic examination and the inspection of official estimates, prepared by each bureau and department in advance of the meeting of Congress.

THE LAW OF ESTIMATES.

Long ago Congress enacted laws for orderly and certain action by the committees in the matter of appropriations, so as to limit and control them, and also to avoid the misfortune which might befall a failure to provide for each item needed and authorized by law.

Sections 3669 and 3670, of the United States Revised Statutes (1878) provide as follows:

SEC. 3669. All annual estimates for the public service shall be submitted to Congress through the Secretary of the Treasury and shall be included in the Book of Estimates prepared under his direction.

SEC. 3670. The Secretary of the Treasury shall annex to the annual estimates of the appropriations required for the public service, a statement of the appropriations for the service for the year, which may have been made by former acts.

The last clause of section 2 of the general deficiency appropriation bill of July 7, 1884, provides:

SEC. 2. * * * And hereafter all estimates of appropriations and estimates of deficiencies in appropriations intended for the consideration and seeking the action of any of the committees of Congress shall be transmitted to Congress through the Secretary of the Treasury, and in no other manner; and the said Secretary shall first cause the same to be properly classified, compiled, indexed, and printed, under the supervision of the chief of the division of warrants, estimates, and appropriations of his department. (23 Stat. L., p. 254.)

The fifth section of the general appropriation act of March 3, 1901 (31 Stat. L., p. 1009) further provides:

SEC. 5. That hereafter it shall be the duty of the heads of the several executive departments and of other officers authorized or required to make estimates, to furnish to the Secretary of the Treasury on or before the 15th day of October of each year, their annual estimates for the public service, to be included in the Book of Estimates prepared by law under his direction, and in case of failure to furnish estimates as herein required it shall be the duty of the Secretary of the Treasury to cause to be prepared in the Treasury Department, on or before the 1st day of November of each year, estimates for such appropriations as in his judgment shall be requisite in every such case, which estimates shall be included in the Book of Estimates prepared by law under his direction for the consideration of Congress.

The second paragraph of section 4 of the general appropriation act of June 22, 1906 (34 Stat. L., p. 448–9) further provides:

SEC. 4. * * * Hereafter the heads of the several executive departments and all other officers authorized or required to make estimates for the public service shall include in their annual estimates furnished the Secretary of the Treasury for inclusion in the Book of Estimates all estimates of appropriations required for the service of the fiscal year for which they are prepared and submitted, and special or additional estimates for that year shall only be submitted to carry out laws subsequently enacted, or when deemed imperatively necessary for the public service by the department in which they originate, in which case such special or additional estimates shall be accompanied by a full statement of its imperative necessity and reasons for its omission in the annual estimates.

And, finally, the ninth section of the general appropriation act of August 23, 1912 (37 Stat. L., p. 415) further provides:

SEC. 9. That until otherwise provided by law the regular annual estimates of appropriations for expenses of the Government of the United States shall be prepared and submitted to Congress by those charged with the duty of such preparation and submission only in the form and at the time now required by law, and in no other form and at no other time.

Anyone who will carefully read these quotations from the statutes of the United States will understand that before any money can be appropriated from the Treasury to the use of any department of the Government, except deficiency estimates, the application of that department must have been made to the Secretary of the Treasury on or before the 15th day of October previous to the convening of Congress and included in the Book of Estimates presented by the Secretary of the Treasury to that Congress on the first day of its meeting.

THE ALASKA BOARD OF ROAD COMMISSIONERS.

This board was organized by the act of January 27, 1905 (33 Stat. L., p. 616). Section 2 of the act provides:

SEC. 2. That there shall be a board of road commissioners in said district, to be composed of an engineer officer of the United States Army, to be detailed and appointed by the Secretary of War, and two other officers of that part of the Army stationed in said district and to be designated by the Secretary of War, etc.

The board is thus created within the War Department, and all appropriations to be requested from Congress to be expended by it, except deficiency appropriations, must be asked for by the Secretary of War in his estimates to be submitted by him to the Secretary of the Treasury on or before October 15 of each

year. And that course is always pursued in securing the annual appropriations from Congress for the Alaska Board of Road Commissioners.

THE BOOK OF ESTIMATES, 1916–17.

As a practical example of the way the various departments of the Government comply with the foregoing law of estimates, reference is made to the last Book of Estimates, prepared by the Secretary of the Treasury for the fiscal year from June 30, 1916, to June 30, 1917. It is a large book of 1,340 pages of fine print. Its official title is House Document No. 27, Sixty-fourth Congress, first session. The letter transmitting these estimates to the House of Representatives is dated on the first day of the Congress, and the title page and letter are as follows:

LETTER FROM THE SECRETARY OF THE TREASURY TRANSMITTING ESTIMATES OF APPROPRIATIONS REQUIRED FOR THE SERVICE FOR THE FISCAL YEAR ENDING JUNE 30, 1917.

TREASURY DEPARTMENT,
*December 6, 1915.*

To the SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: In conformity with the requirements of sections 3669 and 3670 of the Revised Statutes and acts of July 7, 1884 (23 Stat., p. 254), and March 3, 1901 (31 Stat., p. 1009), I have the honor to transmit for the information of Congress the estimates of appropriations required for the service of the fiscal year ending June 30, 1917, as furnished by the several executive departments; also, statement of the expenditures of the moneys appropriated for contingent expenses of the Independent Treasury for the fiscal year 1915.

Respectfully, W. G. MCADOO, *Secretary.*

Similar Books of Estimates are submitted to Congress every year by the Secretary of the Treasury, and from these estimates thus officially submitted the committees of Congress prepare the appropriation bills. No appropriation bills for authorized work—that is, Government work once authorized through departmental control—are ever offered by Congressmen; all such appropriations come in the regular estimates from the proper department having charge of the work.

ESTIMATES FOR ALASKA ROADS.

The estimates for the construction, repair, and maintenance of military and post roads, bridges, and trails in Alaska are prepared in the War Department in the usual way, and never depend upon bills introduced by the Delegate from Alaska. In the Book of Estimates above mentioned for the fiscal year ending June 30, 1917, at page 366, is the regular annual estimate for the military and post roads, bridges, and trails in Alaska, prepared and submitted to the War Department by Col. Richardson, the chairman of the Alaska Board of Road Commissioners. It is as follows:

ESTIMATES OF APPROPRIATIONS REQUIRED FOR THE SERVICE OF THE FISCAL YEAR ENDING JUNE 30, 1917.

*Repair and maintenance, military post roads, bridges, and trails, Alaska—*

Repair and maintenance of military and post roads, bridges, and trails, Territory of Alaska (*act of Jan. 27, 1905, and annual acts for the support of the Army as published in General Orders Nos. 115, 1906; 48, 1907; 80, 1908; 49, 1909; 54, 1910; 45, 1911; Bulletins Nos. 15, 1912; 7, 1913, and 18, 1914, and act Mar. 4, 1915, vol. 38, p. 1078, sec. 1*) ..... $150,000

Amount appropriated for the fiscal year ending June 30, 1916 ..... 165,000

*Statement required by sec. 10 of sundry civil act approved Aug. 1, 1914 (Stats. 38, p. 680).*

| | Contemplated expenditure, 1917. | Expenditure, 1915. |
|---|---|---|
| 1. Construction, repairs, and maintenance, roads, etc.: | | |
| 1 assistant engineer, per annum | $3,000.00 | $3,000.00 |
| 1 designing engineer, per annum | 2,400.00 | 200.00 |
| 1 superintendent, per annum | 3,000.00 | |
| 2 superintendents, at $2,700 each per annum | 5,400.00 | 5,400.00 |
| 2 superintendents, at $1,800 each per annum | 3,600.00 | 3,200.00 |
| 1 chief clerk, per annum | 2,700.00 | 2,700.00 |
| 1 clerk, per annum | 1,980.00 | 1,800.00 |
| 1 clerk, per annum | 1,500.00 | 1,500.00 |
| 1 messenger, per annum | 900.00 | 900.00 |
| (Above designated employees constitute the permanent organization of the Board of Road Commissioners which has under its direction the expenditure of the road and trail portion of the Alaska fund, as well as the special appropriations by Congress.) | | |
| Other salaries, wages, and compensation, personal service | 69,820.00 | 59,840.00 |
| | 94,300.00 | 78,540.00 |
| (Other employees consist of foremen and day laborers engaged in most part during the midsummer months when work can be carried on to advantage. The total number employed during the most active period would be approximately 25 foremen and 500 to 600 laborers. The rates of pay vary from $5 per day to $250 per month for foremen, and $2.50 to $5 per day for day laborers, with board.) | | |

*Statement required by sec. 10 of sundry civil act approved Aug. 1, 1914 (Stats. 38, p. 680)—Continued.*

| | Contemplated expenditure, 1917. | Expenditure, 1915. |
|---|---|---|
| 1. Construction, repairs, etc.—Continued. | | |
| Compensation for services other than personal— | | |
| Transportation of persons | $1,060.00 | $923.00 |
| Subsistence of persons in traveling status | 930.00 | 776.00 |
| Subsistence of persons not in traveling status | 4,840.00 | 4,120.00 |
| Transportation of things, freight, etc | 7,533.00 | 6,250.00 |
| Subsistence and care of animals | 435.00 | 362.00 |
| Communication service (telegraph, telephone, and postage) | 215.00 | 179.00 |
| Printing, maps, etc | 21.00 | 18.00 |
| Furnishing electric light | 86.00 | 72.00 |
| Other nonpersonal service (hire of horses and dogs) | 7,740.00 | 6,440.00 |
| Materials for bridges, culverts, etc | 5,350.00 | 4,455.00 |
| Supplies— | | |
| Stationery and drafting supplies | 197.00 | 164.00 |
| Fuel (coal and wood) | 795.00 | 665.00 |
| Cleaning and toilet supplies | 21.00 | 17.00 |
| Forage and other supplies for animals | 7,580.00 | 6,320.00 |
| Provisions | 10,200.00 | 8,500.00 |
| 2. Repair of property and equipment used: | | |
| Salaries, wages, and other compensation, personal services | 63.00 | 53.00 |
| Services, nonpersonal | 263.00 | 209.00 |
| Materials | 260.00 | 207.00 |
| Supplies | 374.00 | 312.00 |
| 3. Purchase of property and equipment: | | |
| Equipment (horses, camp equipment, wagons, harness, etc.) | 6,200.00 | 5,140.00 |
| Rents (offices, post-office boxes, and barns) | 1,286.00 | 1,070.00 |
| Miscellaneous | 250.00 | 208.00 |
| | 150,000.00 | 125,000.00 |

The foregoing statement of estimates submitted by Col. Richardson, chairman of the Board of Road Commissioners for Alaska, for the fiscal year 1916–17 shows that he only estimated for $150,000 for the next year's work, and also how carefully Congress requires these estimates to be made, and in what exact detail he was required by law to state the purpose for which he intended to use the money estimated for.

In addition to the foregoing the following table shows the amounts which Col. Richardson, as chairman of the board, has heretofore estimated through the War Department for Alaska road work, and the amounts which Congress allowed upon such estimates. These amounts of estimates are copied from the annual Book of Estimates at the pages mentioned, while the amounts of the appropriations are taken from the session laws of Congress:

| Year. | Page. | Estimate. | Appropriation. |
|---|---|---|---|
| 1910 | 196 | $350,000 | $350,000 |
| 1911 | 537 | 100,000 | 100,000 |
| 1912 | 188 | 100,000 | 150,000 |
| 1913 | 518 | 100,000 | 125,000 |
| 1914 | 328 | 100,000 | 100,000 |
| 1915 | 269 | 125,000 | 125,000 |
| 1916 | 331 | 125,000 | 165,000 |
| 1917 | 366 | 150,000 | 500,000 |

The fact is beyond question that the Alaska Board of Road Commissioners has always received as large an appropriation as it has ever estimated for under the law, and in four instances, shown in the above table, it has received more than Col. Richardson estimated for under the law.

In view of the fact that frequent assertions are made in Alaska, too often by the members of the board of road commission officials, that the board is unable to get sufficient appropriations from Congress for its work, and that its requests for appropriations are hindered and defeated by the opposition of the Delegate from Alaska, the following official letter from Hon. James Hay, chairman of the Committee on Military Affairs, is inserted as complete disproof of the assertion:

HOUSE OF REPRESENTATIVES, UNITED STATES,
COMMITTEE ON MILITARY AFFAIRS,
*Washington, D. C., February 14, 1916.*

Hon. JULIUS KAHN,
*House of Representatives.*

MY DEAR SIR: In response to your inquiry you are informed that Delegate Wickersham has never made any objection or opposition to the Committee on Military Affairs, of which he is a member, to any of the appropriations recommended by this committee for continuing the work of the Alaska Board of Road Commissioners for military and post roads, bridges, and trails in Alaska. These appropriations have been based upon estimates from the Secretary of War and not otherwise.

Yours, very truly,

JAMES HAY.

THE PRESENT APPROPRIATION OF $500,000.

During last fall a controversy arose between the people in the Ruby district in Alaska and the board of road commissioners over the proportion of the public money for road work apportioned to that district. Again the excuse of insufficient appropriations and the opposition of the Delegate from Alaska was brought forward by officials connected with the board. The people in that great mining district, in desperation over bad transportation facilities, began to appeal to their Delegate in Congress.

At their request, knowing and appreciating their sorry conditions and desiring to better them, I introduced H. R. 6886 for their relief on January 4, 1916. The bill is as follows:

A bill (H. R. 6886) to appropriate the sum of $200,000 for further construction and maintenance of military post roads, bridges, and trails in Alaska, and for other purposes.

*Be it enacted, etc.*, That there be, and is hereby, appropriated, out of any money in the United States Treasury not otherwise appropriated, to be expended in conformity with the provisions of and under the direction of the board of road commissioners described in "An act to provide for the construction and maintenance of roads, the establishment and maintenance of schools, and the care and support of insane persons in the District of Alaska, and for other purposes," approved January 27, 1905, and the acts amendatory thereof, the sum of $200,000, for the completion of the military post road and bridges from Ruby to Long Creek, Alaska, and known in the reports of said commission as route No. 38; that said appropriation shall continue available until expended by said commission.

The introduction of the bill was supported by a letter addressed by the Delegate to the chairman of the House Committee on Military Affairs, as follows:

WASHINGTON, D. C., *January 6, 1916.*

Hon. JAMES HAY,
*Chairman House Committee on Military Affairs,*
*House of Representatives.*

DEAR SIR: Herewith inclosed is a copy of H. R. 6886, "A bill to appropriate the sum of $200,000 for further construction and maintenance of military post roads, bridges, and trails in Alaska, and for other purposes," introduced by me on January 4 and referred to your committee. I assume the usual practice of referring the bill to the Secretary of War for report and recommendation will be followed, but the purpose of this note is to inquire, Will it be necessary for me to procure the Secretary to prepare and submit a supplemental estimate for this sum, in compliance with the law of estimates and especially section 4 of the appropriation act of June 26, 1906 (34 Stat. L., pp. 448-9), which requires that "special or additional estimates for that year shall only be submitted to carry out laws subsequently enacted, or when deemed imperatively necessary for the public service by the department in which they originate, in which case such special or additional estimates shall be accompanied by a full statement of its imperative necessity and reasons for its omission in the annual estimates?"

Will the Committee on Military Affairs consider the appropriation asked for in my bill without any special or additional estimates from the Secretary of War?

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

Also, on the next day the following letter was addressed to the Secretary of War, requesting him to prepare and forward to Congress a supplemental estimate, under the law, as follows:

WASHINGTON, D. C., *January 7, 1916.*

Hon. LINDLEY M. GARRISON,
*Secretary of War, Washington, D. C.*

SIR: The chairman of the House Committee on Military Affairs has sent to the War Department a copy of H. R. 6886, "A bill to appropriate the sum of $200,000 for further construction and maintenance of military post roads, bridges, and trails in Alaska, and for other purposes," introduced by me on January 4, for examination and report.

The chairman informs me "it would very greatly increase the probability of the passage of the bill if it had the indorsement of the Secretary of War and especially an estimate for the appropriation." Looking into the law I find that section 4 of the appropriation act of June 26, 1906 (34 Stat. L., 448–449), requires "special or additional estimates for that year shall only be submitted to carry out laws subsequently enacted, or when deemed imperatively necessary for the public service by the department in which they originate, in which case such special or additional estimates shall be accompanied by a full statement of its imperative necessity and reasons for its omission in the annual estimates."

Herewith inclosed is a letter from Hon. Dan Sutherland, the member of the Territorial senate, residing at Ruby, Alaska, who sets forth the reasons for making this appropriation, and also a copy of the Record-Citizen of October 16, 1915, which contains an editorial upon the subject and also a copy of a letter addressed to me urging the appropriation.

Fortunately, also, Col. Wilds P. Richardson, the chairman of the Alaska Board of Road Commissioners, is in the city, with his office in the War Department. The board, of which he is president, will have entire charge and control of the expenditure of the appropriation if made, and he is entirely conversant with every detail of the necessity for the road mentioned in the bill.

I respectfully request that Col. Richardson be invited to give his views upon the necessity for this appropriation, and thereupon the Secretary of War prepare a supplemental estimate, based upon the facts stated by Col. Richardson, showing the necessity for this appropriation; that the estimate be sent to the House in accordance with law, and the approved bill be returned to the chairman of the House Committee on Military Affairs.

It seems, under the law, the mere indorsement of the bill by the Secretary of War, by letter or otherwise, is not sufficient. It seems a supplemental estimate is necessary, and I am very anxious to have the Secretary of War make that supplemental estimate upon the showing of its necessity, to be made by Col. Richardson. Will you kindly advise me of the action taken on my request for an estimate?

Please return Senator Sutherland's letter and the newspaper to me when you are through with them.

Respectfully,

JAMES WICKERSHAM,
*Delegate from Alaska.*

In answer to my letter to the Secretary of War of January 7th, I received the following letter from the War Department:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
*Washington, January 18, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives.*

SIR: The Secretary of War directs me to acknowledge the receipt of your letter of the 7th instant, relative to H. R. 6889, in which it is proposed to appropriate the sum of $200,000 for further construction and maintenance of military roads, bridges, and trails in Alaska, and to accomplish other purposes named therein, and in which letter you expressed the hope that the Secretary may not only approve the measure but also make a supplemental estimate relating to the matter.

With regard to your request the Secretary also directs me to advise you that the chairman of the House Committee on Military Affairs, to which the bill was referred for consideration, has transmitted the measure to this department "for information and remark." The matter is now being considered in connection with your letter and the papers which you inclose, and a report on the proposed legislation will be furnished the committee in the near future.

Very respectfully,

H. P. MCCAIN,
*The Adjutant General.*

And thereafter came the result in the letter from the War Department, dated March 2, 1916, as follows:

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
*Washington, March 2, 1916.*

Hon. JAMES WICKERSHAM,
*House of Representatives.*

SIR: Referring to your letter of January 7, 1916, relative to H. R. bill No. 6886, in which it is proposed to appropriate the sum of $200,000 for further construction and maintenance of military post roads, bridges, and trails in Alaska, and for other purposes, I am directed by the Secretary of War, ad interim, to advise you as follows:

The president of the Board of Road Commissioners for Alaska was called upon for a report bearing upon the bill referred to in your letter. In the report of the president the need for the work contemplated by the bill was freely admitted, but at the same time the need for road improvements in other parts of the Territory was strongly emphasized.

After analyzing the situation it was recommended in the report that the president of the board be authorized to submit a supplemental estimate to enable the work to be carried forward properly during the coming year, providing, however, for reasons of economy of construction, that only $100,000 be spent on the Ruby-Long Creek Road during the present year, as a part of a through road to the coast.

The estimate, having been approved, has been forwarded to the Secretary of the Treasury for transmission to Congress in accordance with law. The views and recommendations of the Board of Road Commissioners for Alaska, which have been approved by this department, are set forth more fully in the report furnished to-day to the chairman of the House Committee on Military Affairs.

Senator SUTHERLAND'S letter and the newspaper received from you are, in accordance with your request, herewith returned.

Very respectfully,

H. P. MCCAIN,
*The Adjutant General.*

Following the above letter from the department, and in pursuance to the law of estimates, the Secretary of War, through the Secretary of the Treasury, on March 2, submitted the following estimate to Congress, being the authorized estimate for $500,000, and an increase over the first estimate submitted of $350,000, as follows:

[House Document No. 835, Sixty-fourth Congress, first session.]

MILITARY AND POST ROADS, ETC., ALASKA.

Letter from the Secretary of the Treasury, transmitting copy of a communication from the Secretary of War ad interim submitting an additional and supplementary estimate of appropriation for the construction of military and post roads, bridges, and trails in Alaska.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
*Washington, March 2, 1916.*

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to transmit herewith, for the consideration of Congress, copy of a communication from the Secretary of War ad interim of the 1st instant, submitting as additional and supplemental estimate of appropriation in the sum of $500,000, for the construction of military and post roads, bridges, and trails in Alaska.

The Secretary of War ad interim, in his communication, states the reason for the submission of the estimate at this time.

Respectfully,

W. G. MCADOO, *Secretary.*

—

WAR DEPARTMENT,
*Washington, March 1, 1916.*

SIR: I have the honor to forward herewith, for transmission to Congress, a supplemental estimate of an appropriation of $500,000 required for the service of the fiscal year 1917, by the Board of Road Commissioners for Alaska, for the "Construction of military and post roads, bridges, and trails, Alaska."

With this amount it is proposed to carry toward completion the construction of the Valdez-Chitina-Fairbanks military road, a road of great military and postal value, now under construction for several years, with constantly increasing traffic, which makes maintenance extremely expensive until weaker sections are strengthened and gravel surfacing carried throughout; also to carry on the work of constructing the Ruby-Long Creek Road, upon which there has already been spent

approximately $43,000. This route and the Valdez-Fairbanks traverse two of the three great trunk routes from the Gulf of Alaska to the interior; the other being the proposed railroad route. The sooner these two roads are made passable and usable for ordinary traffic throughout their entire length, the better for the public service, as well as for the local development.

Owing to the continually growing demand for road work in Alaska there comes an increased cost of maintenance, with increase in mileage. By reason of the limited funds available the work of the board is now nearly brought to a standstill. Due to this fact it is deemed necessary to submit this estimate, as the amount of $150,000, submitted in the regular estimates of the department for 1917 (Book of Estimates, 1917, p. 366), covers maintenance and repair of existing construction only.

The omission of this item from the regular annual estimates was due to the fact that it was not practicable for the president of the Board of Road Commissioners for Alaska to bring to the attention of the department the full facts respecting the road work in Alaska before the annual estimates for 1917 were required to be submitted by law on October 15, 1915.

Very respectfully,

H. L. SCOTT,
*Secretary of War ad Interim.*

THE SECRETARY OF THE TREASURY.

---

*Supplemental estimates of appropriations required for the service of the fiscal year ending June 30, 1917, by the Board of Road Commissioners for Alaska.*

WAR DEPARTMENT.

BOARD OF ROAD COMMISSIONERS FOR ALASKA.

Construction of military and post roads, bridges, and trails, Alaska:

For the construction, repair, and maintenance of military and post roads, bridges, and trails in the Territory of Alaska, to be expended under the direction of the board of road commissioners described in section 2 of an act entitled "An act to provide for the construction and maintenance of roads, the establishment and maintenance of schools, and the care and support of insane persons in the District of Alaska, and for other purposes, approved January 27, 1905, and to be expended conformably to the provisions of said act: *Provided*, That not to exceed the sum of $100,000 may be expended in continuing the construction of the road known as the Ruby-Long Creek Road (acts Jan. 27, 1905, vol. 33, p. 616, sec. 2; Mar. 4, 1915, vol. 38, p. 1078, sec. 1)..... $500,000

Amount appropriated for the current fiscal year ending June 30, 1916..... 165,000

NOTE.—The foregoing amount is required chiefly for new construction and is additional to the $150,000 estimated for maintenance and repairs as published in the annual Book of Estimates for the fiscal year 1917, page 366. With this amount it is proposed to carry toward completion the construction of the Valdez-Chitina-Fairbanks military road (409.6 miles), a road of great military and postal value, now under construction for several years with constantly increasing traffic, which makes maintenance extremely expensive until weaker sections are strengthened and gravel surfacing carried throughout; also, to carry on the work of constructing the Ruby-Long Creek Road, upon which there has already been spent approximately $43,000. This route and the Valdez-Fairbanks traverse two of the three great trunk routes from the Gulf of Alaska to the interior, the other being the proposed railroad route. The imperative necessity for the submission of this estimate is due to the constantly growing demand for road work in Alaska, and with the increase in mileage there comes increased cost of maintenance, resulting in the work of the board being nearly brought to a standstill by reason of the limited amount of funds that have been appropriated by Congress for the work. The omission of this item from the regular annual estimates was due to the fact that it was not practicable for me to bring to the attention of the department the full facts respecting the road work in Alaska before the regular estimates for 1917 were required to be submitted by law on October 15, 1915. (W. P. Richardson, colonel of Infantry, United States Army, president Board of Road Commissioners for Alaska.)

After securing the estimate and approval of the Secretary of War to be submitted to Congress in accordance with the law of estimates, I asked for a special hearing before the House Committee on Military Affairs, and on April 11 appeared before the committee and presented the facts, showing the necessity for the appropriation. On the same day Col. Richardson appeared before the same committee in support of the appropriation, and on June 16, when the Committee on Military Affairs favorably reported the bill making appropriations for the support of the Army for the fiscal year ending June 30, 1917, it carried this clause on page 36:

Construction, repair, and maintenance, military and post roads, bridges, and trails, Alaska: Construction, repair, and maintenance of military and post roads, bridges, and trails, Territory of Alaska, $500,000.

As the bill has now passed the House of Representatives it carries the $500,000, so much needed for the completion of some of the military and public roads in Alaska. This item, thus secured by my active efforts, exceeds the sum estimated for by Col. Richardson in the Book of Estimates filed with Congress by the Secretary of the Treasury on December 6 last by $350,000. This sum added to the large sums paid into the Alaska fund by the people of Alaska will give an amount sufficient to do a vast good to the development of the public roads in Alaska if efficiently expended.

And in the matter of securing adequate appropriations in the future, it is hoped the Alaska board of road commissioners, of which Col. Richardson is chairman, will make an estimate in accordance with law in Washington as large as they demand for political purposes in Alaska. While my effort this time has so far been successful, it would not have been necessary to make it if the board had made its estimate under the law as large as I have finally made it for them. Hereafter the board should make its estimate under the law for as much as it needs.

In view of the law of estimates, the people of Alaska must understand that neither the Delegate from Alaska nor any other Congressman can procure an appropriation for any sum whatever for carrying on the work of the Alaska board of road commissioners through any bill introduced by him, unless he can induce the Secretary of War and Col. Richardson to approve the amount asked for by making a formal estimate under the law and forward it to Congress as the estimate in this case was so finally forwarded. And the Secretary of War, after approval of the estimate by Col. Richardson, can procure such an appropriation without a bill being introduced by the Delegate or any other Congressman. No such estimate was made in this case until the Delegate from Alaska secured such action, and he then raised the estimate made by Col. Richardson from $150,000 to $500,000. The Delegate from Alaska hopes the $200,000 asked for will be expended in the completion of the Ruby-Long Creek Road, as it ought to be. Col. Richardson will then have twice as much money for other work as he asked Congress in his estimate to appropriate for the work.

---

## The Farmer's Bank.

## EXTENSION OF REMARKS

OF

## HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. SCHALL. Mr. Speaker, we have the business men's bank, the banker's bank; why not the farmer's bank? The foundation of our industrial, commercial, and financial fabric is agriculture. "All wealth comes from labor applied to land." To-day, nearly a century and a half since the adoption of our Constitution, we have provided no rational or practical system for financing the farm.

The United States is the banker nation of the world, but our banks are commercial banks and not adapted to agriculture. From 1864 to 1914 our national banking law prohibited farm loans. The new Federal reserve law accommodates only one-twelfth part of the present outstanding farm-mortgage indebtedness of the United States.

Our banking law discriminates against the farm. The assets of a commercial bank must be liquid. Its loans must be chiefly 30 to 90 day paper. The farm loan should be 5 to 50 year paper. We, almost alone among the great nations of the earth, have made no provision to place farm loans on an efficient basis. We have created financial institutions to finance properly at reasonable rates every other line of business activity, but we have left our greatest industry to the tender mercy of chance and the loan shark.

Six years ago the United States census showed that our farm wealth represented the colossal total of $40,000,000,000, or two-fifths of our national wealth. It is now undoubtedly worth over $50,000,000,000. Is the financing of such an industry not worth our consideration? The annual value of our farm products has reached $10,000,000,000, far and above all other items in our net national income. Is not an efficient, economical, and adequate basis of credit which shows such an income margin an urgent necessity? Our banking system provides adequate credit for manufacture, mines, transportation, and commerce at rates as low as anywhere on the globe. The credit needs of agriculture we have overlooked. Our average farm-loan rates, ranging from 5½ to 24 per cent, are more than double those of Europe. In Germany, France, Denmark, Norway, Holland, and Great Britain, where farm credit has received for 20 to 50 years past as great consideration as commercial credit, the ruling rates are 3½ to 4 per cent. While the European systems have in some degree aided in modeling this bill, yet the situation as presented here is not the situation as it exists in Europe. There it is small, intensified farming. People and their children and their children's children live in one locality for generations, and the population is thick and homogeneous. Our farms are large and diversified; the farming population is to a large degree migratory, and we are the melting pot of all nations.

The American farmer pays double the rate for his capital, and yet he is supposed to produce his crops on a basis enough cheaper

than the European price to pay the cost of transportation and handling, together with dealer's profits and commissions, from the American farm across sea and continent and successfully compete with the European farmer in his own market.

The annual income of the average farmer in the United States is $600 a year. Out of this must come interest and taxes and living expenses, which leaves no margin for recreation or luxury. For him it is unrelenting toil from sunup till sunset. No other industry yields so stingy an income. Only one-half of the farm land in this country is under cultivation; 400,000,000 acres stand idle, besides the vast acreage not included as farm lands but which is yet redeemable, for lack of a farm-credit system.

James B. Morman says in his work The Principles of Rural Credits:

When the law against usury can be so easily circumvented by the methods of charging commissions, premiums, costs, and other incidental expenses, the expectations of the farmer for an improvement in rural-credit conditions will not soon be realized. These extra costs often more than double the legal rate of interest, and against them the farmer seems to have no means of redress. It is the first duty of the State to provide the farmer with protection against credit abuses.

Modern farming must have capital at reasonable rates. We shout, "Back to the farm." The average farm in the United States to-day costs $6,500. With what is the unemployed man in the city going to buy a $6,500 farm without a national system of finance for acquiring and operating that farm?

Our population doubles in about 30 years, but the number of American farms increases at the rate of only about 50 per cent in 30 years, or half the rate of population increase. From 1880 to 1910 the number of farm owners increased by 1,022,000, or 35 per cent, while the number of farm tenants increased by 120 per cent, three times that of farm owners. Since 1880 the rural population has declined from 70 to 50 per cent of the whole population.

Under the present financial system a mortgage on the farm shuts out the light of the sun from its occupants. They toil, without ceasing, early and late, winter and summer, from the father to the youngest member of the family, denying themselves all but the barest necessities in order to keep up the interest on the mortgage. When the time for payment or renewal arrives there is the greatest anxiety lest the holder foreclose and sweep away the proceeds of five years of toil. If the mortgage is renewed, there is a premium to pay and the cost of renewal, and with all this struggle and sacrifice not a cent of the principal has been wiped out. The average interest to farmers in the United States when costs and premiums are figured in is around 9 per cent. Is it any wonder that the farmer youth refuses to look forward to a life of thankless, unremitting toil, and hastens to break loose at the first opportunity and join the great throngs of the cities, "where wealth accumulates and men decay." The average farmer has no outlook but to rise at 4 in the morning and, after 12 hours of hard day labor, do his chores after dark at night, and all for $600 a year.

The Danish farmer, the German farmer, the French farmer pay 4 per cent interest, three-fourths of 1 per cent amortization or partial payment of the principal, and one-fourth of 1 per cent administrative expenses, or a total of 5 per cent per annum on both interest and principal, and in 40 to 50 years this 5 per cent wipes out principal and interest in full, and he or his heirs have the farm free of debt. The foundation of the German system of rural credits is the 17,000 cooperative agricultural banks.

Even British India has 3,500 cooperative agricultural societies as the basis for credits to its farmers, and 32 central institutions to handle the loans of the local cooperative units. New Zealand, a comparatively new country, furnishes loans as low as 3½ to 5 per cent.

Our railway, mine, telegraph, water power, and industrial mortgages run from 30 to 50 years, and the average rates are 4 to 5 per cent. The Illinois Central has two bond issues at 5 and 4½ per cent. There are five issues at 4 per cent, five others at 3½, and two at 3 per cent. The farms which support the Illinois Central Railroad should have as low a rate as the railroad which passes through them. The mortgage bonds of the Great Northern bear interest at 4½ per cent, of the Southern Pacific at 4 per cent, while the first mortgages of the farms through which they run bear interest all the way from 8 to 24 per cent.

In all we loan on mortgages to American railroads $12,000,000,000 at an average of 4 to 4½ per cent. Four times the amount of the farm mortgages of the United States. The farm earnings of the United States are nearly four times the earnings of the railroads, and the real value of the farm property is nearly four times the par value of the capital stock of the railroads.

Why will investors loan up to 100 per cent of the value of the railroads at 4 to 4½ per cent, while the average rate charged on a farm mortgage, limited to 50 per cent of the farm value, is from 6 to 12 per cent, and in some instances 24 per cent? Because our credit system for financing railroads has been thoroughly organized and supported by all the financial and governmental agencies of the country.

Open your newspaper and read, under the heading, "New York money market": "Mercantile paper 3 to 3½ per cent; time loans, 60 days, 2½ to 2¾ per cent; six months, 2¾ to 3 per cent; call money, 1¾." Over $2,240,000,000 has been loaned at these rates by the New York clearing-house banks. The volume of loans to-day is double that of five years ago.

The volume of the New York loans alone nearly equals the entire volume of farm mortgages of the United States. Because commercial credit is organized, because Congress has provided it with national banking laws and administration, because it has for a governmental foundation the Federal reserve act, with an interlocking system of Federal reserve banks under an expert Federal board and all the financial resources and activities of the Nation articulated and working in harmonious action thereunder, the business of New York both domestic and foreign, and the speculation of the stock exchanges has the use of $2,240,000,000 and the lowest commercial rates on the face of the globe, while, because of agricultural disorganization, $40,000,000,000 worth of farm property pays an average of 8 per cent even on first-class farm mortgages. Nowhere is there such another colossal financial fiasco. We know the cause and we know our duty. It is to put on the United States statute books promptly a practicable rural-credits law, or as practicable as possible in view of the compromises that must be made in order for this Congress to get upon the statute books any rural-credit law.

As I understand this bill it establishes a Federal farm-loan board in Washington of three men, appointed by the President, whose salary of $7,500 is paid out of the Treasury, who shall have general supervision over the Federal land banks.

The United States is to be divided into 12 districts, in each of which the farm-loan board is to organize a Federal land bank. These Federal land banks can be drawn on by the national farm-loan associations and by no one else. For 90 days after the books of the banks are opened anybody may subscribe to the amount of $750,000, and if at the end of 90 days this stock has not been fully subscribed, then the Treasurer of the United States takes up the subscription to the amount of $750,000. Whenever farmers wish to borrow they must incorporate a national farm-loan association of not fewer than 10 members intending to borrow not less than $20,000.

The only officer to receive pay is the secretary-treasurer, whose duty is to take charge of all business connected with the loaning and taking in of money. Each farmer who wants to borrow must subscribe and pay for stock up to 5 per cent of the amount he wishes to borrow. If he hasn't the money he can borrow enough to pay for his stock, and add it to the amount of his loan. He can borrow up to 60 per cent of the value of the land and 20 per cent of the value of the buildings, but in no case can he borrow over $10,000 or less than $100. For example, he wants to borrow $1,000 for 36 years. He must take out stock to the value of $50. His lands must be appraised, his abstract examined, and if the appraisal is approved then the loan is made. The money is sent to the local secretary-treasurer. The money must be used for improvements, to pay off an existing mortgage, or to buy farm lands. Interest is in no case to be over 5 per cent, and may, if bonds sell below this figure, be less, plus 1 per cent administration expenses. At the end of his loan his stock may go in as last payment. Whatever dividends accrue to his stock can be applied as payment on the loan. Amortization or repayments of the principal are made annually, which include the interest and a part of the principal, no payment to be less than $25. It is the duty of the Federal land bank to work out tables in each case to see just what the payments shall be to wipe out the debt in 36 years, and there is also a provision that the principal can be paid up at any interest date after the five years; so that the farmer would not need to carry the loan 36 years, if times brighten.

After volumes of testimony from students and experts from every section of the earth, the joint Rural Credits Committee, composed of Senators and Representatives, Republicans and Democrats, representing East and West, North and South, bankers and "gentlemen" or "shade-tree farmers," have at length laid before us their bill and their report. For years Wall Street has choked down this legislation, so sorely needed by the farmer. But, thanks to the primary election system, and the corrupt-practices act, which the metropolitan press so strenuously oppose, it is fast becoming impossible for the money trust

of the country to dictate the nominees of all parties, as in the past, rendering it a "hoss and hoss" proposition to the voter, "Heads, the bosses win; tails, the people lose." The farmer, the common people, the majority, are becoming the election "boss." They are sending men to Congress who will represent their interests, and they are recalling them sharply when they fail so to represent them. And as the years of reform go on, the Congressman who wishes to hold his job must more and more represent the will of the people that nominate and elect him.

Whether this bill will serve the farmer or not remains to be seen. At least it is nonpartisan. I shall vote for this bill, not because I think it the best bill, but because it is the only bill that we have a chance to vote on at this time. In my opinion it is too clumsy, too confusing, has too much red tape and dross, requires too much machinery to run it. But the many political jobs carried by it are an inducement to the present administration and will aid in its passage.

Gold is not produced pure, but must be accepted along with the dross, which later, subjected to the fire of experience, can be eliminated. I am in favor of helping the farmer, and I am in favor of getting this bill through, because the farmer can lose nothing by it and he may gain. I shall vote for the bill for the following points which it contains: First, the long-term loan; second, amortization, or the installment plan of repayment; third, the fact that the Federal board, the men at the head and their crowd of assistants, are paid from the United States Treasury, and hence this expense will not rest directly on the farmer. The $9,000,000 Federal aid—a mere drop in the bucket when compared with the river and harbor or the Army appropriation—is yet enough to make the opponents of Federal aid set up a mighty howl. But, at least, it is a beginning. It allows 20 per cent on farm buildings, and to this extent puts a premium on comfort. Insufficient as it is, and dissatisfied as I am with its shortcomings, yet it has virtue in it, and points in the right direction, and differs from the bill presented by the Senate in that it carries Federal aid. With this feature maintained, it will ultimately, under the tests of experience, by which future Congresses can profit, and add amendments, prove, I hope, the greatest boon of the twentieth century. Experience will work out the detail. We can not begin sooner than now. Somebody's "folly" is at the bottom of the Chicago River, but submarines that do their work efficiently embody the same ideas. The first flying machine that flew only flew a few feet, but the flying machines of this present day are built exactly on the same principle. It will be easier to revise an existing law, when its faults have become patent through actual working, than to try all over again through compromise and trade to gather a majority to put through a new law. We have been working for years to get rural credits into legislative form. It would be a shame to fail now.

It is now five years since Congress created a commission of seven to accompany 70 commissioners appointed by the various States to visit Europe and study foreign rural-credits systems. This is the third Congress that has had the benefit of the reports and recommendations and proposed bills.

Let not the friends of rural credits defeat success by inaction and hairsplitting now, when we are so close to some sort of a success. Every year of delay costs the farmers of this country something like $200,000,000 in unjust interest rates. American farmers need a modern system of banking and finance, and they need it now.

What the farmers want is not more of the bankers' money but Government money, loaned direct to them, under the same advantage that another class, the banker class, enjoys. They borrow from the Government on gilt-edged security for 2 and 2½ per cent, and in all equity they should not be heard to raise the hue and cry of class legislation. In doing so they remind us of Dickens's character, the Artful Dodger, chasing Oliver Twist, and calling "Thief! Thief!" and he with "the wipe" in his own pocket.

This measure is of as vital interest to the city man as to the farmer. It goes to the root of the high cost of living. Provide the farmer with a system whereby he can get long-time loans at low rate. He has a soil that produces less, acre for acre, than the long-used acres of Europe. Increase of consumption must be met by increase of production unless cost of produce is to soar unlimitedly. There is but one way for the farmer to increase production, and that is by modern methods, greater efficiency, drainage, fertilizing, up-to-date equipment. All this takes money.

AN OUNCE OF FACT IS WORTH A TON OF THEORIES OF THE FUTURE.

The time to take care of this problem is now, while the intelligent farmer is still fighting his battle, before the struggle with poor living and insufficient return from his toil has driven him, discouraged, to some other livlihood.

The only point of opposition is that some of our bankers fear that a rural-credits system will take away business. But the farm-land bank, with its local cooperative agencies, which the rural-credits plan contemplates, does not compete with the commercial bank. It begins where the commercial bank leaves off. It leaves to the commercial bank all the short-time paper and takes only the long-term mortgages, running 5 to 36 years.

If National and State bankers can get along and prosper in company with the loan and trust companies and savings banks and building and loan associations, they should have no fight with rural-credits associations. The loan companies handle a large amount of one to five year paper. Some of the trust companies do commercial business. They should prove a vast aid and benefit to commercial banks in the long run, for to build up and develop agriculture creates business for local and interstate commerce, manufacture, and railroads, and every dollar of additional business which farm prosperity brings to a town brings business to the bank, and, first of all, to the country banker. Fifty years of practical experience in the most prosperous and advanced agricultural communities of Europe have demonstrated that rural credit is the foundation of modern agricultural efficiency and progress.

Mr. Speaker, ours is the greatest industrial nation on earth, the banker nation of the world. To two of the nations at war we have loaned $1,000,000,000 and to other countries $200,000,000 more. We have the greatest gold stock in the world, and our foreign-trade balance is now much over $2,000,000,000 a year. The foundation of our financial greatness is agriculture, which adds $10,000,000,000 a year to our national income with each annual harvest. Shall it be said that the United States can finance every kind of business within its own domain, every foreign interest for war or for peace, and can not finance its own greatest industry and asset, the farmers who fight its battles in war and produce its prosperity in peace, even when they offer $50,000,000,000 worth of their own homesteads for security?

Mr. Speaker, let not this Congress deprive itself of the credit and the honor of doing all in its power to free the farmer from the grip of the loan shark and to emancipate the farm from chaos in business management.

**Pensions for Soldiers and Their Widows.**

## EXTENSION OF REMARKS
OF
## HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 19, 1916.*

Mr. FESS. Mr. Speaker, in the early days of this session of Congress the distinguished Member from Louisiana [Mr. MORGAN] gave an exhaustive address of an hour, in which he set forth his opposition to the present pension system. On several occasions since I have been a Member of the House I have heard Members from the Southern States speak in similar strain. It is perhaps too much to expect all the Members from these States to indorse the pension system. The memories of the great Civil War, popularly known as the greatest civil strife known to man, are not yet ceased.

But, Mr. Speaker, we have always believed in this country in the voluntary rather than conscript system of defense. Whatever may be our future system, we must not and we will not forget the service of the volunteer of 1861 to 1865, not alone because of his heroic devotion to the cause of his country, but because of his contribution to the history of self-government in the world.

Here in this virgin soil was planted the idea of democracy. Its orderly development was interrupted by the stress of war more than once. In the French and Indian War, 1755–1763, it was given its peculiar planting—Anglo-Saxon democracy rather than French ecclesiasticism. In the American Revolution, from 1775 to 1781, it was given a new vision by cutting away the many effete customs of the hereditary monarchy. This war cut loose feudalism, primogeniture, entails, life tenure, and hereditary government, as well as the practice legislation without representation.

The War of 1812 did little more than to emphasize our independence upon the sea as well as upon the land. It is rightly called the second war of independence. The Mexican War did

not involve any great governmental principle, but the great Civil War involved a wider and more far-reaching question than all before it.

The one great question of all government is to reconcile liberty with authority, freedom with government. How can that authority necessary for order be exercised without unduly interfering with the proper and necessary liberty of the individual? How can the governing body proceed without too much interference with the rights of the governed mass? How can the prerogatives of the Nation be reconciled with the rights of the State? Too much prerogative means monarchy. Too much State rights means anarchy. This was the problem before this Nation in 1861. All countries heretofore had failed in their attempts to solve it. Greece gave too much liberty to the free cities and anarchy resulted. Rome gave too much power to the Govment and she went down in anarchy. England attempted it, but without great success, although she was nearer the solution than any other before us. This country battled for 70 years and finally resorted to the sword in 1861, after decades of contest in the forum. The great Civil War ended the struggle, not the debate. We will continue to discuss Federal relations, but the issue will never again be taken to the field of battle. That is settled once for all. Tho war established the great principle that the Nation must be supreme in all matters pertaining to the Nation at large, while the State, in matters pertaining to it alone, will be left with sovereign power. Here in this country and in the time of those living was permanently settled the greatest governmental question ever presented since the "Morning Stars" sang together.

I am ready to vote a pension to every soldier that volunteered to give his services for this great Union cause; for that service might have meant his life. It did often, and in many other cases his limbs, and in still others his health, and in all cases it meant service—voluntary service. This country must never neglect the men nor the widows who cared for them in their last days, and I, for one, shall resent any attempt to do so. The pension roll is large, but it is constantly growing smaller. The ravages of time are thinning the ranks of those who fought that the Nation might live. These defenders are at the age of the allotted time. I am in favor of a generous treatment, not only for "him who shall have borne the brunt of battle," but for his widow, as well. The bill just passed meets with my hearty indorsement. It gives a widow who married a soldier prior to or during the war $20 per month. It gives a widow who has reached 70 years of age $20 per month. It also provides a pension to a widow who married the soldier prior to 1905, thus displacing the law which fixed the date at 1890. This great Nation can not afford to neglect the family of the preserver of the Nation's life. His work is not at this time appreciated. It will be when his work shall be viewed in the light of civil government in the world.

## Commendable Patriotism.

### EXTENSION OF REMARKS
OF
### HON. MICHAEL K. REILLY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, June 26, 1916.*

Mr. REILLY. Mr. Speaker, on last Saturday I received a telegram from my constituents of Ripon, Wis., which reads as follows:

RIPON, WIS., *June 24, 1916.*

Hon. MICHAEL K. REILLY,
*House of Representatives, Washington, D. C.:*

Whereas an appropriation of $75,000 for the erection of a Federal building at Ripon, Wis., has been made by the National Congress; and
Whereas the people of this community heartily believe in and approve of a policy of adequate national preparedness; and
Whereas we believe that private and local gain and enhancement should always be subservient to the common good: Therefore be it

*Resolved*, That the citizens of Ripon, whose sons enlisted in Company D, Wisconsin National Guards, are now encamped at Camp Douglas in response to the summons of President Wilson; whose boys of other days were among the first to answer the call of their country in the Spanish and Civil Wars; whose patriotism and loyalty have ever been unbounded and unstinted; with the tearful farewells of mothers, wives, sisters, and sweethearts of soldiers fresh in their memory; with the echoes of the footsteps of the Grand Army of the Republic in State encampment assembled still lingering in their ears; earnestly request their Representatives in Congress to immediately introduce and strive to secure the passage of an act diverting the appropriation made for a Federal building in Ripon from its original purpose and applying it specifically to the equipment of the National Army, preferably in the perfection of the Aviation Service.

COMMON COUNCIL OF CITY OF RIPON,
RIPON COMMERCIAL CLUB,
(And 456 citizens of Ripon.)

Mr. Speaker, this telegram from citizens of Ripon—a city of about 4,000 inhabitants—expressing a willingness to forego for a time the adornment of their city, through the erection of a Federal building, in order that more pressing demands of the Nation might receive first consideration, is timely and speaks volumes for the broad patriotism of the citizenship of that community.

The patriotism displayed by this telegram is unusual and deserves more than a passing notice; therefore I take pleasure in publishing the telegram in the RECORD, so that the citizenship throughout the Nation may take inspiration from the patriotic spirit that prompted the sending of the same.

The citizens of Ripon have always been highly patriotic; they have made magnificent responses to every draft made on them in our national emergencies; they are justifiably proud of the fact that their community has been able to offer a company of National Guard to the Nation in the present crisis, and they are willing to make other sacrifies in order that every preparation possible may be made for the proper defense of our country.

## Government Manufacture of Munitions of War.

### SPEECH
OF
### HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
*Wednesday, May 31, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. COX. Mr. Chairman, I intend to support the bill as reported by the majority members of the Committee on Naval Affairs. It contains strong elements of preparedness, and in my judgment will be approved by the country. It will not meet the views of the extremists of either side. It is far below what the Navy League desires and far above what the pacificists want. It is a conservative measure—a middle-of-the-road course, if you please. One of the most important features in the bill is the amendment offered by the gentleman from Tennessee [Mr. PADGETT] appropriating $11,000,000 for the Government to build an armor-plate factory. Many arguments have been made for and against this amendment. Many gentlemen contend that the Government should not go into the manufacturing business; that to do so would put the Government in competition with private enterprise.

Where the Constitution gives to Congress power to create a department of government, I am not afraid to give that department all the power it may require to carry forward the work of the department. To the gentlemen who so loudly acclaim against the Government erecting its own armor factories, why do they not criticize the Post Office Department, which has a monopoly of the mail? No objection is made by any of them that the Post Office Department, though monopolized by the Government, has been a failure. I assert that wherever the Government has entered a business strictly as a Government function it has never been a failure, but has resulted to the good of the taxpayers of the country. I would not be in favor of the Government entering upon the manufacturing business as a private individual. I would oppose it forever, but I am in favor of the Government entering upon such lines of business as it sees fit solely as a Government function. The Constitution gives to Congress the power to provide and maintain a Navy. A Navy without ships exists only on paper; a Navy must have ships, from the superdreadnaught to air craft. The power to create and maintain a Navy is found in the Constitution. For one I am in favor of giving that department all necessary power to make it the most effective Navy in the world. We can not have ships without armor plate. We can not have armor plate without having factories to make it, and they must be run and operated either by private manufacturers or by the Government.

Mr. Chairman, three concerns, the Bethlehem, Carnegie, and the Midvale Steel Cos., now, and for the past number of years, have had a complete monopoly of the manufacture of armor plate and many other supplies for the Government, both Army and Navy, and for the past 20 years these concerns have fur-

nished the United States all the armor it has used in the construction of battleships. The gentleman from Pennsylvania [Mr. BUTLER] has offered an amendment proposing to let the Trades Commission investigate the profits of manufacturers of armor plate, practically giving the Government power to fix the price of armor. This amendment looks to me very much like it is the Armor Trust holding out the hand of Esau, but talking in the voice of Jacob. Time and time again this trust has been warned that they were overcharging the Government for armor plate, exacting extortionate prices for their commodity at the expense of the taxpayers of the Nation, but feeling themselves secure through their closed corporation these trust magnates have not heeded the voice of the people. They have gone to the well once too often. The day of judgment has overtaken them. The people are in no mood to trifle with trusts controlling one of the essential elements of safety and security of the American people—armor plate. They have been held up and skinned long enough. They see no relief, no ray of hope, to ever come from these trusts. They do not believe the time will ever come when the Government will be able to purchase armor plate cheaper than it purchases it now, unless the Government manufactures its own armor. There is nothing binding on the part of this trust in its offer to let the Trades Commission investigate the cost of making armor plate and accept the price fixed by the Government. They can revoke it at any time they see fit. Ever since the Padgett amendment passed the Senate several months ago our mails have been flooded each day with letters and telegrams from the Bethlehem, the Carnegie, and the Midvale Steel Cos., making all kinds of offers and overtures to Congress that if it would not pass the amendment, hereafter they would be good. These concerns have carried entire pages of advertisements in the large dailies as well as the little weekly papers for the past two months telling the people of their repentance and how willing they are to serve them.

Mr. Chairman, I insert one of these articles which recently appeared in one of the little weekly papers of my district:

[Bulletin No. 3.]

WHY NOT FACE THE FACTS ABOUT ARMOR COMPETITION?

*To the people:*

The policy of the United States Government for many years has made real competition in armor-making ineffective.

The Government *might* have asked the three armor plants for bids and let the entire tonnage to the lowest bidder. That would have made competition effective.

The result of such a course would have been to drive two of the three manufacturers out of business and leave the country with facilities of only one plant in time of need.

*The Government, in fact, has always asked for bids from the three manufacturers, but no matter what the price quoted, each year's business was divided among them.*

Armor makers serve but one customer—the Government—just as a public utility serves but one customer—a community.

The solution of the public-utility problem is *regulation* of rates.

The solution of the armor problem is for the Government to *fix the price.*

We voluntarily agree to accept any price fixed by the Federal Trade Commission. Isn't acceptance of that offer better than the destruction of an industry built solely to serve the Government?

BETHLEHEM STEEL CO.,
CHAS. M. SCHWAB, *Chairman.*
EUGENE G. GRACE, *President.*

Since when did this great trust see the light of day? What opened its eyes? What induced it to turn from its extortionate course and ask help at the hands of the people? What has caused it to fly the signal of distress at this the eleventh hour of the night? When did it first begin this frantic appeal to the people for aid through the ad. route? Silently and ruthlessly it has pursued its course of overcharge and extortion until this bill reached the calendar, then, like Paul, it saw a vision looming before its bright eyes; it saw a day of reckoning, a day of accounting, a day of determination on the part of the people to free themselves from this vampire which, under the false pretense of patriotism, has pretended to serve the people, but in reality has robbed them as no pirate that ever sailed the seas robbed his helpless and defenseless victims in the past.

I intend to vote for the Padgett amendment, believing by so doing that we will take the manufacture of armor plate out of the hands of the worst trust that ever had its grip upon the Navy Department or any other department of the Government. There is but one person, and one only, that can smash this monstrous trust, and that person is Uncle Sam, backed and supported by the taxing power of 100,000,000 people in continental United States. For almost a quarter of a century our Army and Navy has been in the throes and in the hands of the worst trust that ever fastened its tentacles upon an independent, liberty-loving people.

As compared to the Munitions Trust and the Armor Plate Trust, the Standard Oil Trust, the Sugar Trust, the Tobacco Trust, the Leather Trust, and many other of the hundreds of trusts sink into insignificance for greed and graft. For greed and gain at the expense of the people, these trusts stand far to the top. Every other trust lags far behind.

Mr. Chairman, we are not without precedents in this matter. We are not groping in the dark. We are sailing on well-charted seas. We have plain signboards of the past demonstrating what the Government can do when it makes up its mind to do it in the smashing of munitions trusts. About 12 years ago the Government was in the grip of the Powder Trust. At that time we were paying approximately $1.41 per pound for smokeless powder. The Government erected a plant to manufacture its own powder, and before the plant was erected the price of powder dropped to 71 cents per pound. The Government kept on adding to its powder plant until to-day we are making about one-half of our powder in Government factories and making it at a cost of 34 cents per pound. The result of this investment has been to drive the price of privately manufactured powder down to 53 cents per pound. The same argument was used then against the Government manufacturing powder that is now being used against the Government manufacturing its own armor plate. Congress was told then that the Government could not manufacture powder as cheaply as private individuals could.

The Government has purchased $25,000,000 worth of powder from the Powder Trust since 1905, paying for it all the way from 53 cents to $1.41 per pound, while the Government statistics show that we are manufacturing powder in Government plants for 34 cents per pound, and the officers in charge state that the more we manufacture the cheaper we can produce it. This Government cost of the manufacture of powder covers everything. It covers the cost of labor, the raw material, the cost of the plant, interest upon investment, insurance, and in fact every item of expense which can possibly enter into the cost of the manufacture of gunpowder. The War Department in 1913 purchased seven thousand 4.7-inch shrapnel from the ammunition ring, paying $25.26 each therefor. At the same time precisely the same article was being manufactured in a Government plant at a cost of $15.45.

The War Department paid the ring $17.50 for a 3.8-inch common shrapnel, when it can be manufactured by Government plants for $7.94. The Government has manufactured at the Rock Island Arsenal caissons for gun carriages at a cost of $1,128.67, for which private manufacturers have been paid $1,744.10. Secretary of the Navy Daniels in his annual report for 1914 called attention to the economy of Government manufacture by saying that—

> Contrary to the popular idea, the Navy Department in what it manufactures does so, from a superdreadnaught to a gallon of paint or a pound of powder, cheaper than it can be purchased. This is particularly true of the most expensive instruments of war, but it is equally true of gasoline engines, electrical supplies, shrapnel, clothing for marines, and sailors' equipment, and other material for shore and land stations.

Mr. Chairman, Government manufacture will mean that workmen who perform the labor of actually making the munitions will receive higher wages and better working conditions than if the contracts for war materials were awarded to private munitions firms, among which are numbered the most bitter enemies of organized labor in the United States. In 1910 the Bureau of Labor, under the direction of Ethelbert Stewart, investigated the working conditions of the Bethlehem Steel Co., one of the companies engaged in making armor for the United States, and the investigation revealed this: That out of every 100 men 29 were working seven days every week; that out of every 100 men 43, including these 29, were working some Sundays in each month; that out of every 100 men 51 were working 12 hours per day; that out of every 100 men 25 were working 12 hours per day seven days per week; that out of every 100 men 46 were earning less than $2 per day.

The Government manufacture of munitions of war of all kinds offers a program on which all save those directly or indirectly interested in private war trafficking concerns may unite, either those in favor of disarmament, increased armament, or maintaining the present armament—where all can meet on a common ground. Those who desire a greater armament can maintain it by Government manufacture without placing increased burdens upon the taxpayers. The people are entitled to get the maximum amount of goods in return for the money they invest in munitions of war. Why should we not obtain the maximum defensive power or the maximum striking power for every dollar we appropriate instead of only about 65 cents' worth of fighting strength for every dollar appropriated, the remainder, 35 cents, going into the pockets of private manufacturers of munitions of war? By manufacturing munitions, submarines,

armor, and aeroplanes in its own plant the Government will be able to keep for its own use any improvements in such implements of war. Under the present policy of giving the major part of military contracts to private concerns it has been impossible to do this.

Secretary Daniels, in one of his recent reports, says, "Even now the improvements in armor and the designs worked out in the Navy have been embodied in the warship of another nation recently finished by the Bethlehem Steel Co. and put into commission." This is not an argument lightly to be disregarded in favor of a Government armor plant, nor has it been overlooked, for instance, by Japan, which has erected its own armor-making plant and surrounded it with such secrecy that none of the other nations are able to tell whether or not at this minute Japan's armor may not be superior to any in the United States.

Mr. Chairman, under the present system the Government is at the mercy of a few concerns having a monopoly of the manufacture of the materials of war, who appear to have a gentleman's agreement to divide the Government contracts between themselves, and between whom there is no competition worthy of the name. Again, says Secretary Daniels in one of his recent reports:

> I do not see how it is possible for Congress to justify to the people a refusal to erect a Government plant, nor how it can answer the charge they will invariably bring up that the same mysterious providence which saved this project to the steel company three times in the past, even after the money for a Government plant had been actually appropriated, is not still at work exercising its beneficent protection over these lusty specimens of infant industries, who are even now under investigation as to violating the antitrust law.

Those who argue that the Government should not enter upon the manufacture of armor plate are either ignorant of the facts or do not understand them. When the War with Spain was imminent the three concerns in this country which have a monopoly of the armor-plate manufacture got together and practically issued an ultimatum to this country that they would not manufacture a single piece of armor plate unless we agreed to pay them $100 per ton more than the price fixed by Congress after an investigation as to a fair price, but their patriotism did not prevent them from selling armor plate to the Russian Government for $249 per ton while they were asking their own Government $616 per ton.

Argument has been made that to insure the preparedness of our country it is necessary that private manufacturers be given the right to manufacture munitions of war, this upon the ground that Government plants are not large enough to turn out war supplies in the event the Government finds itself involved in war. If this be true why not enlarge the Government plants, and operate them in times of peace to their fullest capacity, and by doing so the Government could have on hand sufficient ammunition, guns, and so forth, to equip the most powerful army ever organized, and keep it in the field a length of time after private plants not engaged in the manufacture of war materials would be able to reorganize their shops and be turning out ammunition and other supplies. In the event that private manufacturers under these conditions would not respond to the necessity of the occasion the Government itself could take over such industrial plants as it might need, just as England has done in the present European crisis. Talk about patriotism of the private manufacturers of munitions of war; talk about the beneficence of this bunch; their patriotism consists in the almighty dollar, in a complete monopoly of this work not only between private manufacturers of munitions of war in this country, but between private manufacturers of munitions of war in foreign countries. In 1897 apparently a world-wide agreement was entered into between the private manufacturers of munitions of war, and this agreement was entered into in this country by the Du Pont Powder Trust, as shown by the following articles of agreement entered into between itself and foreign manufacturers of powder:

> Whenever the American factories receive an inquiry for any Government other than their own, either directly or indirectly, they are to communicate with the European factories through the chairman appointed, as hereinafter set forth, and by that means to ascertain the price at which the European factories are quoting or have fixed, and they shall be bound not to quote or sell at any lower figure than the price at which the European factories are quoting or have fixed. Should the European factories receive an inquiry from the Government of the United States of North America or decide to quote for delivery for that Government, either directly or indirectly, they shall first in like manner ascertain the price quoted and fixed by the American factories, and shall be bound not to quote or sell below that figure. * * * The American factories are to abstain from manufacturing, selling, or quoting, directly or indirectly, in or for consumption in any of the European territory, and the Europeans are to abstain in like manner from manufacturing, selling, or quoting, directly or indirectly in or for consumption in any of the countries of the American territory. With regard to the syndicate territory, neither party is to erect works there, except by a mutual understanding, and the trade there is to be carried on for joint account in the manner hereinafter defined.

The Du Ponts were at one time—they are not now—in an agreement with a German firm, the United Rheinisch Westphalian Gunpowder Mills, to keep it informed of all improvements in the process of powder making. Here is the actual wording of the contract, article 10:

> That any and every improvement upon said process, or either of them, made by either of the parties hereto at any time hereafter shall forthwith be imparted to the other of the parties hereto.

However, that is not all. The Du Ponts agreed to keep the German powder mills informed at all times of all the powder furnished to the United States Government, stating in detail its quality and characteristics, and even its quantity, making themselves, to all practical ends, paid informers to the representatives of a foreign Government. Here is the exact language, article 13:

> That the parties of the second part (the Du Ponts) will, as soon as possible, inform the party of the first part (the German concern) of each and every contract for brown powder or nitrate of ammonia powder received by the parties of the second part from the Government of the United States or any other contracting party or parties, stating in detail quality, quantity, price, time of delivery, and all the requirements that the powder called for in such contract has to fulfill.

Mr. Chairman, in my candid judgment, any man or corporation in this country engaged in the manufacture of munitions of war who will secretly enter into such an agreement with any foreign power as set forth in these articles of agreement is unpatriotic, un-American, and does not deserve decent consideration at the hands of Congress. These should be sacred things, kept forever secret. No nation, friendly or unfriendly, should ever be permitted to know any of these secrets, and I have but little patience with men arguing that the Government should not manufacture its munitions of war in time of peace, thereby retaining its secrets, not only as to the kind and character of powder, kind and character of armor plate, kind and character of all other munitions of war, but the quantity of each. Even if these things could not be manufactured as cheaply by the Government as by private manufacturers, I would still be in favor of it; but the undisputed and overwhelming weight of evidence conclusively shows the Government can manufacture these things cheaper than any private manufacturer can sell them to the United States.

Mr. Chairman, to read the large city newspapers one would think the United States has steadily neglected its Army and Navy and that Congress has been exceedingly stingy in making appropriations for these two arms of the Government. The truth is our Government has increased its appropriations for and on account of war faster than any nation in the world has in time of peace. In the last 10 years we have spent for war and on account of war $2,000,000,000, enough to pay off the national debt, dig the Panama Canal, and pay the expenses of every church and school in the United States for an entire year; and for every $100 we have collected from the people we have paid out $67, all on account of war, and a very large slice of the money we have appropriated for the Army and Navy has gone to four firms, which up to this time have had complete monopoly of the manufacture of armor plate and powder.

Since 1903 we have bought from the Midvale Co. 48,399 tons of armor plate, and paid for it $420 per ton, or in all $20,375,858 for the single item of armor plate alone, not to say anything about other millions of dollars' worth of contracts that have been given to the Midvale Co. for other things used by the Army and Navy; and during the same time we have bought from the Bethlehem Steel Corporation (the Schwab company) 95,007 tons of armor at an average rate of $445 per ton; and we have paid the Bethlehem Co. for armor plate alone $42,344,937, not counting the millions of dollars we have paid this concern for other munitions of war.

During the same time we have bought from the Carnegie Steel Co., of which J. P. Morgan is closely associated, 89,943 tons of armor plate, paying $442 per ton on an average; in all, $39,783,497 for the single item of armor plate.

In all we have bought from these three firms 233,339 tons of armor plate, paying an average of $439 per ton, a total of $102,504,929. Remember the figures, $439. There have been 10 official estimates by Government officers as to the cost of armor plate in a Government factory, and the average of their estimates is $251 per ton; and had we manufactured this armor in a Government factory, I think I am well within the bounds of conservatism in saying we would have saved at least $35,000,000 on armor alone. So if our country is not prepared, it has not been due to any niggardliness on the part of Congress in making appropriations, but it has been due to the fact that the Munitions Trust in this country monopolized and absorbed a tremendous profit which has gone to swell their enormously overrich purses, and which ought to have gone into the manufacture of munitions of war to the end that the people would have received full return for the money put into the enterprise.

Mr. Chairman, in the Army bill we provided for a Government nitrate plant. It is conceded by all that nitrate is an essential element in preparedness. We were entirely dependent for nitrate upon the nitrate beds of Chile, and without nitrate we could not manufacture powder or high explosives, and feeling the danger of a possibility of being cut off from this supply and desiring to be independent, the bill carried an authorization of $20,000,000 for the erection and equipment of this plant. The plant will be operated to make nitrate not only for powder and high explosives, but to manufacture fertilizers. When the plant is not being operated to make nitrate to be used in the manufacture of powder it will be manufacturing nitrate for fertilizers to supply the farmers of the Nation with cheap fertilizer.

Mr. Chairman, we have been no more dependent upon Chile for our nitrate in the past than we have upon these three firms for the manufacture of armor plate and other munitions of war. The time has come when a great Government like ours can no longer be handcuffed and shackled by great trusts in this country. The time has come when it ought not to be permitted to do it. The time has come for the United States to write its second Declaration of Independence and free itself from these barnacles.

Mr. Chairman, I advocate the Government manufacture of munitions of war not only because it is cheaper, but in doing so it will take private profit out of war and preparation for war, so that war will be no more profitable and no more attractive to the J. P. Morgans and the other directors of war-trafficking firms than it is to the rest of mankind. While it is dangerous to prophesy, in my judgment when peace is concluded between the warring nations the world will see an agreement entered into between them that each nation shall thereafter manufacture its own munitions of war. When that time comes war will banish from the earth. No longer will men be driven like dumb animals into the inferno of a thousand Verduns.

## The Record of the Hon. W. E. Humphrey.

### EXTENSION OF REMARKS
OF
### HON. RICHARD W. AUSTIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 22, 1916.*

Mr. AUSTIN. Mr. Speaker, I avail myself of this opportunity to pay a just tribute to one of our colleagues, the Hon. W. E. HUMPHREY, who has the best wishes, I am sure, of every Republican in this House in his laudable ambition to represent the State of Washington in the United States Senate. However, his election to that august body concerns not only the State of Washington and the Pacific coast but it concerns the entire country. It is the concern of the Republican Party of this Nation. Mr. HUMPHREY is one of the leaders of the Republican Party. He is one of the ablest men in Congress. He is one of the foremost orators of the country. His recent speech at the Republican State convention at Tennessee was one of the most powerful political arguments ever made in our State.

Mr. HUMPHREY is a leader and not a follower. He is the kind of man that is needed in the Senate at this time. Mr. HUMPHREY does not wait to see whether a position is popular before he takes it. He stood by the Republican Party in time of storm and stress while many others who are now clamoring loudly for its favor were trying to destroy it. Mr. HUMPHREY will at once become a leader in the Senate. He will take with him to that body the experience and the influence of 14 years' service in the House. Many Members of the next Senate—in fact, almost a majority, have served in the House with Mr. HUMPHREY. He will not be a stranger in that body. No other man in the State of Washington can have such great influence in the Senate as Congressman HUMPHREY, or so well serve his State and the country. If the people of Washington knew Congressman HUMPHREY as we who have served with him know him; if they knew as we know his ability, his energy, industry, and patriotism, there would be no opposition to his nomination and little to his election.

The Republicans of Washington at this crucial time in the Nation's history, not only for their own interest and for the interest of the Republican Party throughout the country but for the interest of the Nation, should use every effort to elect Mr. HUMPHREY Senator. Nothing else that the State of Washington could do would give her such political standing and such great influence in the National Capital as HUMPHREY'S election to the Senate.

I have no desire to interfere in the politics of the State of Washington, but interested, as I am, in the success of my party and in the success of the coming Republican administration, and being especially interested in the success of my country, I want to see in the Senate strong and patriotic men and real Republicans like Mr. HUMPHREY; and especially do I want such men in the Senate when I remember the great questions that must be met and solved when the war in Europe closes. This is my justification for making these remarks in the hope that they may help the people of Washington to place a just estimate upon the ability and service of Congressman HUMPHREY and the importance of seeing that he is elected.

Senator JONES, of Washington, has served with Congressman HUMPHREY either in the House or Senate ever since Mr. HUMPHREY has been in Congress. He is therefore beter fitted than any other man to speak of the work of Congressman HUMPHREY. Two years ago Senator JONES wrote a letter to Mr. J. P. Todd, of Seattle, giving Mr. HUMPHREY'S record in this body. I take pleasure in inserting that letter in the RECORD, adding, however, that since the time Mr. JONES wrote that letter, some two years ago, that Mr. HUMPHREY has voted for the rural credits bill, the prohibition amendment to the Constitution, the equal suffrage amendment, and many other important measures.

Mr. HUMPHREY has been one of the most active and able Members of the House in working for legislation to the end that our Nation shall be prepared to defend itself. For several years Mr. HUMPHREY has been preaching what we now term preparedness. For years he has been insisting that a battleship squadron should be kept upon the Pacific sufficient to protect that coast from attack. Mr. HUMPHREY urges preparedness not because he favors war but because he favors peace. He believes that for this Nation to be prepared to defend itself from unjust attack, and especially from invasion, is the best insurance against the horrors and atrocities of war.

SENATOR JONES'S STATEMENT IN REGARD TO CONGRESSMAN HUMPHREY'S WORK.

MY DEAR MR. TODD: Your favor asking me for a statement of the record of work done by Congressman HUMPHREY during his service in the House at hand. I am pleased to comply with this request so far as it is possible to do so, and all the more so because of my continued service with him and because of our almost general agreement upon the important matters of legislation that have come up during the last 12 years. Of course, I can not cover everything he has done or been connected with. He has taken an active part in so many different matters and so many important subjects have been under consideration that to cover all would be beyond the scope of this letter.

No one who has kept track of his record at all will deny the fact that he has steadily grown in ability, effectiveness, and influence from the time of his entrance into the House. His ability, industry, courage, devotion to his constituents, and his high integrity are known to his friends and admitted by his opponents. Having served with him during the 12 years he has been in Congress and having cooperated with him unreservedly in behalf of the State on those great questions which have been up for consideration, I can speak of his work from personal knowledge as well as from the record. It is with pleasure that I call your attention to some of the most important measures he has favored and some of the most important work he has performed.

HIS RECORD ON LABOR LEGISLATION.

Labor: His votes have been uniformly in behalf of American labor. He voted for the employers' liability act and the workmen's compensation bill, which our Democratic friends have failed to pass; for requiring materials to be used in the construction of the Panama Canal to be purchased in the United States; for limiting the hours of service for the men working on railroads; for the various safety-appliance laws in relation to railroads; for the various eight-hour laws that have been passed; for the laws creating the Bureau of Mines, the Children's Bureau, and the Department of Labor; for a child-labor law for the District of Columbia; for the eight-hour law for women in the District of Columbia; and for many others of a similar character. Surely these mentioned show that his vote and his sympathy can always be counted upon for those who toil. This is natural. He worked with his hands when a boy and young man. He knows what it is to earn his daily bread by manual labor, and his sympathy for and interest in labor does not come from a theoretical idea of what it means to work, but from actual experience. He can be counted on to support every reasonable measure for the welfare and protection of labor.

FRIEND OF WAR VETERANS.

Pensions: Mr. HUMPHREY has always been an active friend of the old soldier. He voted for the age-pension law, the law increasing the pensions of widows, the law removing the income provisions for widows, the Indian veterans' pension law and its increase, and for every bill, public or private, for the relief of any soldier. His friendship for the old soldiers, their widows, and dependents has not decreased as their ranks have thinned and their numbers lessened. He has declared in public addresses "that it is a sacred duty of this Nation to pay to every soldier who served his country in its hour of need a sufficient pension to provide him with the necessities of life, and that the Nation should care for the soldier's widow and orphan." He has also supported every provision of law giving the soldier a preference in Government employment, and has protested against its violation.

ELECTION OF SENATORS AND INCOME-TAX AMENDMENTS TO CONSTITUTION.

He voted at every opportunity for the resolution submitting to the people an amendment to the Constitution providing for the election of Senators by the direct vote of the people, and he also voted for the resolution submitting the income-tax amendment to the people.

SUPPORTED REFORM MEASURES.

Regulating trusts and combines: He voted for the Hepburn law to prohibit rebates and discriminations by the railroads, probably the most important antitrust legislation that has gone upon the statute books since the passage of the Sherman antitrust law. He voted for the law enlarging the powers of the Interstate Commerce Commission by giving it, among other powers, the right to ascertain and fix reasonable rates; to suspend proposed rates until their reasonableness could be determined; the right to fix through rates on rail and water lines; the right to enforce terminal connections between rail and water lines; and the right to divest railroads of control and ownership over water lines that might be competitive. He voted for the law providing for the physical valuation of railroad, telephone, and telegraph lines, for the law prohibiting the giving of passes, and for many other acts tending to control trusts and prevent monopoly, including the act prohibiting corporations from making contributions to campaign funds.

He also voted for the laws requiring publicity of campaign contributions, both before and after elections.

POSTAL SERVICE.

He was one of the first men in Congress to make a speech in favor of the Postal Savings Bank System, and did effective work for the passage of the present law. He favored and voted for the present Parcel Post System.

AGGRESSIVE FOR PURE-FOOD LAW.

Health and morals: He worked and voted for the present meat-inspection law and for the pure-food law. He was especially aggressive in his work for the pure-food law, contending that it was and is one of the most important statutes that Congress ever enacted, and that it vitally affects the welfare of the entire people. He worked and voted for the "white-slave law" prohibiting the transportation of women for immoral purposes, and for the law prohibiting the importation of opium into this country for other than medicinal purposes.

ALASKA.

He has always been an aggressive and influential friend of Alaska. He fought for the act giving her a Delegate in Congress and helped to pass the law giving her a Territorial form of government. He drew, himself, and had passed the present Alaska game law. As a member of the Committees on the Merchant Marine and Fisheries and of Rivers and Harbors he has been able to do much to protect the great fishing industry of Alaska and for the improvement of her harbors. His speech for the recent Alaska railroad bill was conceded to be one of the most effective and convincing delivered upon this subject. It contains a remarkable amount of definite information regarding that Territory. I doubt if any individual Member of the House had a greater influence than he in overcoming opposition to the measure appropriating $35,000,000 for the building of a railroad in Alaska by the Government. He is one of the best and most influential friends Alaska has in Congress to-day, and his retirement would be a loss to Alaska that can not be overestimated.

PANAMA CANAL.

Mr. HUMPHREY has always fought and worked for the construction of the Panama Canal or a canal across the Isthmus. As it is built on and entirely within American territory by the American people, and as the American people will pay for it, operate it, maintain it, and defend it, he believes that this Government has the right to control it and to use it with its own ships as it pleases. He believes that it is the right of the United States not only to do this, but that it is its duty to use the canal to bring about effective competition between the transcontinental railroads and the ships that pass through the canal in order to lower the freight rates between the two coasts for the benefit of the entire people of the country. He voted to have the canal constructed upon the present plan and vigorously opposed a "sea-level" canal.

We unhesitatingly approved the prompt, active, wise, and statesmanlike steps taken by President Roosevelt to promote the world's progress by acquiring the territory through which this canal could be constructed, and we will both oppose to the limit any action that will reflect upon him or compel the American people to pay blackmail money for doing that which was so necessary to the success of an undertaking primarily in the interest of all the nations of the earth.

FOUGHT AGAINST THE TOLLS REPEAL.

No man in Congress was more active or vigorous in the fight in favor of the law giving American ships in the coastwise trade the right to pass through the canal without the payment of tolls than Mr. HUMPHREY. WILLIAM C. ADAMSON, chairman of the Committee on Interstate and Foreign Commerce, says that no man in Congress did more to pass that act than he. As you know, he has been equally active and energetic in his opposition to the repeal of that law. He has denounced this proposed repeal as a cowardly and un-American surrender to Great Britain and to the transcontinental railroads.

His speech in the House is regarded by both Democrats and Republicans as one of the strongest made on this question. He pointed out especially the great injury that such action would bring to the State of Washington, and declared that if the present law is repealed it will take with it the great benefits that the canal would bring to the State of Washington and give them to British Columbia, and that it would be better if the canal had not been built. He is of the opinion, however, that the repeal of the present act will not end the fight, but that Congress will again enact a law reasserting our sovereignty in our own canal and bring about competition between the steamship lines and the transcontinental railways as soon as the people have had an opportunity to express their will at the polls upon this proposition.

ALWAYS A PROTECTIONIST.

Tariff: He has always been a protectionist. He has always believed that free trade means industrial ruin to the country and has always contended that our labor should be protected from the cheap pauper labor of the rest of the world. He has often declared that "this Nation can not prosper if it gives its work and its wages to foreign labor."

MEXICO.

He was one of the first public men to criticize the attitude of the administration toward Mexico. Speaking at Indianapolis on the 12th day of last February, he declared that while the administration was preaching peace their attitude and actions were daily bringing the country nearer war. He declared its policy at that time to be weak, vacillating, and blundering. Was he not correct?

ATTENTIVE TO HOME INTERESTS.

Local matters: I think you know and everyone should know that no constituent, however poor or humble, however prominent or influential, has ever written to Mr. HUMPHREY that he did not receive a prompt reply and prompt attention to his request. During his entire service all these many matters have received his personal attention, and he has performed his heavy task ungrudgingly, feeling that it was his duty to do so.

His State and his district have had his best service. The expenditures made in the State of Washington by the National Government, through legislation of which he has had charge in the House, has amounted to many millions of dollars. Of the many appropriations which have been granted for needed improvements during his service and mine, and which have had his most earnest and efficient attention, I will mention the following:

| | |
|---|---|
| Lake Washington Canal | $2,275,000 |
| Dry dock at Bremerton | 2,300,000 |
| Fortifications on Puget Sound | 4,000,000 |
| For public buildings at Bellingham, Everett, Seattle, North Yakima, Olympia, Walla Walla, and others, over | 1,000,000 |
| For river and harbor improvements in the State | 15,000,000 |
| For submarines | 2,000,000 |

Many others could be named, but these are sufficient to show the effectiveness of his work in behalf of local interests. They are the largest and most important, although I want to say that it is not always the largest and most important that calls for the most work and attention. This consideration of local interests has been secured without in any way compromising his opinions or his independence of action. He succeeded me

on the Committee on Rivers and Harbors, and during the last six years has had practical charge of legislation in the House involving an expenditure in our State for public improvements of practically $25,000,000.

MAN OF POLITICAL INDEPENDENCE.

His political independence: He had the courage to follow his judgment, even against his own party. When the bill for the admission of New Mexico and Arizona as one State was before Congress both President Roosevelt and Speaker CANNON personally asked him to vote for it. He did not believe it was fair to the Southwest, and spoke and voted against it. He was strongly urged by President Taft to vote for the reciprocity bill, but he did not think it was fair to the Northwest or to the State of Washington, and voted against it because of his own convictions. These instances show that he possesses the courage of his convictions, which is perhaps the most valuable of all traits in a public man. While he is a partisan, he refuses to follow his party when its action does not meet with his convictions of duty.

POSITION IN THE HOUSE.

Mr. HUMPHREY is now one of the recognized leaders of the House of Representatives. He is the oldest man in continuous service from the Pacific coast. Speaker CLARK once said:

Wisdom dictates that men who have proved that they are of service should be kept in Congress, and the value of their services increases in exact proportion to the length of service.

Mr. HUMPHREY is an illustration of the truth of that statement. His influence is constantly increasing, and he has grown more rapidly during this and the last Congress than ever before. He now has a national reputation and is everywhere regarded as an authority upon the questions of the tariff, rivers and harbors, merchant marine and fisheries, and the Panama Canal. His speeches in the House this session have been most widely circulated and most frequently commented upon. He has taken first rank among the debaters of the House. More than 75,000 copies of his speech at Indianapolis have been printed and circulated in various portions of the country.

IMPORTANCE OF HIS REELECTON.

Much complaint has been made heretofore of the influence of Members from the East, both in the House and the Senate. This influence has come from the very fact which Mr. HUMPHREY's position emphasizes. The East has kept its Members continuously in the House and the Senate, and in this way they have very naturally risen to positions of power and influence in both bodies. This power and influence will come to the West if it will but learn the lesson of experience and keep its active, energetic Members in Congress.

Mere differences of opinion on matters of minor importance can not justify retiring a Member of long experience, which give him a power and influence for good on behalf of his constituents which it would take a new man, however able and industrious, years to attain.

I do not desire to interfere improperly in the selection of a candidate by the Republican voters of Mr. HUMPHREY's district, but I believe that it is my duty as a citizen of the State of Washington to call attention to the importance of his renomination and election, not only to the people of his own district but to the people of the entire State, and then, of course, they will decide what is best for them to do.

BIG QUESTIONS LOOMING.

No man can foresee when our trouble with Mexico will end. The Panama Canal question is one of vital and far-reaching importance and will not be settled at this session, no matter what our action may be. The industrial conditions of the country are very bad and call for immediate and wise changes in our tariff policies.

Alaska must have many additional laws passed if she is to develop as she should. If there has ever been a time during the past 25 years when it was important to keep in Congress men of ability, experience, and influence, it is now. Mr. HUMPHREY'S influence and standing, great as it now is, will constantly increase, and his usefulness will be greater in the next Congress than in this. The people of the State of Washington have been educating and training him during the past 12 years for the duties of Congress.

He has not neglected his opportunities, and his defeat now would be a public calamity to the entire Pacific coast. When he is better fitted than ever before to perform the duties of his office, when he is in a position to be of greater influence than ever before, when his services are more urgently needed than ever before, what could justify his retirement? Surely Seattle, with all her needs and with her local pride and local spirit, will not retire him from a position that is of such tremendous importance to her and her development.

When Congressman from the entire State and from a large district, though living in Seattle, Mr. HUMPHREY represented fully and impartially all sections of the State and his district.

HIS LONG RECORD SATISFACTORY.

Criticism: Mr. HUMPHREY, like all men that have been in public life during the last 10 years, has been criticized by some as too radical, by others as being too conservative. In the light of to-day, those who criticize him for favoring the postal savings bank and the parcel post and various labor legislation will admit that he was right. As a follower and admirer of Col. Roosevelt, I believe that if you will study Mr. HUMPHREY's record during the last 12 years you will find little to criticize. I doubt if you would to-day say he voted wrong upon a single question.

What higher praise than this can be given his courage and judgment? He, as you are aware, has enjoyed in a high degree the confidence of Col. Roosevelt. The colonel, in a letter written to him for publication, September 30, 1910, said:

You always had in view the interests of the whole American people, and for those interests you stood in a straightforward and progressive fashion.

In one of his speeches, Mr. Roosevelt said:

The man who has the power to act is to be judged not by his words but by his acts.

Judged by that standard, I feel certain that there is little in the record of Mr. HUMPHREY that you or any other Progressive or other Republican will condemn, and certainly there is much to meet your sincere approval and admiration. With very kindest regards, and trusting I have adequately complied with your request, I am,

Yours, sincerely, W. L. JONES.

## Child-Labor Bill.

### EXTENSION OF REMARKS
OF
### HON. EUGENE BLACK,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, June 23, 1916.*

Mr. BLACK. Mr. Speaker, I wish to discuss briefly the Keating child-labor bill, which passed the House of Representatives at this session of Congress and then went to the Senate, where I understand it has been amended in some particulars, but has not passed that legislative body thus far. One thing seems certain, however, and that is that if it does become a law it will be different from the bill which passed the House of Representatives, and against which I cast my vote when the bill was up for passage. In discussing this bill it is proper that I should state in this connection that Texas, which I have the honor to represent in part, already has a better child-labor law than is proposed in this measure. And I am truly glad that it has such a law.

TEXAS CHILD-LABOR LAW.
(Revised Statutes.)

Any person or any agent or any employee of any person, firm, or corporation who shall hereafter employ any child under the age of 15 years to labor in or about any manufacturing or other establishment using dangerous machinery, or about the machinery in any mill or factory, or in any distillery, brewery, or to labor in any capacity in the manufacture of goods for immoral purposes, or where their health may be impaired or morals debased, or shall send any such child to any disorderly house, bawdy house, or assignation house, or, having the control of such child, shall permit him or her to go to any such house, shall be deemed guilty of a misdemeanor, and upon conviction shall be fined not less than $50 nor more than $200, and each day the provisions of this act are violated shall constitute a separate offense.

It is also proper that I state that at least 44 out of the 48 States of the Union have already adopted child-labor laws of their own, suitable to their own local needs and conditions, and do not need and ought not to have the interference of the Federal Government.

My vote against this bill was on principle and because of two reasons, both of which I think are vital objections to it:

First. Because I do not believe that Congress has any constitutional right to pass such a bill.

Second. Even if it be admitted that the law would be constitutional, it is an interference by the Federal Goverament with the rights of the States to regulate their own internal affairs and local conditions, and for that reason ought not to pass.

CONSTITUTIONAL OBJECTION.

I fully realize that there is a growing disposition in the United States in some quarters to regard the Constitution as an instrument of little value and small worth, and men of the

Roosevelt type are perfectly willing to brush it aside and hold it a "worthless scrap of paper," but I do not subscribe to that doctrine. I still believe that England's great commoner, William E. Gladstone, was right when he said of our Constitution that—

> It is the most wonderful work ever struck off at a given time by the brain and purpose of man.

Besides that, every Member of Congress must take the following oath when he assumes the duties of his office:

> I do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic, and that I will bear true faith and allegiance to the same—

And so forth.

Therefore, having taken that oath of office, I will certainly observe it to the best of my ability, and will not vote to pass any law which I believe to be contrary to that Constitution which I have sworn to uphold.

Judge Cooley, the author of the great work on Constitutional Limitations, has very correctly said:

> Legislators have their authority measured by the Constitution. They are chosen to do what it permits and nothing more, and they take solemn oath to obey and support it. When they disregard its provisions they usurp authority, abuse their trust, and violate the promise they have confirmed by an oath. To pass an act when they are in doubt whether it is not violating the Constitution is to treat as of no force the most imperative obligations any person can assume. A business agent who would deal in that manner with his principal's business would be treated as unworthy; a witness in court who would treat his oath thus lightly and affirm things concerning which he was in doubt would be held a criminal.

Now, this so-called child-labor bill is not by any means a new measure. It has been before several previous sessions of Congress. In the Fifty-ninth Congress a similar measure was referred to the Judiciary Committee for a report on its constitutionality, and on that committee were such eminent lawyers as Judge Jenkins, of Wisconsin; Judge Birdsale, of Iowa; Judge PARKER, of New Jersey; Mr. Littlefield, of Maine; and Judge De Armond, of Missouri, and they reported back to Congress unanimously that it was their opinion that the measure was unconstitutional.

Let me read you the concluding part of that report, written by Judge Jenkins, chairman of the committee. He said:

> In fact, it is not a debatable question; it would be a reflection upon the intelligence of Congress to so legislate; it would be casting an unwelcome burden upon the Supreme Court to so legislate. The agitation of such legislation produces an uneasy feeling among the people and confuses the average mind as to the power of Congress and the power of the States. The lives, health, and property of the women and children engaged in labor is exclusively within the power of the States originally, and always belong to the States, and was not surrendered by them to Congress. The assertion of such power by Congress would destroy every vestige of State authority, obliterate State lines, nullify the great work of the framers of the Constitution, and leave the State governments mere matters of form, devoid of power, and ought to more than satisfy the fondest dreams of those favoring centralization of power.

That is not my language; it is the language of a great lawyer in presenting a unanimous report from the Judiciary Committee of the Congress of the United States. Now, on what ground do the proponents of this measure claim that it is constitutional? They are depending on the doubtful proposition that it is constitutional under the interstate-commerce clause. Most of you gentlemen, of course, recall that the Constitution of the United States gives Congress the power "to regulate commerce with foreign nations and among the several States and among the Indian Tribes." This bill seeks to pass rules and regulations under which goods shall be manufactured in the several States. But the Supreme Court of the United States has held that Congress has no jurisdiction over manufacturing in the several States. (See Kidd *v.* Pearson, 128 U. S., 21.) Also, that commerce does not begin until manufacture is complete. Articles can not be considered in interstate commerce until they start on their journey to another State. (Coe *v.* Erral, 116 U. S., 517.)

Congress can only exercise jurisdiction over articles after they become a part of interstate commerce, and any effort in any way to control them or their production prior to that time is just as unconstitutional as would be efforts to control their distribution after they had been delivered to the consignee and the original packages broken. I affirm, as a proposition which I believe to be absolutely sound, that if an article be sound and free from fraud or adulteration when it leaves the manufacturer and when it enters commerce, that Congress has no power to forbid it the privileges of interstate commerce.

I also affirm that the Constitution of the United States can not be "stretched out" so as to give Congress the power to declare rules and regulations under which that sound and wholesome article of commerce shall be manufactured or produced. Let me read you a paragraph from Watson on the Constitution, published in 1910:

> Closely akin to the question of regulating manufacturing is the question whether Congress can forbid the handling of a commodity, by a carrier of interstate commerce, which was manufactured in a State, for instance, by women and children under a certain age, as has recently been maintained. This question is of far-reaching effect, and if such power exists in Congress it would result in the most complete invasion of the sovereignty of the States by the General Government which has ever been accomplished by the General Government * * * But there is no power in Congress to control the manufacture of goods in the States destined for interstate or foreign commerce, and consequently Congress is unable to control the labor of persons engaged in manufacturing products in the States which are intended for interstate or foreign business. Such regulations are left to the State. The power to make such regulations resided there before the Constitution was adopted or the Union formed, and it was not surrendered by the States to the General Government.

It would be an easy matter to prolong this discussion by citing other Supreme Court decisions and authors on constitutional law denying the authority of Congress under the interstate commerce clause of the Constitution to take this indirect method of saying to the individual States how they shall conduct their internal affairs and domestic policies. But I do not want to prolong my argument on this phase of the matter. Of course, if the bill does finally become a law, it will fall to the duty of the Supreme Court to pass final judgment on this important and far-reaching question. And even if it should be admitted that the bill is constitutional—which I do not for a moment believe—then I would still oppose it because it violates the rights of the States to control their own internal affairs and matters of domestic policy.

DEMOCRATIC DOCTRINE OF STATE RIGHTS INVOLVED.

The bill deals with the age and hours of labor of persons and not with the rules and regulations for interstate commerce. If 44 States of the Union have already undertaken the task of dealing with the problem of child labor within their own borders, then why should the Congress of the United States try to interfere under the pretext of regulating interstate commerce? That the laws in the several States differ in their provisions is but the greater reason why they should be let alone. Each State is attempting to meet the requirements peculiar to the condition and needs of its own people. Is it not fair to presume that the legislatures of the several States, elected by the voters of those States and directly responsible to them, are more competent to judge as to the needs of that State than is Congress, far removed from the people to be affected, and with only a few members who have any first-hand information as to the peculiar needs of each State?

If the Supreme Court of the United States should hold this law constitutional, then it would clearly be within the power of Congress to say to the farmers of the South under what conditions they will be permitted to produce every bale of cotton which enters into interstate commerce, and that would include nearly all that is raised in Texas, because we have as yet very few cotton factories to consume our product there at home. If this law is constitutional, then Congress can pass laws demanding that not a pound of this cotton should be picked by boys under 16 years of age, and other regulations of that kind, which might not be suitable to the needs and wishes of the people. Do not you think that the people of Texas are more able to regulate these matters for themselves than to have Congressmen from Massachusetts, Vermont, New York, and Pennsylvania to do it for them? I do. If Texas is incapable and incompetent to deal with her own labor problems, then she is unworthy to have any State government at all. But she is able to do it, and has done it, and does not need any outside interference from any source. And the same thing might be truly said of the other 43 States who have legislated on this subject for themselves.

During the debate in Congress the following colloquy took place between Mr. ADAMSON, of Georgia, and Mr. WEBB, of North Carolina:

> Mr. ADAMSON. Will the gentleman yield for a question?
>
> Mr. WEBB. Yes, sir.
>
> Mr. ADAMSON. I desire to ask the gentleman if the same rule of reasoning could not prevent boys from raising cotton and working in the fields?
>
> Mr. WEBB. Oh, yes; if this bill is constitutional, Congress can provide that no cotton picked in whole or in part by a child under 14 or 16 years of age shall be shipped in interstate commerce, just as the arbitrary will of Congress may dictate.
>
> Mr. ADAMSON. And on the same line of argument you could prohibit all children from working and make vagabonds of all the coming generation?
>
> Mr. WEBB. Yes. If this bill is constitutional there are no more rights left to the States at all, if Congress wants to take them away. You can regulate everything, and there is no use hereafter in undertaking to have a constitutional amendment for suffrage, divorce, or anything else. As Rousseau says, whenever you arrogate to one central government all the powers concerning the purely domestic and internal affairs of the people, which have always been left and are still left to the States to administer, then our Government will fall of its own weight. There have been other republics besides ours, but there never has been a republic balanced like ours, with dual State and Federal sovereignty—the sovereignty of the Federal Government

within its sphere and the sovereignty of the State governments within their spheres. The sovereignty of the State government has always been recognized to have the control of all conditions which affect the morals and health of the people.

Mr. ADAMSON, who asked the questions, is chairman of the Committee on Interstate Commerce; and Mr. WEBB, who answered the questions, is chairman of the Judiciary Committee, and both of them voted exactly as I did on this bill.

Also, such Democrats as Majority Leader CLAUDE KITCHIN; Chairman LEVER, of the Committee on Agriculture; Chairman CLARK, of the Committee on Public Buildings and Grounds; Chairman HUMPHREYS, of the Committee on Flood Control; Mr. POU, ranking Democratic member of the Rules Committee; Hon. RUFUS HARDY, ranking Democratic member of the Committee on Merchant Marine; Hon. DAVID FINLEY, ranking Democratic member of the Committee on the Post Office and Post Roads, all took the same view that I did of this matter and voted against the measure.

FEDERAL INSPECTORS.

Now, the question naturally arises in the mind of the inquirer, If this so-called child-labor bill becomes a law, how will it be enforced?

Well, the bill itself provides that it shall be enforced by Federal inspectors who shall visit the different factories, mines, and manufacturing establishments of the United States. There are 299,000 manufacturing establishments throughout the United States, and it is a very simple matter for you to see that it will take a horde of Federal inspectors to visit and supervise these establishments. Already these 299,000 manufacturing establishments are supervised and looked after by the State authorities of the 44 States which have enacted child-labor laws, and what is the sense of duplicating this expense by having a horde of Federal officeholders to do what the States are already doing for themselves? We hear a great deal of complaint these days about the increasing expenses of the Federal Government, and very properly so. There is no doubt but that the expenses of the Government are going up by leaps and bounds, and the reason for it is very plain to every man who has studied the question at all. The Federal Government is duplicating in numerous instances what the States are already doing themselves. Of course, naturally, as our population increases the expenses of the Federal Government also increase, but the ratio of this increase of expense has been out of all proportion to the increase in population, and it is getting high time that the people were giving serious consideration to the question. Why is it so? and giving their support to Members of Congress who make a serious effort to reduce these unnecessary expenses.

CONCLUSION.

I could prolong this discussion to a much greater length by discussing what I conceive to be the correct province of the Federal Government and the reserved powers of the States, but I do not wish to make this statement too long.

If I know my own heart and human sympathies, I want to see every boy and girl in this broad land of ours grow up and make a fine useful man and woman, and I am perfectly willing that anyone shall make the closest kind of an investigation into my private life with a view of determining what interest I have always taken in matters of this kind. If Texas did not already have a good child-labor law, I would be one of many citizens to join in a demand that our legislature enact one. But they have already done it. I yield to no man in my desire to help the laboring man benefit his condition and improve his economic situation.

I am proud of the fact that I have been one of those who labored with my own hands, working in the cotton fields, of bearing brick, and numerous other kinds of labor. I think I know how to appreciate the laboring man's point of view, but I do not believe it is necessary for us to surrender our fundamental principles of government to accomplish the results which we seek to obtain. To do so would be a foolish and short-sighted policy, and in the end would in all probability prove a boomerang to the interest of the laboring man himself. Already some of our large corporations are clamoring for Federal incorporation laws in order that they may escape State control and be under a centralized system, which would make it easier for them to secure special concessions. Organized labor has done remarkably well in the last 20 years in securing its rights under State control, and in my opinion it would be an act of "looking backward" and very dangerous in its ultimate consequences to repudiate the time-honored doctrine of State control in these matters and turn them over to the control of the Federal Government.

Therefore, Mr. Speaker, holding firmly to these views, I have cast my vote against the bill.

## The Patriotic Aliens Anxious to Serve the Country.

### EXTENSION OF REMARKS
OF
### HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. SIEGEL. Mr. Speaker, unanimously this measure, appropriating the largest sum of money in a bill of this kind that has ever been presented to us in a time of peace, is being passed to-day because we all realize that a crisis confronts the Nation. It means an expenditure of over $182,000,000, and the increases for the National Guard and Regulars adopted yesterday by the House are as follows:

INCREASES ADOPTED.

1. Horses for Cavalry and other departments, $3,000,000. Total appropriation as increased, $3,800,000. Chairman HAY informed the House that the War Department has recently contracted for 68,000 horses and mules.

2. Medical Department and sanitation, $1,000,000; total appropriation, $2,000,000.

3. Engineer Department, $500,000; total appropriation, $1,000,000.

4. Ordnance stores, ammunition, $2,000,000; total allowed, $4,500,000.

5. Manufacture of arms, $3,000,000; total appropriation as increased, $5,000,000.

6. Ordnance stores, supplies, $3,000,000; total allowed, $6,000,000.

7. Machine guns for Regulars, $1,960,000; total appropriation, $3,360,000.

8. Machine guns for militia, new item of $2,000,000.

9. Armored motor cars, $150,000; total allowed, $300,000.

10. Field artillery, militia, $5,000,000; total of increased appropriation, $8,000,000.

11. Ammunition for field artillery for militia, $5,000,000; total of increased appropriation, $8,000,000.

12. Military training camps for civilians, $1,500,000; total appropriation, $2,000,000.

History is now being made. The next few days will tell the tale whether we are to be plunged into a bloody conflict that we have not sought. It will be to our everlasting credit that we have not been the aggressors. Time will record the incontrovertible fact that this country has done nothing except to exercise those rights which every Government is bound to do in behalf of its citizens. Every obligation that both the moral and international law required us to keep with our southern neighbor has been most faithfully kept by us. It appears, however, that we are destined to enter into a struggle that must be characterized in a phrase that William H. Seward used, namely, "irrepressible conflict."

We have heard much in recent months in parts of the press and from some eminent gentlemen who love to tell us how far back their ancestors first commenced to arrive here that the immigrants or their sons would not do their duty to this country in its hour of need.

The following article from the Baltimore American, which I quote in full, is an emphatic and complete refutation of such assertions:

THE PATRIOTIC ALIENS—THEY ARE ANXIOUS TO SERVE ON THE MEXICAN BORDER—SOME SPEAK ONLY BROKEN ENGLISH.

Aliens, and those whose parents are foreign born, apparently are as anxious to serve on the Mexican border as real Americans, if the records of the recruiting offices at both the Fourth and the Fifth Regiments, Maryland National Guard, can be judged from. Since President Wilson's call for State guard mobilization just a week ago the majority of the recruits to the local regiments are either those who have adopted the United States as their country or those whose parents came from the old country.

A noticeable feature is that in many cases the officers have had to assist some of the applicants in becoming citizens of the United States. Possibly those of either Russian, German, Italian, and English descent are in preponderance. In the Fourth Regiment alone there are more than 100 Jews, who were among the first to rally to the call to colors. Some of the recruits speak only broken English.

The New York Times, referring to the same fact, contained the following yesterday:

FEW NATIVE AMERICANS—RESPONSE IN BALTIMORE TO GUARD CALL IS FROM THE FOREIGN BORN.

[Special to the New York Times.]

BALTIMORE, *June 25.*

Of the recruits received in the two Maryland regiments in this city only about half are native Americans, according to recruiting officers in charge. In many cases the officers say that they have had to assist

the new men personally in their first steps toward becoming citizens of the United States. Many others are sons of foreign-born parents.

Of the recruits of foreign blood those of Russian descent are in the majority, with Germans and Englishmen following in the order named. There is also a fair sprinkling of Italians among them. Many members of the Maryland Militia are of German descent.

In a statement to-day Col. Washington Bowie, jr., said he hoped native Americans in Baltimore would do their duty. "We want Americans who are accustomed to responsibility. The fact that somebody loves them is the very reason why they are needed."

An incident showing the intense enthusiasm of the Italian immigrant to serve our country at the present time is so aptly depicted in the Washington Herald and so expressive of the patriotic spirit that actuates the man who comes here from Europe that I deem it of sufficient interest to read it in full:

MARCO, HE GRABBA DA CITIZENSHIP TO MAKA BEEG FIGHT IN MEXICO.

Marco Pica, late of Naples Bay, Italy, stood, hat in hand, outside the recruiting station at 1225 Pennsylvania Avenue yesterday, and ran stubby fingers through a shock of curly black hair.

A khaki-clad militiaman, whose hat was adorned with the blue cord of the infantry, approached him.

"Better enlist, old man," the khaki-clad one said. "Big time down Mexico way."

Marco grinned.

"Fight—for sure fight?" he queried.

"For sure fight," said the militiaman.

Marco grinned again and pondered.

"I guess I go," he said finally. "Lika da fight. Lika da Estados Unidos. No lika da Mexico. Mexico no good. Si—I guess I go."

And he squared his shoulders and marched up to the recruiting desk.

"One more," said the militiaman to himself, but he spoke too soon. For when the recruiting officer inside questioned Marco he found he was not a citizen of the United States.

It was hard work making the Neapolitan understand why he couldn't be accepted. He thought there might be some doubt as to his soldiering ability.

"I maka da good man," he assured the officer earnestly. "I maka what you call ex-peer-ience. I serve one, two, three yea in da army of ma country, back in Italia. I maka da good man. I know how."

It was finally explained to him that the militia would like to have him, but that none save citizens of the United States could be accepted.

Marco's face fell—but not for long. "I fix dat," he declared. "I fix—you wait." And out he went, almost on a run.

That was yesterday morning.

Yesterday evening about dusk a radiant Marco strode back into the recruiting station and handed the officer a bulky, important-looking paper. The officer looked it over and then whistled.

"I'll be durned," he murmured. "He's taken out his first citizenship papers."

And so Marco will get to "maka da fight" after all.

From all over the land comes the news that the boys are responding to the President's call, and that they are speeding toward the border to protect the lives, property, and homes of our citizens residing in those States which face the border along our southern territory.

A small poem tells how the mothers and fathers are nobly encouraging their sons to do their duty to our flag and country. It is entitled—

TO ARMS!

The call to arms has sounded,
And the echo of the cry
Is answered by God's country,
As our soldier boys go by.

Our flag floats proudly o'er them;
'Tis the emblem of the free;
'Tis the flag our fathers fought for
On the land and on the sea.

A mother's heart goes with them
As they proudly march away;
A mother's prayer goes with them
In the thickest of the fray.

God's blessing rests upon them,
Upon each and every one,
On every mother's darling,
And on every father's son.

—Zola J. Mercer.

## Two Patriotic Resolutions.

## SPEECH

OF

## HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. FREAR. Mr. Speaker, I submit herewith a resolution from Ripon, Wis., letter of acknowledgment, and a few words on the Hay resolution drafting the National Guard into foreign service:

Resolution unanimously adopted at a public meeting of the citizens of Ripon, Wis., and approved by the city council and other public bodies of that city.

Whereas an appropriation of $75,000 for the erection of a Federal building at Ripon, Wis., has been made by the National Congress; and

Whereas the people of this community heartily believe in and approve of a policy of adequate national preparedness; and

Whereas we believe that private and local gain and enhancement should always be subservient to the common good: Therefore be it

*Resolved*, That the citizens of Ripon, whose sons enlisted in Company D, Wisconsin National Guard, are now encamped at Camp Douglas in response to the summons of President Wilson; whose boys of other days were among the first to answer the call of their country in the Spanish and Civil Wars; whose patriotism and loyalty has ever been abounding and unstinted; with the tearful farewells of mothers, wives, sisters, and sweethearts of soldiers fresh in their memory; with the echoes of the footsteps of the Grand Army of the Republic in State encampment assembled still lingering in their ears, earnestly request their Representatives in Congress to immediately introduce and strive to secure the passage of an act diverting the appropriation made for a Federal building in Ripon from its original purpose and applying it specifically to the equipment of the National Army, preferably in the perfection of the aviation service.

I also insert the letter of transmittal and my answer thereto:

RIPON, WIS., *June 25, 1916.*

Hon. JAMES A. FREAR,
*House of Representatives, Washington, D. C.*

DEAR SIR: I have for a long time viewed with enthusiastic approval your fight on the "pork barrel" in Congress, and with considerable pride in the fact that a Wisconsin man had courage enough to stand up for the right.

Knowing your convictions upon this matter, therefore, I am sure that you can not fail to be interested in the almost unprecedented action taken by the citizens of Ripon, as outlined in a set of resolutions which were circulated and signed almost unanimously by the citizens and taxpayers here.

These resolutions, signed as above, and approved by unanimous action of the common council and of the Commercial Club, have been telegraphed and mailed to Congressman REILLY, as representing this district, and copies also forwarded to Senators LA FOLLETTE and HUSTING.

I trust that you will use what influence you have to see that the matter comes up for action, for the maximum good of an action of this kind is not in the money itself but in the example its sets.

Very truly, yours,

W. E. HAZELTINE,
*Secretary and Treasurer.*

JUNE 27, 1916.

Mr. W. E. HAZELTINE,
*Care Ripon Light & Water Co., Ripon, Wis.*

MY DEAR MR. HAZELTINE: I am in receipt of your letter of June 25 inclosing copy of resolutions passed by citizens of Ripon urging that the $75,000 appropriation for Ripon's public building be turned into the common-defense fund.

I am grateful, indeed, for this expression of sentiment from Wisconsin on the importance of the public defense as compared with local pride. It is hard to understand how a Congress made up, as it is, of honest Representatives from all over the country will consent to wasteful and extravagant "pork-barrel" appropriations largely for local interests, which in the case of the pending river and harbor bill reached $43,000,000, and in the case of the Mississippi land-reclamation project passed by the House reached over $50,000,000. A public building bill, wasteful and extravagant in character, is also about to be introduced in the House, according to report.

Your resolution is timely, and it reinforces opponents of waste and local expenditures who believe that at this time in the country's history we should curtail needless waste and extravagance. It is fitting that the resolution should come from Ripon, the birthplace of a great political party that has given to the country many of our greatest men. I thank you for your letter and the resolution, which will be filed in the House, and I desire to express appreciation for your own good words personally.

Very sincerely, yours, JAMES A. FREAR.

Mr. Speaker, the foregoing resolution is opportune, and I have inserted it in the RECORD with my letter of response. I desire to add a few words that have a bearing on the same general subject and on another resolution.

Monday the House passed a military bill carrying $180,000,000, larger by many millions than any bill ever before introduced for that purpose in the National Congress. During the same closing hours of House debate the Senate defeated a provision passed by the House last Friday. The Hay resolution before the Senate permitted the President to draft the National Guard into the Regular service and, if need be, send such troops into Mexico, and we coupled with the provision a $1,000,000 appropriation, to be used by the Secretary of War in caring for needy dependents of National Guardsmen thus suddenly called away from their families and business occupation. Men from Ripon and from hundreds of other cities throughout the country are among those summoned.

Amid orations on patriotism and the high qualities that ought to animate the citizen soldier, irrespective of claims of dependents, and during the same time we were passing a military bill for $180,000,000, the Senate struck out of our resolution the clause giving $1,000,000 to dependents of men we are sending to the front and provided that such men, some of whom are now down on the Mexican border, can resign from the guard and escape military service if able to make suitable showing of families depending upon them.

That resolution came back to the House accompanied by speeches of statesmen who publicly declared the soldiers of this country do not need manicurists or chiropodists to accompany them to the front. Such sentiments expressed in the highest parliamentary body of the country have no place at this time or any time. Neither will the country be deceived over the affected superior motives ascribed by men in this Chamber or any other

chamber for voting against a proposal to aid dependents of National Guardsmen.

We have no right to express the contempt that every right-minded citizen must have for such utterances, because we are prevented by parliamentary prohibition. We can not analyze the character of men who believe such things and who gratuitously insult the men we have drafted into service, because by so doing, a breach of parliamentary rights will occur. We can say that when another body refuses to give to the dependents of guardsmen necessary aid in this time of national need, when it refuses to give $1,000,000 unanimously passed by this body, but grants $43,000,000 to a wasteful and dishonest river and harbor bill, the country should know the standards of economy and patriotism that govern public men, wherever serving.

An extravagant public-building bill is about to the introduced in the House, according to rumor; an omnibus bill, condemned by public sentiment and accepted only by those who are ready to acquire local improvements at the expense of public waste. That bill reached over $41,000,000 when last passed by Congress. It is now in the program of pork grabs, and at this time the Ripon resolution is of striking significance, because it calls attention to the need of preparedness over pork barrels and an offer of sacrifice for the boys we are sending to Mexico.

I believe in public economy, but I do not believe in gross injustice, and will try not to overstep the bounds of parliamentary language in discussing what occurs elsewhere; but I point to the fact that the rule was stretched when the House resolution appropriating $1,000,000 to dependents of national guardsmen was under discussion in another body, when it was characterized as wasteful and extravagant and likely to bankrupt the Treasury.

In Sunday's Star objections appeared from the chairman of a Senate committee, who gave out an interview, from which I quote:

> To make such a relief provision as the House resolution proposes ($1,000,000) would disorganize the Regular Army. We can not have such benefits for one class of the service at such time and deprive another class in the same service of the privilege. The amendment which we have proposed, giving the Secretary of War authority to honorably discharge enlisted men with dependent families, puts us on the same footing as other countries. Men with dependent families always should be called to the service last.

Simultaneously with that weighty announcement from the chairman of a committee, whose slight knowledge of national guardsmen can be accurately measured by his interview, we were further informed that the House resolution placing in the hands of the Secretary of War $1,000,000 for care of dependent families would be stricken out, and that has been done by the Senate.

We have no right to discuss the action of Senators, but when men blessed with a little brief authority give their views to the press and public it is proper to show how little understanding they have of the situation and why the appropriation should be made.

The National Guard is being mustered into the Regular service. Some of the troops are reported on their way to the front. After they reach Mexico they will some day learn that Congress passed an act saying "married men should be called to the service last."

Mr. Speaker, I have some familiarity with both Regular Army and National Guard service, having served full enlistments in both branches during past years. I speak from that experience in saying recruits entering the Regular Army are almost invariably single men, and they enlist into that service well knowing what they are called upon to do as soldiers and compensation fixed by law to which they will be entitled. Men entering the National Guard enlist with the understanding that actual service during war is a possibility only.

Married and single men occupying the highest positions in the community where they live are persuaded to join the local company to help it along and as a matter of local pride and patriotic duty. They continue with the company, and frequently father and son become members of the same organization. Men of ability equal to the average found upon the Senate or House floor are in every regiment, and it is no exaggeration to say in practically every company lawyers, doctors, merchants, farmers, and mechanics jostle elbows in the National Guard, and in that one fact is disclosed the high standard of efficiency and loyalty to the country displayed in this hour of national need. It is a poor member of the National Guard, if a married man, who in this day and age does not earn over $50 a month with which to feed and clothe a family. This income he forfeits ordinarily when called upon by his country. It is forfeited unless private employers in occasional instances assume a burden which belongs to the public.

The President has called these men to the colors, all of them have reached State mobilization quarters, and some of them are on their way to Mexico, according to press reports. With no means of making even hasty provision for dependents, men have been torn from their families, even as they were a half century ago, and the responsibility for the care of such dependents is thrown on local communities. In many towns public-spirited citizens are raising funds to help care for these dependents, but the very size of the task shows how hopeless it will become when the enthusiasm of giving wears off. This Government has shown itself to be grateful to other defenders, and now is the time above all others to show its gratitude and not leave to private subscription what is a matter of national obligation.

More to the point, dependents do not care to parade their wants, and whatever generous motives accompany local movements those who suffer most will often be the last to make their wants known. A controlling argument, however, should be that such dependents ought not to be dependents while a wealthy Government is able and properly obligated to care for their needs.

Mr. Speaker, exercising the authority reposed under the Constitution, Congress has drafted all National Guardsmen into the regular service on order of the President; civilian soldiers who a week ago were engaged in their business avocations are now en route to Mexico. Not one word of remonstrance has come from the National Guard or from its membership. No man has written me, although I personally know many in my own State's service, from the commanding general down to the private soldier. These men have promptly answered their country's call. They have not asked for any privileges, but married men and single men with dependents or without, of all professions and occupations, practically without exception—all have joined the colors. According to general orders issued March 13, 1914, by Gen. Leonard Wood the National Guard "of the State of Wisconsin may be taken as a model in the matter of training, equipment, and business administration." This is high praise for the citizen soldier, coming as it does from the commanding officer of the military forces, and the entire National Guard, by its immediate and universal response, has won the thanks of the country.

The man who refused to go with his company may have exhibited more moral courage than those who marched to the train, but I know of companies in which every man, married and single, reported for duty, will be mustered in, and will go to the front. Not one in ten of those who are married have failed to answer the summons, and I doubt if the percentage will be as large from among those who accept the chance for escape offered by the Senate resolution. The call of wife and family is first of all next to the country's right of service, and yet men are unwilling to leave their comrades and return home, though permission be granted.

It it needless to discuss their reasons, which are understood by every patriotic, public-spirited man, and of such is the National Guard composed. The hardest struggle is not fought for the capture of a trench, but by individuals who must fight out responsibilities and determine their own course at such times. Strong men and weak men are all subjected to the same test, and the decision does not always go with mature judgment but is influenced by surroundings, duty, and personal pride, elements of patriotism, and we will do well to recognize the fact by insisting upon the House resolution. Whether one man or ten thousand leave dependents is immaterial, for the moral obligation rests with the Government in either case.

Little does the Senator quoted in the press know the individual sentiment among men of the National Guard when he assumes he has solved the problem by excusing men who have dependents at home. With many of these men, to leave their comrades would be an act of injustice to the company, to the service, and to the individual soldier. Hard as the test may be it will ordinarily be decided in the negative. The only way it can be made effective is to legally bar married men from Army service, and even then, others, with dependents, will be left without needed aid.

What is to become of the dependents of men, who, for patriotic reasons or fear of personal criticism or pride or other reasons, refuse to leave their comrades? The chairman of the Senate committee says to the press we can not discriminate—but men do discriminate when they join the Regular Army for an occupation and the National Guard for patriotic reasons and service only when needed.

A Senator said Saturday that we have been extravagant with pensions and it is no time to provide manicurists or chiropodists for members of the National Guard. His protest arose on the ground of public economy.

That language in this body would meet the same quick, certain answer it met elsewhere, but parliamentary limitations prevent men here from expressing their sentiments on such coarse, uncalled-for criticism.

Naturally, however, we are prone to examine into the particulars of economy offered by such men. Honesty of intention is no explanation for the man with a $7,500 salary, who derides and ridicules National Guardsmen, unable to reply. Without request on their part for action, this provision was adopted by the House. Dependents of congressional scoffers are provided with $7,500 annually, given by a generous Government, and yet some statesmen grow indignant because less than one-tenth of their own salary is proposed for dependents whose sole means of support has been called to their country's service.

The Senate struck the item of $1,000,000 from the House resolution by a vote of 5 to 30, which vote is found on page 11497 of the CONGRESSIONAL RECORD of June 26. The House has reaffirmed its unanimously expressed opinion and rejected the Senate amendment by a vote of 119 to 5, or over 20 to 1. That the House is near to the people and understands the claims of patriotism, ordinary decency, and common humanity may be gathered from that vote.

After announcement in the press of the House action, the same chairman, following a notoriously bad and habitual practice of certain statesmen, gave to the press a second interview, as shown by the Washington Times of June 27, page 2:

"The Senate never will recede from its position," said Chairman ——, of the Senate Military Committee, when he heard of the House's decision. "The Senate positively will not agree to pay pensions or aid to dependents. It would bankrupt the Federal Treasury and demoralize the Army."

UNPATRIOTIC ANNOUNCEMENTS.

On what meat doth Cæsar feed? Who is it that says so positively what the Senate will and what it will not do? Who is it that denounces the House for bankrupting the Treasury with a $1,000,000 appropriation? On the opposite page of the Times, following the pompous announcement, appears this half-page ad, printed under the American flag:

Men wanted at once to serve the country in the National Guard of the District of Columbia. Washington must furnish additional men. Now enlist for preparedness. War orders state that each unit in the National Guard must be recruited to war strength, which is more than double their peace strength. This means that your country needs you and needs you badly. Apply to recruiting stations, open 9 a. m. to 10 p. m.

With that ad staring at him on page 3 of the Times and in every other local paper, the chairman of a Senate committee talks of bankrupting the Treasury through a million or even ten million dollar fund if placed in the hands of the Secretary of War. Men who ask from Congress practically $200,000,000 for a military bill quibble with truth and harangue newspaper reporters over a $1,000,000 appropriation bankrupting the Federal Treasury, while other men of similar standards talk of manicurists and chiropodists for guardsmen.

Such statesmen charge the House with seeking to bankrupt the Treasury and insist on parading their views in the public press. No greater insult to the House, to National Guard troops, or to ordinary intelligence could be offered than by those who express such sentiments.

The resolution passed by the House carried $1,000,000 for expenditure by the Secretary of War, under such rules as he may prescribe, for the purpose of maintaining, at a cost of not more than $50 per month, the family of each enlisted man of the National Guard drafted into the service of the United States until his discharge therefrom, when such family has no other income except his pay. And the word "family" includes wife, dependent mothers, fathers, and sisters. That is the substance of the provision rejected by the Senate.

No more worthy appropriation can be made by this Government than in giving $1,000,000 or $10,000,000 annually, if need be, to provide for dependents of men who are to use the $180,000,000 of war supplies just given for defenses.

That $1,000,000 is infinitely more important to this country, aside from its broad, humanitarian purpose, than the $43,000,000 river and harbor "humbug and steal" which recently passed another body and now awaits action by this House.

It is more important to the country than nearly $20,000,000 sunk in the Columbia River, two-thirds of which has been wasted. It is more important to the country than a million and a half dollars more, now carried in the 1916, $43,000,000, bill, that is also to go into that same Columbia River. Did present-day economists seek to defeat that bill by raising their voices against its provisions or did they remain mute and approve when they secured their local appropriations? The bill would have been defeated if precept meant practice with eleventh-hour economists.

It is better in 1916 to spend one million or ten million dollars, if need be, for dependents of National Guardsmen rather than sink nearly $9,000,000 contained in the 1916 pork-barrel bill for the Mississippi River, in addition to over $150,000,000 already spent on that river without tangible results. Even those who live on the Columbia and formerly on the Mississippi should concede that.

It is better for the country to care for dependent relatives of boys who have gone to the front rather than spend $5,000,000, contained in the 1916 bill, for the crazy Ohio canalization scheme, on which $50,000,000 has already been wasted. It is more creditable to care for dependents of the country's defenders than to squander a million and a half in the 1916 pork-barrel bill for a Missouri River private-land reclamation scheme, on which nearly $20,000,000 has already been squandered. It is wiser to use public funds for the protection of those who have temporarily lost their protectors rather than to waste millions of dollars on the artesian-watered Trinity or the dry, deserted Brazos, or the Arkansas, recommended for abandonment by engineers, all of which wasteful projects have absorbed many millions of public funds for the promotion of political pork and are liberally remembered in the disgraceful 1916 waterway bill.

Mr. Speaker, it is indefensible that such bills should be put through Congress at this time or at any time.

We defeated two "pork barrels," carrying $92,000,000, last session, and saved $42,000,000 to the Federal Treasury, notwithstanding the protests of those who would be economists to-day.

That $42,000,000 will pay needed expenses of every dependent of the National Guard for two years to come, and in addition will build a battleship for public defense.

The $50,000,000 land-reclamation 1916 bill, for reclaiming private lands along the Mississippi River, would pay for two battleships and care for these dependents, but it swept through the House without a roll call, and is before economists of another body, some of whom propose saving money by shaving clerks' salaries and preventing dependents of guardsmen from receiving Government support.

The $24,000,000 stricken from the Army bill in the House, that was intended for the Alabama Power Co.'s Muscle Shoals project, will provide for these dependents for several years if need be.

I do not care to refer further to waste and extravagance that has characterized many bills proposed or passed by Congress this session; I do not desire to refer to men who, sitting in public offices, drawing $7,500 annually, look with contempt upon those at the front in Mexico. Such cases bring their own reward, and far be it from me to predict the political effect of such action as proposed by the gentleman who was quoted by the press; but statesmanship earns its own reward when it votes "aye" on pork barrels and "nay" on such proposals as I have discussed. The country will not support men or parties that adopt such methods, and it ought not to do so.

Mr. Speaker, I am ready to stay here until next session, if need be, and fix the responsibility for delay, until this measure is passed. I am willing to demand that common justice be done, and if others find in that effort we are favoring manicurists and chiropodists for soldiers, I have only to say that the man who utters such sentiments does no credit to himself. I trust the House will disagree with any proposal to strike out the appropriation we have voted for needy dependents of guardsmen now in actual service, and I welcome the resolution coming from Ripon, the birthplace of the Republican Party, a party formed in the hour of national need over a half century ago. That little city in my home State honors itself and the Nation by its action, and it carries a lesson to those who to-day support extravagance and waste on the one hand and deny the dependents of National Guardsmen on the other. All honor to the birthplace of a great party and to the worthy descendants of founders of that party.

---

## I Am Neutral in the European Struggle.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. MURRAY. Mr. Speaker, I am neutral. I think I am. While personally I sympathize with Germany's great civilization and would hate to see her crushed, yet, remembering my own Republic, I realize it wisest if both groups of belligerents shall thoroughly and completely "lick" each other. I regret the disposition of some people, and I do not confine this to any par-

ticular nationality, but to former citizens of all the belligerent nations, who, by their conduct and demands, seem to think more of the flag of that belligerent nation of their birth than of the Stars and Stripes. I do not blame any foreigner for desiring the success of his native land or for wishing its supremacy over all nations of the world except the United States. I am Scotch. Every atom of my blood, every nerve and sinew, every heart throb beats in unison for the success of the old Scotch. I presume I have all the faults and all the virtues with which God made a Highlander. The prettiest story in all history to me is that of the kilt and plaid, the clan and its tartan.

I love to read of the achievements of Scotchmen; of the wars in which they have participated, of their steady, strident step over the burning sands of Africa to meet the brave Boers; of their impetuous charge under Lord Clive in India; of their more recent landing on the shores of France to the astonishment of the effete Frenchmen, dressed in kilt and plaid, with knees and legs bare, going forth with only a Scotchman's will to meet their titanic Teutonic foe. I love to read of the battles in which they participated—of the Battle of Culloden, of 1746, and the sad memory of the fall of my own clan following the cause of Prince Charles; of the Battle of Waterloo, where the Scottish Grays wrung from the lips of the world's greatest military chieftain, Napoleon himself, as he observed them shot down without flinching, the expression, "What a pity to kill such brave men." I love to remember the achievements of the sons of Scotchmen in our own country—among their generals like Grant and Lee, Hood and Hooker, Magruder, McPherson, McClellan, McDowell, and Longstreet, Sheridan, and Sherman; like Joe Johnston and Stonewall Jackson; of their sons who have become President, such as Madison and Monroe, Jackson and Buchanan, Lincoln, Hayes, and Cleveland, Taft, and Wilson; of their parliamentary leaders, like JOE CANNON and old CHAMP CLARK. I love to read the teaching of their ministers, like Livingston and Dixon, Rutherford, Melville, and Alexander Campbell, John Knox, and Thomas Chalmers. I love to read their poets, like Sir Walter Scott and dear old Bobby Burns; of their philosophers, like Bain, Dunbar, and Sir William Hamilton; of their statesmen, like William the Good Regent; of their jurists, like John Marshall and Lord Mansfield. I love to remember their patriots of old, like Wallace and Bruce, and their fleet-footed messengers, who kindled Argyle's fires on Scotia's Highland peaks to call their clans to battle. But, above and beyond all this, I am an American; and in every conflict where the United States is involved I am against her enemies, though they include all the Scotch of the Highlands, yea, the Murray clan; and any foreigner who comes to our shores, who, taking the oath of allegiance to the old flag, becomes a naturalized citizen of the Republic and does not feel that way is at heart a traitor.

**Col. Theodore Roosevelt's Letter to the Progressive National Committee Declining the Nomination of the Progressive Party for President and Indorsing the Republican Nominee, Hon. Charles Evans Hughes.**

---

## EXTENSION OF REMARKS

OF

# HON. IRA C. COPLEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, June 27, 1916.*

Mr. COPLEY. Mr. Speaker, under the leave granted by the House I insert in the RECORD the letter of Col. Theodore Roosevelt to the Progressive national committee, declining the nomination of the Progressive Party for President and indorsing the Republican nominee, Hon. Charles Evans Hughes, as follows:

*"To the Progressive National Committee.*

"GENTLEMEN: In accordance with the message I sent to the Progressive national convention as soon as I had received the notification that it had nominated me for President, I now communicate to you my reasons for declining the honor which I so deeply appreciate. Since the adjournment of the convention I have received between two and three thousand letters and telegrams from men who had supported me for the nomination, the majority expressing the desire that I would refuse to run, while a minority urged that I should accept the nomination. As it is a physical impossibility to answer these letters and telegrams individually, I beg the courtesy of the senders that they will accept this public statement in lieu of such answers.

PRAISES PROGRESSIVE CONVENTION.

"Before speaking of anything else, I wish to express my heartiest and most unstinted admiration for the character and services of the men and women who made up the Progressive national convention in 1916. I can give them no higher praise than to say that in all respects they stood level with the men and women who in 1912 joined at Chicago to found the Progressive Party. These two conventions, in character, in disinterestedness, in vision, in insight, in high purpose, and in desire to render practical service to the people typified exactly what such bodies ought to be in a great self-governing democracy. They represented the spirit which moved Abraham Lincoln and his political associates during the decade preceding the close of the Civil War.

"The platform put forth in 1912 was much the most important public document promulgated in this country since the death of Abraham Lincoln. It represented the first effort on a large scale to translate abstract formulas of economic and social justice into concrete American nationalism; the effort to apply the principles of Washington and Lincoln to the need of the United States in the twentieth century. No finer effort was ever made to serve the American people in a spirit of high loyalty to all that is loftiest in the American tradition.

"Events have shown that the Progressive Party in 1912 offered the only alternative to the triumph of the Democratic Party. Moreover, these events have shown that the application of the principles which we then advocated is even more necessary to this Nation than we at the time supposed.

NEED OF PREPAREDNESS.

"The results of the terrible world war of the past two years have now made it evident to all who are willing to see that in this country there must be spiritual and industrial preparedness along the lines of efficiency, of loyal service to the Nation, and of practical application of the precept that each man must be his brother's keeper. Furthermore, it is no less evident that this preparedness for the tasks of peace forms the only sound basis for that indispensable military preparedness which rests on universal military training, and which finds expression in universal obligatory service in time of war. Such universal obligatory training and service are the necessary complements of universal suffrage, and represent the realization of the true American, the democratic, ideal in both peace and war.

"Sooner or later the national principles championed by the Progressives of 1912 must in their general effect be embodied in the structure of our national existence. With all my heart I shall continue to work for these great ideals, shoulder to shoulder with the men and women who in 1912 championed them; and I am sure that these men and women will show a like loyalty to the other, the fundamental, ideals which the events of the past two years have proven to be vital to the permanency of our national existence. The method by which we are to show our loyalty to these ideals must be determined in each case by the actual event. Our loyalty is to the fact, to the principle, to the ideal, and not merely to the name, and least of all to the party name.

WORK DONE BY PROGRESSIVES.

"The Progressive movement has been given an incalculable impetus by what the Progressive Party has done. Our strongest party antagonists have accepted and enacted into law, or embodied in their party platforms, very many of our most important principles. Much has been accomplished in awakening the public to a better understanding of the problems of social and industrial welfare.

"Yet it has become entirely evident that the people under existing conditions are not prepared to accept a new party.

"It is impossible for us Progressives to abandon our convictions. But we are faced with the fact that as things actually are the Progressive national organization no longer offers the means whereby we can make these convictions effective in our national life. Under such circumstances our duty is to do the best we can and not to sulk because our leadership is rejected. That we ourselves continue to believe that the course we advocated was in the highest interest of the American people is aside from the question. It is unpatriotic to refuse to do the best possible merely because the people have not put us in position to do what we regard as the very best. It remains for us, good humoredly and with common sense, to face the situation and endeavor to get out of it the best that it can be made to yield from the standpoint of the interests of the Nation as a whole.

ADMINISTRATION ARRAIGNED.

"This was the situation at the opening of the present year. It was clearly evident that unless a cataclysm occurred the presidential election would result in the choice of either the Republican or the Democratic nominee. The present administration, during its three years of life, had been guilty of shortcomings more signal than those of any administration since the days of Buchanan. From the standpoint of national honor and interest it stood on an even lower level than the administration of Buchanan. No administration in our history had done more to relax the spring of the national will and to deaden the national conscience. Within the Republican Party conflicting forces were at work. There were men among the organization leaders who advocated a course of action such as offered no improvement upon the Democratic position, and advocated the nomination of candidates whose election would have represented no improvement upon the continuance in office of Mr. Wilson. If such a course were followed, it would obviously become our duty to run a third ticket. But it was plainly our duty to do everything honorable in order to prevent such a necessity; to do everything short of sacrificing our most sacred convictions in order to secure the alignment under one leadership of the forces opposed to the continuance in power of Mr. Wilson and the Democratic Party.

EFFORTS FOR HARMONY.

"Under these circumstances, the progressive national committee, at Chicago, in January, outlined our duty to seek common action with the Republican Party, using the following words: 'Our people are seeking leadership—leadership of the highest order and most courageous character; leadership that will draft to itself for the country's benefit the unselfish and patriotic services of its ablest citizens. The surest way to secure for our country the required leadership will be by having, if possible, both the Progressive and Republican Parties choose the same standard bearer and the same principles.'

"Six weeks later, March 9, in my Trinidad statement, I asked for a similar combination against the Democratic Party, on a platform of 'clean-cut, straightout national Americanism,' and for a candidate 'who will not merely stand for such a program before election but will resolutely and in good faith put it through if elected.'

"This was, in effect, the same statement that I made in my telegram to ex-Senator Jackson, pending the convention, which ran, in part, as follows: 'Can we not, forgetting past differences, now join for the safety and honor of our country, to enforce the policies of genuine Americanism and genuine preparedness? Surely we can afford to act in accordance with the words of Abraham Lincoln when he said, "May not all having a common interest reunite in a common effort to save our common country? May we ask those who have not differed with us to join in this same spirit toward those who have?" As far as my own soul is known to me it is in this same spirit that at this time I make my appeal to the Republicans and Progressives assembled at Chicago.'

COL. ROOSEVELT'S ATTITUDE.

"In addition to these public statements I had also stated my own attitude verbally, and in letters, during the weeks immediately preceding the convention, to scores of leading Progressives from all parts of the country, including many of the leaders at the convention. To these men I expressed my earnest hope that the Republicans would so act as to make possible for the Progressives to join with them. I stated to them, however, that in view of the attitude of some of the Republican leaders it was at least conceivable that we should be put in a position where our highest duty, our fealty to the country, our sense of what patriotism demanded in a great crisis would make it imperative upon us to run a separate ticket; and that whether in such event it would be necessary for me to head that ticket could not be determined in advance. I stated in these interviews and in these letters, with the utmost emphasis, that the decision of this point, like the whole matter of running a separate ticket, would have to be determined by what the interests of the country demanded in view of the action finally taken by the convention at Chicago.

"At the time many of the Republican leaders asserted that my statements were not made in good faith; that I really intended to insist upon my own nomination by the Republican convention; and that if I was not so nominated, I intended to accept the Progressive nomination and run on a third ticket. Of course, my fellow Progressives were under no such error. They knew that I spoke in good faith and meant exactly what I said. They knew that my utterances were to be accepted at their exact face value as meaning that if the Republicans nominated a man whom we could conscientiously support we would support him. The Progressive convention came together knowing my public statements and therefore knowing exactly what my attitude was.

HUGHES MEETS THE CONDITIONS.

"In my judgment, the nomination of Mr. Hughes meets the conditions set forth in the statement of the Progressive national committee, issued last January, and in my own statements. Under existing conditions the nomination of a third ticket would, in my judgment, be merely a move in the interest of the election of Mr. Wilson. I regard Mr. Hughes as a man whose public record is a guaranty that 'he will not merely stand for a program of clean-cut, straightout Americanism before election, but will resolutely and in good faith put it through if elected.' He is beyond all comparison better fitted to be President than Mr. Wilson. It would be a grave detriment to the country to reelect Mr. Wilson. I shall, therefore, strongly support Mr. Hughes. Such being the case, it is unnecessary to say that I can not accept the nomination on a third ticket. I do not believe that there should be a third ticket. I believe that when my fellow Progressives coolly consider the question they will for the most part take this position. They and I have but one purpose—the purpose to serve our common country. It is my deep conviction that at this moment we can serve it only by supporting Mr. Hughes.

GERMAN-AMERICAN SUPPORT.

"It is urged against Mr. Hughes that he was supported by the various so-called German-American alliances. I believe that the attitude of these professional German-Americans was due not in the least to any liking for Mr. Hughes, but solely to their antagonism to me. They were bound to defeat me for the nomination. The only way by which they could achieve this object was by supporting Mr. Hughes and they supported him accordingly, without any regard to other considerations.

"I need hardly repeat what I have already said in stern reprobation of this professional German-American element—the element typified by the German-American alliances and the similar bodies, which have in the prenomination campaign played not merely an un-American but a thoroughly anti-American part. These men have nothing in common with the great body of Americans who are in whole or in part of German blood, and who are precisely as good Americans as those of any other ancestry. There are not, and never have been, in all our land, better citizens than the great mass of the men and women of German birth or descent who have been or are being completely merged in our common American nationality—a nationality distinct from any in Europe, for Americans who are good Americans are no more German-Americans than they are English-Americans or Irish-Americans or Scandinavian-Americans. They are Americans and nothing else. No good American, whatever his ancestry or creed, can have any feeling except scorn and detestation for those professional German-Americans who seek to make the American President in effect a viceroy of the German Emperor.

"The professional German-Americans of this type are acting purely in the sinister interest of Germany. They have shown their eager readiness to sacrifice the interest of the United States whenever its interest conflicted with that of Germany. They represent that adherence to the politico-racial hyphen which is the badge and sign of moral treason to the Republic. I have singled these men out for specific denunciation, and assuredly if I support a candidate it may be accepted as proof that I am certain that the candidate is incapable of being influenced by the evil intrigues of these hyphenated Americans.

"Mr. Hughes's character and his whole course of conduct in public affairs justify us in the assured conviction that the fact that these men have for their own purposes supported him will in no shape or way affect his public actions before or after election. His entire public life is a guaranty of this.

PRESIDENT WILSON'S COURSE CRITICIZED.

"The events of the last three and a half years have shown that as much can not be said for Mr. Wilson. In Mr. Wilson's case we do not have to consider his words, but his deeds. His deeds absolutely contradict his words, and, for the matter of that, his words absolutely contradict one another. It is folly to pay heed to any of the promises in the platform on which he now stands, in view of the fact that almost every important promise contained in the platform on which he stood four years ago has since been broken. We owe all of our present trouble with the professional German-American element in the United States to Mr. Wilson's timid and vacillating course during the last two years.

"The defenders of Mr. Wilson have alleged in excuse for him that he confronted a difficult situation. As regards Mexico, the situation which Mr. Wilson confronted was nothing like as difficult as that which President McKinley confronted in connection with Cuba and the Philippines at the time of the Spanish War. Under the actual circumstances we could with only a minimum of risk have protested on behalf of Belgium, a small, well-

behaved nation, when she was exposed to the last extremity of outrage by the brutal violation of her neutral rights, this violation being itself a violation of The Hague conventions, to which we were a signatory power.

"As regards the foreign situation generally during the great war, the fact of the existence of the war made it far easier and safer for Mr. Wilson to assert our rights than if he had had to deal with some single strong power which was at the time unhampered by war. During the past 20 years questions have arisen with powers of the first rank, such as England, Japan, and Germany, each of which has necessitated far greater courage, resolution, and judgment on the part of the President dealing with it than President Wilson need have shown in order to put a complete stop to the continually repeated murder of American men, women, and children on the high seas by German submarines, the *Lusitania* being merely the worst of many such cases. The same feebleness that was shown by President Wilson in dealing with Germany abroad was also shown by him in dealing with the organized German outrages within our own land, and, finally, in dealing with the organized German-American vote. The continued existence of the German-American menace at home is directly due to Mr. Wilson's course of action during the past two years.

APPEAL TO PROGRESSIVES.

"Certain of my friends who feel that the Progressives should run a third ticket base their feeling on objection to the character or actions of the Republican national convention. As regards this point, it is sufficient to say that the members of the Republican national convention were unquestionably induced to nominate Mr. Hughes primarily because of the belief that his integrity and force of character, and his long record of admirable public service would make him peculiarly acceptable, not only to the rank and file of the Republican Party but to the people generally. I do not believe that Mr. Hughes would have been nominated if it had not been for the fight on behalf of public decency and efficiency which the Progressive Party has waged during the past four years.

"In any event, and without any regard to what the personal feelings of any of us may be as regards the action of the Republican convention, I wish very solemnly to ask the representatives of the Progressive Party to consider at this time only the welfare of the people of the United States. We shall prove false to our ideals and our professions if, in this grave crisis of the Nation's life, we permit ourselves to be swerved from the one prime duty of serving with cool judgment and single-minded devotion the Nation's needs. Our own political fortunes, individually and collectively, are of no consequence whatever when compared with the honor and welfare of the people of the United States. Such things do not count when weighed in the balance against our duty to serve well the country in which, after we are dead, our children and our children's children are to live.

"The world is passing through a great crisis and no man can tell what trial and jeopardy will have to be faced by this Nation during the years immediately ahead. There is now no longer before us for decision the question as to what particular man we may severally most desire to see at the head of the Government. We can decide only whether during these possibly vital years this country shall be intrusted to the leadership of Mr. Hughes or Mr. Wilson.

TRIED AND FOUND WANTING.

"Mr. Wilson has been tried and found wanting. His party, because of its devotion to the outworn theory of State rights, and because of its reliance upon purely sectional support, stands against that spirit of far-sighted nationalism which is essential if we are to deal adequately with our gravest social and industrial problems. Mr. Wilson and his party have in actual practice lamentably failed to safeguard the interest and honor of the United States. They have brought us to impotence abroad and to division and weakness at home. They have accustomed us to see the highest and most responsible offices of Government filled by incompetent men appointed only for reasons of partisan politics. They have dulled the moral sense of the people. They have taught us that peace, the peace of cowardice and dishonor and indifference to the welfare of others, is to be put above righteousness, above the stern and unflinching performance of duty, whether the duty is pleasant or unpleasant. Yet in Mexico they have failed even to secure the peace which they thus sought, and they have failed in spite of the most ample opportunity and most ample warning to prepare in any real fashion to meet the crisis which their own policy invited. They have taught us to put 'safety first,' safety before duty and honor; to put that materialism which expresses itself in mere money making and in the fatted ease of life above all spiritual things, above all the high and fine instincts of the soul. They have taught us to accept adroit elocution as a substitute for straightforward and efficient action. They have raised indecision, hesitancy, and vacillation into a settled governmental policy.

MR. HUGHES EULOGIZED.

"Mr. Hughes has shown in his career the instinct of efficiency which will guarantee that, under him, the Government will once more work with vigor and force. He possesses that habit of straightforward thinking which means that his words will be correlated with his deeds and translated into facts. His past career is the warrant for our belief that he will be the unfaltering opponent of that system of invisible government which finds expression in the domination of the party boss and the party machine. His past career is a guaranty that whatever he says before election will be made good by his acts after election. Morally, his public record shows him to be a man of unbending integrity; intellectually, it shows him to be a man of original and trained ability. We have the alternative of continuing in office an administration which has proved a lamentable failure or of putting into office an administration which we have every reason to believe will function with efficiency for the interest and honor of all our people. I earnestly bespeak from my fellow Progressives their ungrudging support of Mr. Hughes.

"Yours, truly,

"THEODORE ROOSEVELT.

"SAGAMORE HILL, *June 22, 1916.*"

---

**Federal Farm Loan Act.**

## EXTENSION OF REMARKS

OF

## HON. JOHN N. TILLMAN,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, June 27, 1916.*

Mr. TILLMAN. Mr. Speaker, I ask the indulgence of this body while I discuss briefly the pending measure now known as the Federal farm-loan act. This bill has at last been perfected as nearly as we shall be able to get it perfected during the present Congress, and this afternoon the bill as agreed upon in conference will pass this House, will pass the Senate, the President will sign it, and the American Congress will at last obey the mandate of the farmers of the country in their demands for rural-credit legislation. This measure is not a perfect one. It is not altogether what the farmers want, but it is by all odds the most valuable concession that has been accorded the farming interests of America in the way of remedial legislation in their interests since the adoption of the Constitution. This is a field day for the farmers and they should be congratulated, and we should felicitate ourselves that this bill, although imperfect, has been passed with little opposition.

Time was when the farmers of the country, unorganized and difficult of organization, were rarely favored by legislative bodies with beneficial class legislation. But a better day has dawned, and the farmer is having his inning. The wonder is that this day has not dawned earlier. When the farmer prospers, all prosper. When he fails, every business and every profession languishes. He feeds the world, and if he should cease to produce, the world would starve in a few months. This kind of legislation is good politics, as well as good business. You help the farmer and he will help you. You spurn him and he will spurn you. Ariosto tells a pretty story of a gentle fairy, who, by a subtle law of her nature, was compelled at certain periods to assume the form of a serpent and crawl upon the ground. Those who in the days of her disguise spurned her and trod upon her were forever barred from participation in those gifts which it was her privilege to bestow, but to those who, despite her unsightly aspect, comforted, encouraged, and aided her, she appeared in the beautiful and celestial form of her true nature, followed them with outstretched arms, lavished upon them her gifts, and filled their homes with happiness and wealth.

This species of legislation will tend to equalize things. A friend from my district wrote me and expressed wonder that the banking interests of the country would permit a bill of this character to be passed. This Congress proposes to legislate for the man with muscle, rather than the man with the money. The legislation which piles up wealth for some and causes others more worthy to perish for want of bread, kills hope and makes life a mockery. I heartily favor this character of legislation,

and I favor legislation that will promote the prosperity and happiness of the governed, not for the glory and profit of the governing classes. I favor the theory that government should not be treated as a rule exercised by the few over the many, but as a service rendered to the many by the few.

The pressing need of a Federal farm-loan act is apparent. In 1910 37½ per cent of those engaged in farming were tenants, which was an increase of 16 per cent of tenant farmers from 1900 to 1910. There are no available figures showing the exact number of tenant farmers now in America, but a conservative estimate will place the number not far from 45 per cent. This is an alarming situation, but cheaper money, as provided in the pending bill, will increase the number of farm owners and decrease the number of tenants, thus materially strengthening the Government and adding happiness and contentment to the people who engage in farming.

The farmers of the United States to-day owe $6,000,000,000, and the total value of property owned by them amounts to forty-one billion. Of this indebtedness two and one-half billion is represented by mortgages on farm lands. The farmers have been paying interest rates, averaging 8½ per cent, totaling $500,000,000 annually. It is the opinion of experts that the farmer can not afford to pay interest in excess of 6 per cent. If he is compelled to pay more than that he is headed straight for brankruptcy. This bill provides that he can procure money on long time from 5 to 40 years and that the rate of interest shall not exceed 6 per cent. This bill should pass without opposition and its passage registers another achievement of this administration, whose record for constructive legislation is unequalled. It implies that the Democratic Party loves to champion the farmers' interests and can be trusted by the 12,000,000 farmers of the United States to protect their interests and promote their prosperity and happiness.

This rural-credit proposition is not a new idea. A very successful Federal land-loan enterprise was inaugurated by Frederick the Great. At the successful close of Frederick's wars he found his people without money, without farming implements, utterly impoverished. He inaugurated the landschaft, a successful rural-credit venture, stripped his palaces of their riches and bought seed for the farmers of his realm, loaned them 60,000 cavalry and artillery horses with which to make their crops, and instituted, as above stated, a system of government loans secured by farm mortgages on reasonable time and terms. After more than a century a Democratic Congress has determined to follow in the footsteps of the great Frederick and extend Federal aid to the farmers of this land to discourage tenantry and encourage home making and home owning.

Interest rates already, it is said, have been lowered 1 per cent in anticipation of this legislation and already farm lands are enhancing in value for the same cause.

## Pensionable Status for Officers and Enlisted Men of the National Guard Drafted Into the Service of the United States in Time of Emergency.

### EXTENSION OF REMARKS
OF
### HON. WALTER R. STINESS,
OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. STINESS. Mr. Speaker, in section 111 of the national defense act of June 3, 1916, provision was made for the drafting of members of the National Guard and the Organized Militia of the several States into the service of the United States, "for any purpose requiring the use of troops in excess of those of the Regular Army."

Provision was made by section 112 of the said act that in case of war the members of the National Guard should have pensionable status under existing pension laws.

At the time of the passage of the act of June 3, 1916, it was not expected that the National Guard would be drafted except in time of war, and therefore the serving under an emergency call was not considered. However, events resulting from the expedition of the Regular Army into Mexico against Mexican bandits became such as to create, in the judgment of the President of the United States, an emergency, to meet which he has called out 100,000 men of the National Guard.

The prompt and generous response from all over the country testifies to the patriotism of the men of the National Guard. I want to say for the National Guard of Rhode Island that it is composed of patriotic young men, who are willing to serve in the defense of their country not for pay but from motives of patriotism and loyalty. They consider it to be their highest duty to enlist under the national flag and to defend it and their country's honor.

And while this is true, it is equally the duty of Congress to see that the men so enlisted in the country's cause and who risk their lives in that cause should be protected by every possible means from sickness and disease, and that if wounded or disabled they should be taken care of, and provision should be made for the support of those dependent upon them.

The various organizations of citizen soldiers comprising the National Guard called out by the President for this emergency are confronted with conditions akin to war itself and the performance of military duty the nature of which subjects them to the hazards and rigor of actual warfare and the consequent risk of life and limb and health.

Realizing all this, these men will perform their duty unhesitatingly and gladly, and I think Congress, as its duty, a patriotic duty, should now extend the rights of pensions to these soldiers and not wait until they are injured or killed and then make them or their families objects of the Government's charity.

Congress did provide in section 112 of the national defense act, as I have said, for pensions to the National Guard in time of war, but not for the present emergency, which may last a long time.

Section 112 reads:

SEC. 112. Rights of pensions: When any officer or enlisted man of the National Guard drafted into the service of the United States in time of war is disabled by reason of wounds or disability received or incurred while in the active service of the United States in time of war, he shall be entitled to all the benefits of the pension laws existing at the time of this service and in case such officer or enlisted man dies in the active service of the United States in time of war, or returning to his place of residence after being mustered out of such service, or at any other time in consequence of wounds or disabilities received in such active service his widow and children, if any, shall be entitled to all the benefits of such pension laws.

My amendment to the pending joint resolution makes this provision apply to the present emergency. It reads:

SEC. 3. That the provisions of section 112 of the national defense act of June 3, 1916, shall be applicable to any officer or enlisted man drafted into the service of the United States pursuant to section 1 of this joint resolution.

I sincerely hope there will be no objection to this amendment and that the House will consider it to be its plain duty to take care of the National Guard in this emergency as in time of actual or technical war.

## Scientific Management.

### EXTENSION OF REMARKS
OF
### HON. JOHN I. NOLAN,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. NOLAN. Mr. Speaker, under the privilege granted me to extend my remarks on House bill 16460, the Army appropriation bill, I desire to place in the RECORD the following extracts on the subject of "Scientific management," by Mr. Minor Chipman, a member of the committee of ten of efficiency engineers, which committee was organized to solicit funds for the purpose of opposing the Tavenner bill prohibiting the use of the stop watch and other time-measuring devices, as well as the bonus and premium systems, in the Government arsenals and workshops. The following extracts are from a statement made by Mr. Chipman to the commission consisting of Prof. Robert G. Hoxie, John P. Frey, and Robert G. Valentine, who were selected by the Commission on Industrial Relations to investigate the question of scientific management as it applied both to governmental and private industry, who investigated 35 plants, and which investigation covered over one year.

The statement is as follows:

"'Scientific management' seemed to me to be like the art of engraving, a splendid thing for making genuine bank notes, but a very bad thing when utilized by a criminal for counterfeiting purposes. 'Scientific management' was not inclusive enough. It was founded upon shop experience, and seemingly by men who had little or no concep-

tion of social and hygienic factors at work in industrial society. I saw that 'scientific management' could be made a force for good, and at the same time could be made a source of evil. I discovered, as the novelty of the thing wore off, that there was a distinct difference between principles and practices, that what we preached was quite different to what we actually practiced. Our enthusiasm for principle blinded us to such an extent that we did not, either for economic causes or lack of adequate conception face the truth, examine the failures, discuss the faults, and determine a scientific remedy. The trade-union's attitude toward 'scientific management' was either dodged or set aside with a new principle of reorganization of labor's forces. Such an attitude could not arrive anywhere. I believed that we must needs accept social standards as they are, labor organization as it is, and build with scientific assurance upon the foundations of society and not upon the foundations of principles involved for the purpose of justifying our system."

I find another section of his statement as follows:

"In a large factory manufacturing talcum powder the girls pasting labels on the cans were speeded up to three times their normal output by so-called 'scientific management.' This brought about a saving of, say, one-hundredth of 1 cent per can of talcum. The girls received 50 per cent more pay. The final question to be asked is whether or not the ultimate consumer cares one whit whether or not 500 or 5,000 labels are pasted in one day or whether or not the cost of producing a can of talcum is 7 cents or 7.01 cents. Society receives no return, either in price or quality. Society desires to know whether or not the speeding up of the girls pasting labels on the talcum-powder cans were injured physically in the speed demanded by 'scientific management.'"

Here follows the vital part of his statement:

"The observation of a time-study man is quite insufficient to satisfy this interest of society. The danger of overspeeding does not lie in an immediate breakdown, but through a gradual deterioration of the human machine, resulting in paralysis, nervousness, or occupational neurosis."

In another place I find Mr. Chipman saying:

"If there is one distinct difference between Mr. Taylor's conception of 'scientific management' and the conception held by the writer, it lies in the lack o' his system to scientifically cope with the human problems of industrial and commercial enterprises. It is not sufficient to make platitudinous statements, and deduce fine-sounding principles concerning human welfare in relation to 'scientific management,' but it is of first importance to see that the human equation, from every viewpoint, is considered adjusted and bettered."

## Against Conscription.

### EXTENSION OF REMARKS

OF

# HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. HUDDLESTON. Mr. Speaker, I would gladly remain silent during the discussion of this measure, but my conscience forbids that I do so. The measure is one of the very greatest importance. I doubt whether this body in all its history has considered a matter of more vital moment. It proposes to abandon the traditions which we have cherished from the beginnings of American history, to depart from an ideal rooted deep in our past and underlying the very foundations of our institutions. The question which we are now considering is whether we are to adopt the methods of European militarism, whether the principle of compulsory military service is to be recognized and approved as valid and legitimate.

The resolution under consideration empowers the President to draft the National Guard for service in the Mexican trouble, to use the militia, if he should be disposed to do so, in the conquest of Mexico. The word "draft," used as it is in the resolution, is a mere euphemism. In the sense in which it is used it is to me a most hateful word. The word "conscript" should be used, for that is at least plain and honest. What the resolution really does is to "conscript" the members of the National Guard for service in the United States Army. The purpose of the resolution is to seize on the men who have been entrapped into the militia and to force them, against their will, into the Army. They are to be forced as unwilling soldiers onto the firing line. Mothers are to be robbed of their boys and children of their fathers, so that the flame of battle may be fed. The conscripting officer is to become a common institution. He is to be the fireside guest and visitor at American homes. He is to be permitted to come into the homes of this land and to take away their cherished protectors to go as unwilling wearers of our uniform. Let us not for a moment delude ourselves with the thought that the "draft" is a mere formality. It is a real thing, real conscription, the same forced military service as exists upon European battle fields to-day.

The conscription of American boys is unnecessary. We are confronted with no real emergency. The adversary against which our mighty engines of war are being put in motion is a most humble one. Poor Mexico, distracted by revolution, impoverished, bleeding out her life's blood upon a hundred battle fields of civil war, is to be the object of our attack. Mexico, in her best and bravest days a poor match for the United States, is now, in the weakness of her sickness and poverty, to be assailed.

Mexico has a population of only about 15,000,000, about 40 per cent of which are Indians, 45 per cent mixed bloods, and less than 15 per cent whites. The United States has a population of 100,000,000 on continental America alone. According to the most recent figures available, Mexico's annual revenues are less than $75,000,000; our revenues are well above $1,000,000,000 per year. Mexico is torn and distracted internally, divided into many hostile factions, impoverished by rebellion after rebellion. Her soldiers are mere guerillas, without any sufficient arms or equipment. She has no fleet for the protection of her ports, no factories for the manufacture of arms and supplies, no foreign trade by which to obtain the instruments of war. The United States has the finest Regular Army in its history; its equipment represents all that money can buy and ingenuity devise. To-day our factories are turning out war supplies and munitions in unprecedented volume. We are better prepared for war to-day than ever in our history. We have a mighty fleet, more than three times as strong as at the outbreak of the Spanish War. In 24 hours we can blockade the Mexican coasts and shut off all intercourse with the outside world. If there ever was a time when no emergency justifying conscription existed, now is that time.

Oh, I do not doubt that Mexico will fight; I do not question the courage and patriotism of her people; but what can men do without arms and munitions and without money to buy them? Mexico's credit is at its lowest ebb. Her only money is paper currency, which is depreciated to a trifling per cent of its face value. The war will soon degenerate into a pursuit of bushwhackers and guerillas. Our soldiers called to the front will see plenty of service, but its chief hardships will be heat and thirst and hunger and the pursuit of bandits over deserts and rugged mountains. The conquest of Mexico and its pacification will take years, perhaps a decade, and we will be well weary of the task before it is done. It is, in the main, work for regular troops, not for men taken temporarily from business and industry.

The conscription of the members of the National Guard is unnecessary in another sense. These boys are willing to go; fully nine out of ten of them will gladly volunteer and go to the front. Only those will hold back who have families which require their presence at home—wives, mothers, and children, to whom they owe a higher duty than the duty of fighting under the existing circumstances. The man who leaves dependent ones to suffer or to exist on charity in order to go for service in the Mexican trouble performs no patriotic duty. There is nothing high or noble in such an action. It may even be an act of moral cowardice deserving of reproach. The one man out of ten who will not volunteer would much better be left at home if he has duties which keep him there or if he is too unpatriotic to fight.

Conscription of the National Guard as proposed by this measure is an insult to every patriotic guardsman. It is a gratuitous insult and affront. It places him in the Army, not as a patriotic volunteer, going gladly to the service of his country, but as a conscript, branded by compulsion. The passage of this measure places a stigma upon every man in the National Guard. These men will not be able in future generations to point to a record as volunteer soldiers. They will be able to point their children only to the record of a "conscript," of a soldier who had to be forced to fight. I am unwilling to place the brand of "conscript" upon the brow of the National Guardsmen.

I am able to understand the pride which a soldier may take in the name "volunteer." I remember well the bright Sunday morning of the 1st day of May, 1898, when I shouldered my rifle as a private soldier and started for the mobilization camp at the outbreak of the Spanish War. I had not even belonged to the militia, but had volunteered for the service of my country. I remember the pride that I took in myself and my comrades as volunteer soldiers. I was sustained and comforted throughout the trials of my service by the thought that I was serving freely and of my own accord, and always I have looked back upon my service as a soldier with a feeling of pride and added self-respect because I was a volunteer. I am unwilling to rob the boys who are now patriotically presenting themselves for service at the front of the proud name of "volunteer." I am not willing to brand them as conscripts, as those who must be forced to serve their country.

I know what a soldier must encounter even in camp, the privation, the hardships, the homesickness, the discouragement, the

disease, perhaps even death. Some of the boys who are torn from their mother's arms will not come back. They are going willingly, even gladly. I would not rob them of a single flower from the wreath of "volunteer."

The National Guard was organized chiefly under the act of 1914, which does not require service outside of the United States. Men enlisted under the law of 1914 for a period of three years only, knowing that they could not be used except for national defense and that they could not be sent into foreign service. All of these men have served a part of their enlistment and many have only a few weeks or months remaining to serve. All of these men, without regard to length of their enlistment or its terms, are seized upon under the pending measure and compelled to serve in the Army, not for the unexpired part of their enlistments but "during the entire emergency," not to exceed three years.

When the men belonging to the National Guard enlisted they entered into a contract and took an oath of service of a definite time and for a certain period. For any violation of that contract they are subject to punishment. Any violation of it constitutes a moral wrong. The pending measure assumes that the contract of enlistment is binding upon the guardsmen only, that it is not binding on the Government. The Government now proposes to itself violate that contract and to force these men to serve for a longer period than they had agreed and in a foreign service which they had not undertaken to perform. This constitutes a gross violation of faith with the guardsmen. They have been trapped into enlisting into the National Guard, and now, because of their training, they are to be forced into further and additional service. I hold that by this course our Government will be guilty of a gross moral wrong and injustice.

In all our previous wars volunteers have been relied on. Washington never commanded a conscript. Jackson had no conscripts under his command at New Orleans. In our colonial wars, in the War of the Revolution, in all our Indian wars, and in our previous War with Mexico only volunteers were used in connection with the Regular forces. Conscription was not resorted to. At the beginning of the Civil War, Congress authorized an army of 500,000 volunteers. In the darkest days of the Union, at the close of 1862, a measure of ostensible drafting was passed by Congress. It provided for the taking of names of men of military age in States which had failed to furnish their quotas of volunteers. It allowed exemption to be purchased upon payment of $300, and provided that any man drafted might furnish a substitute. The first attempt to enforce it caused rioting, with serious bloodshed in New York City. Out of 2,800,000 men who took part in the Civil War on the Union side less than 20,000 were enrolled under the drafting act. It can not be said that drafting contributed to any material extent to the preservation of the Union.

Since the settlement of America, except for the trifling drafts of the Civil War, no hour has been so dark as to demand conscription for public defense. Conscription is hostile to our ideals and institutions. It is dangerous; it is destructive in its tendences; it will prove harmful in the end. It is absurd to resort to conscription under the present circumstances, when we have heretofore so carefully avoided it. I wonder if the souls of the great American statesmen of the past, of the great Democrats who always opposed compulsory military service, are not disturbed to-day.

At the outbreak of the European war the British faced the central powers having only 175,000 regular soldiers. No greater crisis ever confronted any nation. Britain had a strong force of territorials, which had enlisted for home service only and which corresponds roughly to our National Guard. Though the emergency was great, there was no breach of faith with the territorials. The British Government's obligation was kept in dignity and good faith. Yet the great Government of the United States, with all its resources and power, confronted by an adversary pitiably weak, breaks faith with its National Guard and conscripts them for a foreign service and for a period for which they did not enlist.

It should be reiterated that the measure requires guardsmen to serve during the entire Mexican emergency, not exceeding three years, although there may be only a few weeks of their enlistment yet unexpired. Conscription of the whole people, of all able-bodied men, would at least have had the merit of equality. This conscription act has no such merit. It seizes only upon those of a special class—the guardsmen. It conscripts a select few, chosen because they have had some little military training and are, peradventure, better fitted to perform the service than other men. There are thousands of young Americans fit and capable for service, many of whom have seen service in the militia and in the Regular Army, who have no dependent wives and families and will be making no great sacrifice by enlisting, who are ready and willing to volunteer if given the opportunity. I would assert that in a real emergency 5,000,000 American soldiers can be raised as volunteers. The British raised over 4,000,000 volunteers in the present war, and have only recently passed a conscription law. I do not accord to any nation or people a higher patriotism than our own people possess.

It is enough to fill one with deep amazement that a measure for conscription should be proposed. That such a measure is unnecessary is most obvious. It is improper and uncalled for. Then why in the name of common sense should it be proposed? What is the occasion for it? The proposition to conscript men for service in the American Army at this time of no real emergency is merely a step in the march of militarism in which, little as it is realized by the great mass of the people, we have already gone a long way. The past two years have seen the greatest development of the spirit of militarism in the United States that ever occurred in our history. The militarists have seized upon the terror inspired by the great tragedy of the European war to fasten their views on our country. The influence of a powerful section of the press has been secured by fair means or foul. The ears of the people have been filled with clamor for soldiers, ships, arms, and equipment.

The present Congress has appropriated for military purposes, outside of the Mexican trouble, about $50 per annum for each head of a family in the United States. All this in obedience to the demand for "preparedness." The added burden of $50 per man, which, of course, must be met by indirect taxation, has been placed upon every father of a family in America. But this is only a small detail. Arrangements have been made and plans perfected for continued increases in our Army and Navy—increases to be augmented from year to year and from which there is no promise of relief. The increase in equipment and organization carries a necessity for increased enlistments. More men are needed and still more. And now the cry is that sufficient enlistments to keep up the strength of the Army can not be secured voluntarily; that we must have universal compulsory service. Conscription has at last raised its ugly head in America and must be dealt with as a vital issue.

Perhaps the people back at home do not realize it. Perhaps the common men in Alabama, Illinois, and elsewhere, the great masses, do not yet realize that there is a small but highly influential coterie in our country, a mere handful of men, but so powerful that they are able to shift the scenes upon the stage, control the sources of information, counterfeit the public voice, and mold popular opinion; that this coterie desire to import into America the military ideals that have been the curse of Europe. We have our militarists who are just as pernicious and active as those who have cursed the countries of the Old World; we have our militarists who would turn America into an armed camp and would subject our free citizens to military serfdom. The American militarists are anxious to try conscription here. It is their purpose to set a precedent, to accustom the people to the idea of conscription, to dignify compulsory service so that the people will more readily submit to it. I would not for a moment intimate that those who father or support the measure now before the House desire to carry out the purposes of the militarists. To the contrary, they are the mere puppets of the situation which the militarists have created. They are clutched by the system and can not break away. They are forced to yield. It is the irony of public service that those who have honestly and faithfully opposed the fell purposes of the militarists are compelled by the exigencies of the occasion to yield to a false public clamor at this critical juncture.

I claim for myself no wisdom nor patriotism superior to any who may support this measure. I do not compare myself with them at all. I am not concerned for their reasons, motives, nor processes. Each Representative has his own responsibility to meet and his own duty to discharge as he sees it. My big concern is that I shall do my own duty as an American Representative should. I have thought on this subject a great deal. I have considered it carefuily. I take my position upon it with all deliberation. Calling in question no Representative's wisdom, I assert for myself that the young men of the National Guard should not be conscripted. To draft them is to conscript them. There is no mistake about that. I assert that no circumstances exist which constitute an emergency, nor which justify conscription; that the national defense is not jeopardized; that the militia is willing to go voluntarily and does not need to be forced. I am unwilling to stigmatize our National Guardsmen as conscripts or to rob them of the honor of serving voluntarily. I refuse to join in establishing a precedent for conscription. I refuse to fix upon the American people the hateful methods of European militarism.

It is easier to go with the majority, to follow the crowd. It is easier to bow to the storm and to wait for fair weather. It is easier to yield to clamor when selfishness, insincerity, and prejudice use specious patriotism as an issue. For my personal convenience and interest, I should much prefer to meekly acquiesce in this measure. Conscience will not permit me to do so. My sense of duty to my country, my loyalty to American institutions and ideals demand that I stand firm. The glorious heritage from our fathers, the memory of their brave deeds and heroic sacrifices, the hopes which the honest lover of his country must ever cherish for its true greatness in the generations that are to come, force me to stand by my convictions. I do not doubt that I shall be criticized. My action will be made the further excuse for the wolf who would devour the lamb, but to such considerations I refuse to yield.

---

**Address of Representative Finly H. Gray, of Indiana, at the Battle Ground Cemetery, in the District of Columbia, May 30, 1914.**

---

## EXTENSION OF REMARKS

OF

## HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address of Representative FINLY H. GRAY, of Indiana, at the Battle Ground Cemetery, in the District of Columbia, May 30, 1914.

The address is as follows:

ADDRESS OF REPRESENTATIVE FINLY H. GRAY, OF INDIANA, AT THE BATTLE GROUND CEMETERY, IN THE DISTRICT OF COLUMBIA, MAY 30, 1914.

Soldiers of the Civil War and ladies and gentlemen, while great are the triumps of war, no less are the triumphs and victories of peace. The Gettysburg reunion or celebration of the fiftieth anniversary of that great battle was one of the great events of this country. In some respects it was a greater event than the capitulation of Lee. In some respects it was a greater epoch in history than the surrender of Appomattox. Appomattox was a surrender of arms. The Gettysburg celebration was a surrender of hearts. At Appomattox men yielded their contentions under force. At the Gettysburg celebration men gave up the strife dividing them apart for fraternity, brotherhood, and love. Appomattox was a triumph of war. The Gettysburg reunion was a triumph of peace. At Appomattox the South took the oath of allegiance to the Union. At Gettysburg both the North and the South pledged their hearts together to maintain the Union forever.

Following in the natural bent of the mind and a universal desire, men seek to avoid the decrees of time. They strive to save the name from perishing with the body; to hold up their names after death; to make their names live on after all that is mortal has fallen to decay.

Men build great monuments and raise enduring marble shafts to hold up their names after death. They erect great buildings, structures, and imposing statuary to hold up their names after death. Men climb to dizzy heights and chisel their names upon some high rock or lofty crag to hold up their names after death.

But in time the monument and enduring marble shaft will crumble away. In time the great building, structure, or imposing statuary will fall to the earth. In time the elements will erase the name chiseled in the high rock or overhanging crag. In time every vestige, trace, and evidence of the efforts of men in a material and physical way to perpetuate their names will be obliterated from the earth.

But the soldiers have built their monuments in the great principles of liberty, freedom, human rights, and self-government to endure as long as government endures among men. They have traced their names in the hearts of the people to live as long as men live and cherish free institutions. This great concourse of people will reassemble and meet again for generation after generation to honor and revere the soldiers and to hold up their names. These flowers will bloom again and again with each returning season as time goes on, to be laid upon the soldiers' graves as a token of love and gratitude and to hold up their name. The soldiers have builded better than they knew. He that humbleth himself shall be exalted, and he that offers himself as a sacrifice shall live forever.

It is always the source of great regret and disappointment for men in after years to realize that what they have stood for in life was wrong. And on the other hand it is always the source of great pride, pleasure, gratification, and consolation for men in after years to know that what they have worked for, or stood for, or contended for, or sacrificed for, or fought for was right. The Union soldiers have this great pleasure and consolation to cheer them in their declining years, to know that they fought for the right.

At the time of the Civil War the country was divided. The people were divided. Public opinion was divided. Sentiment and sympathies were divided. The rights and wrongs of the Civil War were contested and in dispute, and it could not be said at that time as a matter of fact that either the North or the South was right.

But time is a great analyzer of facts. Time is a great demonstrator of truth. Time is a great vindicator of principles and policies and men. Time will tell. In the great final analysis time will weigh and consider and determine the right.

We could not give the South to-day what they fought for 50 years ago. We could not give the South to-day the human slavery which they fought for 50 years ago. We could not give the South to-day the secession, the disunion, the confederacy which they fought for 50 years ago. The South would spurn such an offer with indignation and resentment. The country is no longer divided. The people, public opinion, sentiment and sympathies are no longer divided. The rights and wrongs of the Civil War are no longer in dispute. The South joins with the North and the whole Nation is in unison and accord. Time has rendered its verdict and decreed that what the Union soldiers fought for was right.

But war is force and might, and force and might do not make right and may determine the conflict for the wrong. But truth is mighty and will prevail. Truth crushed to the earth will rise again. No question is ever settled until it is settled right. If the issues of war are determined wrong the fires of conflict will only smoulder to break out anew again and again until the issues are determined right. And then, and not until then, will peace be lasting, permanent, and enduring. No fires of conflict have been left smouldering between the North and South. The country is again united. Peace is permanent, unbroken, and enduring. Weighed in the balance of time and tried by the test of half a century, the Union soldiers stand vindicated. The philosophy of history has confirmed the decree of time that what the Union soldier fought for was right.

We must know the cost in order to realize the value or worth of any human acquisition. We must know the denial, deprivation, the sacrifice, the hardship, the exposure, the want, and even dire distress—we must be schooled in adversity in order to learn the lesson of appreciation.

The rich man's son dissipates his father's fortune because he does not know the cost, because he can not realize its worth or value. He does not know the toil, the labor, the sacrifice, and the denial of his father in the accumulation of the wealth which he has inherited. He has not gone through the school of adversity in order to learn the lesson of appreciation and gratitude for the many blessings of life.

Sight, vision, is a great and priceless blessing. To be able to behold the face of nature, the mountains, valleys and hills, the streams, lakes, the sea, and the sky, and to look into the faces of our friends and those who are near and dear to us is a great blessing which we enjoy with indifference and want of appreciation and gratitude until we are stricken blind or with impaired vision, and then, and not until then, are we appreciative or grateful. And so it is with the faculty of hearing, with the ability to walk, the enjoyment of health, food, and drink, shelter, home, and other great natural blessings which we enjoy with indifference and without appreciation or gratitude until we are deprived or in want.

The soldiers know the cost of our free institutions. They know the cost in blood and treasure, life and limb, in health, and all that is near and dear in life. They realize their worth and value. They know denial, privation, sacrifice, hardship, exposure, want, and dire distress—they have gone through the school of adversity and have learned the lesson of appreciation of many great blessings of life which other men enjoy with indifference and disregard. They know the sacrifice of liberty and freedom which military life requires, and they are appreciative of the liberty and freedom of our civil life.

The soldiers know the cost. They realize worth and value. They have been schooled in adversity, and have learned the lesson of appreciation and gratitude for the many blessings of

life. They are our most appreciative, grateful, patriotic, and loyal citizens, because they know the cost.

But the verdict of time is not only a consolation to the victors, but it is a solace to the vanquished as well. The South has the consolation to know that what they failed in was not the right, was not what they actually cherished as sacred to preserve, but that they only failed in that which they did not wish and what they would not accept to-day if tendered to them. This is a greater consolation to men in their declining years than to realize that they were victorious against the right.

Time heals all wounds and cures all the defects in human affairs. Time is carrying us each year further and further away from the animosities and antagonisms of the great Civil War. The generation of to-day can discern only the faint outlines of that great struggle. The war generation is fast passing and the scenes of the conflict are fading from the minds of the living. The smoke from those great battlefields has lifted from the earth. The echo of cannon and the reverberation of artillery have died away with the receding past. The tumult of battle has been hushed into suppressed murmurs of regret. Save for the song of the lonesome bird or the drone of beetle, the stillness and silence brooding over those battlefields to-day is as appalling as the awful clash of war was terrible. The foliage, the verdure, and the vine have crept out over the battle grounds to hide the scars of war. The strife and bitterness of the past has been screened from the present by the great mantle of nature and the curtain of time. The war is over. Free institutions have been preserved. The country is again united, and the honor, the glory, and the gratitude of a great Nation of people are yours forever.

## The Hay Resolution.

### EXTENSION OF REMARKS
OF
### HON. MICHAEL K. REILLY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 23, 1916.*

Mr. REILLY. Mr. Speaker, the pending resolution authorizes the President to draft into the military service of the United States, under the provisions of section 111 of the national-defense act approved June 3, 1916, all members of the National Guard and of the Organized Militia of the several States, Territories, and the District of Columbia, and any and all members of the National Guard and Organized Militia reserves to serve for the period of three years, unless sooner discharged.

I shall vote for this resolution, not because I believe we are in a state of war at the present time with Mexico, or because it is certain that we are going to have war with Mexico, but because it appears to be imperatively necessary, as a result of conditions on the border between our country and Mexico, that additional troops should be provided in order to protect the lives and property of our citizens, and that such troops should be available for use across the line in Mexico in case of an emergency.

The National Guard as such are not available for use outside the territory of the United States.

I hope that it will be possible to avoid war with Mexico. The overwhelming sentiment of the American people is against war with Mexico or with any other country. There can be no doubt at all but that certain American influences are at work, and have been at work for some time, with the object in view of bringing about an armed conflict between our country and Mexico. These influences represent to a large extent that class of our citizens who have large property holdings in Mexico, although it can be said to the credit of some American citizens who have property holdings in Mexico that they do not belong to this class. I know American citizens who have large property interests in Mexico, but who are patriotic enough not to want war with Mexico. These men put the lives of American boys above their property interests in Mexico, while the other class of American citizens, who are property holders in Mexico, put the dollar above the man and have for their motto "The flag must follow the dollar."

President Wilson has taken a firm and patriotic stand against the forces that would involve our country in war with Mexico, and were it not for his insistence that the Mexican people be given an opportunity to work out their own political destiny in their own way and in their own time, our troops would long ago have been engaged in the pacification if not the conquest of our sister Republic.

President Wilson does not want war with Mexico and the overwhelming majority of the Members of Congress are opposed to war with Mexico. The President and his State Department have given to the Mexican Government and the Mexican people and to the whole world ample assurance that our troops are not in Mexico at the present time because of any desire on our part to acquire Mexican territory. Our troops are in Mexico to-day simply because the de facto government of Mexico is either unable or unwilling to protect the lives of American citizens along the border line between Mexico and the United States from the marauding bands of Mexican citizens who are in the habit of making frequent raids into the United States for the purpose of murdering and plundering our citizens.

I am opposed to war between this country and Mexico, because such a contest would result disastrously to both countries and because I consider the life of one of our American boys—the hope of some fond American father and mother—more valuable than the lives of a whole regiment of Mexicans and more worthy of protection than all the property that American citizens own in Mexico.

I am very much in favor of that part of the pending resolution that provides for the payment by the United States Government of not to exceed $50 a month to the families and dependent ones of the enlisted men of the National Guard during the time said men are in the service of their country.

The National Guard are not hired soldiers and they did not join their local companies for glory. These men have patriotically sacrificed their time, their money, and their energy in preparing themselves for just such an emergency as now confronts our country; they have left their homes, their different lines of employment, and, many of them, their wives and babies, to go to the front to offer themselves as a sacrifice upon the altar of war, and it would seem that the Government and the country, for which these men are willing to make such tremendous sacrifices, ought to make every possible provision for the care of the dependent ones and families of these men during the time that they are at the front in the service of their country.

The members of the National Guard who have dependent ones looking to them for support have not asked for any allowance or assistance from the Government. These men have willingly gone forth to the mobilization camps without any understanding or belief that the Nation was to do anything for their beloved ones at home; they did not hesitate to respond to the call of their country, notwithstanding the fact that many of them realized that in going to the front they were sacrificing their prospects for material success and the happiness and comfort of those dependent upon them.

The pay provided for private soldiers of 50 cents a day is a mere pittance and practically amounts to no compensation at all. The men who are willing to go forth from the ranks of private life to make up the armies of our country and to fight for our flag ought to at least receive sufficient compensation to enable them to continue to discharge their duties as a man and a citizen.

The fact that our country in the past has never seen fit to make provisions for the dependent ones of our soldiers is no argument why such provisions should not be made to-day. The fact that our country failed to do its full duty toward the families and dependent ones of our soldiers in our past wars is no reason why Congress should not do the proper thing at this time in the matter of looking after the wives, families, and dependent ones of the boys who have gone to the front in this crisis.

It is only a comparatively few of our citizens who can go to the front in an emergency of this kind, and it is no disparagement of the patriotism of those who do go to the front that those who stay at home make some sacrifices in order that the burdens of the ones that go may fall less heavily upon their beloved ones at home; and the man who stays at home and thereby escapes the sacrifices of war and who is unwilling to pay taxes enough to take care of the beloved ones of the men who go to the front is thoroughly unpatriotic and unworthy of the defense and protection of any flag or any country.

Fortunately, the present crisis has brought forth many evidences of a willingness on the part of the general public to make patriotic sacrifices in order that the burdens of war may fall less heavily upon the wives and families of our soldier boys. In almost every community throughout the land from which companies of the National Guard have gone forth to the mobilization camps meetings of citizens have been held to devise ways and means for rendering assistance to the dependent ones of the boys who have gone to the front. In this connection, I am proud to state that many employers of labor have announced that the wages of their employees who have gone to the front would be paid just the same, and that the position vacated to go to war would await the home-coming of the citizen soldiers.

This broad spirit of patriotism on the part of the general public and a great many employers of labor is certainly to be commended. This willingness on the part of those who stay at home to sacrifice and do something for those who go to war is, indeed, encouraging. Nothing has occurred in the recent history of our Government that demonstrates a higher and purer patriotism on the part of our citizens in general than this spontaneous outburst of patriotic efforts on the part of the "stay at home" to lighten the burdens of those who go to war. Such exemplifications of patriotic devotion to country and to humanity are encouraging, and while our country possesses such high types of citizenship it need have no fear of foreign invaders or internal foes.

---

**The United States Shipping Board.**

---

## EXTENSION OF REMARKS

OF

# HON. JESSE D. PRICE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, May 19, 1916.*

Mr. PRICE. Mr. Speaker, I consider this bill the third great charter in the regulation of American business and transportation. It establishes a board to regulate our commerce on the water and supplements the laws now in force regulating interstate commerce.

It was only a short time ago that the transportation business of the United States was in a most chaotic condition. There were practically no laws regulating the business of interstate railroads, and as a result the shipping public suffered, and the railroads suffered as well. It brought out a class of unprincipled men who would acquire railroads by any kind of schemes, water the stock, pocket the proceeds, and ruin the roads. Murderous and unscrupulous competition was used to destroy the business of railroads, and then when they were out of the way rates were raised, and shippers suffered as a result.

In order to regulate this matter a law was passed establishing the Interstate Commerce Commission. That has proved a wonderful blessing to the American people. The railroad business is now being conducted in a systematic and honorable way, to the great benefit of the roads themselves, as well as to the patrons of the roads.

Until very recently the general business of the country was under practically no regulation. Large corporations would take advantage of smaller ones, selling goods at a loss in order to drive out competition, and then increase their prices and make good every loss. The most gross injustice was often perpetrated, and the people called aloud for relief.

In response to this demand, the Sixty-third Congress enacted a law creating the Federal Trade Commission. It has control of individuals and corporations doing an interstate business much as the Interstate Commerce Commission has over interstate transportation.

No longer will large corporations be allowed, through unfair dealing, to squeeze out and ruin weaker competitors. In the long run the country will probably find this trade commission one of the most useful bodies we have ever established.

Now we propose to establish the third board, which shall be known as the United States shipping board, for the purpose of encouraging and regulating our merchant marine. I think you will all agree with me that it is high time that something substantial should be done to encourage the shipbuilding and maintenance of merchant vessels under the American flag.

In 1830, 94 per cent of all our sea imports were carried in American ships. At the breaking out of the Civil War 63 per cent was carried in American ships, while during 1915 only 18 per cent of our sea imports was carried in American ships. In other words, in 1915, of our total imports by sea of $1,526,269,412, only $281,334,841 was carried in ships flying the American flag. We pay an enormous freight bill each year to the owners of foreign ships.

The Democratic Party has always advocated the policy of "America first." This country is in a better position to build and operate ships than any other country in the world. We have raw material in unlimited quantity, both wood and steel; we have an almost endless number of harbors where shipbuilding establishments are, or can be, built; we have the most skillful workmen in the world. We are able to produce the steel which goes to build these vessels as cheaply as anywhere on earth, and there is no good reason why we should not have a great merchant marine if given the proper encouragement. This is the purpose of the bill now under consideration. It is like the Federal Trade Commission law, which is not intended to hamper and embarrass domestic business but to carry on investigations and make suggestions that will aid in the upbuilding of all kinds of local business.

Under the provisions of this bill the shipping board will consist of the Secretary of the Navy and the Secretary of Commerce, together with five commissioners, to be appointed by the President and confirmed by the Senate. One of the powers granted to it is to organize one or more corporations under the laws of the District of Columbia with a capital stock not to exceed $50,000,000. The United States Government may subscribe not less than a majority of the stock of each of these corporations. These corporations will have power to purchase, construct, equip, lease, charter, and operate merchant vessels in the commerce of the United States.

This does not mean that our Government is going to enter permanently into the shipping business or compete with private capital. Within five years after the conclusion of the present European war, the Government shall dispose of its share in these corporations and go out of the business.

The real purpose of this is to establish lines of trade and encourage private capital to embark in these enterprises.

There are regular lines of boats running between this country and all of the European countries, and it is easy, under normal conditions, to ship all we desire over those routes; but there are many parts of the world where the American flag is seldom, if ever, seen flying from a merchant ship.

One of the future outlets for our goods is the South American trade. There are always many uncertainties in establishing new lines of business and inducing capital to embark in them. We desire to establish regular lines of steamers between this country and the principal ports of Latin America. We wish to turn the trade of these countries this way instead of having it go to Europe. Without American ships it will be impossible for us to do this. We desire to have the ships purchased under the provisions of this act to open up this line of trade, and by the time the Government must dispose of its interest in these ships there will be a regular business started and on a good-paying basis. This business can then be boomed up by private individuals and corporations and continued indefinitely.

I do not believe the American people will ever consent to pay a regular subsidy to American ships in foreign trade any more than they would pay a direct subsidy for the establishment or maintenance of a business within our own country. You will remember under the McKinley Act a bounty of 2 cents per pound was to be paid on sugar, but the American farmers immediately inquired why they could not have a bounty on wheat. If we were going into the bounty business in other lines, they felt they should get some of it. It is a bad economic principle, and I am certain it never will be started here.

Great Britain is the principal shipping nation of the world; her tramp steamers carry the goods of all nations. She pays a subsidy only to those ships which are a part of the British navy. She does not pay any subsidy to the great mass of shipping which carries such a large share of the world's trade.

Many laws have been changed recently in this country making it easier to build and operate American ships. For one thing, the duty was removed from all material imported for shipbuilding purposes. This did not result in the importation of these materials, but it opened the door of competition and compelled the ironmasters of this country to sell the things needed for shipbuilding at a rate that kept out foreign competition.

The reason this law was necessary was because the steel manufacturers of this country were sending their products abroad and selling them to the shipbuilders there at a price low enough to meet the manufacturers in those countries while they were charging much higher rates for domestic consumption.

We also had a good many laws on the statute books which made the operation of American vessels more expensive than foreign vessels. A large number of these, however, have been changed, and in cases where it does not impair the safety of lives and property the other laws should and will be modified. It is a common saying among shippers that it is the hampering laws of this country which prevent them from building up a larger merchant marine.

Now, we do not want to hamper any line of business. It is the policy of the Democratic Party to encourage every legitimate enterprise. We are willing to go any reasonable length in the establishment of any business that will give employment to American labor and investment to American capital.

In order to encourage the building of American ships the shipping board created by this bill is given power to investigate the relative cost of building merchant vessels in the United States and in foreign countries, and the relative cost, advantages, and disadvantages of operating in the American trade vessels under United States register and foreign register. It is authorized to examine the navigation laws of the United States and the rules and regulations thereunder and make such recommendations to Congress as it deems proper for the improvement and revision of such laws for the development of the American merchant marine.

Each year, before the 1st day of December, it shall report to Congress the results of its investigations and its recommendations.

This is something of which those interested in foreign shipping have long felt the need. There has been a great difference of opinion about the relative cost of building and operating ships in this country and in foreign countries. The report of this board should clear the matter up for all time. The foreign trade of this country is going up by leaps and bounds. Those who have not kept close account of it will be astonished at what has happened on the sea during the last 20 years. The importations and exportations by sea have more than doubled during that time. To be exact, in 1895 our total foreign trade by sea was $1,456,403,388; in 1915 it was $3,992,625,475. You will notice from these figures that the increase in 20 years has been about two and three-fourths times. We have every reason to believe that the increase in the future will be even greater than in the immediate past. There is every indication of the greatest business boom the world has ever known. At this time the factories of our country are working overtime; that is, a great many of them are running nights as well as daytime. The only thing that hampers them is the difficulty of transporting their goods. In many cases it is impossible for the railroads to carry the products of our factories, and for many months we have had perfect congestion at our seaports. If we had a few hundred extra vessels, our export trade would be greatly increased.

I do not wish to in any way inject politics into this argument, but I must say that the Democratic Party is largely responsible for this tremendous business, both at home and abroad. The just laws which have been enacted since the beginning of the present administration have been a stimulus to every line of business.

The shrewd diplomacy of this administration has enabled us to maintain the honor and dignity of this Nation all over the world and at the same time has kept us out of all foreign wars. Our people are devoting themselves to useful occupations and accumulating riches that far exceed the wealth of the El Dorado.

The balance of trade in our favor this fiscal year will be about two billions of dollars. I do not think this is going to be a temporary boom, but, after we have secured foreign markets, the products of our factories will continue to flow there for an indefinite time.

One of the important features of this bill is that all of the ships acquired under it shall be considered a part of the Navy in time of war. They shall be engaged in regular mercantile pursuits when not needed by the Government, but whenever an emergency arises the President may call them at once into the Government service. This will be of inestimable value if, unfortunately, we should ever be forced to engage in a foreign war. This is somewhat on the same plan as that now followed by the British Government. There a mail subsidy is paid to the steamship lines, which may be called at once to assist the navy in time of need. It was in that way that England called into its service such a tremendous amount of shipping at the outbreak of the present war that she was able to convey her troops by the million and maintain them in foreign lands. If it had been necessary for her to enter into a separate contract with each of the owners of these vessels, it would have been a very slow and expensive process. Those who are in favor of American preparedness must heartily support this provision of the bill.

There is in this country a great organization known as the National Foreign Trade Council. It consists of about 50 of the leading business men of the United States. They are doing a great deal to increase our foreign trade. Recently they issued some recommendations to Congress for the purpose of assisting the country to secure foreign commerce by building up our merchant marine. Their recommendations have been so largely embodied in the provisions of this bill that I am going to quote them at length. They are as follows:

1. That Congress establish a permanent shipping board, composed of five members, who shall be men experienced in shipping and foreign trade. This board shall recommend to Congress such revision and modernization of all United States laws relating to shipping as it deems necessary, and shall permanently discharge all the functions of the Federal Government relating thereto. This board shall constitute a permanent advisory body, empowered to recommend to Congress the measures necessary for the maintenance of United States shipping upon an equitable competitive basis with other nations, always having due regard for the maintenance of American standards of living and compensation, and keeping in view the needs of the national defense and the necessities of the foreign trade. To this end the board should be directed to ascertain the cost of construction and operation, rates of interest on shipping mortgages, insurance rates, etc., of American shipping as compared with that of other nations, and it should be its duty to determine what line of ocean carrying trade shall be permanently developed under the American flag for the benefit of the foreign commerce of the United States, and to recommend methods whereby such lines may be rendered possible, in the event of the cost of their operation preventing effective competition with foreign services in the same zone.

2. That the board bring to the attention of Congress the necessity for modifications of the speed requirements of the mail act of 1891 in special cases, so that the establishment of mail communications with South America, South Africa, Australasia, and the Far East may be considered from the several points of view of the cost of operation of such lines and of the speeds at which it is desirable that these lines be maintained.

3. That the board so constituted shall likewise report upon the measures necessary to render investment in American shipping safe and attractive to private capital, and to increase the present resources of our systems of credit, as by the establishment of mortgage banks, to supply funds to the shipping industry for financing the construction of tonnage, and to throw around shipping mortgages such protection as to remove any apprehension on the part of investors regarding the safety of shipping propositions.

4. That the President be empowered to suspend the operation of such of the provisions of the seaman's act (applicable to American vessels, November 4, 1915; foreign vessels, March 4, 1916), as he may consider detrimental to the interest of American shipping, until Congress, having before it the advice of the shipping board, has revised and modernized the United States navigation laws; or, if this suspension be deemed not expedient by Congress, then that section 13 of the seamen's act be amended so as to eliminate the language test and the minimum percentages of able seamen among the deck crew, substituting therefore provisions equivalent to the requirements of the British merchant shipping act, and that the requirements of section 14 and annexed regulations concerning certificated lifeboat men, etc., be modified in conformity with the 1914 amendment to the British merchant shipping act.

The seamen's act, referred to above, was a bill introduced by Senator LA FOLLETTE, of Wisconsin. It throws more protection around seamen than any other act ever passed in this country. It goes in great detail into the various things of which sailors have rightly complained in the past. The only part of it to which serious objection is made is that which provides that 75 per cent of the sailors shall be able to understand the language of the officers in charge of the ship. This was largely intended to prevent the employment of Chinese, Japanese, and other foreigners who would work for less than half of the American scale of wages.

The part of this bill that will be discussed the most is not the part which I consider the most important. That feature relating to the Government becoming part owner of merchant ships is but a temporary matter and not of far-reaching consequence, but the establishment of the shipping board is a matter of importance to every one interested in our foreign commerce. If this bill becomes a law, it will simply complete the regulation of business on land and sea. It will encourage the building up of our merchant marine and, I believe, in time will be looked upon as one of the most important measures passed by the Sixty-fourth Congress.

## Choctaw and Chickasaw Per Capita Payment.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM W. HASTINGS,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. HASTINGS. Mr. Speaker, under leave to print, I am herewith inserting the regulations governing the per capita payment to the enrolled citizens and members of the Choctaw and Chickasaw Tribes of Indians in the State of Oklahoma, approved by the Secretary of the Interior on June 23, 1916.

The matter referred to is as follows:

REGULATIONS GOVERNING PER CAPITA PAYMENTS TO ENROLLED CITIZENS AND MEMBERS OF THE CHOCTAW AND CHICKASAW TRIBES OF INDIANS IN THE STATE OF OKLAHOMA.

The following regulations are hereby prescribed under the Indian appropriation act approved May 18, 1916, which reads, in section 19 thereof, in part, as follows:

"That the Secretary of the Interior be, and he is hereby, authorized to pay to the enrolled members of the Choctaw and Chickasaw Tribes of Indians of Oklahoma entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury or deposited in any bank or

held by any official under the jurisdiction of the Secretary of the Interior, not to exceed $300 per capita in the case of the Choctaws and $200 per capita in the case of the Chickasaws, said payment to be made under such rules and regulations as the Secretary of the Interior may prescribe: *Provided*, That in cases where such enrolled members, or their heirs, are Indians who by reason of their degree of Indian blood belong to the restricted class, the Secretary of the Interior may, in his discretion, withhold such payments and use the same for the benefit of such restricted Indians: *Provided further*, That the money paid to the enrolled members as provided herein shall be exempt from any lien for attorneys' fees or other debt contracted prior to the passage of this act, except that the Secretary of the Interior is hereby authorized within 30 days after the passage of this act to investigate claims not to exceed $1,950 growing out of contracts alleged to be in existence between John Calvin Gray, William T. Lancaster, Arthur Jennings, and Clyde Jennings, as enrolled members of the Choctaw or Chickasaw Nations, and Henry W. Blair, Kappler & Merillat, James K. Jones, Charles M. Fechheimer, and Eugene Hamilton, as attorneys, and in case such claims are found to be valid and the contracts approved in accordance with existing law, the said Secretary of the Interior may, in his discretion, apply any amounts that may be found due under this paragraph to the aforesaid enrolled members of the Choctaw or Chickasaw Nations to the payment of such fee, but the amounts due hereunder to other enrolled members of the Choctaw and Chickasaw Nations shall not be held in abeyance to this claim but shall be paid promptly without reference to same: * * *

"1. Payments hereunder shall be made under the supervision of the Superintendent for the Five Civilized Tribes or such other officers as may be designted by the Commissioner of Indian Affairs and by such special disbursing agent as the Commissioner of Indian Affairs may designate.

"2. The payments shall be based upon the final rolls of the citizens of the Choctaw and Chickasaw Nations, as approved by the Secretary of the Interior and corrected to date of payment. Such payments shall be in the aggregate sum of $300 per capita to the members of the Choctaw Tribe, exclusive of freedmen, and $200 per capita to members of the Chickasaw Tribe, exclusive of freedmen. No payment shall be made, however, under these regulations, of the amounts due in the cases of John Calvin Gray, William T. Lancaster, Arthur Jennings, and Clyde Jennings, enrolled members of the Choctaw or Chickasaw Nations, as the matter of the settlement of certain attorneys' claims against said named Indians and of the payment of any money due them under the above-quoted provisions of law will be the subject of further and special instructions.

"3. The term "restricted" as used in these regulations shall be held to apply to members of said tribes enrolled as of one-half or more Indian blood, from whose allotment of land the restrictions as to alienation have not been unconditionally removed as to every part thereof, and the term "unrestricted" shall be held to apply to all others entitled to participate in this payment. The term "minor" or "minors" as used in these regulations shall include all males under the age of 21 years and all females under the age of 18 years.

"4. Payments due unrestricted adults, in their own right, shall be made to them by official check to their order, except where they are under legal disability.

"5. Payments due unrestricted minors and unrestricted adults under legal disability, in their own right, where such persons have legal guardians or curators, shall be made to said guardians or curators upon satisfactory evidence being furnished the officers in charge of the payment of the appointment, sufficient bond and good standing of said guardians or curators.

"6. Upon a showing satisfactory to the officers in charge of the payment that no legal guardian has been appointed for any unrestricted minor to whom a payment is due, in his own right, such payment may be made to the father, mother, or other person having the care and custody of such minor: *Provided*, That in case any male or female is married, or in case of an unmarried male over 19 years of age, payment may be made to said person by official check to his or her order if, in the discretion of the officers in charge of the payment, it will be for his or her best interest so to do: *Provided further*, That all applications for a payment due an unrestricted minor having no legal guardian bear the approval of a United States probate attorney or field clerk, if, in the discretion of the officers in charge of the payment, such approval appears to be for the best interest of such minor. The officer in charge of the payment may, in his discretion, and if he believes it to be for the best interests of such unrestricted minor, decline to pay the money due in such case to any other than a legal guardian; and pending the appointment of such legal guardian by the court having jurisdiction, he may temporarily withhold such payment, wholly or in part.

"7. Payments due restricted adults, in their own right, shall be made to them by official check to their order, except where they are under legal disabil ty, and except in those cases where, in the discretion of the officer in charge of the payment, the amounts due should be withheld, wholly or in part. The amounts withheld shall be placed to the credit of the individual Indians entitled thereto, and shall be disbursed for the benefit of such Indians, under supervision as provided in department regulations concerning the handling of individual Indian money.

"8. Amounts due restricted minors and restricted adults under legal disability, in their own right, shall be placed to their individual credit and shall be disbursed for the benefit of such restricted Indians under supervision as provided for in department regulations governing the handling of individual Indian money: *Provided, however*, That where such restricted minors or restricted adults under legal disability have legal guardians or curators, payment may, in the discretion of the officer in charge of the payment, be made to such legal guardians or curators upon satisfactory evidence being furnished the officer in charge of the payment of the appointment, sufficient bond, and good standing of said guardians or curators, and provided such payment will, in the opinion of the United States probate attorney or field clerk, be for the best interests of such restricted minors or such restricted adults under legal disability.

"9. Where a payment is made to a legal guardian, original letters of guardianship will not be required, but a certificate of the probate court, bearing the approval of a United States probate attorney, showing the person executing the guardian's certificate to be the duly appointed, qualified, and acting guardian of the minor to whom said payment is due and that he has furnished good and sufficient bond, will be accepted and filed with the account.

"10. The act of Congress above quoted provides for payments to 'lawful heirs' of deceased members, and no payments will be made to administrators or executors; but where payments are due any person or persons as the heir or heirs of a deceased member of any of said tribes such payments shall be made to the heirs by official check to their order, or withheld for their benefit, wholly or in part, according to the respective class to which they belong, subject to the same regulations as are prescribed above relative to payments due persons in their own right.

"11. Before payment is made to the heirs of any deceased person proof of death and heirship satisfactory to the officers in charge of the payment must be made, and the finding of such officers upon such proof shall be final and conclusive for all purposes of these payments.

"12. The heirs of enrolled deceased persons entitled to payments hereunder shall be determined in all cases in accordance with the provisions contained in the agreements with their respective Indian tribes concerning the distribution of tribal funds to the heirs of deceased enrolled citizens who died prior to the receipt of their allotment or share of said tribal funds.

"13. All suspended or withheld payments, or parts thereof, shall be held in the Treasury of the United States, subject to proper requisition, or in the hands of the special disbursing agent or such other officer as the Secretary of the Interior may designate to have the custody of the same, such suspended or withheld payments, wholly or in part, to be disbursed at such times and in such amounts as the best interest of the persons to whom such suspended or witheld payments are due may demand, and in accordance with these regulations.

"14. The Superintendent for the Five Civilized Tribes will prepare a schedule showing all persons entitled to share in this per capita distribution, two copies of which schedule shall be forwarded to the Indian Office for use in examining and auditing the accounts of the special disbursing agent showing claims paid thereunder. It will not be necessary for the special disbursing agent to submit a complete roll of all entitled to share in these payments with his accounts at the end of each quarter. The special disbursing agent will, at the end of each quarter, submit a schedule or voucher covering only the claims actually paid during the quarter, and will continue said disbursements under these regulations until all claims are paid, or until further orders of the department.

"15. No arrangement shall be recognized or information furnished in the interest of any merchant, trader, or other creditor, nor shall their representative or collector be allowed in the offices where the payments are being made.

"16. Powers of attorney will not be recognized, nor will any order given by an Indian to another person for his share of the payment be honored.

"17. These payments shall be made by check and forwarded by registered mail to the person entitled to receive the same, and there shall be noted on envelopes containing checks a notice to postmasters requesting delivery only to the party addressed, and return receipt shall be required, except that checks not exceeding the sum of $20 may be forwarded by mail without registering: *Provided, however*, That checks may be delivered in person by probate attorneys or other employees of the Indian Service when deemed advisable by the officers in charge of the payment.

"18. All things necessary to making the payments referred to above, not otherwise specifically provided for in these regulations, shall be done under the authority and supervision of the Superintendent for the Five Civilized Tribes, or such other officer as may be designed by the Secretary of the Interior.

"19. For the purpose of these payments these regulations shall be held to supersede all other existing rules and regulations.

"E. B. MERITT,
"*Assistant Commissioner of Indian Affairs.*

"DEPARTMENT OF THE INTERIOR,

**Fodder for Machine Guns.**

## EXTENSION OF REMARKS
OF
## HON. CHARLES H. RANDALL,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. RANDALL. Mr. Speaker, under the unanimous consent given me by the House to extend my remarks in the RECORD, I insert the following editorial from the Washington Post of this morning, which is a good sign of returning sanity among American newspapers.

The editorial is as follows:

FODDER FOR MACHINE GUNS.

If the honor of the United States can be maintained by peaceful methods, who shall say that the Nation should go to war?

Those who want war must be willing themselves to sacrifice their lives upon the altar of national devotion.

None but a poltroon and coward would fail to make the sacrifice if the honor of the country were at stake, but only those who are in full possession of all the facts in the Mexican situation can decide what the national interest demands.

What man in public life, what official or orator in the market places, can say that he is more jealous of the national honor than are the people themselves? The honor of the Nation is safe in the hands of the American people.

And what are the people saying? What are they thinking as they walk through the streets? What are they saying about

their own supper table after they have returned from their daily work? In one of his speeches President Wilson said:

I would a great deal rather know what the men on the trains and by the wayside and in the shops and on the farms are thinking about and yearning for than hear any of the vociferous proclamations of policy, which it is so easy to read by picking up any scraps of printed paper.

Those who are expected to sacrifice their lives upon the battlefield, the fathers and mothers who yield their sons and who yield them willingly when the honor of the Nation is at stake, should have something to say about the question of war.

Two million of the men of Europe lie in their graves as a result of the mad war that is still in progress, and yet the honor of the nations involved has not yet been satisfied.

At Verdun 300,000 of the finest men of France, Germany, and England lie dead. The toll demanded by European statesmanship steadily is mounting, and the end is not yet in sight.

Of the 2,500,000 men who were in the Civil War on the Northern side, more than 1,000,000 were below the age of 21 years, and the fathers and mothers, sisters and sweethearts were left behind to agonize and mourn.

It is not the corporations, the landowners, or the captains of industry who have the vital interest in the question of war or peace. It is not the politicians or orators, the organizations of public preparationists or public pacifists that have the most at stake. It is the average citizen—the citizen who earns his bread by the sweat of his brow, the citizen who loves his family and wants to continue giving that family his support and protection who has the most at stake.

Those orators who cry out for a given course of action in the name of the national honor without having before them all the facts that affect the national interest in a crisis merely demonstrate their lack of responsibility and their callous selfishness.

It speaks well for the wisdom of the American people that they have never elected a President who has been stampeded into war by false advisers or critics.

Great as has been the horror of the European war, strong as is the desire to preserve the strength of the United States for the more civilized purposes of humanity, the American people as a unit will be ready to fight and to die if it should be necessary to preserve the national honor.

On the one side in the Nation to-day, as in all crises of the past, there are those who, without knowing all the facts on which the great decision must be made, argue for immediate action against Mexico, regardless of the consequences. On the other side are those who are praying that peaceful means of protecting the Nation's honor shall be completely exhausted before there is recourse to arms and to the sacrifice of the blood of American soldiers.

President Wilson, with all the facts before him, was able to win a diplomatic victory in the submarine controversy, satisfying this Nation's honor without the frightful toll of war.

The President of the United States alone knows the facts in the Mexican situation. He alone can make the decision that will conserve the national interests. While orators are making their arguments in public places, the people, by wire and letter, are telling the President that they, who must make the sacrifices and who will not ask that some other mother's son make it for them, want peace so long as it is compatible with the Nation's honor.

---

**Address of President Wilson.**

## EXTENSION OF REMARKS
OF
## HON. DAN V. STEPHENS,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. STEPHENS of Nebraska. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address made by President Wilson at Philadelphia yesterday before the Associated Advertising Clubs of the World.

The address is as follows:

Mr. Wilson said:

"I understand, gentlemen, that you have associated yourselves together in order to promote candor and truth in the advertisement of your business. I wish very much, gentlemen, that candor and truth might always be the standard of politics as well as the standard of business. I do not see how a man can devote himself to candor and truth in the promotion of a particular business without studying the life of the great Nation to whom he addresses his advertising. I do not see how a man can fail, having established the horizon of his business where the great hills of truth lie, to lift his eyes to the great multitude of laboring men and striving women who constitute a great Nation like ours, and in the very act of addressing them get in his own consciousness some part of the impulse of their life. You can not commend your business to people that you do not understand and you can not understand the people of the United States without wishing to serve them.

MUST PUT IDEALS IN ACTION.

"So I come to you with this thought: America is at a point, gentlemen, where it is more than ever necessary that she should understand her own ideals not only but be ready to put them into action at any cost. It is one thing to entertain fine principles and another thing to make them work. It is one thing to entertain them in the formulas of words, like the splendid words which were uttered, and give distinction to this ancient and historic building behind me, but it is another thing to do what these same men did, make those words live in the action of their lives. And America is summoned in each new generation to renew not only the pledges that those men made but to renew the example which they gave to the world.

"I am not interested, and I beg that you will believe me when I say that I never have been interested, in fighting for myself, but I am immensely interested in fighting for the things that I believe in, and so far as they are concerned, I am a challenger to all comers. It is important, therefore, since I am in fighting mood, to let you know what are some of the things that I do believe in.

WANTS AMERICA PUT FIRST.

"In the first place, I believe, and I summon you to show your belief in the same thing, that it is the duty of every American in everything that he does in his business and out of it to think first not of himself or of any interest which he may be called upon to sacrifice, but of the country which we serve. 'America first' means nothing until you translate it in what you do. So I believe most profoundly in the duty of every American to exalt the national consciousness by purifying his own motives and exhibiting his own devotion.

"I believe, in the second place, that America, the country that we put first in our thoughts, should be ready in every point of policy and of action to vindicate at whatever cost the principles of liberty, of justice, and of humanity to which we have been devoted from the first. You cheer the sentiment, but do you realize what it means? It means that you have not only got to be just to your fellow men but that as a nation you have got to be just to other nations. It comes high. It is not an easy thing to do. It is easy to think first of the material interest of America, but it is not easy to think first of what America, if she loves justice, ought to do in the field of international affairs.

"I believe that at whatever cost America should be just to other peoples and treat other peoples as she demands that they should treat her. She has a right to demand that they treat her with justice and respect, and she has a right to insist that they treat her in that fashion, but she can not with dignity or with self-respect insist upon that unless she is willing to act in the same fashion toward them. That I am ready to fight for at any cost to myself.

FOR RULE OF THE PEOPLE.

"Then, in the third place, touching ourselves more intimately, my fellow citizens, this is what I believe: If I understand the life of America, the central principle of it is this, that no small body of persons, no matter how influential, shall be trusted to determine the policy and development of America. You know what you want in your business. You want a fair field and no favor. You want to be given the same opportunity that other men have, not only to make known what you have to sell, but to sell it under as favorable conditions as anybody else; and the principle of the life of America is that she draws her vitality not from small bodies of men who may wish to assume the responsibility of guiding and controlling her, but from the great body of thinking and toiling and planning men, from whom she draws her energy and vitality as a Nation.

"I believe—and this is the reason I am a Democrat, not merely with a big 'D,' but with a little 'd'—I am all kinds of a Democrat, so far as I can discover; but the root of the whole business is this, that I believe in the patriotism and energy and initiative of the average man. Some men say they believe in it; when they act they show that they do not. They show that they think the only advice that is safe to take is their advice.

FEELS SAFE WITH MASSES.

"I was not referring to any individual, but I could give you an interesting and a very short list of a group of individuals who have that opinion, namely, that it is not safe for the United States

to escape from their control. I feel perfectly safe in the hands of the average body of my fellow citizens. You are bound to feel safe in their hands. If they do not believe in you, you can not sell anything. If they do not believe in you, you can not conduct your business. Your vitality comes from them to you; it does not go from you to them. The theory of government which I decline to subscribe to is that the vitality of the Nation comes out of closeted councils where a few men determine the policy of the country.

"So, gentlemen, I feel at home in this company, not because I advertise, but because I have got principles that I am perfectly willing to expose to the public view and because I want to express not only my sympathy with but my admiration for a body of men who think it is worth while to get together in order to tell the truth. The only thing that ever set any man free, the only thing that ever set any nation free, is the truth. A man that is afraid of the truth is afraid of the law of life. A man that does not love the truth is in the way of decay and of failure, and I believe that if you will just let the vitality that is in you and the enthusiasm that is in you run beyond the confines of the business that you may be interested in, you will presently feel that infinite reward as if the red blood of a whole nation came surging back into your own veins.

INSPIRING TO BE FREE.

"Can you imagine, my fellow countrymen, a more inspiring thing than to belong to a free nation and make your way among men every one of whom has the right and the opportunity to say what he thinks. Criticism does not hurt anybody. I heard an old politician once say to his son, 'John, don't bother your head about lies and slanders; they will take care of themselves. But if you ever hear me denying anything, you may make up your mind that it is so.' And when you see a man wincing under criticism, you may know that something hit him that was so. And therefore when they are saying the things that are not true, there is no credit in keeping your head and not minding it. I have such an inveterate confidence in the ultimate triumph of the truth that I feel, with old Dr. Oliver Wendell Holmes, that the truth is no invalid, and you need not mind how roughly you handle her. She has got a splendid constitution, and she will survive every trial and every labor.

WANTS IDEALS IN BUSINESS.

"Business is all right so long as it is not sordid, and it can not be sordid if it is shot through with ideals. A man, no matter how humble his business, can hold his head up among the princes of the world if, as he ought to do, he will think of himself as the servant of the people and not as their master; as one who would serve and not one who would govern.

"I congratulate you, my fellow citizens, upon the ideals of a profession which can lower or exalt business, as you choose, and which you have chosen to employ for its exaltation. I came away from Washington to look into your faces and get some of the enthusiasm which I always get when I come away from officialdom and touch hand to hand with great bodies of the free American people."

---

**Water Power Development.**

---

# SPEECH

OF

# HON. JOHN K. SHIELDS,

OF TENNESSEE,

IN THE SENATE OF THE UNITED STATES.

*Wednesday and Friday, February 9 and 11 (legislative day of February 9), 1916.*

The Senate had under consideration the bill (S. 3331) to provide for the improvement of navigation for interstate and foreign commerce, and the development of water power in the navigable rivers of the United States.

Mr. SHIELDS. Mr. President, this bill was introduced under what is known as the commerce clause of the Constitution of the United States, Article I, section 8, paragraph 3, conferring upon Congress the power "to regulate commerce with foreign nations, and among the several States and with the Indian tribes."

The power and jurisdiction of Congress under this clause over foreign and interstate commerce is absolute and unlimited, otherwise than by provisions of the Constitution, and includes trade and traffic and all the means and instrumentalities convenient and necessary for carrying on commerce. It extends to transportation of every kind and authorizes the improvement of the navigable waters of the United States for that purpose by such means and agencies as Congress may consider proper, and there is no constitutional objection to the improvement of navigable rivers by the use of private capital, as proposed in this bill.

There are in the United States some 50,000 miles of rivers classed as navigable, but about one-half of them are unavailable for commerce without the removal of obstructions and the construction of dams and locks for the purpose of passing vessels over falls and rapids. There is no country in the world that has greater natural inland waterways than this, and with proper improvement they can be made to contribute as much to its commercial and industrial wealth as any of its other great natural resources. This has been recognized for many years, and some of the ablest men of the country have devoted much time and study to this work, and in this way providing for our people cheap and effective water transportation. The Congress has had nearly all of these rivers surveyed and plans and specifications made for their improvement, with estimates of the cost, by competent engineers, and in the last 50 years it has appropriated and expended for such improvements more than $800,000,000. The work has hardly begun, and it will take many years and many hundred millions of dollars to complete it. I have no doubt that some day all of these rivers will be improved and open to navigation, but it can not be denied that there is now in the United States a strong influence opposing their further improvement. Whether this opposition comes from the great transportation companies of the United States which would be affected by the cheaper water transportation, or from other sources, is immaterial.

It is here and has succeeded in defeating the rivers and harbors appropriation bills for two sessions of Congress. But if the Congress were inclined to make appropriations for this purpose there are many rivers which can not be improved in this way for years to come, because of the immense expenditure required.

It would seem, Mr. President, that any plan whereby private capital can be obtained and invested in improving these rivers, for which no public appropriation can now be made, should have the support of every citizen interested in furnishing cheap and convenient transportation for the products of agriculture, manufactories, mines, and the forests of the country, and for the welfare of the people. This is one of the great objects which it is proposed and believed this bill will accomplish, and that without much delay and in the near future.

The improvement of navigation is the only constitutional warrant which the Congress has for enacting this bill into law, but the development and utilization of the vast water-power resources of the navigable rivers of the United States, worth many million dollars and now idle and daily and yearly running to waste, which may be lawfully joined with it, are of equal importance and will contribute as much to the industrial wealth and prosperity of the country.

These two objects of the bill, the improvement of navigation with private capital and the development of water power, must go together. The investment of private capital for the public purpose of improving navigation can not be obtained without the concurrent development of private property for individual profit.

The bill does not provide for any appropriation from the Public Treasury or any concession of property interests of the United States. It permits riparian proprietors along navigable rivers to construct dams in them for the purpose of developing water power for manufacturing purposes, to be equipped with all necessary locks and other facilities for navigation, at their own expense, according to plans and specifications approved by the Secretary of War and Chief of Engineers. In other words, the bill proposes a method for the improvement of navigation in navigable rivers without cost to the United States, by permitting the riparian proprietors to develop and utilize the water power in those streams.

The development of the water-power resources of the country is of no less importance to the people than the improvement of our waterways. Manufacture comes before commerce and transportation and it is necessary to promote and successfully prosecute it to make them possible. Power is indispensable to all manufacturing industries. Whatever creates mechanical energy which can be successfully applied in industrial operations is necessarily of great value and contributes to the wealth of the country. It has been well said that our great coal supplies and unsurpassed water possibilities for the production of cheap power in large quantities are the greatest assets which this country will have in future industrial rivalry with other nations of the world. We are now using our coal in generating steam in quantities that are staggering to the minds of those familiar with such matters but with results that are marvelous in their success and contribution to the prosperity of the country.

There are, however, some industries of comparatively recent invention and discovery which can not be successfully carried on with steam power and imperatively require cheaper energy in large quantities, which can only be obtained by the development of the potential water-power resources of our navigable rivers.

Mr. Herbert Knox Smith, Commissioner of Corporations of the United States, in his report for 1912, estimates the minimum horsepower afforded by all the streams of the United States at 32,082,000 and the maximum 61,678,000, exclusive of that which can be made available by storage, which is estimated at 200,000,000 more.

The maximum possible development, exclusive of storage, according to this estimate, is distributed in the several States as follows:

| | |
|---|---|
| North Atlantic States: | |
| Maine | 971,000 |
| New Hampshire | 295,000 |
| Vermont | 206,000 |
| Massachusetts | 273,000 |
| Rhode Island | 16,000 |
| Connecticut | 164,000 |
| New York | 2,037,000 |
| New Jersey | 127,000 |
| Pennsylvania | 821,000 |
| | 4,910,000 |
| South Atlantic States: | |
| Delaware | 13,000 |
| Maryland | 146,000 |
| District of Columbia | 13,000 |
| Virginia | 1,044,000 |
| West Virginia | 1,261,000 |
| North Carolina | 1,050,000 |
| South Carolina | 812,000 |
| Georgia | 752,000 |
| Florida | 16,000 |
| | 5,107,000 |
| North Central States: | |
| Ohio | 213,000 |
| Indiana | 141,000 |
| Illinois | 414,000 |
| Michigan | 352,000 |
| Wisconsin | 804,000 |
| Minnesota | 593,000 |
| Iowa | 458,000 |
| Missouri | 195,000 |
| North Dakota | 248,000 |
| South Dakota | 90,000 |
| Nebraska | 439,000 |
| Kansas | 323,000 |
| | 4,270,000 |
| South Central States: | |
| Kentucky | 236,000 |
| Tennessee | 913,000 |
| Alabama | 1,132,000 |
| Mississippi | 75,000 |
| Louisiana | 2,000 |
| Arkansas | 73,000 |
| Oklahoma | 250,000 |
| Texas | 661,000 |
| | 3,342,000 |
| Western States: | |
| Montana | 5,197,000 |
| Idaho | 3,080,000 |
| Wyoming | 1,566,000 |
| Colorado | 2,036,000 |
| New Mexico | 527,000 |
| Arizona | 2,038,000 |
| Utah | 1,581,000 |
| Nevada | 331,000 |
| Washington | 10,376,000 |
| Oregon | 7,935,000 |
| California | 9,382,000 |
| | 44,049,000 |

Another estimate, recently made by Mr. George Otis Smith, Director of the Geological Survey, fixes the aggregate available water power of the United States at 55,000,000 horsepower.

Mr. Secretary Garrison stated sometime ago before the House Committee on Interstate Commerce, which had under consideration a bill similar to this, that the available water power in the navigable streams of the United States was 7,000,000 horsepower, and that the possible development in the headwaters or upper reaches of those streams was 20,000,000 horsepower. This estimate is directly pertinent, as the provisions of this bill are confined to navigable rivers. While these estimates vary considerably they all show the magnitude of this vast and valuable natural resource.

Astounding as the statement may seem, and great as it apparently reflects unfavorably upon the intelligence, enterprise, and progress of the American people, it is nevertheless a fact that not more than 5,000,000 horsepower of this vast, valuable, natural energy has been improved and made to contribute to the wealth of our people. I will undertake, however, to show that this is not the fault of our great civil, hydraulic, and electrical engineers, nor of those who have ever been willing to invest capital in the development of the resources of their country when a reasonable return upon the investment and protection of their property is afforded, but that it is caused entirely by a false policy of conservation which for awhile exerted some influence in the Congress and succeeded in placing upon our statute books certain impracticable, restrictive, and confiscatory laws which have absolutely throttled and prohibited water-power development in the United States, notwithstanding the great beneficial results that are known to have followed the utilization of that power by other countries of the world.

The industrial progress of a country is largely measured by the power or energy which its people create by proper use of its natural resources and apply to manufacture, transportation, and all other useful purposes. The statistics of the Bureau of the Census show that the primary power equipment in the United States in commercial and municipal central stations, street and electric railway stations, and manufacturing plants, in 1912, was 30,448,246 horsepower, of which 80 per cent was steam power, and that more than one-half of this was to be found in the States of Pennsylvania, New York, Massachusetts, California, and Michigan.

I have no estimate of the power used in transportation by commercial railways and steamships, but the value of the fuel, chiefly coal, consumed annually by railroad locomotives, as shown by statistics compiled by the Interstate Commerce Commission, is about $243,000,000. The annual consumption of coal in the United States for all purposes is shown by reliable estimates to be about 480,000,000 tons, valued at about $1,000,000,000. While the coal fields of the United States will unquestionably supply the needs of the country for a century or more they are not unlimited or inexhaustible and the coal most accessible and most cheaply mined is being consumed first while the price is steadily increasing. The only known fuels which can be economically used for the same purpose as coal are oil and gas, and, according to the belief of geologists, these will be exhausted within a few decades.

The Commissioner of Corporations, in the report from which I have read, speaking of the comparative use of steam power produced by coal and other fuels, and the possible use of water power, further said:

> Water power is unlike most natural resources in that it is not diminished by use, nor is it conserved by nonuse. Coal which is not used to-day remains to be used hereafter, but the energy of water, which is allowed to flow by unused, neither increases nor diminishes the future supply, but it is irretrievably lost. Our supply of coal—the principal source of energy—while vast, is not unlimited. The utilization of water power results in the saving of coal for future use. In other words, the real waste of water power is its nonuse, while its development effects a conservation not only of water power but of our fuel supply as well.
>
> The importance of effectually utilizing the water powers of the country is therefore obvious. The power now (February, 1912) required to operate the industrial enterprises and public-service utilities of the country (excluding steam railroads and vessels) can be safely estimated at not less than 30,000,000 horsepower. Approximately 6,000,000 horsepower is now generated by water; the rest is generated from fuel, mainly coal. The quantity of coal required to produce a horsepower hour in steam varies according to the quality of the coal and the size and efficiency of the engines. It is claimed that under the most favorable condition, a pound of coal can be made to produce 1 horsepower per hour. From this minimum the estimated quantity ranges as high as even 6 or 7 pounds. Assuming, however, that on the average a horsepower hour in steam can be produced by 3 pounds of coal (and this quantity probably understates the average quantity of coal required, and the corresponding saving by the substitution of water power) the power now produced by water saves at least 33,000,000 tons of coal per year. This is based on a 12-hour day.
>
> By reason of distance from markets, cost of development, and other causes, it will doubtless be many years before a quantity, equal to even the "minimum potential" water power of the country—32,083,000 horsepower—can be advantageously developed. It is certain, however, that under favorable conditions several additional millions of horsepower can now profitably be developed from water, thus effecting a still further conservation of our fuel. The millions of water power economically available but undeveloped represent absolute waste.

I do not wish to be understood as asserting that the water power of our streams, if fully developed and utilized, will cover all the field now occupied by steam power and answer all its purposes, for such is not a fact. Generally speaking, water power is only available in the mountainous sections of the country, and in a number of States the quantity is negligible, while steam power plants can be located anywhere, and the power produced in small or large quantities according to the demand and the use required. Water power can never compete with coal in sections where it is found in great quantities and cheaply mined or in generating steam for the operation of commercial railroads, steamboats, or ships upon our rivers and the high seas; nor will it come in competition with steam power in the great manufacturing centers remote from the rivers. These two great sources of mechanical energy are both necessary for industrial purposes, each in its particular

field and for the particular uses for which it is best adapted and can be most profitably used. There is no conflict between them when the interests and necessities of the entire country and the people of all sections are considered. The great growth of population and unparalleled industrial progress of our country are constantly requiring more mechanical energy and for some purposes cheaper energy in large quantities, which can only be obtained from falling waters.

I am informed that there is now an urgent demand for 4,000,000 horsepower of hydroelectric power for manufacturing purposes requiring cheaper power than that generated by steam, and that adequate capital is now waiting and ready to be invested for its production when our prohibitory laws are so amended or repealed as to allow it to be done by the improvement of private property in and on navigable rivers, as proposed by the provisions of this bill.

Mr. President, the value of water power has been known for centuries, and has been made to serve the purposes of man in many ways, but by the wonderful discoveries and inventions of the present age its value and use have been increased almost beyond measure and computation. For many years the energy produced by it was used by direct application from the water wheel to the machinery which it operated, and was restricted to the banks of the streams where the power was produced. The use of water power in this direct and restricted way is of great value and contributes immensely to the cheaper production of many manufactured products and would more than justify the development to its fullest extent. But the great, and I may say the imperative, demand and necessity of the development of the water power in our navigable rivers is for cheap power in great quantities for the generation of hydroelectricity.

The conversion of water power into hydroelectric energy is one of the greatest of the many wonderful achievements accomplished by the genius of our great hydraulic and electrical engineers. The electrical energy generated by the falling waters may be transmitted from one to two hundred miles and distributed over thousands of square miles of territory without appreciable loss, there to be applied and used for all industrial purposes. The cheapness of its production makes it available for all the varied uses and activities of this day. It illuminates and heats our towns and cities and operates manufacturing plants of every kind. It pumps water to irrigate hundreds of thousands of acres of arid but fertile lands which were before waste places and deserts, making them produce fabulous crops and to serve almost every imaginable domestic convenience and necessity requiring mechanical power. It furnishes motive power for street and interurban railways and is used to a limited extent to operate commercial railroads.

The greatest hydroelectric development in the United States has been made in the great water-power States of Montana, California, and in the mountainous States of the Middle West, chiefly, as I understand, upon streams that are unnavigable in the legal sense and where the blight of the legislation this bill is proposed to take the place of has not prohibited it. There is one company in Montana with a capital of $85,000,000 which furnishes hydroelectric power so cheaply that the cost of operating street railways, illuminating towns, and the machinery of the great copper and other mines of that State has been and is now reduced almost one-half the amount before paid for steam power, making it possible for the current to be used for all domestic purposes. There are many houses in Montana in which fires have never been built.

This company also supplies the Butte, Anaconda & Pacific Railway Co. with motive power for its locomotives on a line of 150 miles, effecting a reduction in the cost of operation of about 33 per cent. The Chicago, Milwaukee & St. Paul Railway Co. will soon substitute electrical power supplied by it for steam power with the expectation of a like reduction in operating expenses, but this use to some extent at least is made possible by the cost of the transportation of coal from distant fields.

The greatest and most important of all uses of hydroelectricity is in heating and operating powerful electrical furnaces for manufacturing purposes of many kinds, some of which can not be carried on by any other means. I refer especially to the fixation of atmospheric nitrogen for the manufacture of agricultural fertilizers. Nitrogen, or ammonia, is the chief constituent element of agricultural fertilizers, and nitric acid is necessary in the production of smokeless powder and other high explosives. That which we now use for these purposes is obtained chiefly from Chile in the form of nitrate of soda, our annual importations being about 600,000 tons of the value or cost of $21,000,000. The Chilean deposits of nitrate of soda are the only ones known and all the countries of the world have obtained their supplies from them for many years. It is now estimated that these deposits will be exhausted in the course of some 10 years. If this is true or we should be cut off from them by a superior naval power in time of war, our agricultural interests would be seriously crippled and national defense made impossible. These facts are not controvertible and we must provide for such contingencies. We have it in our power to do so. Nitrogen can be manufactured from the air in quantities to answer all our purposes. Four-fifths of the atmosphere that surrounds us and that we breathe is composed of this colorless, odorless, nonmetallic, gaseous element. The supply is ample for all purposes and is inexhaustible. Modern science, after years of research and experiment by processes of fixation, in the use of the electrical furnace has made atmospheric nitrogen available for all the uses made of Chilean saltpeter.

There are two methods or processes for the fixation of atmospheric nitrogen, one called the arc process, and the other the cyanimid process, but I will not undertake to describe them. They are both successful and each has its special advantages. The fact that nitrogen can be obtained from the air in quantities sufficient for all purposes required, and at a little less than half the cost of Chilean saltpeter, is now well established. Great nitrogen-manufacturing plants, representing investment of many millions of dollars, are in successful operation in Norway, Sweden, Germany, Switzerland, France, Italy, Japan, Australia, and just across our border in the Province of Ontario, Canada. These countries were all quick to grasp the value of this great achievement of modern science and the advantage, if not the necessity, of providing within their own territories an abundant and economical supply of nitrogen, and have devoted much of their water-power resources to the generation of cheap hydroelectricity for that purpose. Germany alone has a hundred million dollars so invested. She has also an immense plant operated by steam produced by coal, but only military necessity will permit this, the cost being too great for industrial purposes. Practically all the vast quantities of explosives now used in the great war raging in Europe are made from air nitrogen, and much left for the manufacture of fertilizers. We are importing some that we use from Norway and more from Canada.

Mr. NELSON. Mr. President, if the Senator will permit me, I desire to say that the pioneer industry of manufacturing nitrogen from the air was built in Norway. Prof. Birkland discovered the arc process, and it was successfully applied by Mr. Isom Eyde. They began the manufacture of nitrogen there before the present war and sold much of it in Germany, in competition with the Chilean nitrate, at a lower price. The industry there has been successful, and they have manufactured nitrates for their own use and for export in considerable quantities. It is said to be equal to the Chilean nitrate for all purposes. Norway has some of the greatest water-power resources in the world, and the cheap power developed from it has made this industry possible and profitable.

Mr. SHIELDS. Mr. President, we have the water-power resources in this country for the successful and profitable fixation of air nitrogen, and they would be developed for that purpose but for the unfortunate restrictive legislation which some impracticable people, calling themselves conservationists, succeeded in having enacted some years ago. About five or six years since the Cyanimid Co. of America desired to build a plant of this kind in the State of Alabama, the initial cost to be about two and a half million dollars, provided they could obtain the necessary hydroelectric power. The Congress passed a bill authorizing the Alabama Power Co. to construct a dam in the Coosa River in that State to furnish in part the power needed. It was proposed to construct the dam with all facilities of navigation, at the expense of the company, and under plans furnished by the Secretary of War, which would have resulted in making slack-water navigation in that river for a distance of 30 miles, but because the act did not provide for arbitrary Federal control and charges upon the business and property of the company it was vetoed by President Taft. This resulted in the loss to this country of that great industry, and the improvement of the Coosa River without any aid from the Treasury of the United States. The Cyanimid Co. built its plant in the Province of Ontario, Canada, where it is now in successful operation, and the farmers of the South are buying its product, with the freight charges of a thousand miles added, whereas, had the Alabama Power Co. been permitted to improve its riparian property on the Coosa River, they could have had it delivered at their very doors.

Mr. WALSH. Mr. President, my understanding is that this plant of the Cyanimid Co. of America in the Province of Ontario has proved a remarkable financial success, and that within

the few years it has been in operation it has more than doubled its capacity, and while the original investment represented $4,000,000, the company now has there an investment of more than ten millions.

Mr. SHIELDS. The information of the Senator is correct.

Mr. OVERMAN. Mr. President, there is now a plant for extracting nitrogen from the air in South Carolina. It was built recently by the Southern Power Co. and is in successful operation.

Mr. SHIELDS. I did not know of that plant. I was under the impression that there was no plant of this kind in the United States. The one in South Carolina must be of limited capacity as it has made no impression upon this industry. I am glad to hear of it.

Mr. OVERMAN. I am not fully informed of the extent of the company's operations.

Mr. SHIELDS. Mr. President, no more important subject can engage the attention of the Congress of the United States than that of devising the means to provide for the farmers of our country a larger and cheaper supply of fertilizer. While fully recognizing the great and beneficent effect the development of our water power will have upon the prosperity of our country in general, I frankly admit that my chief interest in this proposed legislation is the belief that it will contribute more to cheapen fertilizers than any other possible means.

We hear much complaint of the high cost of living, caused by the increased price of foodstuffs and clothing materials. The basic cause of this is an increased demand and a diminished supply. The production of our lands is not keeping pace with the increase of our population. We have exhausted much of the virgin fertility of our soil and it is necessary that the plant food which we have been constantly taking from our fields for more than a century be replenished. This can only be done by fertilizers containing the well-known elements necessary for plant life. The countries of Europe use more than double the quantity of fertilizer per acre used in this country and their lands produce crops about double those ours produce with the same cost of labor. The American farmer is fully aware of the necessity of fertilizing his land, but the cost of fertilizers is almost prohibitory of their use in sufficient quantities. They now use annually about 75,000,000 tons of commercial fertilizer, costing them about $175,000,000. The greater part of this is used in the States east of the Mississippi River, and, perhaps, about 70 per cent of it in the Southern States. The essential constituent elements of a complete fertilizer are nitrogen, or ammonia, phosphoric acid, and potash, the relative proportions of these elements being nitrogen 40 per cent, phosphoric acid 35 per cent, and potash 20 per cent. It is estimated that the nitrogenous materials used in fertilizers cost the farmers about $75,000,000 in 1913, and it has doubtless been more during the last two years, because the price of Chilean saltpeter has advanced from an average of $47 per ton to $74 per ton.

We obtain nitrogen by the use of legumes, such as peas, beans, and clovers, and from cotton seed, but with the cheaper air product available all these can be used for more profitable purposes.

We have an abundant supply of phosphorus. There are great beds of phosphate rock in the Southern and Western States, which will furnish us with phosphoric acid for centuries. It is now ascertained that this rock can be treated with hydroelectricity, so as to better prepare it for fertilizing purposes than the old method by sulphuric acid, without the hurtful effects of that process and at about one-half of the cost. Potash is found, I believe, almost exclusively in Bavaria, and fortunately it is the least necessary element in fertilization, for it is the most expensive used, and is now almost unobtainable.

With our water powers developed for the manufacture of atmospheric nitrogen in this country and the production of phosphoric acid, so as to supply these valuable materials at one-half the price that we are now paying for them, the farmers of the country will be enabled to use double the amount of fertilizers that they now use and with the same labor, increase their crops of wheat, corn, cotton, and other agricultural products a hundredfold.

Mr. President, the fixation of atmospheric nitrogen is also necessary to supply us with nitric acid for the manufacture of high explosives for military purposes and in such industrial pursuits as mining, quarrying, and railroad construction. The explosives consumed annually in the United States cost about $40,000,000, and the raw material used in their manufacture is nearly all imported. They are indispensable for all these purposes. We could make little progress in mining and railroad construction without them. In war we would be defenseless without an adequate supply. In the past it has been our policy to keep a store of about 65,000 tons of Chilean saltpeter on hand for military purposes; but as explosives are used in war that is a mere bagatelle. We could not manufacture sufficient powder from that quantity to last us for 30 days in a war like that now prevailing in Europe. When that war began Germany had in store 660,000 tons of nitrate of soda. This has been exhausted and she is now being supplied by the fixation of atmospheric nitrogen, which she had with such wonderful foresight provided for within her own boundaries. It would be the greatest folly of this Government to longer rely upon Chile for nitric acid for explosives for national defense.

Gen. Wm. Crozier, Chief of Ordnance, War Department, in his annual report for 1915 to the Secretary of War, in substance says that the United States can not with any safety rely upon Chilean saltpeter for nitric acid used in explosives, and that we should, as European countries have so wisely done, provide for adequate supplies by developing our water-power resources for the manufacture of atmospheric nitrogen within our own borders.

Mr. Secretary Garrison, in his annual report to the President for 1915, speaks of the wisdom and necessity of the manufacture of air nitrogen for both agricultural and military purposes in strong terms, and advocates proper legislation for the development of our water powers for that purpose. He says:

> Neither, in my judgment, is there an appreciation of the full extent and variety of the uses to which such power can be, and in other countries is being, put. The misconception is general that the greatest, if not the sole, use of such power must be found in the usual municipal utilities. But modern science has achieved a use for hydroelectric energy, which now causes the subject to occupy a place of prime importance in our present considerations; because, at once and so happily, it can be made to contribute to meet our necessities in widely different fields—our agricultural and general industrial development and our national defense. I refer to the fixation of atmospheric nitrogen through the use of the electric furnace, a method of supplying that essential element which has passed the experimental stage and, through the encouragement of proper laws, has become firmly established as a practical industry in other lands. Such a use requires large quantities of cheap power, which can be found only in the use of water power. Every man knows that nitrogen is an ingredient of commercial fertilizer, but it is much less universally known that nitrogen is an indispensable element of all military explosives, and is, therefore, an essential munition of war.
>
> Military effectiveness requires ample quantities of the element, and the proper appreciation of national security behooves us to make provision for an adequate supply in time of war. Our only present source of supply is the natural nitrate beds of Chile, which in time of war might be shut off from us. Obviously in the matter of munitions, especially where the source is so limited and localized, we should neglect no provision so easily available as this to make the country self-sustaining. Plants producing nitrogen for industrial purposes in time of peace would be a great national asset in view of their availability to supply us with necessary nitrogen in time of war.

The electrical furnace is also necessary for the purpose of manufacturing aluminum, aniline dyes, electric steel, and many other valuable products which I can not describe at this time.

Mr. President, in the light of these incontrovertible facts, it seems almost incredible that there should be any objection to legislation which will encourage and permit the improvement of our great rivers for navigation and the concurrent development of water power for manufacturing purposes, absolutely necessary to the public welfare, and without any expense to the Federal Treasury.

Mr. President, this stagnation in water-power development and manufacture of valuable products which modern science has made possible by the use of cheap hydroelectricity is not for want of enterprise of the American people or full appreciation of their value. The fault lies at the door of Congress, and is chargeable to the restrictive and impractical laws it has enacted within the last few years affecting the development of the water-power resources of navigable rivers and of all streams upon the public domain. This bill, however, applies only to navigable rivers which, in the sense of the commerce clause of the Constitution as defined by the Supreme Court of the United States, are those navigable in fact; that is, susceptible of being used in their ordinary condition as highways of commerce over which trade and travel may be conducted in the customary modes on water; and if it becomes a law, its operation will be confined chiefly to the great streams of the States of which the Mississippi River is the eastern boundary and those that lie east of that river. It should not be confused with the Myers bill now in the Senate, which applies to streams on the public domain where the United States, as proprietor, owns the lands necessary for dam sites and has the right to rent them as Congress may deem wise and may direct.

The power of Congress over navigable rivers is confined to that given by the commerce clause of the Constitution to regulate commerce upon them, which is a police power. The Federal Government has no property interest in the waters of those rivers and no riparian rights outside of the public domain. The waters of the rivers and riparian rights in and along them, subject to the paramount power of Congress to regulate commerce

on them, are controlled by the sovereign States within which they lie and belong to those States and the riparian proprietors to whom the States have granted them. This has been repeatedly so declared by the Supreme Court of the United States in numerous cases, among which are those of Pollard et al *v.* Hagan et al, 3 Howard, 212; Kansas *v.* Colorado, 206 U. S.; Hardin *v.* Jordan, 141 U. S.; and United States *v.* Chandler-Dunbar Co., 209 U. S., in which Mr. Justice Lurton, speaking for the court, said:

> The technical title to the beds of the navigable rivers of the United States is either in the States in which the rivers are situated or in the owners of the lands bordering upon such rivers. Whether in one or the other is a question of local law.

For a hundred years the States exercised their sovereignty over the navigable rivers, authorized the construction of dams in them and bridges over them, and defined and regulated the rights of riparian proprietors in their waters without hindrance upon the part of the Federal Government, save the power of Congress to order the removal of any structures placed in them considered to be obstructions to navigation. The Congress passed the first general law controlling structures in navigable streams in 1890, and by an act passed in 1899 assumed full and complete control over these streams, forbidding the construction of dams, piers for bridges, or other structures in them without the special consent of Congress.

In 1906 Congress passed an act entitled "An act to regulate the construction of dams across navigable rivers," which required for such construction the consent of Congress by special act and provided the conditions upon which the construction could be made, which it is not necessary to state, as that act was superseded by another, passed June 23, 1910, entitled, "An act to amend" the former one, but which, covering the whole subject, repealed it by implication. This act also required the consent of Congress for the construction of dams and prescribes the conditions upon which they may be constructed.

These conditions have proved practically prohibitive of all water-power development in navigable rivers. They, speaking in general terms, require the company making the development to construct its dams according to plans approved by the Secretary of War and Chief of Engineers and authorizes those officers to impose such terms as they may deem necessary to protect the present and future interest of navigation, which may include conditions requiring the company to construct, maintain, and operate, without expense to the United States, all necessary dams, appurtenances, works, locks, sluices, or other structure or structures which Congress or those officers may at any time consider necessary in the interest of navigation.

The Secretary of War is also authorized to fix and collect for the permit granted various charges, to be paid into the Federal Treasury. The rights acquired under the act may be arbitrarily forfeited and annulled for failure of the company to comply with any provisions and requirements of the act, or conditions imposed by the Secretary of War and Chief of Engineers, and the company required to remove the dam and accessory works at its own expense, without resort to the courts of the country, and the power is reserved to amend or repeal the act authorizing the construction of the dam at any time without any provision for compensation for the property thus destroyed.

The permit is limited to 50 years without any provision for renewal or protection of the property of the company or those who rely upon it for power. The company making the development may at any future time be called upon to double its investment, to provide for further navigation facilities without any increase in water-power development, and is at all times subject to arbitrary charges, exactions, and forfeitures, and may be deprived of its property without compensation, at the will of constantly changing officials. These conditions render the right to maintain the dam so uncertain and defeasible that no business man will invest his money in such an enterprise and capital can not be obtained with which to promote it. It is impossible to market the power generated, because no one will build mills or factories to be operated by power furnished by a company whose plant is subject to be arbitrarily forfeited and shut down at any time and certainly upon the expiration of the permit. These acts, strange to say, contain no provisions for the regulation of charges for power nor any preference in favor of municipalities or public utility companies.

This legislation has absolutely strangled all water-power development in navigable rivers since its enactment. There have been few authorizations and fewer dams constructed under it, the aggregate development being less than 140,000 horsepower. The great Keokuk Dam, in the upper Mississippi, was constructed under a special act granting a permit in perpetuity and that at Hales Bar, in the Tennessee, under a special act granting a permit for 99 years.

President Wilson, in his message to Congress in December, 1914, referring to our water-power resources and present laws, said:

> The key is still turned upon them (the natural resources); the door shut fast at which thousands of vigorous men, full of initiative, knock clamorously for admittance. The water power of our navigable streams outside of the national domain also, even in the Eastern States, where we have worked and planned for generations, is still not used as it might be, because we will and we won't; because the laws we have made do not intelligently balance encouragement against restraint. We withhold by regulation.

The Secretary of War, Mr. Garrison, in his annual report for 1915, asserts the failure of this legislation in these words:

> One other matter on the civil side requires special mention, and that is the question of water-power development in the navigable waters of the United States.
>
> The measure which was designed to permit and encourage the development of the water power of our navigable streams failed of passage in the last Congress. Until Congress shall enact such legislation, this power, a great national resource inviting our use, runs on unused and wasted. The subject is one of prime importance to this Nation as a whole and should receive the prompt attention of the coming Congress. The evils of the existing law must be conceded; a consideration of the general dam act itself reveals them, and the lack of development under it in the face of a substantial demand makes proof of them. It is believed that, though these evils are not generally understood, their full effect and far-reaching consequences are hardly appreciated. Without specifying here, it can in a word and in all truth be said that the existing law is a makeshift which effectually prevents all development. On the other hand, it does not offer the rightful and necessary inducement for an economical and profitable development, nor would it adequately protect the interests of the public if development were possible under it. Even were it sufficient in these regards, it has been demonstrated that it would be unworkable in another. It is a general dam act in name only; while purporting to lay down general conditions to cover development in all cases, it nevertheless requires in each case the further special authorization by Congress, an inconsistency which invites a disregard of the general conditions, makes of each application an independent legislative proposition, and subjects each project to the delay and hazard of congressional action.

And in a statement before the Interstate Commerce Committee of the House in January last he further said:

> Of course, prior to the assumption of full Federal control by the act of 1899 there had been considerable development of power, but those were the days before the growth and the development of the uses of hydroelectric energy, and such development as then took place consisted for the most part of small installations originally made years ago and kept in operation and enlarged to meet local requirements. They were the ordinary old-time power installations. Between 1899 and the first general dam act of 1906—that is, several years prior to the first piece of restrictive Federal legislation—there began that marked increase, which has been progressing ever since, in the uses to which hydroelectric energy may be put which resulted in a correspondingly marked increase in the development of water power for hydroelectric purposes in intrastate rivers and in the upper reaches of rivers where Federal authority and control were not exercised, including also several respectable developments made under the special authorization of Congress. Notwithstanding, however, the vastly increased uses for hydroelectric energy during the past decade, it is perfectly clear that since the act of 1906, while development under State control has given corresponding evidence of increase and stimulus, development at available sites on navigable streams under Federal jurisdiction has been repressed rather than encouraged and has not been permitted to respond to the ever-increasing demands for hydroelectric power.
>
> As just said, the first general dam act was that of 1906, which was rewritten in the second or amended general dam act of 1910. The first act was less illiberal than the second, which is the existing law. Whatever may be asserted to the contrary, the department knows, and everybody who has taken the trouble to ascertain the facts also knows, that reasonable development has not taken place under the act. Reasonable development can never take place under the act. The act prohibits it. This is no new discovery. It is conceded by all who have familiarized themselves with the operation of the act. That there have been applications made for permits to erect dams and power structures under the act and granting of the same by Congress does not constitute construction, nor is it any testimony as to the virtues of that act. The real test comes when permittees attempt to raise money under the act. An applicant merely sees an opportunity to develop power and comes to Congress for permission. It costs practically nothing to make such an application. If the financing fails the permittee loses only his time. The process is a good gamble. It is analogous to paying down money to secure an option on property. The real test of the general dam act lies in the record of what has been accomplished under it.
>
> Under the first act 25 subsequent enabling acts were passed. Under these enabling acts only six plants have been constructed, and the remainder of the permits have lapsed under the time limitations, presumably because the projectors could not finance under the terms of the act. Activity in water-power development throughout the country has increased enormously since 1910, but under the present law, passed in that year, the applications for permits to construct dams on navigable streams have been less in number than they were from 1906 to 1910. Congress, under the 1910 act, has passed only 14 enabling acts, and only two power plants have been constructed under them. The total capacity of the plants constructed under the acts of 1906 and 1910 is something less than 140,000 horsepower.

And Hon. Franklin K. Lane, Secretary of the Interior, in speaking of similar laws applying to streams upon the public domain, refers to their prohibitory character in these words:

> It is generally conceded that the water-power resources upon the public domain can not be developed under existing laws because of the uncertain tenure involved by revocable permits: (*a*) because the engineer and promoter fear to embark an enterprise under such conditions; (*b*) because the capitalist will not loan money upon such security; (*c*) because the consumers can have no positive assurance that they will be supplied for a fixed and definite period.

The same persons who are said to have inspired this prohibitory legislation are now actively and officiously endeavoring to prevent the enactment of laws which will unshackle this valuable natural resource and permit its utilization by the present generation, for fear, as they say, it will fall into the hands of a trust, evidently upon the assumption that Congress has not the intelligence to properly and honestly discharge its duties in the premises. They seem to think that conservation means tying up and preventing the use of natural resources instead of opening them up for beneficent commercial and manufacturing purposes. This is a false and unsound policy, for true conservation consists in making the greatest use of these resources for the benefit of the people. The committee on water-power development of the Fifth Annual Conservation Congress in its report to that congress November, 1913, well said:

> When we consider also that the development of water power not only conserves fuel but directly serves to promote the navigability of rivers, we should be very careful how we discourage this triple conservation in order to secure other results which we may consider desirable. If we do discourage it, we may be antimonopolists or something else, but we are certainly not conservationists.

Water power and the business of manufacturing and distributing hydroelectricity are no more subject to monopolization than any other property or business, and are as fully protected by our stringent and efficient laws for the suppression of monopolies and restraints of trade.

Mr. President, I will now direct the attention of Senators to the provisions of the bill presented by the Commerce Committee. These provisions are in their nature legislative, contractual, and administrative, and all these characteristics must be kept in mind while considering them.

I will at this time only discuss the fundamental principles upon which the bill is constructed, without going into all the details by which they are to be worked out.

The United States by the first section authorizes individuals, political subdivisions of States, municipal corporations, private corporations or associations to construct, maintain, and operate dams, diversion structures, and accessory works for the improvement and development of navigation and water power in and along the navigable rivers of the United States, first having obtained a permit from the Secretary of War as subsequently provided, and subject to the conditions contained in the bill and those which the Secretary of War is required and authorized to make a part of the permit granted by him.

This provision is necessary for a workable law for the development of water power in navigable rivers. A general dam bill which requires the consent of Congress to each separate project is one in name only. It is not within the power of this or any future Congress to control the legislative policy of their successors. Congresses are constantly changing membership, and new Members will always have different views concerning the improvement of navigation and water-power development which would be written in each separate act consenting to a particular project, and this would absolutely destroy uniformity in legislation of this kind and assure discrimination and inequality in the terms of different permits.

The delays which occur in procuring the consent of Congress by special acts and the uncertainty of what the provisions of such acts will be have in the past discouraged capital and caused it to seek other investments free from such embarrassments and will continue to do so. The Congress has conferred upon the War Department jurisdiction over navigable rivers, and intrusted to the officers of that department the improvement of them with appropriations from the Public Treasury, with full discretion in the location and constructions of dams, locks, and other facilities for navigation, and there is no valid reason why these same officers should not be intrusted with this discretion when private capital is used in making improvements. Congress before enacting special acts for this purpose has generally referred them to the War Department for a report, so far as the project affected navigation, and given great weight to such reports. This provision does not carry with it any appropriation from the Federal Treasury or concession of public property, but is a delegation of part of the police power of Congress to regulate commerce by the improvement of navigable rivers. I think it is now generally conceded that this plan is preferable to special acts authorizing the construction of dams. Authority to grant permits for water-power development upon the public domain has been given the Secretary of the Interior and found to operate satisfactorily. The police power has also been conferred upon other departments of the Government over matters within their respective jurisdictions with satisfactory results.

It is further provided in this section that, where the power to be developed is to be used for public utility purposes, the permittee must be a municipal corporation, a political subdivision or agency of a State, or a public utility corporation created under the laws of a State or of the United States, and authorized to engage in the business of furnishing water, heat, or electric energy for public or private use. The rates and charges are subject to regulation by the laws of the State, and voluntary transfers of permits and the rights thereby granted, except for financing the business of the permittee, are prohibited to transferees not having the same qualifications, and in all cases the transferee, whether the transfer be made under a voluntary or involuntary sale, takes and holds the same subject to the provisions of the bill and the conditions of the permit, in all particulars as if no sale or transfer had been made.

These corporations are more easily regulated and controlled by the proper authorities, and it is believed that this provision will tend to secure to the consumer adequate service and reasonable rates, for which purposes there are also several other specific provisions in the bill to which I will call attention further on.

The conditions upon which the Secretary of War is authorized to grant the permit are found in section 2 of the bill and may be summarized as follows:

The individual or corporation applying for a permit must submit to the Secretary of War and the Chief of Engineers plans and specifications for the proposed dam and accessory works, and such maps as may be required for a full understanding of the project, which, when approved, becomes a part of the permit and can not be changed or altered without the consent of those officers. The project must be such as, in the judgment of the Secretary of War, is best adapted to a comprehensive plan for the improvement of the waterway in question for navigation and the full development of its water power, and for other beneficial purposes and to conserve and utilize the water resources of the region in the interest of navigation, the necessities of the Government, and the public welfare.

The Secretary of War, in so far as he deems the same necessary to promote navigation and consistent with a reasonable expense to the permittee, and necessary to preserve and improve navigation facilities, at least equivalent to those existing prior to the construction of the dam, may require the permittee to construct in whole or in part, without expense to the United States, in connection with the dam, lock or locks, booms, sluices, or other structures for navigation purposes, in accordance with plans and specifications approved by him; to furnish free of cost power for the operation of the same; and when the United States shall deem other navigation facilities necessary, to convey to the United States, free of cost, such part of its lands and right of way through its dams or other structures, and permit such control of pools as may be required for the same. That the permittee reimburse the United States for the cost of the investigation necessary for the approval of the plans and for the supervision of construction; and to pay the United States reasonable charges, to be fixed by the Secretary of War, for benefits derived from any increased flow of water artificially caused by storage reservoirs or other headwater improvements constructed by the United States, to be used in the repair and maintenance of such headwater improvements. The Secretary of War may allow the use of lands of the United States necessary for the project upon the payment of reasonable charges, based on the value of the land ascertained by the rules of law applicable to condemnation of private property for public use.

The Secretary of War, by section 3, shall have control over the pools, currents, and flow of water past the dam and the operation of the navigation facilities and the power to make such reasonable rules and regulations as he may deem necessary in the interest of navigation.

These provisions require dams to be located, constructed, and equipped with locks and other appliances by the permittees at their own expense under the direction of the Secretary of War and the Chief of Engineers, to be controlled by the Secretary of War, and such rules as he may make for the regulation of navigation, in all things as when the dams are constructed by the United States. The permittee is required to furnish power for the operation of the locks and appurtenances without charge and pay for all benefits, if any, received from the United States. Preferences are to be given applicants for permit equally well qualified to comply with the conditions imposed who have first acquired the right to divert the waters of the stream by construction of the proposed dam and have otherwise complied with the laws of the State wherein it is located and obtained the consent of the State to such improvement.

The Secretary of War is also authorized to give preference to municipal corporations or other political agencies or subdivisions of States and public utility companies in granting per-

mits, in so far as it is necessary to protect and advance the interests of consumers of water power and its products, consistent with the full development of the navigation and water-power resources of the stream. There should be no arbitrary preference in favor of municipalities, for a small town or city desiring to develop a part only of the potential water power of a great stream for its limited uses, could in this way block the complete development of its recources necessary to supply numerous other towns and public utilities with hydro-electricity. This matter should be largely left to the discretion of the Secretary of War. These conditions are intended to, and it is believed they will, uphold the authority of the United States and protect the interests of the general public in transportation in navigable rivers without unduly embarrassing those who have the right to develop the water power therein.

The permittee, by section 4 of the bill, is made responsible for all damages which may be inflicted in the construction, maintenance, and operation of dams and accessory works and it is provided that the United States is in no event liable for them.

The object of this provision is to exclude all contention that the United States can be held liable for such damages on the theory that permittees are its agent in so far as the dams and accessory works are constructed and operated for navigation purposes.

Permittees, when a municipal corporation and political subdivision or agent of a State, or a public utility service corporation, are authorized to exercise the power of eminent domain and condemn property necessary for the construction of dams and other purposes in the courts of the State or in the district court of the United States in the State where the property is situated, the proceedings to be according to the procedure of the State courts. This provision is only necessary in so far as property is required for the Federal purpose of improving navigation, which is the only authority Congress has for granting it, and to confer jurisdiction on the United States courts, as is usually done where the United States is directly or indirectly interested. These corporations, as arms of the States and public corporations, are by the laws of the States creating them, either by their charters or general laws, vested with the right to exercise the power of eminent domain when private property is required for a public purpose. There may have been at one time some doubt whether the generation and supplying of hydro-electricity for light, heat, and motive power to the public was a public use or purpose which would authorize the power of eminent domain to be conferred, but it is now well settled that it is by the adjudications of the courts of last resort of many of the States and of the Supreme Court of the United States. The leading cases, perhaps, are that of Power Co. *v.* Webb, 123 Tenn. 584, in which the opinion was delivered by Mr. Justice Grafton Green, one of the ablest judges of that State, and that of Mount Vernon-Woodberry Cotton Duck Co. *v.* Alabama Interstate Power Co., decided by the Supreme Court of the United States at the present term, in which Mr. Justice Holmes, with his usual clearness and aptness of expression, speaking for the court in holding that the use was public, said:

> The principal argument presented that is open here, is that the purpose of the condemnation is not a public one. The purpose of the power company's incorporation and that for which it seeks to condemn property of the plaintiff in error is to manufacture, supply, and sell to the public, power produced by water as a motive force. In the organic relations of modern society, it may sometimes be hard to draw the line that is supposed to limit the authority of the legislature to exercise or delegate the power of eminent domain. But to gather the streams from waste and to draw from them energy, labor without brains, and to save mankind from toil that it can be spared, is to supply what, next to intellect, is the very foundation of all our achievements and all our welfare.

The service, charges, and rates of permittees are, by section 7, made subject to regulation by the laws of the State within which the service is rendered and where the power sold and distributed enters into interstate commerce, and the authorities of the States directly concerned are unable to agree concerning them, jurisdiction is conferred upon the Interstate Commerce Commission to regulate them, according to the procedure and practice of that commission in regulating charges and rates of railroad companies.

In the valuation of the property for rate-making purposes the cost of the construction of the lock or locks, or other aids of navigation and capital expenditures required by the United States, will be considered, but not the value of the permit granted.

The property and business of the permittee, however, are to be in all things subject to the laws and regulations of the State where it is situated and carried on. This seems ample to preserve and protect the constitutional power and jurisdiction of the States over all persons and corporations within their boundaries, and enables them to compel those constructing and operating plants for water-power development to furnish adequate service, at reasonable charges, and fully protect and advance the interests of consumers and their citizens.

And for the further protection of consumers against extortion and unreasonable charges, it is expressly provided by section 12:

> That the works constructed and maintained under authority of this act shall not be owned, leased, trusteed, possessed, controlled, or operated by any device or in any manner so that they form part of or in any way effect any combination in the form of an unlawful trust or monopoly, or form the subject of any unlawful contract or conspiracy to limit the output of electric energy or in restraint of trade with foreign nations or between two or more States or Territories, or within any one State or Territory, in the generation, sale, or distribution of electric energy.

The Sherman Anti-Trust Law, as amended by the Clayton Anti-Trust Law, is ample to prevent and suppress all monopolies and restraints of trade of every kind, but on account of the fears of some people, so often expressed, that the water powers of this country may be monopolized by some unknown trust, this section, more drastic in its terms than those laws, has been written into the bill. There are many well informed upon this subject who are of the opinion that the generation and distribution of hydroelectricity is a natural monopoly, and that the real protection of consumers consists in stringent provisions for regulating the service and charges so amply provided in this bill, and which can, under the power reserved in section 13, to alter and amend the act, be hereafter enlarged as new conditions and subsequent developments may, in the wisdom and discretion of any future Congress, be deemed necessary in the public interests.

It is also provided in section 9 that the business and property, real, personal, and mixed, of permittees, including all parts of plants for the generation and distribution of power or other purposes, shall be subject to taxation by the States as other similar property in their boundaries. This provision not only recognizes the sovereignty of the States to tax the property and business of the permittees, but excludes denial of that power because the company, so far as navigation is concerned, is an agency of the United States.

Permittees are required to commence the construction of dams and accessory works within two years from the date of the permit and prosecute the work with due diligence and in good faith, and complete and put the same in commercial operation within such time as the Secretary of War may require in the permit, and upon failure so to do, the permit is forfeited and the Secretary of War, through the Attorney General, may institute such proceedings in a district court of the United States as he may be advised to enforce such forfeiture, eject the permittee, and dispose of and distribute the property, if any, as may be equitable. The object of this provision is to prevent individuals or corporations from obtaining permits merely to tie up water-power resources and prevent others from developing them and is a further effective precaution against monopolization of the water powers of the country.

The bill further provides (section 8) that any permittee who fails or refuses to comply with any of its provisions, or any of the conditions made a part of the permit, or any regulation or lawful order made by the Secretary of War, authorized by the bill, shall be guilty of a misdemeanor and, on conviction, fined not exceeding $1,000, and the Attorney General may, on request of the Secretary of War, institute proper proceedings in equity in the district court of the United States where the property, in whole or in part, is situated, to compel compliance with those laws and regulations and prohibit further violation of them by mandamus injunction or other process; ample jurisdiction being conferred upon that court for the purpose. And if the unlawful conduct is continued, after final judgment in either such civil or criminal proceedings, the court may in the public interest pronounce a decree revoking the permit and wind up the business of the permittee and decree a sale of all or such part of the property of the permittee, dependent in whole or in part upon the rights granted, and distribute the proceeds to those interested and make such further orders and decrees as equity and justice may require. The United States is authorized to purchase at such sales but will not be required to pay for any value of the permit granted. The purchaser or purchasers of the property at a sale so made will take all the rights and privileges and perform the duties which belong to the permittee and assume such outstanding obligations of the permittee as the court may deem equitable in the premises. These provisions for forfeiture, for failure to comply with the conditions of the law, and the regulations made thereunder by the Secretary of War and for the enforcement of such forfeiture, are very drastic and will, unquestionably, compel obedience to the law and the regulations and fully protect the interests of the public.

The provisions fixing and limiting the time for which permittees are authorized to maintain dams constructed by them and the terms upon which their property may be taken over by the United States at the expiration of such time, or by such persons as the United States may authorize, or the renewal of the permit to the original permittee, and the conditions of such new or renewel permit, are contained in sections five and six and are among the most important in the bill.

The United States by these provisions grants to individuals and corporations the right to maintain the dams and other structures, constructed under the authority given in the first section of the bill, for the full and definite term of fifty years and thereafter until terminated by the United States upon two years' notice, unless, of course, forfeited for some of the causes heretofore stated and the authority of the permittees, as a matter of right for such maintenance is limited to the same term of fifty years from the date of the permit, the maintenance and use of the dams and structures thereafter being at the will and option of the United States.

The permittees are required, upon such expiration or termination of the permits, to transfer and convey to the United States or to such person or persons as the Secretary of War may grant a new permit, all their property, constituting their plant and dependent in whole or in part upon it for its usefulness, and necessary or serviceable in the distribution of water or the generation, transmission, or distribution of power, which will include lands, riparian rights, and all other species of property and property rights, upon payment by the United States, or the new permittee, of its fair value, together with the costs of the lock or locks and other capital expenditures required by the United States, and the assumption by their successor or successors of existing, reasonable, good faith contracts made with the approval of the authorities having jurisdiction of the same. The United States is not required to take over and pay for the plant or to furnish a purchaser for it and may renew the permit to the original permittee. The permit to the new permittee or to the original permittee will be made upon the conditions and restrictions provided for in the bill and such others as the then existing laws may authorize and require.

These provisions are contractual in their character and binding upon both the individuals and corporations constructing the dams and the United States and its officers, and are enforcible as any other property rights in all courts of competent jurisdiction. They remove the most grievous defects in the former legislation, that is, the absolute uncertainty of the term for which permittees can maintain and use the dams and other structures, and the constant liability of their right to do so to be revoked by the Secretary of War or subsequent legislation, without compensation for the property inevitably destroyed by such revocation, conceded by all to be the chief cause of the stagnation of water-power development in the United States.

It is generally agreed by capitalists who are expected to advance the money for construction, and those who will build factories to be operated with the power developed, and other consumers of power, and those best informed concerning navigation facilities, that 50 years is sufficient, but necessary, to afford reasonable protection to all these interests. The probable necessities of navigation during the time can be anticipated with reasonable certainty and provided for in the plans and specifications approved by the Secretary of War and Chief of Engineers, as is now done in such improvements made by the United States, and all possible mistakes are provided for by the reserved right to construct further facilities.

The construction of plans for the generation of hydroelectricity requires enormous sums of money, often amounting to millions of dollars, which must be raised by bonds maturing in 40 or 50 years secured by mortages on the property of the permittees, and a shorter life for the permit, with uncertainty of renewal or compensation for the property upon its expiration would make financing such an enterprise impossible.

The authority of permittees to continue the maintenance of dams after the expiration of the definite term fixed until terminated by two years' notice given by the United States, either before or after such expiration, is for the preservation of the property in the interest of the general public and all concerned. Permittees are enabled to keep the plant in good repair, retain their customers, and preserve its value as a going concern, in which condition it will be turned over to the United States, or the new permittee, with an established business which can be continued with profit. Manufacturers will continue to be supplied with power for their plants and municipalities with electricity for lighting their streets and motive power for the operation of other public utilities. If there is no authority for continuing the operation of the plant it will be shut down, which would result in much injury and depreciation of the property and great inconvenience to the public served by it. It is believed that two years is ample time for the United States to provide by proper legislation for taking over the plant, or for the terms upon which a permit may be granted to a new or the old permittee. There is no effort to prescribe the uses to which the United States may devote the property, or the further conditions and restrictions authorized to be made in new or renewed permits, but all these matters are left to be provided for by future Congresses, as authorized by the Constitution and by any amendments that may be adopted, which, in the light of the experiences of half a century, may and doubtless will legislate upon them with more intelligence than can be done at this time. The jurisdiction and machinery of the courts are broad enough to enforce compliance with all these provisions and there will be no difficulty in their execution.

There is no provision in these or other sections of the bill authorizing or imposing a Federal charge or rent upon permittees for the permission to improve and use their riparian property by developing water power and there should be none. As I have stated in another part of my remarks, the United States has no property interest in the waters of navigable rivers, and as there are no public lands in the States to which this bill will in the main apply there is no constitutional authority for making such charges. An amendment providing for such charges has been offered, and as I understand others to the same effect will be offered I withhold further discussion of this question until they are considered. I will, however, call attention to the fact that the properties of permittees, real, personal, and mixed and their business, are made subject to taxation by the States and municipalities within which the dam and plant are located as all other property within such State or States. There should be no attempt to interfere with the sovereignty of the States to impose such taxes by Federal taxation. And further, if Congress should find it necessary to defray the expenses of the Federal Government to tax water-power development, it should be done in the general revenue bill and the taxes imposed on all such property, that already developed as well as that to be developed under the bill. There should be no discrimination against property yet to be developed.

The compensation to be paid permittees for their property when taken over or the permit granted to others is its fair value at the time, excluding the value of the rights acquired under the permit, except that only the cost of the locks and other capital expenditures required by the United States will be allowed, all of which may be ascertained by agreement between the Secretary of War and the permittee or by the courts. The committee considered this the just rule to apply, and it is substantially the same found in all other acts providing for compensation, the words in them being "reasonable value" or "just value," which mean the same as fair value. Certainly the United States does not desire to take the property of its citizens, nor to transfer it from one individual or corporation to another individual or corporation, for less than its fair value. This is also a question of importance to the public, as the permittees may often be municipalities or public agencies of States, and to pay them less than the fair value of the property would be allowing the United States or the new permittee to confiscate it in part. Furthermore, the contention that the permittees should not be paid the fair value of their property, which means the price which they could obtain for it in the market if they wished to sell and another wished to buy, is only another method or scheme for wringing from riparian proprietors who wish to improve their property and ask permission of the Federal Government to place structures in navigable streams for that purpose a charge or rent for such police permit. There are, however, I understand, several amendments to be offered fixing the compensation to be paid permittees at less than the fair value of the property, and I will not elaborate upon the subject until those amendments come up for discussion.

Mr. President, those who favor imposing Federal charges upon water-power development, or taking over the plants for less than their fair value, seem to entirely overlook the interest of consumers. They forget that all charges, rents, and taxes upon water-power development and all deductions from the fair value of the property when taken over will be considered by public-service commissions as operating expenses in fixing the rates to be charged consumers for the power used by them, and reflected in the price of the necessaries of life manufactured by those using the power, for in no other way can investors obtain a fair return upon their capital invested. Charges and deductions of this kind will also prevent the production of cheap power, the very object of water-power development.

There has been some apprehension expressed that the United States or the several States could not acquire the water power

developed under the provisions of this bill for public uses before the expiration of the authority and permit herein granted. Such fears are groundless. The United States could at any time, in the exercise of the power of eminent domain, condemn them for Federal uses and the States may do so for any public use upon payment therefor of, in the language of the Federal and State constitutions, "just compensation." The power of eminent domain vested in the Federal Government and inherent in all the State governments applies to all property of every character and species, and the legislative bodies of these sovereignties can not by any act of theirs exclude from it any property whenever there is a public necessity for its use.

The general principles of this bill were substantially approved by Hon. Lindley M. Garrison, then Secretary of War, in an able address before the Interstate Commerce Committee of the House, January 26 last, when that committee had a similar bill under consideration, which I commend to all interested in this character of legislation.

The Secretary of War is authorized by section 10 of the bill to lease to any applicant the right to utilize the surplus water power over that required by the United States produced by any navigation dam constructed or to be constructed and owned by the United States, on terms deemed to be for the best interest of the United States, with preferences to municipal corporations or public-service agents of States, the rents received to be applied to the maintenance of such dams and further improvement of the waterways in which they may be situated. These leases and the permittees are to be governed by the provisions of sections 3, 4, 5, 6, 7, 8, 9, 11, 12, and 13 of the bill so far as applicable, all of which have been explained and will not be repeated. This provision is similar to that in the act for the improvement of the St. Marys River in Michigan, which was held constitutional and valid in the case of the United States *v.* Chandler-Dunbar Co., 229 U. S. It does not authorize the United States to engage in water-power development for commercial purposes, but simply to dispose of surplus water power created and incidental to dams constructed for navigation purposes and owned by it, and this was held in the case referred to to be unobjectionable.

The rights of permittees under present laws are fully protected by section 11 of the bill, and this act does not apply to them except in certain administrative matters unless they elect to apply for a permit under the same. Permits to build dams for municipal and irrigation purposes and upon the public lands are also exempted by this section from the provisions of the bill.

The right to alter, amend, or repeal the act is reserved in section 13, but where the permittees have exercised rights under it the same are to be deemed property rights of which they shall not be deprived except as otherwise provided in other sections of the bill.

Mr. President, I have been much interested in this bill as a measure applying to all navigable-river States, but my interest has been greater on account of the very great benefits that my own State will receive if it becomes a law. In the navigable rivers in Tennessee there is now going to waste potential water power aggregating over a million horsepower, which can not be developed under existing laws.

There is at the Muscle Shoals in the Tennessee River, just over our State line in Alabama, a possible water-power development of 600,000 horsepower which can, and I understand will, be made in the event of the passage of the necessary legislation. The dams proposed to be built there will make that great river navigable from its mouth to Chattanooga, and the hydroelectricity, generated by a large power of that kind, can be transmitted with slight loss to all points in two-thirds of Tennessee, and therefore our people are as much interested in that project as are those of Alabama. Tennessee has the richest phosphate fields in the world within reach of the power that would be developed at this point, and electrical furnaces to prepare it for fertilizers will double their value. Indeed, the development of our water-power resources and the increase of the value of our phosphate fields will add many millions of dollars to the wealth of our great State, and its people are, of course, deeply interested in these matters.

But this proposed legislation is national in the benefits to be accomplished and affects the interests of the people of all the States.

Mr. President, I have gone into the provisions of this bill with more detail than I had expected and will not recapitulate them. With the statement I have made of the necessities for legislation of this kind and the explanation I have at perhaps unpardonable length made of the provisions of the bill, I now submit it to the Senate.

## Widows' Pensions.

### EXTENSION OF REMARKS
OF
### HON. MARTIN D. FOSTER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. FOSTER. Mr. Speaker, the bill, H. R. 11707, providing for the increase of widows' pensions to $20 per month when they shall have arrived at the age of 70 years, and to pension those who married prior to 1905 and those who were married after drawing pension and became widows again, has my indorsement.

The bill reads as follows:

*Be it enacted, etc.*, That from and after the passage of this act the rate of pension for a widow who was the lawful wife of any officer or enlisted man in the Army, Navy, or Marine Corps of the United States during the period of his service in the Civil War shall be $20 per month, and the rate of pension for a widow who has reached or shall hereafter reach the age of 70 years shall be $20 per month; and nothing herein shall be construed to affect the existing allowance of $2 per month for each child under the age of 16 years and for each helpless child; and all acts or parts of acts inconsistent with the provisions of this act are hereby repealed: *Provided, however*, That this act shall not be so construed as to reduce any pension under any act, public or private.

SEC. 2. That any widow whose name was placed or shall hereafter be placed on the pension roll under any existing law, and whose name has been or shall hereafter be dropped from said pension roll by reason of her marriage to another person who has since died or shall hereafter die, or from whom she has been heretofore or shall be hereafter divorced upon her own application and without fault on her part, shall be entitled to have her name again placed on the pension roll at the rate allowed by the law or laws under which she was formerly pensioned, unless she be entitled to a greater rate of pension under the provisions of section 1 of this act, such pension to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *Provided, however*, That where the pension of said widow on her second or subsequent marriage has accrued to a helpless or idiotic child, or a child or children under the age of 16 years, she shall not be entitled to renewal under this act unless said helpless or idiotic child, or child or children under 16 years of age, be then a member or members of her family and cared for by her, and upon the renewal of pension to said widow payment of pension to said child or children shall cease: *And provided further*, That the provisions of this act shall be extended to those widows otherwise entitled whose husbands died of wounds, injuries, or disease incurred during the period of their military or naval service, but who were deprived of pension under the act of March 3, 1865, because of their failure to draw any pension by reason of their remarriage.

SEC. 3. That any widow, as described in section 2 of the act approved April 19, 1908, who married the soldier or sailor prior to June 27, 1905, shall have title to pension under the provisions of said section of said act, to commence from the date of filing her application in the Bureau of Pensions after the passage of this act: *And provided further*, That the benefits of this act shall include those widows whose husbands, if living, would have a pensionable status under the joint resolutions of February 15, 1895, July 1, 1902, and June 28, 1906.

Since I have been in Congress it has been my pleasure, and I considered it my duty as a representative of the people, to vote for bills which help to take care of the soldiers and those dependent upon them. It seems to me that no nation can afford to neglect the soldiers who volunteer to fight in defense of the country and not properly take care of them or those dependent upon them when the help is needed. The assistance given by the Government should not be considered as a gift in the way of charity, but a duty that we owe to those who have made the sacrifice and endured the hardships of war. We talk to-day much about preparedness, of putting our country into better condition for its defense, and vote hundreds of millions of dollars for this purpose, which we all believe necessary, and yet a Government so rich and bountiful as ours can not do better in the way of preparedness than to provide for the soldier, widow, and orphan who are left helpless as a result of past wars, or may become so in the future, if unfortunately war should come.

The law now in effect has been that those who married subsequent to June 27, 1890, can not receive a pension unless they can show that the soldier died from disease contracted in the Army. Most of these men are old and have required care and attention, and the wives who have looked after them for so many years are deprived of a pension because they are unable to show death directly due to Army service.

It seems to me a wise provision that the law should now be changed and these widows should be allowed a pension who have married since that time. Twelve dollars per month for a woman at 70 years of age affords, indeed, a very scanty living, and if sickness or other misfortune should come she is unable to take care of herself, but must rely upon charity for

assistance. I know of my own personal knowledge of a number of widows of soldiers who are old and poor, without any means of support, and who, married since June 27, 1890, are now compelled to earn their living by hard labor. It seems to me that such conditions among the widows who married honorably discharged soldiers who fought in the defense of their country should not be permitted to continue. The increase of the pension to $20 per month will give some further relief to these widows, who are old; and yet, when I think that $20 per month amounts to but $240 a year, for living in times like these, does not afford anything except the actual requirements to keep soul and body together. Ours is a rich country, and we can well afford at this time to pay a reasonable amount to the wives of the soldiers and those dependent upon them. Such action on the part of the Government will be an inspiration to the young men of our country who volunteer for enlistment—to know that the Government will provide for them in case of old age, disease, or injury, and to those who are dependent upon them. With war now imminent in Mexico and the President calling upon the young men of the country to volunteer for service in behalf of the Government, we could not find a better time to pass this bill than now.

Abraham Lincoln, in his second inaugural address, stated the duty of our Government in its treatment of the soldiers and those dependent upon them when he said:

> With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations.

President Lincoln did not propose to let us forget the valuable services these men had rendered to our country, and his thought was when the war had closed it became our solemn duty to take care of them.

Women are just as patriotic as men. Though they do not go to war, yet they are called upon to give up their fathers, husbands, and sons to fight the battles of the country. When they say goodbye to the one dear to them who enlists, they do not know that they will ever see him again. They remain at home to take care of the family and keep the home. The small amount paid our soldiers in time of war is not sufficient to support a family, so they must depend on others if unable to take care of themselves. Our Government has been liberal in its care of soldiers and those depending on them, and I hope it always will be. I shall continue to support such legislation which will assist them. It is to be regretted that any Member of this House should try to make political capital out of any bill of this kind. It should be the patriotic duty of all to see that these widows are properly cared for. There may have been Members of both parties who voted against similar bills in the past. I am not here to criticize them for doing so. Each Member must vote as he believes best. I feel that the people I have the honor to represent indorse a liberal policy toward the soldiers and those dependent upon them. Let us not forget those who have endured the trials and hardships resulting from service in defense of their country's flag or those who are left dependent.

---

## Compensation to Certain Families of the Conscripted Forces of the United States.

### EXTENSION OF REMARKS
OF
### HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916,*

On the bill (H. R. 16734) to pay to certain families of the men of the drafted forces of the United States a sum of money for their maintenance during the term of service of such drafted men in the service of the United States.

Mr. BAILEY. Mr. Speaker, it seems to me that if we are to snatch a hundred thousand or more of our young men away from their gainful employments and send them out on an errand not of their choosing there is but one thing to do, and that is the very thing we are proposing to do in this liberal measure. We should step in and take care of those who are dependent upon them and who must cruelly suffer when their natural support is withdrawn, as it has been withdrawn by the drafting of the militia into the service of the United States.

This is all a matter of course. We can not leave the wives and children of these men to the unhappy chances of charity. It is as much our duty to look after their welfare as it is to look after the welfare of the men in the field. If we take the latter and send them afar from their homes, leaving the latter unprotected against the wolf of hunger, we are bound in justice and in mercy to step in and take the place, as far as we may, of the fathers and sons who are no longer permitted to discharge the duties of the breadwinner.

But it seems unnecessary for me to speak at any length regarding this obvious obligation. The thought which presses upon me is the apparent folly of it all. Why have these scores of thousands of young men been taken away from their usual pursuits and sent hurrying to the Mexican border? Was it because an invasion was threatened? No. The people of Mexico as such have had no designs upon us. They have been friendly. The last desire in their hearts would be for a breach with this powerful Nation. It is true that a few Mexicans have been making raids into the territory of the United States. These were irresponsible bands. They no more represented the Mexican people than the Jesse James gang, which once made a raid into Mexico, represented the people of the United States. As a matter of fact, these bands were made up of enemies of the Government of Mexico. They were marauders who are believed to have been bent for their own sinister reasons on embroiling the Mexican Government in a war with this country. And it is flatly charged by that Government that the marauding bands were financed and supplied in large measure from this side the border by selfish American interests, which likewise have sought to bring on armed intervention in Mexico.

The policing of our border might have been carried out by the Regular Army if its forces had been properly disposed; but for reasons not quite clear these forces have been very widely scattered. They have been dispersed from Alaska to the Philippines and from Hawaii to the Canal Zone, where they were not needed, instead of being mobilized at the points along the southern border where they were needed. Perhaps there may be an explanation for this curious circumstance, but it is yet to be given. It is clear that if the 120,000 men making up the Regular Army had been posted along the border and had been more on the alert than the garrison at Columbus seems to have been the night of the Villa raid in March, there would have been little trouble in keeping bandit bands from crossing into American territory, and, of course, there would then have been no occasion for conscripting the militia into the service of the United States.

It is plain that if the garrison at Columbus had been really on guard the bloody affair which actually happened could not have occurred. There was ample warning of the approach of the Villista horde. The Mexican authorities themselves had apprised the Americans of the threatened raid. Yet at Columbus there were no outposts, no sentries, no preparations at all for the thing which happened. Apparently the soldiers were soundly asleep and the officers were absent from their quarters. Yet it was the Columbus raid which culminated in the punitive expedition, which seems to have been undertaken without a full understanding with the Mexican Government.

However, this expedition might have occasioned little, if any, trouble if it had not seemed to the Mexicans to lose its original character and to forget its original purpose. The Mexicans complain that it took on the aspects of an army of occupation. It very soon dispersed the bandits it set forth to punish. But it made no sign of withdrawal. On the contrary, it proceeded farther and farther below the border, occupying towns as it went. It was inevitable that its operations should bring it sooner or later into conflict with the Mexican forces. It would not be in human nature for an expedition of this character to go unchallenged by the people whose soil was thus invaded. And the Carrizal incident came as a matter of course. It was bound to come. It could have been avoided only by the avoidance of a course that led infallibly in that direction.

Let us for a moment put ourselves in Mexico's place. Let us suppose that a horde of American bandits had crossed into Mexican territory, had shot up a Mexican town, had killed a lot of Mexican soldiers, had run off a lot of Mexican horses, and had then returned into Texas or New Mexico or Arizona. And then suppose a Mexican punitive expedition had taken a cold trail in pursuit of the bandits without gaining the full permission of the Government of the United States. Suppose this punitive expedition had carried with it field artillery and all the accessories of an army of occupation. Suppose that after it had caught up with the bandits and had killed or dispersed them it had kept on, penetrating farther and farther into American territory and establishing military bases as it proceeded. Can you conceive that this procedure would have been welcomed by the American people? Can you imagine it going unresented and unchallenged? Can you believe that all America would

not have been up in arms and bent on repelling the invasion? It is to be doubted whether such an expedition, even though fully countenanced by the Government of the United States, would have been allowed to get very far without encountering a popular uprising that would have swept it back upon its own soil.

Yet we have seemed to marvel that Mexicans have felt disturbed by the presence of 15,000 armed Americans upon their soil. We have been disposed to feel a sense of outrage because they have dared to reveal their resentment. Our national spirit has blossomed forth into warlike demands because Carranza has suggested that, their mission fulfilled, our troops should be recalled. And because Carranza has ventured such a suggestion and has insisted that our forces should turn back, we have concentrated upon the Mexican border a great army that can crush him if that step should be considered the logical one to take.

Fortunately, however, the President has indicated that the conquest of Mexico has no place in his plans. "The easiest thing is to strike," he said in his New York speech. "The brutal thing is the impulsive thing. No man has to think before he takes aggressive action; but before a man really conserves the honor by realizing the ideals of the Nation he has to think exactly what he will do and how he will do it." And then he adds: "Do you think the glory of America would be enhanced by a war of conquest in Mexico? Do you think that any act of violence by a powerful Nation like this against a weak and distracted neighbor would reflect distinction upon the annals of the United States?" Further along in the same lofty deliverance we find him saying: "I have constantly to remind myself that I am not the servant of those who wish to enhance the value of their Mexican investments; that I am the servant of the rank and file of the people of the United States."

Those who have wished to enhance the value of their Mexican investments have been insistent on intervention. In a very large measure they have been responsible for the circumstances which have attended the situation on the border and below. But the President now reminds them and reminds himself that he is not their servant, but rather the servant of the rank and file of the people of the United States; and the rank and file do not want war. They have a noble passion for peace. They hate the very thought of conquest. They love liberty and they know they can not retain it for themselves if they deny it to others. They are heart and soul with President Wilson when he declares in favor of reason and justice rather than of force in dealing with Mexico. They will applaud him for the high stand he has taken against intervention. And they will rejoice when the last of our armed men has come out of Mexico and is again on our own soil.

## Naval Appropriation Bill.

## SPEECH

## HON. CLAUDE KITCHIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, May 29, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. KITCHIN. Mr. Chairman, I never did love to talk much in the House, but I regret exceedingly that my time is so limited now that I can not on this occasion have the opportunity to present the views of those, including myself, who have not been dominated by the preparedness hysteria, which seems to have seized the country and the House.

While I believe the present bill carries many millions more of appropriations than the needs of the Government or the country really demand, I shall vote for it.

I was and am opposed to the original program which was presented by the Secretary of the Navy and the administration to Congress. That program was made, perhaps, upon the advice of naval officers who did not have men who knew something about the Navy of this country and the navies of the world to cross-examine them in the presence of the President and the Secretary of the Navy. This bill has been framed and prepared after five months of hearings by the Naval Committee, of naval experts and officers, under cross-examination of men who knew as well as they did something about the Navy in this country and the navies of the world and the requirements of this country with respect to the Navy.

This bill modifies the original program submitted to Congress to such an extent that it is so infinitely better that every Democrat here who opposed the enormous increase of the original program is justified in supporting it. It is so immeasurably better than the alternative presented by the Republicans of the committee and of the House that it is the duty of every Democrat here to vote against the proposition of the minority and, in order to defeat it, support the pending measure. The pending bill strikes from the original program the dreadnaughts, substituting therefor battle cruisers, and also eliminates the five-year feature—the most objectionable feature of the program first submitted. It contains the Hensley international peace and disarmament proposition, which adds largely to its merits. It refuses to tie up the Government in a five-year authorization and appropriation which at one radical step would impose upon the people a burden of practically $1,500,000,000, but leaves such legislation each year to the judgment and wisdom of Congress. The Naval Affairs Committee showed both wisdom and courage in refusing to recommend dreadnaughts. The evidence of the naval experts and officers in their daily testimony for the last several months before the naval committee was overwhelming that the Navy's needs in capital ships were fast battle cruisers and not dreadnaughts. It was the consensus of opinion of such experts and officers that if we were to have by the bill two, or four, or five, or six capital ships they should all be fast battle cruisers and not dreadnaughts. The Navy has not a single battle cruiser, while it has, built, building, and authorized, 19 dreadnaughts.

I must say candidly to the House that if the Senate adds to this bill dreadnaughts or other capital ships, or puts into it the five-year feature, I can not support it.

All of the advocates of "preparedness," in and outside of the Capitol, except the wild, rantankerous jingoes, only claim that we should have a Navy second to that of Great Britain. Even the Navy League—a so-called "patriotic society" organized by the Steel Trust—the Bethlehem, Midvale, and Carnegie steel and armor-plate companies, and other munition makers, and its sister "patriotic society," the National Security League, demand only, in the language of this resolution, "that the American Navy should at once be restored to the position of second naval power."

At the last session's hearings Admiral Fletcher, commander of the Atlantic Fleet, the highest naval officer in the Navy, declared that we did not need a Navy as large as that of Great Britain, and that naval officers did not advocate the building of such a Navy. Admiral Vreeland in 1913 testified that this country did not require a Navy as large as Great Britain, and he gave good reasons, which I have not the time to go into. Secretary Daniels in his testimony before the Navy Committee last year said that nobody in this country expected or wanted a Navy as large as that of Great Britain, because it was not necessary. The minority report of the Republican members of the committee on the pending bill demands only that our Navy be restored to second place.

So, then, we have it that the demand of the extreme "preparedness" advocates in and out of the House—even the war traffickers and their "patriotic societies"—is that we should have only a Navy second to that of Great Britain; that is, superior to that of Germany, as she has a larger navy than any foreign power except Great Britain.

Now, gentlemen, is it not strange that in all this debate not a man has referred to the fact that at the hearings last session the overwhelming, the conclusive, the undisputed proof by the naval officers and experts and the Secretary of the Navy was that then our Navy was stronger and superior to the navy of Germany or France or Italy or Japan, and that our Navy was superior to any navy on earth except that of Great Britain? When the Secretary of the Navy was testifying, when Admiral Fletcher, the head of the Atlantic Fleet, and Capt. Winterhalter and Admiral Badger were testifying that our Navy was superior to that of Germany or any other nation except England, this hysteria of "preparedness" had not seized with its dominating grip the Navy Department and the House.

Not only did Secretary Daniels, Admiral Fletcher, commander of the Atlantic Fleet, a man who if war did come with any sea power would have to do the fighting, Capt. Winterhalter, and Admiral Badger declare that we had a Navy superior to any navy on earth except Great Britain, but the distinguished leader of the Republicans in this House admitted on this floor that we at that time had a Navy superior to any navy of the world except Great Britain, and he voted with

Judge Witherspoon and Mr. HENSLEY and many other Democrats and Republicans to cut down the program of last year from two dreadnaughts to one. Not only that, but the distinguished gentleman of Michigan, Mr. KELLEY, a leading member of the Naval Committee, who made a speech Saturday for the naval program presented by his party, a program five times as large as that of last session and more than six times as large as any program ever enacted into law by his party, declared on the floor of the House last session that Admiral Fletcher testified that we had a Navy superior to that of any nation in the world except Great Britain, and he agreed with him.

What has caused our Navy, since this testimony and evidence of its superiority, to fall behind that of Germany? Since this testimony we last session authorized the biggest building program in the history of the country. Germany since the war began has lost 87 warships, with a tonnage of 300,000, more than she has ever built in any five years of her history, more than this country could build in five years. And yet with a building program by us larger than ever before in the history of the Government, and with Germany losing 300,000 tonnage by this war, more than she could replace in five years, we have the proposition by the minority here to increase that large program of last year from $55,000,000 to $272,000,000 in order to begin to make us equal to Germany.

In face of the fact that the overwhelming, undisputed proof last session was that our Navy was the second in rank among the naval powers, superior to that of Germany and all others except that of Great Britain—exactly what our "preparedness" advocates claim they want to make it now—and that since then we authorized the biggest constructive program in our history, and the navies of Germany and other countries have been weakened by the loss of ships during the war, it seems a reckless folly for us to be supporting the big increase of appropriation carried in this bill and almost criminal to support the fabulous increase proposed by the minority on the ground or pretext that our Navy should be restored to "second place."

I do not know that, being a Democrat, I ought to repeat it, but I reckon the truth ought to be known. One of the biggest officers in the Navy Department, and I believe he is as great an official as the Navy Department has, testified before the Naval Committee that the program which they submitted for this Congress to approve by enactment was prepared largely on account of the "preparedness" sentiment that had grown up in the country, and not so much in view of the real needs and requirements of this Government or the country. I have had Democrats to whisper to me, "It's good politics for our party to advocate this 'preparedness'—big navy and big armies." I have said to them, "Gentlemen, all of us, from the President down, believe that this is a nonpartisan question, and it ought to be, and it ought to be for one's individual conscience and judgment from the facts and evidence as he sees them. If we try to make politics out of it to catch these war traffickers, jingoes, munition plants, and their 'patriotic societies,' the Republicans are just smart enough to outbid us every time." [Applause and laughter.] And they have outbid us to the tune of over $100,000,000. I want to throw out this suggestion to the Democrats here and elsewhere that it is a vain hope and undertaking for the Democratic Party to attempt by legislation to get the vote and influence of the big interests in this country, because the Republicans will outbid us and beat us to it every time, although we might have a few months' start of them. [Laughter.]

The Secretary of the Navy, Mr. Daniels, at the last session said that the program which the administration then presented to Congress if annually pursued was all that the needs of the country and the Government required, and he was dead right about it, for that was all that we did need or require, so far as capital ships were concerned.

Admiral Fletcher testified then that he could not think of a better way to supply the needs and requirements of the Navy and the country than to adopt such a program as the Secretary of the Navy proposed. Mr. Chairman, I want to let the taxpayers of this country know——

Mr. FARR. Mr. Chairman, will the gentleman yield? Was that the five-year program?

Mr. KITCHIN. No; I do not yield.

Mr. FARR. I would like to ask the gentleman if that was the five-year program?

Mr. KITCHIN. I was referring to the program submitted last session.

Mr. FARR. Yes.

Mr. KITCHIN. The five-year program was the one submitted at this session.

Mr. FARR. That would reduce us to fourth in five years.

Mr. KITCHIN. There is not a naval expert in the world who can come and give any facts sustaining the gentleman's statement, and he is the only man in the world with audacity enough to make such a statement.

Mr. FARR. Every naval expert before the committee says so; every one of them.

Mr. KITCHIN. Not one so testified. If we can get rid of this hysteria——

Mr. FARR. Is the President affected with hysteria?

Mr. KITCHIN. And get away from the influence of the armor-plate companies and the shell companies in our States, we can see the real facts. How can they say that it has dropped to third or fourth place when last year these naval experts and the Secretary of the Navy and Mr. MANN and Mr. KELLEY all declared that then we had a Navy superior to any in the world except Great Britain, and since the war began Germany, the next largest of foreign navies, has lost 300,000 tons, and since then we authorized the largest building program in the history of the country? In the two or three minutes remaining I desire to remind the taxpayers of the country——

Mr. QUIN. Yes; talk to them a little bit.

Mr. KITCHIN. That if this preparedness hysteria does not subside, and Congress pursues for three years the military program already passed and the naval program proposed in this bill, modest as it is as compared with the program first submitted to Congress, or with the proposition of the Republicans, from their pockets will be wrung more taxes annually for the Army and Navy alone than were collected from all sources of taxation last year. From the tariff, income tax, internal revenue—tobacco, whisky, and so forth—and the emergency revenue act we collected last year $625,456,000. If we do not return to sanity, in three years we will be expending on our Navy and Army alone $650,000,000—over $150,000,000 more than any nation on earth ever expended on its navy and army in times of peace. And the taxpayers must pay every dollar of these enormous appropriations.

When they begin to pay they are going to ask and find out what "preparedness" means.

The CHAIRMAN. The time of the gentleman has expired.

---

## The Oregon Primary Election.

---

## EXTENSION OF REMARKS

OF

# HON. CLIFTON N. McARTHUR,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. McARTHUR. Mr. Speaker, on yesterday, when my distinguished and esteemed friend the gentleman from Alabama [Mr. HEFLIN] was enlivening the House with a discussion of current politics, he stated that Mr. Charles E. Hughes was the nominee of the political bosses, whereupon I inquired as to whether or not the gentleman from Alabama had heard of the results of the Oregon primary election on May 19, wherein I declared Mr. Hughes to have received four times as many votes as Mr. Wilson. I wish at this time to correct my statement as to the relative size of the vote received by Mr. Hughes and Mr. Wilson, as the former did not receive "four times as many" as the latter. In the excitement caused by the eloquence of my friend from Alabama I forgot the exact figures, but I have since looked them up, and wish to insert them in the RECORD.

The vote, as furnished me by the secretary of state of Oregon, was as follows:

| | |
|---|---|
| Theodore E. Burton (Republican) | 10,593 |
| Albert B. Cummins (Republican) | 27,558 |
| Charles E. Hughes (Republican) | 56,764 |
| Total Republican vote | 94,915 |
| Woodrow Wilson (Democrat) | 27,898 |
| Total Democratic vote | 27,898 |
| Theodore Roosevelt (Progressive) (name written in) | 258 |
| Total Progressive vote | 258 |

Mr. Hughes's name was put on the ballot by petition of his Oregon supporters, but he requested the secretary of state to remove it, as he was not a candidate. The secretary of state attempted to comply with the request, but one of the Hughes petitioners instituted mandamus proceedings against that official and the supreme court of the State decided that the people had the right to make Mr. Hughes their candidate by placing his

name on the ballot, and that their rights in the matter were superior to his own wishes. No organized campaign was made for Mr. Hughes, but there was a popular uprising for him and he swept the State, carrying every one of the 35 counties. He received a clear majority of 18,613 votes over the combined vote of Mr. Cummins and Mr. Burton—both high-grade men, fully capable of filling the great office of President of the United States. He received more than twice as many primary votes as did Mr. Wilson, who carried Oregon in the general election four years ago.

I mention these figures for the purpose of showing the great undercurrent for Mr. Hughes among the people of my State. I believe this feeling to be general throughout the country and therefore can not agree with the gentleman from Alabama when he states that Mr. Hughes is the nominee of the political bosses.

---

**Address of President Wilson Before the Press Club in New York City June 30, 1916.**

---

## EXTENSION OF REMARKS

OF

# HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. FOSTER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I beg to insert the speech made by President Wilson in New York before the Press Club in that city.

President Wilson said:

"I realize that I have done a very impudent thing; I have come to address this thoughtful company of men without any preparation whatever. If I could have written as witty a speech as Mr. Pulitzer, I would have written it. If I could have written as clear an enunciation of the fundamental ideas of American patriotism as the mayor, I should have attempted it. If I could have been as appealing a person and of as feeling a heart as Mr. Cobb, I would have felt safe.

"If I could have been as generous and interesting and genuine as Mr. Colby, I should have felt that I could let myself go without any preparation. But, gentlemen, as a matter of fact, I have been absorbed by the responsibilities which have been so frequently referred to here to-night, and that preoccupation has made it impossible for me to forecast even what you would like to hear me talk about.

EFFECT "ODDLY CONTRADICTORY."

"There is something very oddly contradictory about the effect you men have on me. You are sometimes, particularly in your photographic enterprises, very brutal to me, and you sometimes invade my privacy, even to the extent of formulating my judgments before they are formed, and yet I am tempted when I stand face to face with you to take off all guard and merely expose myself to you as the fallible human being that I am.

"Mr. Colby said something that was among the few things I had forecast to say myself. He said that there are some things which it is really useless to debate, because they go as a matter of course.

DUTY TO PREPARE NATION.

"Of course it is our duty to prepare this Nation to take care of its honor and of its institutions. Why debate any part of that, except the detail, except the plan itself, which is always debatable?

"Of course it is the duty of the Government, which it will never overlook, to defend the territory and people of this country. It goes without saying that it is the duty of the administration to have constantly in mind with the utmost sensitiveness every point of national honor.

EASIEST THING IS TO STRIKE.

"But, gentlemen, after you have said and accepted these obvious things your program of action is still to be formed. When will you act and how will you act?

"The easiest thing is to strike. The brutal thing is the impulsive thing. No man has to think before he takes aggressive action; but before a man really conserves the honor by realizing the ideals of the Nation he has to think exactly what he will do and how he will do it.

"Do you think the glory of America would be enhanced by a war of conquest in Mexico? Do you think that any act of violence by a powerful nation like this against a weak and destructive neighbor would reflect distinction upon the annals of the United States?

FULLY REALIZES HIS POSITION.

"Do you think that it is our duty to carry self-defense to a point of dictation into the affairs of another people? The ideals of America are written plain upon every page of American history.

"And I want you to know how fully I realize whose servant I am. I do not own the Government of the United States, even for the time being. I have no right in the use of it to express my own passions.

"I have no right to express my own ambitions for the development of America if those ambitions are not coincident with the ambitions of the Nation itself.

TELLS OF PEACE LETTERS.

"And I have constantly to remind myself that I am not the servant of those who wish to enhance the value of their Mexican investments, that I am the servant of the rank and file of the people of the United States.

"I get a great many letters, my fellow citizens, from important and influential men in this country, but I get a great many other letters. I get letters from unknown men, from humble women, from people whose names have never been heard and never will be recorded, and there is but one prayer in all of these letters: 'Mr. President, do not allow anybody to persuade you that the people of this country want war with anybody.'

QUOTES RAILROAD ENGINEER.

"I got off a train yesterday and as I was bidding good-by to the engineer he said, in an undertone, 'Mr. President, keep out of Mexico.' And if one man has said that to me a thousand have said it to me as I have moved about the country.

"If I have opportunity to engage them further in conversation, they say, 'Of course, we know that you can not govern the circumstances of the case altogether, and it may be necessary; but for God's sake do not do it unless it is necessary.'

"I am for the time being the spokesman of such people, gentlemen. I have not read history without observing that the greatest forces in the world and the only permanent forces are the moral forces.

LITTLE ACCOMPLISHED BY FORCE.

"We have the evidence of a very competent witness, namely, the first Napoleon, who said that as he looked back in the last days of his life upon so much as he knew of human history he had to record the judgment that force had never accomplished anything that was permanent.

"Force will not accomplish anything that is permanent, I venture to say, in the great struggle which is going on on the other side of the sea. The permanent things will be accomplished afterwards, when the opinion of mankind is brought to bear upon the issues, and the only thing that will hold the world steady is this same silent, insistent, all-powerful opinion of mankind.

RECALLS AMERICAN HISTORY.

"Force can sometimes hold things steady until opinion has time to form, but no force that was ever exerted, except in response to that opinion, was ever a conquering and predominant force.

"I think the sentence in American history that I myself am proudest of is that in the introductory sentences of the Declaration of Independence, where the writers say that a due respect for the opinion of mankind demands that they state the reasons for what they are about to do.

"I venture to say that a decent respect for the opinions of mankind demanded that those who started the present European war should have stated their reasons; but they did not pay any heed to the opinion of mankind, and the reckoning will come when the settlement comes.

INDIFFERENT TO VERDICT.

"So, gentlemen, I am willing, no matter what my personal fortunes may be, to play for the verdict of mankind. Personally, it will be a matter of indifference to me what the verdict on the 7th of November is, provided I feel any degree of confidence that when a later jury sits I shall get their judgment in my favor. Not my favor personally—what difference does that make?—but in my favor as an honest and conscientious spokesman of a great nation.

"There are some gentlemen who are under the delusion that the power of a nation comes from the top. It does not. It comes from the bottom.

"Power and virtue of the tree does not come from the blossoms and fruit down into the roots, but it comes from the roots in the obscure passage of the earth where the power is derived, which displays itself in the blossoms and the fruit; and I know that

among the silent, speechless masses of the American people is slowly coming up the sap of moral purpose and love of justice and reverence for humanity which constitutes the only virtue and distinction of the American people.

RULERS OF THE FUTURE.

"Look for your rulers of the future! Can you pick out the families that are to produce them? Can you pick out the localities that are going to produce them?

"You have heard what has been said about Abraham Lincoln. It is singular how touching every reference to Abraham Lincoln is. It always makes you feel that you wish you had been there to help him in some fashion to fight the battles that he was fighting, sometimes almost alone.

"Could you have predicted, if you had seen Abraham Lincoln's birth and boyhood, where that great ruling figure of the world was going to spring from?

"I have presided over a university, but I never deceived myself by supposing that by university processes you were producing the ruling forces of the world.

HIS VIEW OF THE UNIVERSITY.

"I knew that all a university could do if it knew its business was to interpret the moral forces of the world and let the young man, who sat under its influence, know the very truth of truths about where it came from, and that no man could produce it unless he felt in his blood every corpuscle spring into delightful life with the mention of ideals which have lifted men slowly, oh, so slowly, up the arduous grades, which have resisted the progress since the world began.

"So, gentlemen, I have not come here to-night to do anything but to remind that you do not constitute the United States; that I do not constitute the United States; that it is something bigger and greater and finer than any of us; that it was born in an ideal, and only by pursuing an ideal in the face of every adverse circumstance will it continue to deserve the beloved name which we love and for which we are ready to die, the name 'America.'"

## Rural Post Roads.

### EXTENSION OF REMARKS
OF
### HON. EDWARD E. BROWNE,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. BROWNE. Mr. Speaker, after knocking at the door of Congress for over 50 years, Congress is about to recognize the justice of the demands of the people in asking Federal aid for wagon roads.

The Government at an early date embarked in road building. George Washington, in one of his messages to Congress, advocated and recommended Federal aid for roads.

In 1806 Thomas Jefferson also advocated Federal aid for roads, and through the efforts of Jefferson and others the great Cumberland Road was started, and $7,000,000 was appropriated. The people never received better value for an appropriation than they did for this.

The Cumberland Road that began at Cumberland, Md., and whose destination was the Ohio River, started the great western march of civilization of the people of this country toward the Ohio and Mississippi Rivers. Since the building by the Government of the Cumberland Road the National Government has embarked on almost every kind of internal improvement—railroad grants, river and harbor improvements, and a hundred other kinds of improvements—and neglected road improvement.

THE NATION SHOULD AID.

The principal argument made against this bill is that the State and local governments should build their own roads and that the National Government was not interested.

I say in reply to this that every wagon road serves a local use, a State use, and a national use.

Over every wagon road is carried the crops from the farm to the nearest railroad station, and from there the products of the farm find their way into interstate commerce, and many times do not reach their destination until they cross the seas and are sold to foreign consumers.

It is the stupendous wealth from the farms that begins its journey in wagons on the country roads that, after supplying our home demands, finds its way abroad to turn the balance of trade in our favor, and to bring to our shores the golden stream of wealth that makes for national prosperity.

Every man's house faces on a road that connects with every other road, and leads to every other man's house and to every market place through the land.

GOOD ROADS WOULD BENEFIT EVERYBODY.

The question of good roads is a problem that concerns everybody. At one end of every road is the farmer with his crops for sale, which aggregated last year nearly $10,000,000,000. At the other end of the road is the city, with its people waiting to be fed, with its merchants waiting for trade, and with the railroads waiting for goods to transport. To whose advantage is it to have a good road for the farmer to come to town? It is clearly to the advantage of the merchant and the city and the railroad as much as it is for the farmer.

The farms and the farmers are the great and abiding support of the Nation. Therefore we have every reason why the improvement of roads should be undertaken by the National Government, besides having the precedent established by the founders of the Government.

OUR ROAD SYSTEM ANTIQUATED.

We in America inherited our system of roads from England, a system that England abandoned centuries ago. I read from Macauley's History of England. He writes as follows:

The highways appear to have been far worse than might have been expected from the degree of wealth and civilization which the nation had even then attained. Every parish was bound to repair the highway which passed through it. That a route connecting two great towns which have a large and thriving trade should be maintained at the cost of the rural population scattered between them is obviously unjust. The injustice attracted the attention of Parliament, and the act, the first of many turnpike acts, was passed. This innovation, however, excited many murmurs. A change was at length effected, but not without much difficulty, for injustice and absurd taxation to which men are accustomed is often borne more willingly than the more reasonable impost which is new.

At that time, in the seventeenth century, England changed her road system and the national Government took a hand in road building, and the magificent system of roads in England show the wisdom of her course.

ROADS INADEQUATE.

The rural roads of the United States are wholly inadequate to meet the demands and requirements of this twentieth-century civilization.

The capital to-day invested in agriculture, including personal property, amounts to the stupendous sum of $40,000,000,000.

Over 50,000,000 of our 100,000,000 people reside in the country; that is, outside of cities of 2,500 inhabitants or over. Yet, out of the annual appropriations made by this Government, less than 10 per cent of the money goes to the country in any way, while the 90 per cent goes to the cities.

PROVISIONS OF THIS BILL.

The $85,000,000 appropriated by this bill will be apportioned among the various States as follows:

First. One-third will be distributed on the basis of population, the ratio that the population of each State is to the total population of all of the United States.

Second. One-third on the basis that the area of each State is to the total area of the United States.

Third. One-third on the basis that the mileage of the rural and star routes of each State bears to the total mileage of rural and star routes in the United States.

This bill further provides that the State shall pay 50 per cent of the total cost of the road upon which it receives Government aid. The bill further provides that these roads shall be located and constructed under the direction of the State highway commission and the Secretary of Agriculture.

It further provides that $10,000,000 of the amount appropriated shall be advanced in building roads through the national parks and forest reserves at the rate of $1,000,000 per year; the amount thus expended to be reimbursed from the forest products and other revenues received from the national forest reserves.

AMOUNT FOR WISCONSIN ROADS.

The State of Wisconsin under this appropriation will receive from the United States in the five years approximately $2,000,000 for its roads.

ROAD IMPROVEMENT IMPORTANT.

This bill should become a law without delay.

Some have argued that the Government should postpone all road improvement on account of the expense.

In reply to this argument I wish to say that we appropriated at the last session of Congress $30,000,000 for an Alaskan railroad to benefit 65,000 people.

Good roads will benefit 100,000,000 people.

It is not too late to repeal or have the Alaskan railroad appropriation wait for this more imperative need.

The river and harbor bill, which carries over $40,000,000, is now in conference, and will undoubtedly pass at this session of Congress.

This Congress has appropriated $100,000,000 for the Government to buy ships so that American products can move with greater facility on the highways of the seas.

It is of far greater importance, in my mind, that the highways on the land, over which the whole food supply of the Nation is annually hauled and over which men, women, and children are obliged to travel in all kinds of weather, on foot and in wagons, 365 days in the year, be improved by the National Government.

Should this great internal improvement which the people have been asking Congress to make for over 50 years be compelled to side-step for every other internal improvement?

This Congress has expended $50,600,000 for the improvement of the Mississippi River to prevent floods, and I might enumerate several hundred million dollars that this Congress has appropriated for internal improvement, none of which, or the aggregate of which, would benefit the people of the United States one-half as much as the improvement of our rural highways of this country.

GOVERNMENT AID TO ROADS.

In my opinion, the question of national aid for roads is the greatest question before Congress. On this question we should waive technical differences.

Horace Greeley once said that "the way to resume specie payment was to resume."

The way to have national aid for roads is to pass the best road bill Congress is capable of drafting, and after working under it, if it proves inadequate, perfect it by amendment. We will never make any progress by attempting to defeat every measure that does not meet in every particular with our ideas.

Therefore, I hope that Congress, before adjourning this afternoon, will agree to this conference report, which means national aid for roads.

PREDICTION.

If Congress passes this bill, it is going to stimulate road building through the whole United States. It is going to compel the States that have no State highway commissions to get them.

Good roads will improve the condition of rural life and make it more attractive, and will have a direct bearing upon the social, intellectual, and economic welfare of the whole people; it will be followed by a greater activity and cooperation on the part of the rural population of this country, which will mean an era of the greatest prosperity this country has ever known. Seventy-five million dollars extending over a period of five years may seem like a small appropriation for the whole United States, but it is well to begin these matters in a conservative way.

The first appropriation for rural delivery amounted to only $10,000. Now we are expending over $40,000,000 upon rural delivery service, the Government making a profit from the parcel-post part of that service of ten millions of dollars last year.

I believe the people of the United States will receive such great benefits from national aid for roads that within 10 years they will demand and receive from Congress an appropriation of $100,000,000 a year.

---

**The Campaign of 1916.**

## EXTENSION OF REMARKS
OF
## HON. CHARLES F. REAVIS,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. REAVIS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an interview given by the Hon. EBENEZER J. HILL on Monday following the Republican convention.

The interview is as follows:

"The United States planned last week at Chicago for a new future, and nothing can be done at St. Louis this week to change it.

"No spot can be found upon the private life or public service of either Charles E. Hughes or Charles W. Fairbanks, and the magnificent patriotism of Theodore Roosevelt has made their election a reasonable certainty.

"The campaign of 1916 will be fought and won not on personalities but on political principles, and in such a fight the Republican Party is sure to win.

"It stands for peace with honor, but demands preparation for complete defense against attack from any quarter.

"It insists upon the absolute independence of the United States as a sovereign power, and will assert and maintain everywhere the legal rights of all of its citizens, making loyalty to the flag and this Nation's welfare the only test of citizenship.

"It recognizes the increasing intimacy of international relations, but claims perfect freedom for this Nation to control for itself its own financial, industrial, and social conditions, standing for America first, the American home, the American standard of living, and the American wage system, and giving equal opportunity to all of our own people in our own market places in preference to special privileges granted to other nations foreign to our habits, methods, and system of government.

"Tested by the experience of the past, the Democratic Party, while useful as an opposition critic, has demonstrated its inability to successfully govern a nation like ours, and its only possible hope of salvation in the coming political contest is found in the continuance of the awful war which now afflicts one-half of the world.

"Even the stimulating effect of a foreign war, though supplemented by repeated emergency taxation here, has not prevented an enormous Treasury deficit, and a Democratic bond issue has been a constant threat to provide for extravagant current expenditure.

"In 1900 the Republican Party won the national election by a plurality of 860,788 votes.

"In 1904, by a plurality of 2,544,343 votes.

"In 1908 by a plurality of 1,269,806 votes.

"In 1912 the Democratic Party was temporarily placed in power with a vote of 1,318,380 less than that cast by Republicans and Progressives.

"Charles E. Hughes's declaration of principles and Theodore Roosevelt's love of country have made reunion possible, and whether war or peace shall be found in Europe, The Republican Party will bring again to this Nation the permanent peace and enduring prosperity which have given us a glorious past and which will again insure an abiding faith in a still more glorious future."

---

**Support of the Families of National Guardsmen.**

## EXTENSION OF REMARKS
OF
## HON. RUFUS HARDY,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. HARDY. Mr. Speaker, I shall vote for the pending bill appropriating $2,000,000 for the support of the families of the National Guardsmen who have no other adequate income while they are serving in the Army. These men are drafted or conscripted by law and the call of the President, and must perforce leave their families, unprovided, to serve their country. I can not give a better reason for my vote than the appeal contained in this letter just received by me.

The letter is as follows:

TEAGUE, TEX., *June 26.*

KIND JUDGE: Judge, will you do something for a poor widowed mother? My only boy, the only help I had in this world, was Howard E. Odom, now in service at Mercedes.

Judge, I have a home and it is paid for, but I am not able to work. I have gallstone colic. My husband has been dead five years. I have had to look to Howard; have four little girls. Howard was so good. He was misled into the National Guard, and through threats of imprisonment he was mustered in. Oh, Judge, do something for me. I have to hire some one to stay with me at night. The little girls have to work out to get men to plow for us. I will pay you $100 to get him home to me if it takes the last horse I have. He will make it back. I am 48 years old. Just think if you were in trouble how your dear, sweet mother would thank some one to help you, and if you have children think what they are to you. Howard has never been away from me a month in his life until now. He is a child of God; a blessing to his home. If you can't do nothing, who can? If not for my sake, for God's sake. I can get every business man in Teague, also Fairfield, to sign a petition, for they know how I need him. I believe through the power of God you will help. Let me hear what you will do at once or what can I do for him. I can get a substitute as able as he if that will do.

I am ever waiting your reply.

Mrs. E. W. ODOM.

Care of J. R. HORTON,
*Teague, Tex., R. 4.*

While I vote for this bill I would like to have seen two amendments embodied in it. First, an amendment authorizing any member of the guard to be honorably discharged who makes application, showing that he has a family dependent on him for support; second, an amendment authorizing the President to call for volunteers, so that the thousands of young men outside of the Guard who are ready and anxious to organize volunteer companies and tender their service might be given the opportunity to do so. I have received more than one letter similar to the one I have quoted from wives and mothers whose prayers ought to be granted. On the other hand I have a number of letters from constituents asking to be allowed to organize a company of volunteers. It seems that neither prayer can be granted. I think both ought to be granted. When young men are able, willing, and ready to enlist in our volunteer army it is no hardship to let them go, but it is a hardship when, by law, we single out any class of our citizens and compel them to go, willing or unwilling, ready or not ready.

It is said that this law is setting a new precedent. I am willing that it shall. No country ought by force to take away the breadwinner of a family without providing for the support of that family. The National Guard all over the country is composed of young men who never thought or dreamed or had a right to dream, of joining the Regular Army when they enlisted in the militia. The laws we have passed at this session practically takes them as a body and transfers them to the Regular Army for such length of time as the President may desire.

## Federal Aid to Good Roads.

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. HAYDEN. Mr. Speaker, I desire to take this opportunity to briefly state just what benefit the State of Arizona will receive by reason of the passage of the good-roads bill. This measure first appropriates $5,000,000 for the fiscal year beginning July 1, 1916, $10,000,000 for 1917, $15,000,000 for 1918, $20,000,000 for 1919, and $25,000,000 for 1920, which sums are to be expended by the Secretary of Agriculture, cooperating with the State highway departments, in the construction of rural roads over which the United States mails are or may hereafter be transported. In order to obtain the benefits of this act a State must by act of the legislature assent to its terms. It is also required that a State highway department be established with which the Federal Government can deal, and the State must also contribute at least an equal amount in money, materials, or labor toward the construction of any proposed road. Arizona is ready to meet these conditions and will make good use of her share of the appropriations.

The money appropriated by this act will be apportioned among the States according to three factors. One-third in the ratio which the area of the State bears to the total area of all the States, one-third according to population, and one-third according to the mileage of rural delivery and star routes compared with the total mileage of such routes. Arizona has, of the total in the Union, 3.83 per cent of the area, 0.224 per cent of the population, and 0.251 per cent of the postal route mileage. By consolidating these three factors we find that my State is entitled to 1.435 per cent of the appropriations made under this act, which means that the following sums of money will be apportioned for road construction in Arizona at the beginning of each of the next five fiscal years:

| | |
|---|---|
| 1916 | $71,000 |
| 1917 | 143,000 |
| 1918 | 215,000 |
| 1919 | 287,000 |
| 1920 | 358,000 |

In other words, $1,074,000 will be contributed from the Federal Treasury to assist in building highways in Arizona during the ensuing five years.

But this is not all the benefit that Arizona will receive by the enactment of this legislation, for section 8 of this bill appropriates $1,000,000 each year for the next 10 years to be expended under the supervision of the Secretary of Agriculture, upon the request of the State or county authorities, in the construction and maintenance of roads within, or partly within, the national forests. The States or the counties in which the forest reserves are located are required to enter into cooperative agreements with the Department of Agriculture to pay for the roads that they want built upon a basis equitable both to them and to the United States. The Federal Government is to be reimbursed for the money thus advanced by depositing in the Treasury 10 per cent of the revenues received from the timber or forage resources of the forests wherein the roads are located until the loan is paid.

I may add that this new plan in no way interferes with the present system whereby the States and counties are now receiving for road and school purposes 25 per cent of the gross receipts of the national forests.

The total area of the national forests in the United States is 135,356,353 acres, of which about one-tenth, or 13,339,390 acres are located in Arizona. The Arizona forests are as rich in timber and forage resources as similar reserves in the other States, and it is therefore reasonable to assume that my State will receive the benefits of section 8 of this act in the ratio which the forest-reserve area of Arizona bears to the total area of the national forests. On this assumption about $100,000 a year will be available for road construction in Arizona, or a total of $1,000,000 within the next 10 years. I traveled by automobile through most of the national forests in Arizona last summer, and I can testify that this money is sorely needed.

The friends of Federal aid for the construction of highways have been willing to vote for almost any kind of a good-roads bill, because we knew that when a system of congressional appropriations for this worthy object is established the assistance thus granted will never afterwards be withheld. There is not a shadow of doubt, therefore, but that Congress will continue to appropriate at least $25,000,000 annually after 1920 to aid the States in the construction of roads. This makes it certain that under the first apportionment provided for in this bill Arizona will receive not less than $2,850,000 during the next 10 years. With the increasing appreciation of the value of good roads, Congress is more likely to augment rather than to reduce this amount. By adding to this sum the $1,000,000 that my State will receive during the next decade from the special appropriation which this bill makes for forest-reserve roads, it is safe to say that Arizona will receive Federal aid to the extent of at least $3,850,000 during the next 10 years. With this help from Uncle Sam, Arizona can build a system of main highways and branch roads that will be a credit to any country in the world.

## Importation of Cattle from Central and South American Ports.

EXTENSION OF REMARKS

OF

HON. H. GARLAND DUPRÉ.

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. DUPRÉ. Mr. Speaker, under leave to print granted me by the House I now insert in the RECORD copy of act 30 of the General Assembly of the State of Louisiana for the year 1916, being a concurrent resolution indorsing Senate bill No. 3351, introduced by Senator BROUSSARD, of Louisiana, regarding importation of cattle from Central and South American ports.

The act is as follows:

Act 30.

Senate concurrent resolution 14 (by Mr. Domengeaux) indorsing Senate bill 3351, Sixty-fourth Congress, first session.

*Be it resolved by the Senate of Louisiana (the House of Representatives concurring)*, That Senate bill 3351, Sixty-fourth Congress, first session, introduced by Senator BROUSSARD, of Louisiana, in the Senate on January 10, 1916, is hereby indorsed, and the Congress of the United States is respectfully urged to pass the bill at this session of Congress to the end that the discrimination now existing in favor of the ports in Texas, against other southern ports, with regard to the importation of cattle and the proper safeguard by the United States Department of Agriculture, may not longer be permitted to continue: Be it further

*Resolved, etc.*, That copy of this resolution be forwarded to the Senate of the United States, and to the House of Representatives of the United States and to the Louisiana Members of the Senate and House in the Congress of the United States.

FERNAND MOUTON,
*Lieutenant Governor and President of the Senate.*
HEWITT BOUANCHAUD,
*Speaker of the House of Representatives.*

Approved, June 23, 1916:

R. G. PLEASANT,
*Governor of the State of Louisiana.*

A true copy.
[SEAL.]

JAMES J. BAILEY,
*Secretary of State.*

## Aid to Dependent Families of Enlisted Men of the National Guard.

EXTENSION OF REMARKS

OF

HON. PORTER H. DALE,

OF VERMONT,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. DALE of Vermont. Mr. Speaker, the measure under consideration presents a strong, sublime policy to which every Member of this Congress ought to let the soul of him respond.

The gentleman from North Carolina [Mr. SMALL] says that this kind of legislation is without a precedent. Well, if the passing of this bill would be a departure from the established custom, the reasons for taking this new course are as old and as just as human need and its alleviation and reprove further default of the obligation. He states that this appropriation would be an unnecessary and unwise use of money. Then we must assume that after the speed with which we have voted hundreds of millions for defense we should suddenly apply harsh economy to the families of the men who have gone to war. Members of this House will not like to say that. But if such a bill as this should fail of enactment, it would appear that we are generous when crude ore demands our money to become an implement of defense and penurious when human beings will become patriots without our gold.

The gentleman says compensation and patriotism do not go together. In that he utters a more sublime truth than he intended. Patriotism is not affected by the assumption on our part of this comparatively slight obligation called compensation. Congress may deny this appropriation, but the men of the National Guard will go with the flag. Yes; Mr. Speaker, from all the States the men will go, though we were to fail to pass this bill. They will go just as the First Regiment from Vermont, among the first on the border, went out under the command of Col. Ira L. Reeves, a man through all his life of military and civic service, in Cuba and the Philippines and as president of Norwich University, well balanced for contingencies by keen conscience and heroic spirit. Yes; from all over the country they, with generations of native ancestors and they whose fathers lived overseas, will go, and their names will stand together as do those of the Norwich Cadets, all of whom have volunteered—Adams and Brooks and Merkel and Boulia and Edmands and Curley. No dependent conditions or compound words go with these men. They are Americans and go from patriotism.

We are not meeting in this bill a demand for the price of their heroism. That company in which I used to drill years ago demanded no such legislation as this as compensation before it entrained. No; but with a loyalty as thrilling in its influence as the record of Ethan Allen at Ticondiroga, when he called upon his 80 men to indicate their willingness to follow him by poising their arms, and every old firelock went up, every man when called to take the oath of enlistment in the Federal Army lifted his hand.

That is no isolated example, of course, and its use here is only to illustrate a heroism that is as broad as the Nation.

But is that the final measure of the heroism and devotion of the men who have gone, and will go, across the borderland of Mexico and maybe of eternity? No; it goes further than this, and so much further that all else fades out and devotion to the Nation meets a supreme test. Right here, when patriotism nears its limit and heroism faces a doubt, there rises the compelling force of the kind of legislation carried by this bill. It is made plain by illustration from existing facts.

On that night when the trains rolled South with the Vermont troops crowds assembled at the stations by which they passed, not to cheer but to stand for hours in the mist so quietly that the rustle of the great flags could be heard overhead, and wait to say the last farewell. But there were some in the families of those young soldiers who were not there. Some were too old and feeble to go. They stayed at home and thought. Some were too young to go or to think of what it meant. And some were not there for other reasons. The wife of a sergeant in the Montpelier company was not there to say farewell to her husband and her two brothers in the company. She stayed at home with the invalid father, and because of the precaution that is taken for those anticipating motherhood it seemed best to keep her from the suppressed excitement of the scenes at the train.

Oh, no; we are not trying to offset that kind of patriotism with a compensation. The two do not go together. But shall we meet conditions like these with 50 cents a day to the soldier gone to the border and a refusal to appropriate for the aid of his family if in want at home? When we take that method to awaken emotions of loyalty and inspire sentiments of devotion we subject ourselves to condemnation.

This is the real compelling influence that is over us in the consideration of this measure. It is not necessary to pass this bill to get the enlistments. The men will go just as my colleague Col. GREENE, left wife and children and well-nigh lost his life in ninety-eight. But there is a compulsion greater than military policy, more imperative than political interest; and that ought to have been so quickly recognized by this Congress that it would have prevented the reproach of the argument of this question in its present form at all, and that should now hasten the enactment of this bill into law in the enthusiastic spirit of appreciation and benevolence and justice.

## Compensation to Certain Families of the Drafted Forces of the United States.

EXTENSION OF REMARKS

OF

HON. RICHARD WAYNE PARKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916,*

On the bill (H. R. 16734) to pay to certain families of the men of the drafted forces of the United States a sum of money for their maintenance during the term of service of such drafted men in the service of the United States.

Mr. PARKER of New Jersey. Mr. Speaker, all through our great land the churches, the patriotic and friendly societies, the boards of trade, the Red Cross, the veteran members of the National Guard, and a host of unions formed for the special purpose, are actively and practically seeing to the care of the families of the brave members of the National Guard, who have so suddenly and unexpectedly been called into dangerous and perhaps foreign service. The passage of this bill is likely to stop that work and so leave those families unprovided for and in distress, because it is not to be forgotten that the War Department has no facilities to investigate their needs and dispose of them promptly, practically, confidentially, and well.

The bill is exceedingly defective. It only covers the cases of married guardsmen who were drafted, and not those of the married men who have since enlisted or may enlist. It does not cover the married regular soldiers who are doing actual fighting in Mexico, and will generally constitute the first line. The Regulars feel this as an invidious distinction, and I am told that recruiting has already fallen off. No bill should pass that does not provide for them.

This special emergency should be dealt with as such locally. The localities can settle all cases justly and well, while it would take years for the War Department to inquire what each husband has done for his family and even to start the administration of this proposed system. It is to be hoped that a like emergency will never occur again. An army for prolonged war service should when possible be made up of men without families.

Married men are not allowed to enlist in our Regular Army. In all nations where there is compulsory military service the married men are only drafted after the young men are exhausted. If our National Guard now contained the reserve that it will have when the national-defense bill has had full effect, this call or draft would have been for full companies of the unmarried, and the members with families dependent on their earnings would not be suffered to go until the last.

Their cases can only be taken care of locally. No general rule of "not to exceed $50 a month" will meet the various instances of patriotic devotion. Think of a host of friends that have given up assured positions with high salaries and responsible duties. Some of our own membership have left their seats here. Only last week I was to be at a wedding where the groom left for active service. Our college boys are doing nobly.

It is like the glorious record of the Civil War, when these cases were taken care of not by the United States, but by the various States, counties, and towns and by the patriotic societies that were formed everywhere.

The facts now emphasize our need for an Organized Militia that shall enroll many times the war strength of each company

and shall have in the local armories full arms and equipment and be ready for service.

The older men, of substance and family, are of most importance for all local disturbances and for the maintenance of law and order. In time of war they furnish the officers; they maintain the home battalion that furnishes and drills the recruits. They are ready to leave their families and risk all for their country. They ought not to have been forced to go until the need exists; and it is a disgrace that our laws had limited the number and equipment of each company and regiment and that married men who were earning their living had to go on the first call.

The only insurance against this is a system of universal military training and enrollment, giving us a reserve of organized and disciplined men ready to answer their country's call. If these times educate us to this end, they will not have been in vain.

---

**"The Republican Convention."**

---

## EXTENSION OF REMARKS
OF
## HON. PERCY E. QUIN,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. QUIN. Mr. Speaker, I have just read a splendid editorial in a South Carolina semiweekly newspaper published at Anderson on the "Republican Convention." It appeared in the Anderson Farmers' Tribune June 13 last. The Tribune seems to be fair, plain-spoken, and worthy of consideration. That it is not hide-bound in its attitude, and that the press of the South is not narrow-minded and blind to the fact that, after all, the great opposing Republican Party has some reason for existence, is shown by the following, which I clipped from the Tribune's editorial columns under the heading "The Republican nominee":

> Unlike most newspapers, the Tribune makes predictions regardless of whether anyone agrees with them or not.
>
> * * * * * * *
>
> We believe that Roosevelt is the only man in the Republican Party who can beat Wilson.

The leading editorial, however, in its issue of the 13th instant is entitled "The Republican convention," and, owing to its clear-cut and straight-forward discussion of the Republican platform and the Republican candidate for President, I think it is well worth incorporating in the CONGRESSIONAL RECORD, because it fairly and dispassionately points out convincing reasons why, judged by his record and the mental attitude shown therein, the Republican candidate is not as acceptable to the masses as the Democratic nominee.

The editorial is as follows:

> There was little difficulty in the Republicans and Progressives getting together at Chicago on a platform. Senator LODGE of Massachusetts, a distinguished statesman, with progressive ideas and a splendid progressive record in the House and Senate, was made chairman of the platform or resolutions committee by the Republicans. On the committee were placed 47 others with votes, one from each State, the previous postmaster of Anderson representing South Carolina Republicans on that committee. The committee appointed a subcommittee of which LODGE was also chairman.
>
> The subcommittee submitted to the full committee a far better platform for Republicans and everybody else, than the platform, finally adopted by the full committee, which contained planks and omitted planks not to be found in the subcommittee's draft. For instance, the long, equivocal, straddling, women's votes, or suffrage plank, was not in the subcommittee draft. Senator LODGE had been in personal touch with the Oyster Bay colonel for months, and after several personal visits to that sequestered spot where Roosevelt lives, LODGE left Washington with substantially the platform the subcommittee really submitted to the full committee, but which was more or less torn to pieces by some members of the full committee, who got together for the purpose.
>
> The platform, declaring for Americanism, standing for American rights, denouncing President Wilson's foreign policy with Mexico, and the European powers having been adopted, and LODGE having made the hit of the convention with it, right on the heels of Senator HARDING'S bust-up on his "keynote" speech, it began to look like LODGE and Fairbanks to the colonel.
>
> Each convention being pleased with the Republican platform, and both having met "with malice and premeditation aforethought" in the same city at the same time for the well-defined purpose of getting together, a committee of five was appointed by each party to confer with reference to a compromise ticket. The Republican convention took two votes after the first session of the "conferees" to disclose T. R.'s strength, and then the conference committees met again. And then they met again, and continued in session until 3 a. m. taking a recess to "meet again," the Oyster Bay colonel being conferred with over long distance. Fairbanks was called into the conference twice, and finally agreed upon as a compromise candidate for Vice President, but no agreement could be reached as to first place.
>
> Twelve-thirty came on Saturday. The Republicans met and recessed for an hour until T. R. could be consulted and heard from again. About 1.30 a long telegram was brought to the Progressive convention by John McGrath, Col. Roosevelt's private secretary, urging the Progressives to nominate Senator LODGE as a compromise candidate, but cries of "No, No," and the erroneous announcement that the Republicans were nominating Hughes for first place, resulted in Roosevelt being nominated in the Progressive convention by acclamation. Each convention then recessed until their nominees could be heard from.
>
> At 3 o'clock Justice Hughes wired Chairman HARDING, stating that he did not desire the nomination and would rather have remained upon the Federal bench, but responding to the paramount call of his party, he reluctantly accepted the nomination, and then proceeded to denounce the President's foreign policy, to declare for American rights, preparedness, and the whole Republican platform.
>
> We fail to appreciate making a campaign for the election of President of these United States turn on whether a voter or candidate is for America or Germany or Great Britain. The Constitution is specific with reference to treason. Foreign affairs are a matter of some importance, but not enough to be made the paramount issue. We doubt if any set of men can make them the paramount and controlling issue of the country's politics.
>
> The people are interested in securing our rights against Great Britain and against Germany and those countries' allies. We are in favor of asserting our right to trade with neutral countries like Norway, Sweden, Holland, and Denmark. We believe the British blockade is unlawful as conducted, because it is not a physical blockade and does not apply to all neutrals. We think it an insult to allow England to rifle our official and other mail and to do the things she has been doing. But we very seriously doubt whether there are not more important or rather important issues in this presidential campaign.
>
> Justice Hughes's record on the bench and as governor of New York will be reviewed. We think that Hughes is a far weaker candidate than the one suggested by the colonel. Hughes, as a lawyer, represented corporations in New York City. He breathed the corporation atmosphere there. There are good and bad corporations and good and bad corporation atmospheres. True, he investigated the insurance companies, but he was elected governor on account of and to get him away from such rottenness. They were so rotten any lawyer could have aroused public sentiment and condemnation. While governor he vetoed a 2-cent passenger fare bill adopted by the New York Assembly, even though practically all railroads in the Empire State sold mileage at 2 cents a mile. He sent a message to the New York Assembly disapproving the income-tax amendment to the United States Constitution, and would have tried to veto it, if the State Department and constitutional lawyers had not pointed out that his veto was of no effect, because the action of a State legislature approving a constitutional amendment does not have to have nor require the governor's signature, approval, nor disapproval. Those are some of his acts as governor, which will and should lose him votes.
>
> After reelection, running about 150,000 behind his ticket, he resigned the office to become justice of the United States Supreme Court. The bosses of New York are reported to have prevailed upon President William Howard Taft to appoint him to the United States Supreme Court to save the Republican Party in New York and to get them rid of him. But it did not save the New York Republican Party. Partly as a result of "Hughes" dissensions, the Democrats came into power. On the Supreme Court he has rendered decisions that will cost him many a vote. His decision in the Virginia-West Virginia debt case, unloading upon West Virginia about $30,000,000, will unquestionably result in West Virginia going Democratic from top to bottom if present indications are prophetic. His participation in the Danbury hatters' decision, mulcting members of local organizations and clubs in threefold damages for acts done by the organization and without the knowledge of the individual members, will lose him votes, for it shows a wrong point of view and unsympathetic mental attitude, particularly in view of Congress's act overruling such interpretation of the Federal law as to associations and combinations of men not organized for profit.
>
> Wilson and Marshall will be renominated at St. Louis this week. A platform will be adopted that Senator OLLIE JAMES and Senator STONE are reported to have carried there in their inside pockets direct from President Wilson. It will recite, of course, the achievements and point with pride to the accomplishments of this administration and answer the Republican platform criticisms. It looks like Wilson by a lap. And it looks like Teddy four years from now, as the Republican nominee if Hughes falls of election, the "Colonel of Oyster Bay" lives, and the Republicans continue to grow more hungry for political preferment.

---

**The Real Patriotic American.**

---

## EXTENSION OF REMARKS
OF
## HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. SIEGEL. Mr. Speaker, the United States has made the most extraordinary progress in the accumulation of wealth in the annals of the world's history and the most rapid strides in recent years in the enactment of legislation which would tend in many ways to better the conditions of those who by their toil have made possible the progress to which I have made reference.

We know that all the European combatants have made provision for the support and maintenance of the families of soldiers dependent upon them for a livelihood.

Mr. Speaker, we have recently heard in this city men say that each particular community should care for such dependent

families residing in their midst and we have heard others talk of "commercialized patriotism."

I feel that to keep silent at such remarks is to evade one's duty to speak plainly at a time like this. Let us examine for a moment what has caused the necessity of this measure which has received at our hands practically unanimous approval. The President has suddenly reached the conclusion that it was urgent that the National Guard be sent to the Mexican border, and at the same time that the men be required to take the Federal oath, so that if the necessity arose they could be sent into Mexico. It must not be forgotten that a large number of these men are married and dependent upon their weekly earnings for the support of their families. When they enlisted in the National Guard they were moved by the highest patriotic sentiments and voluntarily gave up many pleasures in attending drills, target practice, and camping, which many of these critics have never thought of doing. These men have the spirit of '76, although answering the Nation's call of 1916. They are and have at all times been ready to make sacrifices of the highest order, but has it come to the point that when their families need bread that the only place they can get it is from the bread line, where vagrants and those who do not care to work usually go? I do not believe that we have reached that state as yet. These men have answered the call of the greatest and richest Republic of the world, and it is the duty of the Nation to take care of their families. These men are leaving their firesides, factories, and farms to do their duty to the entire United States, and not merely for the sake of defending one hamlet or city. One might just as well say that Arizona, Texas, and New Mexico should pay all the expenditures which have or may hereafter be incurred in protecting the lives, homes, and property of our citizens in those States from Mexican marauders, as to argue that each particular community should take care of dependent families of National Guardsmen.

Nor would one expect that New York City, which has contributed one-third of the individual income tax and one-fifth of the corporation tax, should in addition thereto provide sustenance for the dependent families of National Guardsmen who hail from New York City.

Uncle Sam is no beggar and needs no charity. A new phrase—"commercialized patriotism"—has been coined by some speakers lately. The meaning of it is that men are going to the front because they are mainly concerned with the monthly pay they are to receive as soldiers and not because they are moved by patriotic motives. The answer to such utterances is short. There is not one man who has left for the Mexican border who was not able to and actually was earning more than the Government pays. That in a large majority of cases the men were earning for a week's work what the Government is paying them for a month's service are facts well known to every individual who has taken any interest whatsoever in the men who compose the National Guard.

Col. Theodore Roosevelt, among other things, said yesterday:

I say involved in something, for if what has happened in the last three years in Mexico is peace, I should prefer war as more peaceful. If there is war, I shall go, and if there are any unmarried men between the ages of 20 and 30, of Oyster Bay, who are prepared to do their duty, they shall go, too. I won't take any married man with a family dependent on him.

GUARD SYSTEM AN OUTRAGE.

It really is an outrage that such a system should be permitted. Under this system, illustrated by the movement of the National Guard to the Mexican border, a man whose wife and children are dependent on him is obliged to go down and leave his family behind. The system is radically wrong.

Elihu Root about a year ago, in an interview, said that many men in public life say things in haste and shortly thereafter repent having made such hasty statements. I believe that such will be the fate of those gentlemen who have opposed this measure.

This bill appropriates $2,000,000 to be expended under the direction of the Secretary of War for the support of, at a cost of not more than $50 per month, so much of said amount as the Secretary of War may deem necessary, the family of each enlisted man of the National Guard called or drafted into the service of the United States until his discharge from such service, which family during the term of service of such enlisted man has no other income, except the pay of such enlisted man, adequate for the support of such family.

It is the best piece of humanitarian legislation that this House has passed this session. It has won the approbation of men, regardless of party, who put the best interests of our country far above party advantage. Toward the eradication of sectionalism, it must indeed be deemed to have contributed its share. It has helped to keep cemented the ties that bind every man at the front to his family. It has shown the world that this Republic at least is not ungrateful to its defenders.

Mr. Speaker, there has appeared this month in Everybody's Magazine a poem written by Elias Lieberman, a classmate of mine, that has attracted considerable attention, and it affords me great pleasure to quote it in full:

I AM AN AMERICAN.

[By Elias Lieberman.]

I am an American.
My father belongs to the Sons of the Revolution;
My mother, to the Colonial Dames.
One of my ancestors pitched tea overboard in Boston Harbor;
Another stood his ground with Warren;
Another hungered with Washington at Valley Forge.
My forefathers were America in the making:
They spoke in her council halls;
They died on her battle fields;
They commanded her ships;
They cleared her forests.
Dawns reddened and paled
Stanch hearts of mine beat fast at each new star
In the Nation's flag.
Keen eyes of mine foresaw her greater glory:
The sweep of her seas,
The plenty of her plains,
The man hives in her billion-wired cities.
Every drop of blood in me holds a heritage of patriotism.
I am proud of my past;
I am an American.

I am an American.
My father was an atom of dust,
My mother a straw in the wind,
To His Serene Majesty.
One of my ancestors died in the mines of Siberia;
Another was crippled for life by 20 blows of the knout;
Another was killed defending his home during the massacres.
The history of my ancestors is a trail of blood
To the palace gate of the Great White Czar.
But then the dream came—
The dream of America.
In the light of the liberty torch
The atom of dust became a man
And the straw in the wind became a woman
For the first time.
"See," said my father, pointing to the flag that fluttered near,
"That flag of stars and stripes is yours;
It is the emblem of the promised land.
It means, my son, the hope of humanity.
Live for it—die for it!"
Under the open sky of my new country I swore to do so;
And every drop of blood in me will keep that vow.
I am proud of my future.
I am an American.

Mr. Speaker, the naturalized American has by his actions in the past few weeks completely refuted the specious arguments advanced by some hysterical literary magazine critics that in times of emergency he would not do his duty to his adopted country. I have spoken to over 17,000 school children in New York City during the past three weeks, and there is not one who loves our institutions who would not have had his pulse quickened by the sight of these children in each instance pledging allegiance to our flag and Republic. They cherish and revere the Stars and Stripes with a deep-seated love and enthusiasm that words can not describe. To hear them sing "America, I love you," is to convey a message to you that thrills you in such a manner as to make you realize that here can be found real sentiment and not mere pretense. In every regiment that has left New York you will find there some of their brothers and other near relatives. These boys have answered the call in 1916, the same as others responded in 1861 and in 1898.

I have no fear for the future of our country. In its hour of need brave men and boys, regardless of the place of their nativity, will willingly make any and all sacrifices our land may ever require. I am looking forward to the day when worth of the individual shall in every part of the United States be the only qualification for his advancement and devotion to duty and love of country the sole requisites for enjoying the full benefits of American citizenship.

In the New York Times to-day appears the following poem by Lurana Sheldon, and as it tells of the love of the naturalized alien for the United States, I quote it in full:

THE NATURALIZED ALIEN.

The land I claim claims me!
It holds me sacredly its own, and I
For its best welfare will both fight and die
If such a sacrifice shall be
Part of the great necessity.

The land I claim has made
My chance for victory, for strong success.
In other climes my triumph would be less,
For here has freedom truly laid
Each open path of honest trade.

The land I claim has left
My hands unbound, my will at peace.
Rich are the blessings, precious the release,
From chains whose links were cleft
Ere hope my soul bereft.

The land I claim claims me,
And she shall find her foster soldier true
To this her flag, the red, the white, the blue,
Though kith and kin shall cross the sea
To call me back to loyalty.

So much has been said about the National Guardsman that I was not surprised to receive the following, entitled "The Regular Army Man," written by Sam H. Welch, United States Troop Camp, Laredo, Tex., and as it has both a grain of humor and much of truth in it, I believe in having the country brought home to it the fact that the Regular is also doing his duty as well as the National Guardsman, and I therefore quote it at length:

He ain't no gold-lace Belvidere
To sparkle in the sun;
He don't parade with gay cockade
And posies in his gun.
He ain't no pretty soldier boy
So lovely, spick, and span—
He wears a crust of tan and dust
The Reg'lar Army man.
The marchin', parchin',
Pipe-clay starchin',
Reg'lar Army man.

He ain't at home in Sunday school,
Nor yet a social tea;
And on the day he gets his pay
He's apt to spend it free.
He ain't no temp'rance advocate—
He likes to fill the can;
He's kinder rough and maybe tough,
The Reg'lar Army man.
The rarin', tearin',
Sometimes swearin',
Reg'lar Army man.

No State will call him noble son,
He ain't no ladies' pet;
But let a row start anyhow
They send for him, you bet.
He don't cut any ice at all
In fashion's social plan,
He gets the job to face a mob,
The Reg'lar Army man.
The millin', drillin',
Made for killin',
Reg'lar Army man.

There ain't no tears shed over him
When he goes off to war;
He gets no speech or prayerful preach
From mayor or governor.
He packs his little knapsack up
And trots off in the van
To start the fight and start it right—
The Reg'lar Army man.
The rattlin', battlin',
Colt or Gatlin,
Reg'lar Army man.

He makes no fuss about the job,
He dont' talk big or brave;
He knows he's in to fight and win
Or help fill up the grave.
He ain't no mamma's darling,
But he does the best he can;
And he's the chap that wins the scrap—
The Reg'lar Army man.
The dandy, tandy,
Cool and sandy,
Reg'lar Army man.

## The Hours of Labor.

## EXTENSION OF REMARKS
OF
## HON. WILLIAM W. RUCKER,
OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. RUCKER. Mr. Speaker, I ask unanimous consent to print in the RECORD two letters received from prominent citizens of my district who are officers in labor organizations composed of railway employees. These letters are in the nature of protests against congressional action or interference in a controversy now being had between the railroads and railroad employees involving the hours of labor, or the eight-hour day proposition.

The letters are as follows:

BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN,
ANCHOR LODGE No. 34,
*Moberly, Mo., June 27, 1916.*

Hon. W. W. RUCKER,
*United States Representative, Washington, D. C.*

MY DEAR CONGRESSMAN: The engineers, firemen, conductors, and trainmen of the United States are at present engaged in a concerted movement for an eight-hour day and time and one-half for overtime.

They feel that this demand is not unreasonable, is absolutely fair and just to the general public, the railroads, and the employees.

At a recent joint meeting of the four orders held here each of the legislative representatives of their respective organizations were directed to request their Congressman and Senators to use their good offices to prevent Congress interfering in the controversy between the railroads and their employees in the event Congress is appealed to in the matter.

The railroad men of this congressional district unanimously favor the above sentiment that Congress should let the employers and employees fight this out without interference on their part.

Trusting that you will appreciate the position of the employees in this important matter, I am,

Yours, very truly,
[SEAL.] G. F. DOUGHTY,
*Legislative Representative,*
*Anchor Lodge, No. 5½, B. of L. F. and E.*

BROTHERHOOD OF LOCOMOTIVE ENGINEERS,
ARTHUR DIVISION, No. 86,
*Moberly, Mo., June 27, 1916.*

Hons. W. J. STONE, JAMES A. REED, and W. W. RUCKER,
*United States Congress, Washington, D. C.*

MY DEAR SIRS: The matter of giving the Interstate Commerce Commission power to arbitrate the eight-hour controversy between the railroads of the country and the men has been brought to our attention, and the engineers of this district request you to oppose any such measure in the Senate or Congress.

Very respectfully,
FRANK MARTIN,
*Legislative Representative.*

## General, Special, and Widows' Pensions

## EXTENSION OF REMARKS
OF
## HON. M. E. BURKE,
OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

On the bill (H. R. 15775) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1917, and for other purposes.

Mr. BURKE of Wisconsin. Mr. Speaker, we have before us to-day for consideration the annual pension appropriation bill, providing funds for the payment of pensions for the fiscal year commencing July 1, 1916, and ending June 30, 1917. This is one of the largest appropriation bills that receives consideration and action by Congress each year. This time it contains an appropriation for the payment of annual pensions, and fees for examining surgeons, for the year mentioned in the sum of $158,000,065.

It has always been a pleasure to me during my short career in this House to support by my vote the annual pension appropriation bills and other special bills providing pensions for the old soldiers and sailors, their widows and dependent children. This general pension appropriation bill I shall also with pleasure support and vote for. Observations and statistics show that there is a smaller percentage of pension appropriations wasted or misused than there is of any other Government appropriations of equal size. Experience and observation also show that there is no money appropriated by the Government which carries so much happiness and joy to the homes of our citizens as does the annual pension appropriation bill. No money appropriated by the Government is so equally distributed and kept so constantly in circulation. Of all the money that Congress annually appropriates none is so cheerfully and gratefully voted by the average Congressman and none does as much substantial good among the people. These annual millions are divided, subdivided, and distributed among 748,147 pensioners upon the Nation's roll of honor.

ROLL OF HONOR.

The statistics for the last previous year indeed show it to be a roll of honor. In the annual distribution of these millions for pensions there is less waste and less fraud than in the appropriation and distribution of money by the Government for any other purpose. As evidence of the honesty, integrity, and honor of the old soldiers, their widows, and dependent children, let me present official statistics. It is shown by the records of the Pension Bureau for the year ending June 30, 1915, that only 39 new cases for that year were presented by the bureau to the Department of Justice for prosecution on account of offenses against the pension laws. Where, I ask you, can there be found another 748,147 citizens with so little dishonesty and practicing so little deception and fraud? It shows us conclusively that honor and good character are precious to the old soldiers and sailors and their widows, and that they fight as valiantly to maintain and preserve untarnished the honor of their citizenship as they valiantly fought and battled for the honor and preservation of the Union; and yet some of our southern friends have the audacity to charge that the pension roll is not a roll of honor. Such indisputable facts prove conclusively that it is a roll of honor with a splendor not excelled by even the interior splendor of the Congressional Library, said to be the greatest splendor in the world.

CLASSES OF PENSIONERS.

Of the 748,147 pensioners on the roll at the close of the year ending June 30, 1916, 437,146 persons rendered service in the Armies or Navies of the United States, including 275 Army nurses; the remaining 311,001 being pensioned as widows and dependents. The number of individuals who served in the Army and Navy of the United States during the Civil War is estimated at 2,213,365.

The survivors of the Civil War on the roll on the 1st of July, 1914, numbered 369,624. These survivors at the end of the fiscal year ending June 30, 1915, were by death reduced in number to 347,081, or a net loss during the year among Civil War veterans of 22,543. This amounts to an annual reduction in the ranks of those heroes of 7¼ per cent.

WIDOWS OF CIVIL WAR SOLDIERS.

On the 1st of July, 1914, there were 56,819 widows of Civil War veterans on the pension roll. On the 1st of July, 1915, there were 54,131 of such widows on the pension roll, being a net loss of 2,688 during the last year.

WAR WITH SPAIN.

On the 1st of July, 1914, there were on the pension roll 24,250 survivors of the War with Spain, and 24,370 on the 30th of June, 1915. On the 1st of July, 1914, there were on the pension roll 1,241 widows of Spanish War soldiers, and one year thereafter, on the 30th of June, 1915, there were 1,284 such widows on the roll.

The greatest number of pensioners ever carried on the rolls of the Government was 999,436 in the year 1902. The total amount paid in pensions for that year was $141,335,646.95. The greatest amount of pensions ever paid in one year was in the year 1913, when the Government expended for that purpose $176,714,907.39. It seems paradoxical that during the year 1913, when there were 179,246 less soldiers, widows, and dependents on the pension roll than in the year 1902, that the amount of pensions paid in 1913 should be $35,379,050.44 larger than in 1902. An explanation, however, is simple and is due exclusively to the increase in pensions for Union soldiers provided for by the Sherwood age-and-service pension act, which became a law May 11, 1912.

NUMBER OF PENSIONERS AND ANNUAL AMOUNTS PAID.

The following table shows the total amounts paid for all pensions and the number of persons on the pension roll between the years 1911 and 1915, inclusive.

*Pensioners of the different wars on the roll at the close of each of the last five fiscal years.*

| | 1915 | 1914 | 1913 | 1912 | 1911 |
|---|---|---|---|---|---|
| Civil War | 691,606 | 728,129 | 762,439 | 801,998 | 833,756 |
| War with Spain | 28,912 | 28,910 | 29,015 | 28,850 | 28,490 |
| War of 1812 | 134 | 170 | 199 | 238 | 279 |
| War with Mexico | 4,933 | 5,592 | 6,265 | 6,846 | 7,621 |
| Indian wars | 2,832 | 3,097 | 3,396 | 3,649 | 4,016 |
| Regular Establishment | 19,730 | 19,341 | 18,958 | 18,713 | 17,936 |
| Total | 748,147 | 785,239 | 820,272 | 860,294 | 892,098 |

*Comparative table of disbursements of pensions on account of the different wars for the last five years (cents omitted).*

| | 1915 | 1914 | 1913 | 1912 | 1911 |
|---|---|---|---|---|---|
| Civil War | $156,608,771 | $163,377,552 | $164,897,872 | $143,979,235 | $148,231,666 |
| War with Spain | 3,851,701 | 3,907,510 | 4,071,168 | 3,971,086 | 3,951,251 |
| War of 1812 | 22,349 | 27,532 | 32,171 | 37,819 | 44,347 |
| War with Mexico | 925,847 | 1,060,530 | 1,184,700 | 1,168,186 | 1,322,918 |
| Indian wars | 513,706 | 560,247 | 527,664 | 521,404 | 575,087 |
| Regular Establishment | 3,535,892 | 3,475,147 | 3,447,142 | 3,308,375 | 3,197,834 |
| Total | 165,518,266 | 172,408,518 | 174,160,717 | 152,986,105 | 157,323,103 |

*Comparative table of the value of an average pension of the different wars for the last five fiscal years.*

| | 1915 | 1914 | 1913 | 1912 | 1911 |
|---|---|---|---|---|---|
| Civil War | $226.53 | $224.38 | $216.29 | $179.52 | $177.78 |
| War with Spain | 133.22 | 135.16 | 140.31 | 137.64 | 138.68 |
| War of 1812 | 166.71 | 161.95 | 161.66 | 158.90 | 158.94 |

| Total | 47,398 |

WISCONSIN CIVIL WAR SOLDIERS.

During the year ending June 30, 1915, there was paid to 18,053 soldiers, their widows and dependents, residing in the State of Wisconsin, $3,995,768.81. In amount of pensions paid to citizens by the Federal Government Wisconsin ranks eleventh among the several States.

WHY THE NUMBER OF SURVIVING SOLDIERS IS SO LARGE.

To many persons it seems surprising that after one-half a century such a large number of the soldiers who served during the Civil War should be still among the living. This is easily explained by turning to the records and ascertaining the ages at which the Union soldiers enlisted.

Statistics show that on the North side the war was fought actually by boys. I quote from a table of statistics relating to the ages of the soldiers and sailors upon their enlistment taken from a recent book entitled "The American Army," of which Maj. Gen. William H. Carter is the author. Of a total of 2,778,304 men enlisted in the Union Army and Navy during the war, less than one-fourth were more than 21 years old. The table of ages at enlistment is as follows:

| | |
|---|---|
| Those 10 years and younger | 25 |
| Those 11 years and under | 38 |
| Those 12 years and under | 225 |
| Those 13 years and under | 300 |
| Those 14 years and under | 1,523 |
| Those 15 years and under | 104,987 |
| Those 16 years and under | 231,051 |
| Those 17 years and under | 844,891 |
| Those 18 years and under | 1,151,438 |
| Between 18 and 22 years | 2,159,798 |
| Between 22 and 26 years | 618,511 |
| Between 26 and 45 years | 46,462 |
| More than 45 years old | 16,071 |

The statistics relating to very young boys, Gen. Carter says, have often been questioned, but, he adds, it must be remembered that the enlistment of mere children as drummers and fifers formerly was authorized in our Army. Gen. Carter himself was only 12½ years old when he enlisted as a mounted dispatch messenger in 1864.

It is impossible at this time to tell the exact number of special pension acts which will be passed during this session of Congress, but to me it appears that such acts are being passed, at least, as liberally as during the Sixty-second Congress subsequent to June 30, 1912, when the Sherwood Pension Act was in force. The reason why the number of special pension acts passed by this Congress will not be as great as in the Fifty-ninth, Sixtieth, and Sixty-first Congresses is because of the liberal provisions of the Sherwood General Pension Act taking care of thousands of needy and destitute soldiers whom it otherwise would have been necessary to have taken care of by special pension acts. The ravages of age and disease, however, are naturally working with great havoc and rapidity among the old soldiers and sailors. Nearly all are now incapacitated from performing manual or other labor, and a large portion of them, like the rest of mankind, have been unsuccessful in laying aside provisions for a rainy day, and the number who are in needy and destitute circumstances is rapidly growing. It will therefore be absolutely necessary to continue until the last soldiers have answered the final bugle call the practice of pass-

ing special pension acts by Congress granting relief to those who may be in the most helpless, dependent, and destitute circumstances. Of course, there are many persons in and out of Congress who complain of the increased liberality necessary in the future to be made in the case of pensions.

Some gentlemen, especially those from the South, claim that the pension system is costing too much. I do not know what the future demands upon the Nation's gratitude will be. I shall not stop to count the cost. My only question will be, Do they need it; and if so, how much? If they do, and it stands to reason that they will, I am willing to give it to them, regardless of its cost. We will then show the nations of the world that this Republic, at least, is not ungrateful, nor forgetful of its defenders. To those who are worrying about the increased cost, let them remember that at every period of the expansion of our pension policy, that there has been worry and objections to every increase in pensions, and yet the country has been able at all times to meet its debt of gratitude, to fulfill its governmental obligations, and to prosper. Let them remember that every dollar that the Government spends for pensions makes the Government just so much stronger in the affections of its citizens. The money goes into every avenue of trade, and into every section of the country. It is true that larger amounts may go into certain sections of the country than others, but there are well-established historical reasons why the amount of pensions distributed in our Southern States is smaller than the amount thereof spent in the North, East, and West. In numerous cases the distribution of pensions under our present system saves the old soldier or sailor or his widow from State, county, or municipal charity. Nothing could be sadder than to see one of the Nation's heroes dependent upon public or private charity. Loyal and patriotic Americans of all political parties are determined that such shall not be the sad lot of any of the Nation's defenders.

Every loyal, patriotic, and grateful American approves of the liberal granting of pensions to our old soldiers and sailors, their widows and minor children and dependents. No government, whether a monarchy or republic, has ever treated its soldiers and sailors and their dependents as liberally as this Government has treated its soldiers and sailors, their widows, and their dependents. Those who fought and bled for the Nation in time of war, and their widows and dependents, are worthy of their country's gratitude, and with the advance of their years and inability to labor, the Nation's gratitude and affection should be increased and not diminished.

DEMOCRATIC FRIENDS OF SOLDIERS.

Some of our opponents, however, may be disposed to contend and assert that the solicitude and gratitude of the Democratic Party for the old Union soldiers has but recently been born or may be prompted by other than reasons of gratitude to the Union soldiers.

Permit me to here insert a list of the various pension laws which were either approved by a Democratic President or passed by a Democratic House of Representatives. Legislative history proves what I now here credit to the Democratic Party:

First. Act of August 15, 1876, providing for the issuance of artificial limbs, or commutation therefor, to disabled soldiers and seamen, and providing transportation for the purpose of having the same properly fitted.

Second. Act of February 28, 1877, increasing the pension of those who lost both an arm and a leg.

Third. An act of March 9, 1878, granting pensions on account of service in the War of 1812 and the Revolutionary War, requiring a service of but 14 instead of 60 days on the part of the survivors of the War of 1812, and granting pensions to widows, regardless of the date of the marriage to the soldiers of this war. It also granted pensions to widows of soldiers of the Revolutionary War on a service of 14 days. Former laws required a marriage prior to the treaty of peace in the case of widows of the War of 1812.

Fourth. Act of June 17, 1878, increasing to $72 per month the pensions of those who lost both hands, both feet, or the sight of both eyes incident to the service.

Fifth. Act of March 3, 1879, increasing to $37.50 all pensions on account of amputation at the hip joint. This sum was afterwards increased to $45 per month by a Democratic House.

Sixth. Acts of January 25 and March 3, 1879, granting arrears of pensions from the date of discharge, generous measures which benefited more than 225,000 pensioners at once and caused the annual pension roll to leap from $33,708,526.19 to $57,240,540.14. The Republican Party had control of both Houses of Congress for more than 10 years after the close of the war, but passed no legislation of this character.

Seventh. Act of June 21, 1879, abolishing biennial medical examinations and providing that in no case shall a pension be withdrawn or reduced except upon notice to the pensioner and a hearing upon sworn testimony.

Eighth. Act of June 16, 1880, giving $72 per month to all those who became totally helpless for any cause incident to the service.

Ninth. Act of February 26, 1881, for the protection of pensioners in the soldiers' homes.

Tenth. Act of July 4, 1884, which established the proper relation which should exist between attorneys and clients and fixed by law the fees to be allowed in pension cases. By this act a Democratic Congress placed the strong arm of the law between the helpless applicant and the rapacious agent.

Eleventh. Act of July 14, 1892, establishing an intermediate rate of pensions between $30 and $72 per month, and fixing the rate of $50 for all who required frequent and periodical though not regular and constant personal aid and attention.

Twelfth. Act of August 5, 1892, granting pensions to Army nurses and forbidding the demanding of a fee by claim agents for prosecuting this class of cases. This was a generous recognition of the noble heroines who, leaving home and loved ones behind, in self-sacrifice braved pestilence and hardship to minister to the sick in the hospitals of the Army.

Thirteenth. Act of December 21, 1893, making a pension a vested right.

Fourteenth. Act of April 18, 1884, making it a felony for any person to falsely or fraudulently represent himself to be an officer of the United States.

Fifteenth. Act of March 19, 1886, increasing from $8 to $12 per month the pensions of 79,989 widows and dependents on the roll at the time as well as tens of thousands who have since been placed thereon. These certificates were issued by a Democratic Commissioner of Pensions without any expense or unnecessary delay to those deserving beneficiaries.

Sixteenth. Act of May 17, 1886, amending the reports of the War Department, which discriminated against a large and worthy class of soldiers, relieving thousands of unfortunate veterans of the hardships worked by the resting of the charges against them based upon technical errors in the records.

Seventeenth. Act of August 4, 1886, increasing the pensions of 10,000 cripples—armless and legless veterans.

Eighteenth. Act of January 29, 1887, benefiting about 30,000 survivors and widows of the Mexican War.

Nineteenth. Act of June 7, 1888, granting arrears to widows from the date of the death of the husband and providing that all United States officials authorized to administer oaths should administer all oaths required to be made in pension cases in the execution of vouchers for pensions free of charge. This arrearage act benefited at once more than 200,000 soldiers' widows.

Twentieth. Act of August 27, 1888, increasing pensions on account of deafness.

Twenty-first. Act of February 12, 1889, granting an increase of pension from $72 to $100 per month to all persons who lost both hands in the service and line of duty.

Twenty-second. Act of March 1, 1889, relating to the payment of pensions to widows or dependent heirs where subsequent to the issue of the check the pensioner dies.

Twenty-third. Act of March 2, 1889, removing certain technical charges in the record and relieving a large and meritorious class of soldiers.

Twenty-fourth. Act of March 2, 1895, which abolished the rate of $2 and $4 and fixed the lowest rate of pension at $6 per month.

Twenty-fifth. An act of May 11, 1912, granting a service pension to certain defined veterans of the Civil War, increasing the pension of more than 400,000 soldiers, and which is the best pension law ever enacted by Congress, thereby increasing the annual pension roll from $153,686,500 to $180,240,145.84.

SHERWOOD PENSION BILL.

On the first day of the special session of the Sixty-second Congress, being the 4th day of April, 1911, that gallant old soldier Democrat, Gen. ISAAC R. SHERWOOD, chairman of the House Committee on Invalid Pensions, introduced the first bill of the session, H. R. 1, providing a general increase of pensions to Civil War veterans based upon service. This bill, in modified form, subsequently became a law on the 11th of May, 1912, and now constitutes the new general pension law, based upon age and service. The Sherwood bill, as introduced and as passed by the House of Representatives in December, 1911, was a far more liberal and just bill than it was after it had been amended by the Republican Senate.

The Sherwood bill as it passed the House of Representatives provided that any soldier or sailor who served in the military or naval service of the United States during the Civil War and received an honorable discharge and who was wounded in battle or in line of duty and is now unfit for manual labor, through causes not due to his own vicious habits, or who from disease or other causes incurred in line of duty, resulting in his disability, is now unable to perform manual labor shall be entitled to a pension of $30 per month. If this bill had become a law as it passed the House of Representatives, it would have been a far more liberal pension bill than the present general pension law, and would have given greater satisfaction to the ex-Union soldiers and sailors. Under its terms every such soldier or sailor who had been wounded in battle or in line of duty or was disabled from diseases contracted in the service, would have been entitled to a maximum pension of $30 per month, regardless of other causes, like old age, accidents, or other diseases contracted since his service, and now rendering the soldier or sailor unable to perform manual labor. In other words, his maximum pensionable disability would not have been based upon present disabilities arising from service origin only.

The Secretary of the Interior, at the time that the Sherwood bill was pending, estimated that at least 15,000 old soldiers and sailors would be benefited by this $30 per month disability clause. The increase in disbursements under this clause was estimated not to exceed $2,500,000 per year. It was truly stated that if the bill became a law with this maximum disability clause it would necessitate an examination of every applicant for the maximum pension by an examining surgeon, or a

board of examining surgeons, and that the increased cost due to such medical examinations would probably reach $200,000 a year. This supposed increase in expenses of medical examinations would have been a mere trifle as compared with the great relief that would have been provided for and shared in by the old soldiers and sailors by the disbursement of $2,500,000 more annually among 15,000 of their number.

In the Senate in 1912, during that same session of Congress, the Sherwood pension bill was amended by inserting in lieu of the language above cited the following:

That any person who served in the military or naval service of the United States during the Civil War and received an honorable discharge, and who was wounded in battle or in line of duty and is now unfit for manual labor by reason thereof, or who from disease or other causes incurred in line of duty resulting in his disability, is now unable to perform manual labor, shall be paid the maximum pension under this act, to wit, $30 per month without regard to length of service or age.

It will thus be seen that the Senate amendment based the right of the soldier or sailor to $30 per month pension upon his present inability to perform manual labor because of wounds, injuries, or diseases incurred in the war exclusively, and did not take into consideration, as did the original Sherwood bill, other causes besides those of service origin, which might aggravate and contribute to the present inability of an old soldier or sailor to perform manual labor.

Various attempts have been made in the Pension Bureau to have that bureau construe this clause in the present pension law, so as to give the old soldiers and sailors the benefit of the $30 per month maximum pension as was intended by the original Sherwood bill. There are many arguments that can be advanced in favor of such a construction, but the bureau, consistently with its past record for years, has given the benefit of the doubt to the Government and against the old soldiers. This is a construction which is undoubtedly inconsistent with the purposes of establishing a pension system, but it has become so firmly established in the Pension Bureau that argument against it is no longer of any avail, and the only relief that can be secured from the burdens of this wrongful rule of construction is by the passge of remedial legislation by Congress.

When we remember that the Sulloway general pension bill, after having passed the Republican House in the Sixty-first Congress, was finally killed in the Republican Senate of that Congress; and when we find that the Sherwood bill, introduced by a Democratic soldier and passed by a Democratic House in the Sixty-second Congress, was amended by the Republican Senate in that Congress so as to make it less liberal by $2,500,000 each year, and so as to make this maximum pension applicable to 15,000 less soldiers and sailors, we can readily see that our Republican legislators are not always safely and consistently the best or most reliable champions and friends of the old soldiers and sailors.

These facts, as well as others, conclusively prove that the old soldiers' friends are not to be found entirely in any one party. They prove that their friends are to be found in all parties, and that those only are their friends who entertain patriotic sentiments and are therefore grateful to the defenders of their country.

History shows that there were times when partisan political exigencies were such that the Republican Party did not consider the time ripe for the liberalizing of pensions, as well as the Democratic Party found itself in such positions. But the old soldiers have always been reasonable and consistent in their pension demands, and can be safely relied upon to continue so.

Let me say in absolutely good faith and as their friend that it is not always wise for an old soldier to carry all of his eggs in one basket, for he has, and will continue to have, loyal friends in both parties. No fair and liberal minded Member of Congress should ever look upon pension matters from a partisan standpoint. In these days, when the selfish and powerful money interests of the country are making a determined attempt to howl and cry down the amount of annual pensions, and actually abuse the friends of the old soldiers who vote for these necessary appropriations, it is well that the friends of the old soldiers should not know any party when they come to provide for soldiers' and sailors' pensions. Let them ascertain the extent of the need of the Nation's defenders, and then without hesitation vote the amount of those needs.

SPECIAL PENSIONS OF THE SIXTY-SECOND, SIXTY-THIRD, AND SIXTY-FOURTH CONGRESSES.

As a member of the Committee on Invalid Pensions during the Sixty-second and Sixty-third Congresses, I have had an opportunity of becoming familiar with the workings of that committee and the rules and spirit upon which such pension claims are weighed and considered. It is with pleasure that I can truthfully say that during the Sixty-second and Sixty-third Congresses upon that committee there has been no exhibition of partisanship or sectionalism among the members in the consideration of claims. All claims coming before that committee are considered upon their actual merits. Entering into the merits are always the elements of age, service, need, and destitution of the soldier, his widow, or dependent. We sit and act as a court of equity in the true sense of the word. It is not necessary for a needy and destitute old soldier, or his widow, to have the acquaintance of a Member of Congress, or to be recommended by some one of political or social prominence. The ear of every member of that committee is always open to the appeal of the weary, needy, and afflicted old soldier, or his widow. Acting as a court of equity, we are freer to act upon the merits of each claim than is the Bureau of Pensions. As in all courts of equity, technicalities which prevent the doing of justice are brushed away, and the course of justice allowed to flow freely. The work of that committee has been considerably reduced since the passage of the Sherwood general-pension law. We must, however, expect the work from now on to increase. This is due to the large number of old soldiers and sailors who will be reduced to needy and destitute circumstances by old age and inability to perform manual labor.

AUTOMATIC ADVANCES IN RATE OF PENSIONS.

Soon after the present general pension law, known as the Sherwood bill, went into operation, trouble was experienced in adjusting the rates to which each soldier and sailor claimant was entitled. It was easy for the Bureau of Pensions to ascertain from its records the exact length of each soldier and sailor's service in the Army or Navy. It was, however, a far more difficult matter to determine the exact age of each such soldier or sailor. In many instances it was found that the applicant for a pension under this law was uncertain as to his own age or date of birth. In many instances where this was the case the soldier or sailor was also without available means for ascertaining the same. In many instances soldiers and sailors had, in previous applications and communications to the Pension Bureau, carelessly and inaccurately stated their age and the date of their birth under oath. Those previous affidavits and communications were made at a time when neither the department nor the soldier or sailors were interested in his birth or age. Consequently that question was then immaterial. But, as the amount of pension under the Sherwood pension bill depends upon age as well as service, it became necessary and important, both to the Government and the soldier or sailor, that his exact age should be determined in the allowance of his application for a pension under that law. In a large percentage of cases it was found that the soldier or sailor had made in the past conflicting statements as to the date of his birth and his age, and the bureau would compel him to resort to all kinds of evidence to prove the date of his birth.

In many such instances his application under that act was allowed without determining the exact date of his birth or his exact age. For instance, if he claimed to be 73 years of age, if the different affidavits made by him in the past all showed that he had represented himself as being of such an age that at the time of the application, according to previous affidavits, that he would be 71, 72, or 73 years of age, without determining his exact age, the bureau at that time would allow him the rate of pension provided for a soldier of his service who had reached the age of 70 years, because, according to all affidavits, he was then over 70 years of age and entitled to the rate of pension provided for a given service and that age. Soldiers and sailors whose claims were allowed under such conditions will be required, before their next claim for increase on account of age will be allowed, to prove definitely and positively the date of their birth.

Since the discovery of this troublesome situation Congress passed, March 4, 1913, an amendment which in substance provides that when a soldier's or sailor's claim under this law has been passed upon and allowed and his exact age once determined there shall be kept a record in the Pension Bureau showing the name, length of service, and age of each claimant, and date of his birth, the monthly rate of pension granted to or received by him, and the county and State of his residence, and that further increases in the rate of pension under that act on account of advancing age shall be made without further application by the pensioner and shall take effect and commence from the date he is shown by the aforesaid record to have attained the age provided by the act as a period for advancing said rate, the object of this being to advance the rate of pensions automatically, as provided in the Sherwood pension bill, without expense to the pensioner, and by requiring the Commissioner of Pensions and his office force to take judicial notice of the recorded evidence of the date of each pensioner's birth when once established. This law is working very satisfactorily, but there are still many instances in which it is

necessary for the pensioner to supply satisfactory evidence of his age before he will be automatically allowed an advance in his pension rate. But once the age of a pensioner has been determined to the satisfaction of the bureau, it will not be necessary for the pensioner to again submit any such proof or to be delayed in the regular receipt of his pension.

MONTHLY PAYMENTS.

The question of providing for monthly payment of pensions, instead of quarterly payments, has received some attention at the hands of Congress during this session. A number of bills for that purpose have been introduced, some of which have been considered. It would appear at first that every pensioner would be in favor of this movement, yet such does not seem to be the case. The old soldiers themselves have manifested but little interest in the proposed change. There appears, however, to be a great division of sentiment among them in certain sections of the country. In other sections no interest, pro or con, has been manifested.

It appears that the executive council of the National Grand Army of the Republic, which council is the highest body next to the grand encampment itself, at the national encampment held at Chattanooga, after such proposed change had been discussed during the address of the commander in chief, unanimously decided against monthly pension payments.

The present Commissioner of Pensions professes that originally he was in favor of the monthly payment of pensions, but since considering the subject and investigating the sentiment among the old soldiers he finds that there is at present no sufficient demand to justify the change. He appears to be now somewhat against the movement, owing to the additional expense which it will involve and the seeming indifference of pensioners.

The additional expense is estimated by him at $1,000,000 per annum. I can not, however, bring myself to believe that there is any substantial foundation whatsoever for any such high estimate of additional expense. I am reliably informed that the present expense of paying pensions by checks under the present system of paying quarterly, or four times a year, is only $100,000. If that be true, then expense of monthly payments would be four times that, or $400,000, a mere bagatelle to the Nation, providing that the change is desired. The subject seems to be new, and perhaps the idea of such a change has not as yet been fully discussed and considered among the old soldiers. They and their friends, however, can rely upon the assurance that whenever they manifest a majority, or strong desire for the change, that Congress will readily grant the same.

LOST CHECKS.

Among the various bills introduced at this session of Congress for the relief of the old soldiers is one for the issuing of duplicates of lost pension checks. The present law requires that when a pension check has been lost, or mislaid, or accidentally destroyed, that application may be made for a duplicate, which, upon the filing of a bond by the pensioner, will be issued at the end of six months. This is an unnecessary hardship upon the old soldier, who has been so unfortunate as to not receive his check or who has lost the same.

A bill providing that these duplicate checks in place of lost checks shall be issued 30 days after filing an application therefor has been favorably reported by the Committee on Invalid Pensions, and there is every reason to believe that it will pass Congress unanimously when it is reached upon the calendar.

SOLDIER SHOULD HAVE BENEFIT OF DOUBT.

The entire history and practice of the Pension Bureau shows that in nearly every instance all technicalities are resolved in favor of the Government and against the soldier or sailor. It further shows that in nearly every instance the Government has been given the benefit of the doubt, and as a result the soldier or sailor got the worst of it. This rule of construction and procedure may have been justified years ago when the pension law relating to Civil War soldiers and sailors was in its infancy. At this late date, however, when the soldiers' and sailors' comrades are scattered to the four winds and can not be found, when others are dead, when age has dimmed the memory of others, when the securing of evidence is most difficult, and when the soldier or sailor is most in need of a pension from the Government, it is time that this rule of construction and of solving technicalities should be changed, and the benefit of the doubt and the solving of technicalities should be in favor of the soldier, sailor, or his widow.

Again, the Pension Bureau seems to be working in some ruts of past ages in other respects. If that bureau would divert or turn from some of these old traveled ruts or routes, justice would be done the old soldier and sailor much quicker than it is done at present and more often. That bureau seems to have the audacity to even question acts of Congress, especially in the case of special pension acts. Even attempts are sometimes made to refuse payment of special pension acts where there is a misspelling of the soldier's, sailor's, or widow's name, which does not change the sound of the name or the identity of the person, and where there is not the slightest evidence to lead them to believe that the pensioner is any other than the person mentioned in the bill. Even a pension granted to a soldier, sailor, or widow by the full middle name by a special act of Congress is ignored and dishonored, because the name of the soldier, sailor, or widow may have originally appeared on the records by the full given name and the initial of the middle name. This happened in cases where there was absolutely no question as to the identity of the soldier or sailor. In the interest of justice to the old soldiers and sailors such quibbles and technicalities should be dispensed with.

ARMY AND NAVY MEDAL-OF-HONOR ROLL.

This Democratic Congress, and especially the House of Representatives, has during this session shown in a marked degree its gratitude and appreciation for the services of the soldiers and sailors who have served in the several wars of this country and their widows and dependents.

Among these measures attention is called to the law passed by this Congress entitled "Army and Navy medal-of-honor roll." There is and has been upon the statute books ever since shortly after the close of the Civil War a law known as the "congressional medal-of-honor roll." All other great nations have passed and have maintained similar laws and have granted special pensions with their corresponding military decorations for the special acts of gallantry which gained them. While the laws of the United States which instituted the congressional medal of honor require a much higher degree of gallantry than is required by other nations for like decorations, yet heretofore we have not granted special pensions to this class of heroes. In the opinion of Congress the heretofore existing law in failing to grant such special pensions to its distinguished heroes made a serious discrimination against the men who have ventured far beyond the pale of duty in heroic achievements.

Other nations have issued similar decorations for lesser degrees of valor by scores of thousands, and have given special pensions besides. England has bestowed her Victoria Cross on thousands of her soldiers during the present war; also France, the Legion of Honor; and hundreds of thousands of such degrees have been bestowed by the German Emperor upon his gallant soldiers. The new law recognizes and rewards in a modest way startling deeds of individual daring and audacious heroism in the face of mortal danger when war is on; deeds that give soul to an army and character to a country.

This Congress did on the 27th of April last pass the so-called Army and Navy medal-of-honor bill, providing for a special pension of $10 per month for members enrolled and entitled to enrollment upon such roll of honor.

Careful estimates disclose that there are now living in the neighborhood of only about 300 of these gallant heroes. The probable cost of these pensions will be only about $13,000 for the first year, and, of course, will gradually decrease as these heroes pass from earth.

Under the terms of the law providing for such roll of honor there are but few who will be entitled to enrollment, and the policy of the measure is to emphasize the Nation's appreciation of that gallant, intrepid, indomitable spirit in war that becomes the best bond to long-continued future peace.

PENSIONS TO WIDOWS AND MINOR CHILDREN OF OFFICERS AND ENLISTED MEN WHO SERVED DURING THE WAR WITH SPAIN, PHILIPPINE INSURRECTION, OR IN CHINA.

Under existing pension laws it is impossible for the widow of a Spanish War soldier or sailor to obtain a pension at the Pension Bureau unless her husband died of disease or disabilities contracted in the service. This is a discrimination against the widow of the Spanish War soldier and sailor, for under existing law the widow of a Civil War soldier or sailor is entitled, upon the death of her soldier or sailor husband, to a pension of $12 per month regardless of the cause of death of her husband.

A bill to remove this discrimination passed the House of Representatives early in this session almost unanimously and has been reported favorably by the Senate Committee on Pensions and is now upon the Senate calendar awaiting action by that body.

Several bills for the same purpose were introduced by Members of the House this session. The bill which was reported favorably and passed by the House was introduced by Hon. JOHN A. KEY, representing the eighth district of Ohio, a Democrat and a veteran of the Spanish-American War who served

with distinction in that campaign. He also introduced a bill for the same purpose in the Sixty-third Congress, which was also passed by the House of Representatives almost unanimously. The bill which passed the House of Representatives this session is now upon the Senate calendar and provides, among other things, for the payment of a pension of $12 per month to the widow of a soldier or sailor who served in the Spanish-American War during her widowhood, and also for the payment of $2 per month for each child of such officer or enlisted man under 16 years of age.

It is estimated that during the first year after its passage that there will be about 10,000 such widows who will be entitled to be placed upon the pension rolls and that they will draw in pensions not to exceed $1,500,000 annually. Of course with the passing of years the number of such widows will necessarily increase, and the annual amount of pensions paid will also. There should be no discrimination in the pensions paid to the widows of soldiers and sailors who served in the Spanish-American War and those whose husbands served in the Civil War. It is true that the Spanish-American War was of much shorter duration and did not require of the soldiers and sailors the hardships which were endured by the soldiers of the Civil War, yet it will not be denied by any intelligent and impartial person that had necessity existed the soldiers and sailors of the Spanish War would have given as good an account of themselves and fought as gallantly and bravely as did the gallant soldiers during the Civil War. It is therefore but just and equitable that the widows of the two classes of soldiers and sailors should be placed upon an equal footing. There is every reason to believe that before the end of this session this beneficial and important pension bill will be enacted into law.

PENSIONS FOR INDIAN-WAR VETERANS.

During this session there was introduced in the House and passed by that body a bill to provide pensions for Indian-war veterans. History shows that in many Indian wars our soldiers were called upon to endure as great hardships and to display as much gallantry and bravery as did our soldiers in more important wars. There has been a demand for many years that the survivors of such Indian wars should be made the recipients of the Nation's bounty and gratitude. There were many campaigns necessarily waged against the various Indian tribes. They were necessary in order to protect the pioneer settlers of the West. Without such protection much of the great West would still remain a wilderness and inhabited only by Indians. Their services were of the greatest importance in opening up and settling the West. Many in such services contracted diseases and disabilities which have impaired the usefulness of many of them, and entirely destroyed the ability of others to support themselves. It may be interesting in this connection to recall a few of the important Indian campaigns.

DEFINING "INDIAN WAR."

The War Department has officially determined that the conflicts specifically mentioned in the pending bill rose to the dignity of "wars." Adjt. Gen. F. C. Ainsworth, in a letter to the Committee on Pensions of the House, in the Sixty-second Congress, under date of January 13, 1912, says, in discussing this point:

> The War Department has had occasion, at various times, to determine, in connection with the question of the wearing of the "service in war" chevrons by enlisted men of the Army, what Indian campaigns approaching the magnitude of wars were such as to entitle enlisted men to wear that chevron. The campaigns against hostile Indians since 1865 that were selected and announced as being such are as follows:
>
> Campaigns in southern Oregon and Idaho and northern parts of California and Nevada, 1865–1868.
> Campaign against the Cheyenne, Arapahoes, Kiowas, and Comanches, in Kansas, Colorado, and Indian Territory, 1867, 1868, and 1869.
> Modoc war, 1872 and 1873.
> Campaign against the Apaches of Arizona, 1873.
> Campaign against the Kiowas, Comanches, and Cheyennes, in Kansas, Colorado, Texas, Indian Territory, and New Mexico, 1874 and 1875.
> Campaigns against the Northern Cheyennes and Sioux, 1876 and 1877.
> Nez Perce war, 1877.
> Bannock war, 1878.
> Campaign against the Northern Cheyennes, 1878 and 1879.
> Campaign against the Ute Indians in Colorado and Utah, September, 1879, to November, 1880.
> Campaign against the Apache Indians in Arizona, 1885 and 1886.
> Campaign against the Sioux Indians in South Dakota, November, 1890, to January, 1891.

There were many other Indian campaigns of minor importance, and for a list and brief historical description of such campaigns the reader is referred to Historical Résumé of Certain Indian Campaigns, by S. J. Bayard Schindel, captain, General Staff.

This bill passed both branches of Congress early in this session and is now pending before a conference of the two Houses. By its provisions a pension of $20 per month from the date of the approval of the act is to be paid to every soldier who has reached the age of 62 years and can furnish to the satisfaction of the Commissioner of Pensions evidence showing that he rendered at least 90 days' actual military service in any of the various Indian campaigns during the period from 1865 to 1891, inclusive.

It further provides a pension of $12 per month from the date of its passage to every widow of such a soldier who rendered the requisite 90 days' service and who married the soldier prior to the passage of this act. This pension measure is not new to Congress, as bills relating to the same subject were introduced in the Sixty-second and Sixty-third Congresses. In the last Congress a favorable report upon such a bill was made to the House of Representatives, but failed of passage because of lack of time for consideration.

At this late date, when the troublesome and fighting Indian has disappeared from our borders, there may be many who fail to appreciate the justice of such pension legislation. I deem it appropriate, in answer to any criticism directed against this measure, to quote from the report of the Senate committee upon the bill providing a pension for Indian-war veterans:

> It is impossible to overestimate the importance of the service rendered by these Indian fighters. They opened the West to civilization and settlement. They battled with a brave, cunning, merciless foe, and usually they faced fearful odds, but they were almost uniformly successful. They fought no Austerlitz, but in every State of the trans-Missouri West is some Thermopylæ rendered immortal by their life's blood.
>
> "I saw more fighting at Beechers Island than during all the four years I served with the Army of the Potomac," is the testimony of one of the survivors of Forsyth's famous fight with Roman Nose.

FAMOUS COMMANDERS.

Some of our most famous and renowned Army men were active in these Indian campaigns. Their names are household words among our people—Sherman, Sheridan, the ill-fated Custer, Howard, the gallant Forsyth, Miles, Baldwin, and a score of others. Nelson A. Miles has written the following letter in support of this bill:

> Mr. C. R. Hauser,
> *National Secretary and Treasurer National*
> *Indian War Veterans, Denver, Colo.*
>
> My Dear Sir: In reply to your letter, I would say that I am very glad to know that there is an effort being made to give pensions to the veterans of the Indian wars, or what was known as the "war for civilization."
>
> The laborious, hazardous, and heroic service rendered by those men was surely most commendable and should entitle them to the gratitude of the American people. They voluntarily placed their lives between the home builders and the unprotected settlements and savage barbarians, who were committing atrocities of the most cruel and savage character.
>
> They endured the severe and destructive heat of the extreme southern districts of our country, as well as the blizzards and the winter blasts of the extreme north, and by the exposure and hardship of the service the lives of many have been shortened thereby, and they have experienced much suffering incident to such exposure and hardship, and I earnestly recommend the favorable action of Congress in their behalf.
>
> Yours, very truly,
>
> Nelson A. Miles,
> *Lieutenant General United States Army.*

It is estimated by those familiar with this matter that the total charge against the Treasury if this bill becomes a law will not exceed $1,000,000 annually.

INCREASE OF PENSIONS FOR WIDOWS OF SOLDIERS AND SAILORS OF THE CIVIL WAR.

The House of Representatives this session passed unanimously a bill reported favorably by the House Committee on Invalid Pensions and entitled "An act to increase the pensions of widows and minor children of deceased soldiers and sailors of the Civil War and the war with Mexico," and so forth.

During the last several years it has been the policy of the House and Senate Pension Committees to report favorably special bills providing increases for what is commonly known as "war widows." Included in this term were the widows who had married their soldier and sailor husbands during, or previous to the Civil War, and who were found by evidence submitted to those committees to be in needy and destitute circumstances. It has also been a common practice with those committees to also recommend for passage special bills restoring widows to the pension rolls who had lost their right to be placed upon that roll by reason of remarriage, when proven in needy and destitute circumstances. Existing law contains a provision under which only such widows may be restored to the pension rolls upon the death of their second husband as are shown to be war widows, or widows who married their soldier husband during or previous to the Civil War.

There is no logical reason why a widow of a soldier who remarries and looses her second husband by death, or divorce upon her application, should not be restored to the same pensionable status that she was entitled to previous to her remarriage.

By remarriage she showed conclusively that she preferred to be placed in a self-supporting position rather than to be dependent upon the Government for support. During the period of her remarriage the Government was relieved in all such instances from payment of pension to her. But few instances can be found where a soldier's or sailor's widow has refused to marry when given opportunity, solely for the purpose of preserving her right to draw a pension from the Government. Such widows have proven themselves to be self-supporting citizens and are justly deserving of being restored to the pension rolls, and to the rights that they were entitled to upon the death of their soldier or sailor husband. This provision of the bill should meet with the hearty approval of all fair-minded citizens.

WIDOWS MARRIED SUBSEQUENT TO JUNE 27, 1890.

In a speech delivered in this House May 9, 1914, entitled "General and special pensions," I discussed at some length the harshness and injustice of that provision of existing pension laws which denies to a widow of a soldier or sailor of the Civil War the right to a pension where she married the soldier subsequent to June 27, 1890. In view of the action of this House in passing almost unanimously in June, 1916, a bill to increase the pensions of widows and minor children of deceased soldiers and sailors of the late Civil War, and so forth, I consider it appropriate at this time and place to incorporate at length my remarks upon this subject, contained in my said speech of May 9, 1914:

"There are a few features of the present pension laws that are wrong, inequitable, and indefensible. Time will not permit me to discuss them in detail. In a short time, I expect, most of them will receive the careful attention of Congress. If once attention can be brought to them, I have no doubt but what justice will be done. The most unreasonable, arbitrary, and unjust provision in the pension laws at the present time is the one relating to or granting pensions to widows who married subsequent to June 27, 1890. That act provides, among other things, a pension of $12 per month for the widow of a soldier or sailor during her widowhood, provided that such widow shall have married her soldier or sailor husband prior to June 27, 1890. This act has been amended several times since, but this provision has never been amended or changed. There is now no law under which a widow who married since June 27, 1890, can secure a pension by law unless her soldier husband died of wounds or injuries inflicted during his war service or died from disease contracted in such service. On the 27th of this coming June it will be 24 years since that harsh, unjustifiable, and arbitrary law was passed—nearly a quarter of a century.

"It undoubtedly answered the purpose for which this arbitrary and inflexible date was fixed for a number of years after its passage. Under the strict letter of the law we may now have, on the one hand, a widow who married a soldier on the 24th of June, 1890, and, on the other hand, a widow who married another soldier on the 30th of June, 1890. One is entitled to a pension under the law at the bureau and the other is not. The husband of the widow marrying before the 27th of June, 1890, may have died a week after that date, and yet his widow is entitled to a pension under the law at the Pension Bureau. The husband of the other widow, who married him three days after the 27th of June, 1890, may die now, after she has lived with and cared for him as a faithful and devoted wife for 24 years, and yet under the law she is not entitled to a pension at the bureau.

"This soldier's widow may have lived and struggled on with him during those 24 years in sorrow and in toil, in adversity and in poverty, from youth to old age, through storm and through sunshine, and it makes no difference for how many long, weary days and nights, through long years, she may have nursed him in his sickness and helplessness, nor that in sorrow and tears she spends her last dollar to plant flowers on his grave, yet she is turned down at the Pension Bureau because of the provisions of this harsh, unjust, and arbitrary law. The fragrance of her dutiful and beautiful life has been wasted on the desert air. Justice demands that so long as we are to continue the policy of pensioning the widows of soldiers and sailors that this class of widows who married since June 27, 1890, should be afforded immediate relief and justice. It is true that the Committee on Invalid Pensions frequently recommends special bills in the case of very needy and destitute widows who married within a short time after the passage of that law; but the granting of a special bill to one of this class, when they all ought to enjoy this privilege as a lawful right, is a rank discrimination and an injustice to those who married no later and who have not been able to reach the sympathies of some Congressman.

BILL FOR RELIEF.

"Having had this deplorable pension situation in mind for some time, and having closely noticed the injustice of its effects, I have had the pleasure during this session of Congress of introducing H. R. 15841, a bill to change the arbitrary provisions of the law of June 27, 1890, and to substitute therefor a more just and automatically working provision for widows.

"In my bill I have stricken out from the present law the words—

"*Provided*, That said widow shall have married such soldier or sailor prior to June 27, 1890—

"And have substituted in lieu thereof the following words:

"*Provided*, That said widow shall have married said soldier or sailor at least six years prior to the death of her husband soldier or husband sailor, and regardless of whether the death of said soldier or sailor shall have occurred before or may occur after the passage of this act: *And provided further*, That no widow of a soldier or sailor, who shall become such widow after the passage of this act, shall be entitled to a pension under the provisions of section 2 of this act, unless she shall have attained the age of 50 years at the time of the death of her soldier or sailor husband.

"I believe that when the injustice of the present widows' pension law is brought forcibly to the attention of this House that some provision for relief will command its sympathies, and the result will be the passage of remedial legislation similar to that contained in the bill which I have introduced. I am sure that if you will but consider it, its virtues will commend themselves to every one of you. The second provision in my new bill provides a guard against the alleged improper and immoral practices and impositions which it is said are sometimes practiced on the old soldiers and sailors by unscrupulous women. It contains a provision which automatically provides a pension for a widow who shall have resided with her soldier or sailor husband at least six years before his death. Of course the provision of cohabitation with the soldier and the age of the widow at the time of his death are arbitrary and subject to change before the passage of the bill as the same may commend themselves to the favorable consideration of Congress.

"I respectfully invite the careful consideration of this bill by Members of Congress, and by the old soldiers and sailors, their wives, and the widows of those deceased. I not only invite your consideration, but also your assistance, in creating a proper interest and demand in this House for its passage or the passage of some similar bill by this House at its next regular session. There can be, and there is, no justification for the arbitrary method which now prevents a widow who has lived 24 years with her soldier or sailor husband from lawfully obtaining a pension at the bureau. It is true that it will increase the pension roll by several millions; but if it is right, and I believe it is, to continue the policy of pensioning soldiers' and sailors' widows, then there can be no excuse, apology, or justification for the present arbitrary discrimination between widows who married since June 27, 1890, and those who married before.

"Let us do by these widows of Union soldiers and sailors what we have done in this Congress, within the last six weeks, for the widows and minor children of officers and enlisted men who served in the War with Spain or in the Philippine insurrection. That bill passed this House by a vote of three-fourths of those voting thereon in favor of it, and it contained a provision that a pensionable widow shall be one who has married an officer or enlisted man who served in one of those wars previous to the passage of that act. This is as it should be at present, but it is not as it should be in the future. It should contain a provision similar to that incorporated in the bill which I have introduced, providing that any widow who shall, after the passage of such act, marry an officer or enlisted man who served in such wars, shall be entitled to a pension of $12 per month, providing she has been married to the soldier for six years or more before his death.

"The hardships, cares, and sorrows endured by the widows who married since June 27, 1890, were and are naturally, on the average, greater and more severe by reason of the old age, helplessness, and inability of their soldier husbands, than were the hardships of those who married previous to that date. In conclusion, permit me to impress upon you that in the matter of widows' pensions, as well as in all legislation, there should be equal rights to all and special privileges to none."

It is provided in this bill, after increasing the pensions of such widows, that after it becomes a law all widows who married previous to June 27, 1905, shall be entitled to draw a pension of $12 per month, to commence from date of filing her application with the Bureau of Pensions after the passage of the act. This provision simply lifts the prohibition against the granting of pensions to widows who married subsequent to June 27, 1890, and refixes, reestablishes, or extends the prohibitory

period against the granting of pensions to widows to date 15 years later. In other words, it has extended the time within which a widow may be entitled to a pension under the law from June 27, 1890, to June 27, 1905—a total extension of 15 years.

The bill also increases the monthly pensions of widows by providing that every widow who was the wife of an officer or enlisted soldier or sailor during the Civil War, and has reached the age of 70 years, shall receive $20 per month.

A more just and equitable pension increase has never demanded the consideration of Congress than this bill for an increase in widows' pensions, and there is every reason to believe that this bill will meet with the approval of the Senate and be enacted into law before the close of this session.

JUSTIFICATION OF PENSIONS FOR WIDOWS OF SOLDIERS AND SAILORS.

There are many of our citizens who question the justice and propriety of the Government granting pensions to the widows of soldiers and sailors. I am glad that this sentiment is not widespread. There is ample justification for the granting and continuance of such pensions. It has become an established policy of our Government to do so, and nothwithstanding that it is now 50 years since the Civil War closed, there are now greater and more reasons for granting and increasing widows' pensions than ever before.

The wives of soldiers and sailors, and especially those who were the wives of such soldiers and sailors during the war, have had more burdens than the average wife. Many of their husbands returned from the country's service crippled with diseases and disabilities contracted in the service. The cares of their wives have been increased as these soldiers and sailors aged. The wife of the soldier or sailor who was such during his service, had to endure trials and tribulations unknown to the great majority of the present generation. They were no less burdensome and arduous than those endured by their husbands. I consider it appropriate in closing these remarks to cite as a tribute to those widows who were the wives of soldiers and sailors during the Civil War the beautiful verses of Thomas Buchanan Read, the Civil War poet. These verses are also appropriate to the present conditions of our country, when efforts are being made in every locality to provide for the wives and dependent relatives left at home as our boys are sent to the front. These verses are entitled:

THE BRAVE AT HOME.

The maid who binds her warrior's sash
With smiles that well her pain dissembles,
The while beneath her drooping lash
One starry teardrop hangs and trembles,
Though heaven alone records the tear,
And fame shall never know her story,
Her heart has shed a drop as dear
As e'er bedewed the field of glory!

The wife who girds her husband's sword
Mid little ones who weep or wonder,
And bravely speaks the cheering word,
What though her heart be rent asunder,
Doomed nightly in her dreams to hear
The bolts of death around him rattle,
Hath shed as sacred blood as e'er
Was poured upon the field of battle!

The mother who conceals her grief
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses,
With no one but her secret God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on Freedom's field of honor!

As a fitting and appropriate closing of these remarks I take the liberty of quoting from the report of the Invalid Pensions Committee in reporting this bill for increasing widows' pensions to the House for passage, which are as follows:

All patriotic men will enlist more freely in the defense of their country when they have the assurance that if death overtakes them their widows will be generously cared for by a grateful Government. It is the wife and mother who sets the light in the window and patiently and anxiously awaits the return of her weary and broken-in-health husband, who, leaving all that is dear behind, went forth to defend the old flag and the Nation's honor with his life's blood. It is the wife who gives birth to all of the soldiers and heroes of the past, the present, and the future. It is the wife who gently ministers in loving tenderness to the old comrade when the dread messenger stalks into the humble home and bears away her companion and support, leaving her grief stricken, desolate, and alone. She then has no one to turn to for succor and relief except the great Government her loved one served most faithfully and loyally. This bill seeks to attest in a small degree the gratitude of a rich and mighty Nation for the frail old woman left behind.

RENEW PROMISE TO OLD SOLDIERS AND THEIR WIDOWS.

The gratitude of the Democratic Party to the old soldier for his services is not yet exhausted. This is clearly shown by the fact that in the recent Democratic national convention, held at St. Louis, Mo., a plank was incorporated in the Democratic platform pledging anew the grateful efforts of the Democratic Party to the old soldier, sailor, and widows.

The following is the plank incorporated in said platform:

PENSIONS.

We renew the declarations of recent Democratic platforms relating to generous pensions for soldiers and their widows, and call attention to our record of performance in this particular.

This amply demonstrates that the Democratic Party has not yet grown weary of liberally and gratefully providing for the old soldiers, sailors, and their widows.

Upon searching the Republican platform of 1916 for pensions we find that no provision whatsoever relating to pensions has been included in the Republican platform of 1916. Evidently the love of that party for the old soldier and his widow has become exhausted or become fickle, and the burden has now been shifted entirely to the Democratic Party. All friends of the old soldier and sailor may rest assured, however, that the love of the Democratic Party for the old soldier, sailor, and his widow is not exhausted, but will continue while a needy old soldier, sailor, or his widow still remains living. The old soldier and his wife may, in view of what the Democratic Party has done in the line of liberal pensions for them in the past, rely with confidence upon the promise of the Democratic Party in the future.

---

## The Clayton Antitrust Law.

### EXTENSION OF REMARKS
OF
### HON. JOSEPH TAGGART,
OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. TAGGART. Mr. Speaker, it gives me particular pleasure to have this article by the distinguished president of the American Federation of Labor printed in the RECORD. I was, in the former Congress, and am now, a member of the Committee on the Judiciary, and had the honor of taking part in writing and reporting the Clayton antitrust law. It was thought by many that if labor organizations were exempted from the operation of the antitrust law it would result in general lawlessness. It has turned out, however, that such fears and apprehensions were entirely without foundation.

When we provided for a trial by jury, a right that was supposed to have existed for 700 years, a right that is guaranteed by the Constitution of the United States, some pessimists thought that the flag would come down. But, Mr. Speaker, the flag is still there, and the real truth is that there is a better feeling on account of what we did and a better opportunity to settle labor disputes by peaceful arbitration. Nothing provokes violence so certainly as arbitrary power.

It was not the intention of the original framers of the Sherman law that it should apply to labor organizations at all. The language of that law, however, was so broad that courts began to apply it in cases where there was alleged interference by labor organizations with interstate commerce. Courts went so far as to hold—as they did in the Danbury Hat case—that interstate commerce began in the factory where goods were being manufactured, to be afterwards shipped across State lines, and that any interference with filling the order was an interference with interstate commerce, for which damages might be recovered.

I am not offering this as a partisan argument. I admire the statement of the great president of the federation, who says, along toward the conclusion of his article, that—

With the workers it is not a question of partisan politics. As the great conference in 1906 declared, the organized-labor movement is not partisan to a political party but partisan to a principle, and that principle for justice, freedom, and humanity.

I believe the time is past in this country when workingmen will be satisfied with acts of Congress that are intended simply to encourage the generosity of wealthy concerns. They will not be satisfied with those public measures that are intended to promote the prosperity of those who are engaged in great enterprises, with the hope, of course, that the persons and concerns that are benefited will share their profits liberally with those who work for them. On the contrary, the great mass of people who labor will insist upon and demand legislation that will tend to promote the prosperity of one and all alike. Prosperity begins at the bottom and finds its way toward the top. That school of orators and political teachers who for many years were able to convince the people that prosperity begins at the top, and when it reaches the point of overflowing, that it drips down

on those below, are going to have numerous difficulties in the future. That theory of promoting the public welfare has lost ground. If those doctors of politics were present at the feast of Dives they would have advised heaping the table of the rich man with more good things so as to induce him to be more generous to Lazarus instead of helping Lazarus.

The president of the American Federation of Labor has stated truly in his first sentence that—

There has been a force in American politics that has insistently and steadily presented the human side and the human relations of all questions. This force has made itself felt with increasing vigor during recent years.

The men who are behind this force can prove that they are on the clean side of these great questions. They are not all of one party. The welfare of humanity can not be made a partisan question.

What follows is the article, in full, of Mr. Samuel Gompers:

PROMISES AND PERFORMANCES.

[By Samuel Gompers.]

There has been a force in American politics that has insistently and steadily presented the human side and the human relations of all questions. This force has made itself felt with increasing vigor during recent years. The results of its work are demonstrated in the clarification of political issues, in the greater consideration that has been given to human rights in legislation and administration, and in the more general representation that has been given to human interest in all departments of government.

When the American Federation of Labor inaugurated its new policy for nonpartisan political use of labor's political power in 1906 the power of corporate wealth seemed intrenched behind impregnable control over the Government. But labor has brought a change in the attitude of Government representatives toward its demands and in the kind and number of laws enacted in the interest of workers.

When the representatives of the American Federation of Labor, in 1906, presented labor's bill of grievances to those in responsible positions in the legislative and executive branches of the Federal Government they presented 10 demands. Since that presentation all but 2 of these original demands have been enacted into law, in addition to the long list of humanitarian legislation recently set forth in the pamphlet issued by the American Federation of Labor, entitled "Labor's legislative achievements." Labor stands for a broad interpretation of the purposes and methods of government that they may make for freedom, equal justice, and serve the interests of humanity.

The political principles and legislative demands which labor now urges upon the Congress of the United States were, in accord with the instructions of the conventions of the American Federation of Labor, presented to the platform committees of the various political parties. This thought was urged upon the representatives of those parties, that the time is past when it can longer be questioned that human rights and human welfare are of paramount importance to all the Nation. The future of any political party depends upon what it will undertake to do for the masses of the people.

With the recognition of this principle, we have entered upon a period when there must be competition between the political parties as to which can do most for the citizens of the Nation. The demands which were presented to the platform committees of the Republican and Progressive Parties which met in Chicago were as follows:

"Government and all civilization exist for the service of human beings and the promotion of their betterment. Such purposes are best achieved when those who are primarily affected by policies and methods have the power of determining them. Under such conditions only will there be relations of good will between fellow citizens and a spirit of true patriotism essential to the best development and unity of our Nation. There must be reason for the conviction that citizens can rely upon the Government for impartial maintenance of rights and protection. Such an attitude can result only when principles of human welfare are made paramount to any other consideration. Experience of other countries and scientific information substantiate the contention that sweated industries, overstrain, long and burdensome hours of toil, tend to physical deterioration, loss of mental virility, and consequent decreased producing power. Standards of life and work, daily hours of toil, and wages have a direct relation to economic progress and development, as well as to preparedness for national defense.

"We pledge our party to maintain the Federal law enacted by Congress securing to the workers the legal right of voluntary association for mutual protection and welfare, protecting their rights against unwarrantable issuance of writs of injunction, and guaranteeing the right of trial by jury in alleged contempt cases committed outside the presence of courts.

"National preparedness, as well as commercial development, in keeping with the importance and the dignity of our Nation, require that we shall have competent and able American seamen. We urge as essential to this purpose the vigorous enforcement of the seaman's act and the most liberal interpretation of its provisions. We are opposed to any minimizing of present provisions for the protection of seamen and for the safety of the traveling public. It is essential to national safety, as well as to the maintenance of an American merchant marine, that conditions of work for seamen shall be such as shall induce resourceful, capable, liberty-loving Americans to follow that vocation. Such American seamen will constitute a trained reserve force in times of national peril.

"In order to protect the wages of our workingmen and their standards of living against the dangerous competition of low-priced labor, which will be largely increased at the close of the European war by the migration of such labor to this country, we demand that the immigration and contract-labor laws be thoroughly enforced and so extended as to exclude from entrance to the United States all persons who can not read some language.

"The fundamental step in national preparedness for development and growth as well as for defense is education that will develop the power and faculties of all citizens and will enable each to take advantage of opportunities for life and work. We demand that there shall be provisions for industrial education and vocational training in addition to cultural education. National industrial efficiency is not a haphazard occurrence, but is the result of carefully considered methods and policies. The initial requisite for any policy to further industrial efficiency is liberal appropriations for necessary education. As this is a matter of national concern, we demand the early enactment of a law providing for adequate assistance to public educational institutions in the various States, which shall provide for industrial education and vocational training in accord with Federal provisions and standards.

"We demand the enactment and rigid enforcement of a Federal child labor law, which shall give adequate protection to the child life of the Nation.

"We demand the faithful observance and enforcement of all the Federal eight-hour laws and their extension to comprehend all departments of government.

"We urge the enactment of a law by Congress for a comprehensive and generous workmen's compensation act.

"We demand the enactment of legislation excluding from interstate commerce the products of convict labor.

"We demand legislation that will abolish present preventable and appalling loss of life and maiming of human beings in American industry and transportation. We favor the creation and maintenance of a bureau of safety under the Department of Labor, which shall be authorized and directed to collect and collate data dealing with industrial hazards and to devise and recommend to Congress any further legislation necessary for securing safety and conservation of human labor power, as well as to formulate and put into operation methods whereby adequate protection shall be afforded to workers from the hazards of industry and transportation.

"Under the euphonious and misleading term 'scientific management,' and systems of time study and stop watches many have been deceived. Any system which ignores principles of human welfare, disregards consideration of fatigue, and the effects of highly specialized methods of production which subdivide mechanical and other operations into such units that the individual tasks become machinelike and injurious to mind and body, can not be countenanced. These systems not only have injurious effect upon the lives—the physical and mental well-being of our workers—but curb the development of skill among the toilers of America. We therefore demand that all adaptations of speeding up systems shall be forbidden in all work in which the Government is concerned.

"For the safety and the protection of the workers of America we declare for the extension of the powers and functions of the Federal Bureau of Mines.

"We pledge our party to the enactment of a law bestowing upon the people of Porto Rico the full right of American citizenship.

"We favor adequate compensation for all employees in the civil service and legislation establishing a reasonable minimum wage for all such employees.

"We favor the creation of a tribunal to which all employees in the competitive civil service may appeal for redress of grievances.

"We favor the enactment of a comprehensive Federal compensation law to apply to all civil-service employees.

"We favor and pledge our support to secure the enactment of an equitable retirement law providing for the retirement of superannuated and disabled employees of the civil service.

"We assert that the acceptance of employment in the civil service of our Government must in no case impair the employees' right of petition.

"We favor Government ownership of telegraphs and telephones.

"We favor the absolute suffrage of women coequal with men."

The platform of the Republican Party contains the following planks of interest to labor:

"The civil-service law has always been sustained by the Republican Party, and we renew our repeated declaration that it shall be thoroughly and honestly enforced and extended wherever practicable."

"We pledge the Republican Party to the faithful enforcement of all Federal laws passed for the protection of labor. We favor vocational education; the enactment and rigid enforcement of a Federal child-labor law; the enactment of a generous and comprehensive workmen's compensation law, within the commerce power of Congress; and an accident compensation law covering all Government employees. We favor the collection and collation, under the direction of the Department of Labor, of complete data relating to industrial hazards for the information of Congress, to the end that such legislation may be adopted as may be calculated to secure the safety, conservation, and protection of labor from the dangers incident to industry and transportation.

"The Republican Party, reaffirming its faith of government of the people, by the people, for the people, as a measure of justice to one-half the adult people of this country, favors the extension of the suffrage to women, but recognizing the right of each State to settle this question for itself."

PROMISES OF THE PROGRESSIVE PLATFORM.

The Progressive platform contains the following response to labor's demands:

"A nation to survive must stand for the principles of social and industrial justice. We have no right to expect continued loyalty from an oppressed class. We must remove the artificial causes of the high cost of living, prevent the exploitation of men, women, and children in industry by the extension of the workmen's compensation law to the full limit permitted under the Constitution, and, by a thoroughgoing child-labor law, protect the wage earner; and by a properly regulated system of rural credits encourage the farmer and give to the landless man opportunity to acquire land.

"A country must be worth living in to be worth fighting for."

Labor's demands were presented to the Democratic Party, which placed in its platform the following labor planks:

THE PLANKS OF THE DEMOCRATIC PLATFORM.

"We have lifted human labor from the category of commodities, and have secured to the workingman the right of voluntary association for his protection and welfare. We have protected the rights of the laborer against the unwarranted issuance of writs of injunction, and have guaranteed to him the right of trial by jury in cases of alleged contempt committed outside the presence of the court.

"We hold that the life, health, and strength of the men, women, and children of the Nation are its greatest asset, and that in the conservation of these the Federal Government, wherever it acts as the employer of labor, should both on its own account and as an example put into effect the following principles of just employment:

"1. A living wage for all employees.

"2. A working-day not to exceed eight hours, with one day of rest in seven.

"3. The adoption of safety appliances and the establishment of thoroughly sanitary conditions of labor.

"4. Adequate compensation for industrial accidents.

"5. The standards of the 'uniform child-labor law,' wherever minors are employed.

"6. Such provisions for decency, comfort, and health in the employment of women as should be accorded the mothers of the race.

"7. An equitable retirement law providing for the retirement of superannuated and disabled employees of the civil service to the end that a higher standard of efficiency may be maintained.

"We believe also that the adoption of similar principles should be urged and applied in the legislation of the States with regard to labor within their borders, and that through every possible agency the life and health of the people of the Nation should be conserved.

"We declare our faith in the seamen's act, passed by the Democratic Congress, and we promise our earnest continuance of its enforcement.

"We favor the speedy enactment of an effective Federal child-labor law and the regulation of the shipment of prison-made goods in interstate commerce.

"We favor the creation of a Federal bureau of safety in the Department of Labor, to gather facts concerning industrial hazards, and to recommend legislation to prevent the maiming and killing of human beings.

"We favor the extension of the powers and functions of the Federal Bureau of Mines.

"We favor the development upon a systematic scale of the means already begun under the present administration to assist laborers throughout the Nation to seek and obtain employment, and the extension by the Federal Government by the same assistance and encouragement as is now given to agricultural training.

"We heartily commend our newly established Department of Labor for its excellent record in settling industrial strikes by personal advice and through conciliating agents.

"We recommend the extension of the franchise to the women of the country by the States upon the same terms as to men."

Thus, the workers have before them the platform declarations of the Republican, Democratic, and Progressive Parties upon the subjects which most directly affect them. Now, the workers must make up their minds as to which of these political parties is most likely, if intrusted with power, to carry their declarations into effect, and as to the adequacy of the response which each party made to labor's demands. For 30 years wage earners had vainly endeavored to secure the amendment of the Sherman antitrust law so as to place voluntary organizations of toilers outside the pale of antitrust legislation, that they should not be regarded in the same category as trusts and organizations organized for profit.

PERFORMANCES.

For 30 years organized labor had been vainly knocking at the door of Congress to secure relief from the injunction abuse and to have restored the right of trial by jury in contempt cases. For 30 years the workers of America had vainly asked Congress to relieve the seamen from the position of bondsmen, and all this occurred under the domination of Congress and the Presidency by the Republican Party.

The Democratic Congress passed, and on October 15, 1914, President Wilson signed, the Clayton antitrust law. Among its provisions was the declaration that the labor of a human being is not a commodity or an article of commerce. It freed the voluntary organizations of labor from the antitrust law, and under which Attorney General Wickersham said no suit such as the Hatters' case could now be maintained in the Federal courts. Relief from the abuse of the injunctive writ was secured and trial by jury in contempt cases restored. The Democratic Congress passed the seamen's act, and on March 4, 1915, President Wilson signed the act.

With the workers it is not a question of partisan politics. As the great conference in 1906 declared, the organized-labor movement is not partisan to a political party but partisan to a principle, and that principle for justice, freedom, and humanity. As the campaign shall proceed it may be necessary to further elucidate the questions in the coming election of both Houses of Congress as well as the President and Vice President. The liberty-loving citizens of our country will do their own thinking and act accordingly. They will vote as their judgment, their conscience, their patriotism, and their own interests and welfare as well as the welfare of the people of the United States will direct.

## Cost of Living in the District of Columbia.

## EXTENSION OF REMARKS

OF

## HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. KEATING. Mr. Speaker, the pending resolution provides an appropriation of $6,000 to enable the Bureau of Labor Statistics of the Department of Labor to conduct an inquiry into the cost of living in the District of Columbia. The committee has seen fit to offer an amendment broadening the scope of the investigation so as to include an inquiry into the wages paid to wage earners. For reasons which I will detail in a few moments I wish the committee had not pressed this amendment.

The principal object of the proposed investigation is to lay the groundwork for a minimum wage law for the women workers of the District of Columbia. The question of the constitutionality of such law is now pending before the Supreme Court, and I am sure that that distinguished tribunal will sustain the lawmaking bodies of the various States in their efforts to secure a living wage for the women of this country. In case the Supreme Court does render a favorable decision, Congress should be prepared to act without unnecessary delay; but it can not proceed without the information we are seeking to secure through the adoption of this resolution.

I have been asked as to the manner of conducting the investigation. That phase of the subject has been treated in a most satisfactory manner by Hon. Royal Meeker, Commissioner of Labor Statistics, in a letter to Senator J. K. SHIELDS, chairman of the Committee on Education and Labor of the United States Senate. This letter will be found in the report of the Committee on the District of Columbia on the pending bill. I fully indorse Mr. Meeker's plans and feel that if they are carried out they will result in securing the data desired.

The Committee on the District of Columbia held a brief but instructive hearing on this measure. One of the witnesses made the following argument which I believe presents the case in a nutshell:

"We are asking for this appropriation because we believe that the chief cause of poverty is not shiftlessness or drunkenness but underpay. Two years ago the Bureau of Labor made a study of hours and wages of women workers in the District of Columbia. Since that time the eight-hour law has put a stop to overwork. We believe that it is important to get rid of underpay next, and we want this study made as a first step.

"The study of wages revealed, for instance, that saleswomen in department stores—a most popular occupation among women here—are paid at an average wage of about $6.50. In factories and laundries the wages averaged even lower. We believe that women can not live in a condition of health and working efficiency—not to mention detriment to happiness and morality—on such wages It is easy to say that the majority of these girls live at home. Probably they do, although the Young Woman's Christian Association has estimated that there are many thousands of wage-earning women in Washington who are living in lodgings and boarding places, and entirely dependent on their own earnings for their livelihood. Every study that has been made in other cities has gone to prove that it costs a woman between $8 and $9 a week to buy adequate food, clothes, and proper lodging. We have no reason to believe that this estimate is too high for Washington. We want to find out.

"As for the girl who lives at home with her family, investigations made in other cities have gone to prove that she almost invariably has more burdens, rather than less, for this cause. She will be helping to care for the younger children in the family, for an invalid adult, etc.; so that the cheaper cost of living as part of a family is more than counteracted by these extra burdens."

But we do not propose that this $6,000 should be expended exclusively in studying the cost of living for women. We want to make a study of how families get along on inadequate wages.

The only thorough and accurate study which has been made of the cost of living among workingmen's families was a study made in New York City in 1909 by Prof. Chapin, of Beloit College, Wis. Mr. Chapin's conclusions are drawn from a most painstaking study of hundreds of typical families. He ends with these significant words:

"It is safe to conclude from all the data that we have been considering that an income under $800—a year—is not enough to maintain a normal standard."

This means an average wage for the 306 working days of the year—counting out the 52 Sundays and 7 legal holidays—of $2.61 a day; even in the event of steady employment throughout the year and no illness. It it unnecessary to remind you of the vast amount of unskilled and semiskilled work which is paid for at rates a great deal lower than this. We all know how these people live—in hovels, rear tenements, and back alleys, under conditions so insanitary that their dwellings are breeding places for infection for the whole city; they are not warmly enough clad in winter; they are not properly nourished at any time; and they have no provision against ill health and old age.

These conditions must be changed.

Before attempting through legislation or through any other means to improve these conditions, we must have the facts. This $6,000 will give us that information for the District of Columbia and will allow social workers and others interested to know just what steps should be taken.

In the hearings before the District of Columbia Committee Mrs. Florence Kelley, general secretary of the National Consumers' League, stated very clearly why this appropriation was asked for. She said in part:

We have been asking now for this very modest investigation for a long time, and two years ago the resolution got as far as the conference committee between the House and Senate, and at every stage of reaching that advanced position before it perished in the end of the session we were always asked, "Why is it necessary to expend any money investigating the cost of living here in the District of Columbia, in this beautiful city, in this favorable climate, where almost everybody is paid by Uncle Sam? Why do we need further light on the subject?" The only reason for having an investigation is that we have not got any light now, except a few rays that come in from private investigators that can be readily overthrown. We may be accused of being sentimental, inaccurate, exaggerated, having some ulterior motive in getting our facts together; and it is for those reasons that we feel that just as much valuable information can be gotten now as in regard to the hours of labor before the eight-hour bill was passed which came from the Department of Labor. So the only unassailable information that we can get with regard to the conditions of living must come from the same source, and it is to show you that there is some poverty here amongst honest working people; that there is precisely the same reason for making this inquiry here that there was in 13 States which have already legislated on the question of wages and the cost of living of women and minors that we come before you and ask you to consider favorably this very small appropriation. Now, theoretically, one would say that where the climate is so mild as it is here, where people do not have to spend very much money for coal, it ought to cost less, but from what we learn from the people themselves it does not appear that it costs any less, if they have any decent kind of houses to live in. But I am not very much given to speculating. I prefer to have facts. All we are asking is $6,000 worth of facts about the Capital of this country. You see, the charge is made everywhere and all the time that while this is the most beautiful city in the country it is one of the most expensive cities for working people to live in. We would like to know whether that is so, and we think we ought to know.

Two years ago the Bureau of Labor Statistics made a study of the hours, wages, and so forth, of wage-earning women in the District of Columbia. According to that investigation it was shown that in the manufacturing and mechanical establishments 16.8 per cent earned $10 a week or over while 23.8 per cent, comprising the largest single group, earned between $5 and $6 a week. In laundries the average wage shown by the pay rolls of the three typical establishments studied was $5.47. In hotels and restaurants two-thirds of the women interviewed were getting $3 to $4 a week. Following is the table of the earnings of women in retail stores. From it you will note that the average wage of saleswomen in Washington is $6.55, whereas the largest single group of employees are getting between $4 and $5.

*Average weekly earnings of 252 department-store women, individually scheduled, compared with weekly rate of pay as given by 11 establishments.*

[1] Percentages not given, as numbers are too small to make percentages significant.
[2] Does not include workshop women, as they are tabulated under manufacturing industries.
[3] Includes 1 whose occupation is not reported and does not include 17, wages not reported.
[4] In this average 9 buyers whose average wage was $80.75 a week were not included, as among the individuals scheduled there were none of this grade. With the 9 buyers included the average wage would be $7.
[5] Includes the workshop women of one large department store, which included them with saleswomen in their pay-roll data.

Now, as to what these wretched wages mean to the women themselves, here are some cases gathered this winter by the Consumers' League of the District of Columbia, the philanthropic organization under the auspices of which the eight-hour law was introduced.

Here is what life holds for five Washington young women, whose stories, it is believed, are typical of the lives lived by thousands:

1. One girl working in a retail store earns $6 a week. She is wholly dependent on herself, so boards with friends, to whom she pays $3.50 a week for her room and two meals. Each week she pays 50 cents for her laundry, 90 cents for her luncheons (15 cents a day), $1 on a suit which she is buying; and this, as you see, leaves her 10 cents each week for all the rest of her clothing, her car fare, if the weather is bad, for recreation, if you consider that part of a rational scheme of life; and this leaves her no provision for illness, church, and so forth.

2. A girl working in a box factory receives $3 per week. She is absolutely alone in the world, so is living in a charity home, where she pays $1.50 for her room and board. The $1.50 remaining must pay for her clothing, her car fare, and so forth, and she is furthermore trying to save money to put a stone over her parents' grave.

3. A girl earning $4 a week lives at home. She pays $2 per week to her family and $1.50 a week regularly on a charge account which she runs at the store where she works and on which she buys clothing for herself and her sister. Even her 50 cents remaining is often needed for extras at home.

4. Another girl earns $6 per week. Of this she pays $3.50 for her board, room, laundry, and so forth. She has a regular charge account of $1.50, pays 50 cents car fare, and thus has 50 cents for other necessities and pleasures.

5. Another girl, a stenographer, whose work was of a very responsible nature, earns $7 a week. Since she was the sole support of her mother and a younger sister and brother, she gave her entire pay envelope to her mother.

Now, it is because it is believed that these stories are not exceptional but are typical of the lives of thousands of women in the District of Columbia to-day that we want this information.

At the hearings the story was told of an investigator who discovered a sweatshop here in Washington where 200 women were employed to make bungalow aprons at 40 cents per dozen. The investigator was paid two 2-cent postage stamps for her work on one apron, and that same experience might befall any one of the thousands of working women in the District. We can not insist on specific changes in such conditions until we have in hand the necessary facts so that we may make intelligent suggestions. That is what this resolution calls for—an exposition of facts.

In Massachusetts, when such a study was made last year, $8.71 per week was the sum decided upon as the least on which a woman could live in decent comfort. Here are the figures:

| | |
|---|---|
| Board and lodging | $5.25 |
| Clothing ($75 a year) | 1.44 |
| Laundry | .50 |
| Doctor and dentist | .20 |
| Church | .20 |
| Newspapers and magazines | .10 |
| Vacation | .16 |
| Recreation (movies once a fortnight) | .19 |
| Theater once a month | .05 |
| Car fare | .70 |
| | 8.71 |

I leave it to your imagination to figure how the discrepancy between what it costs the girl to live and what she is actually paid is made up.

So much information as to the evils of low wages was given the committee that the resolution when reported out contained an amendment calling for an inquiry into wages paid as well as into the cost of living of wage earners. We already have this information for women (Bureau of Labor Statistics, Bulletin No. 116), and, furthermore, it would add materially to the expense to make this double investigation. In that connection I have a letter from Commissioner Meeker, who says in part:

> The amount called for in the original resolution, $6,000, was very carefully estimated to cover a cost of living survey only. If the resolution passes in its present form, it will be utterly impossible for me to comply with the wishes of Congress. The amount, $6,000, is sufficient to enable me to make a satisfactory investigation into the cost of living. If Congress desires a report upon wages within the District, it should make an additional appropriation. I have not made any accurate estimate of the cost of such a wage investigation, as no one had proposed it to me.

For that reason I trust the amendment as to wages will be stricken from the bill. I can not offer the amendment at this time because of the parliamentary situation, but I trust it will be adopted in the Senate.

The commissioner is himself very anxious to make the investigation, as his testimony shows. For one thing he said:

There come to my desk every day almost inquiries as to what is the American standard of living; what does it cost the American family to live? I can answer those only by referring back to the old annual report issued in 1903, which gives information that was collected in 1901. At that time a Nation-wide survey of the cost of living was made by the old Bureau of Labor, and I am obliged to use that data in answering the questions—and they are perfectly legitimate questions, gentlemen, as you can see, with reference to the standard of living of American families.

Now, I am interested in getting the very best and most up-to-date information possible to answer the letters and inquiries that come to my desk all the time. I want to know what the expenditures in American workingmen's families are.

For more than two years women interested in the wage-earning women of Washington have been working for the passage of this modest appropriation. Because their efforts have been so earnest, because 20 different organizations in this city, including thousands of men and women, want the study made, but chiefly because the study will of itself be tremendously valuable to the future of the National Capital, I trust it will pass.

## The Good-Roads Bill.

### EXTENSION OF REMARKS
OF
### HON. JAMES H. MAYS,
OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. MAYS. Mr. Speaker, the first definite step toward the ultimate construction of a national system of good roads is about to be taken. The committees of both Houses having the bill in charge have evidently given careful consideration to every feature of the subject and have finally formulated a measure fair to all sections of the country.

Through a separate vote, the House has just agreed to section 8, which provides for the improvements of the public roads in the national forests. It is entirely proper for the Federal Government to improve its own property and make available to the people those vast areas of the West.

Each State is accorded equitable terms by this bill. Some Members from the seaboard States complain that their people must contribute a higher percentage of revenue than they receive in benefits. They also state that they have already built many miles of road and should not be taxed to help other States.

While this bill may favor the West as argued, other bills passed by the Congress, such as the rivers and harbors and the various bills looking to the vast increases in the Naval and Military Establishments will greatly favor the East. None of the States objecting will have more public roads than it needs even after the program contemplated by this bill has been completed. The measure is eminently fair to each State and to every section in the apportionment of its benefits. It may be interesting to use the State of Utah as illustration. By the terms of this bill that State will fare as follows:

*Apportionment to Utah.*

| | |
|---|---|
| First year ($5,000,000) | $57,950 |
| Second year ($10,000,000) | 115,900 |
| Third year ($15,000,000) | 173,850 |
| Fourth year ($20,000,000) | 231,800 |
| Fifth year ($25,000,000) | 289,750 |
| Total | 869,250 |

This apportionment is arrived at by a consideration of these facts:

Area of Utah in square miles, 82,180.
Percentage of total area of United States, 2.760.
Population of Utah, 373,351.
Per cent of population of United States, 0.408.

*Apportionment to Utah for forest roads.*

| | |
|---|---|
| Each year for 10 years (approximately) | $48,000 |
| Acreage of national forest in Utah | 7,449,000 |
| Total acreage of national forests | 156,281,066 |
| Per cent of national forest in Utah to total acreage | 4.8 |

It will thus be seen that the State of Utah will receive more than a million dollars in the next five years. To this will be added an equal amount by the State Highways Commission, making a fund of over $2,000,000 in the next five years to be devoted to the construction of public roads. After that undoubtedly the wisdom of future Congresses will see that the good work is continued.

## Naval Preparedness.

### EXTENSION OF REMARKS
OF
### HON. FREDERICK C. HICKS,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, June 27, 1916.*

Mr. HICKS. Mr. Speaker, the American people have a pride in the Navy, a pride justified by the glorious achievements of our sailors for 125 years. The record of our seamen stands out resplendent in our history; the ships and the men who sailed them to victory are enshrined in the hearts of our countrymen. Inspired by the gallant deeds of our commanders in days gone by, and with our hearts quickened by the memory of those sea-flung heralds of victory—"I have just begun to fight," "Don't give up the ship," "We have met the enemy and they are ours," "You may fire when ready, Gridley"—the call comes to us from the past to be true to the American Navy.

The functions of a navy are fourfold; to provide:—defense of our country against invasion, protection to the lives and property of our citizens in foreign countries, safety for our overseas commerce, and to assure the maintenance of national policies. Believing that a poweful navy is essential for our peace, security, and development, I favor a program which will provide a navy—the second strongest in the world. That peace, not war, is the desire and the hope of America; that it is the inspiration of our people, now and always, is a statement so true and a fact so undeniable that it is futile to discuss it. No one wants war. It is abhorrent alike to our principles and our ideals. But while our Republic looks without envy upon the possessions of other nations and desires only to pursue its way in harmony and justice toward all, it does not follow that we will be immune from hostilities forced upon us by aggressive enemies or free to maintain without interference our national aims and principles. We must not jeopardize the perpetuity of our institutions nor ignore the high purposes to which our fathers dedicated this Republic. With thousands of miles of coast line to defend, with a Monroe doctrine to maintain, with a growing foreign commerce to protect, with citizens scattered over the earth whose lives and property must be safeguarded, we would be derelict in our duty to ourselves and to civilization were we to falter in making absolute the stability and continuance for all time of our free institutions. Without regard to race or creed or birth, America is united in its determination to protect American rights everywhere, to preserve the freedom of the seas, and to maintain untrammeled and unrestricted the rights of a neutral nation in the midst of a world conflict.

Let me quote from George Washington, who in his eighth annual address said:

To secure respect to a neutral flag requires a naval force organized and ready to vindicate it from insult or aggression. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violation of the rights of the neutral party as may, first or last, leave no other option.

I believe that Washington's advice is as sound for the twentieth century as it was for the eighteenth.

The naval bill as passed by this House did not provide for the construction of battle cruisers or additional dreadnaughts. In my judgment, this was a mistake, for both are essential to a well-balanced and powerful navy.

I agree with the views expressed by the minority members of the Naval Committee when they said:

We therefore recommend the authorization of two dreadnaughts and six battle cruisers, and feel that anything short of this would not be making adequate preparation for the national defense.

Great Britain, Germany, Japan, and Russia have added battle cruisers to their navies, and we should do likewise. Regarding the battle cruiser it has been said:

Far superior in speed to a superdreadnaught and not inferior in the range and power of her guns, this type of sea fighter seems destined to dominate the ocean for years to come, "for no floating thing that can whip her can catch her and nothing that she can whip can escape her."

Admiral Dewey, in commenting upon the Jutland battle, said:

The battleship which can give and take and stand up and fight is now, and always has been, the main bulwark of our naval strength and the main strength of any navy.

I believe we should have a large fleet of submarines for the protection of our coasts. The submarine, by reason of its

mobility and deadliness of attack, is a most effective and efficient weapon for defense, and we should construct large numbers of them. Owing to the complicated and delicate mechanism of these vessels, it is necessary to allow for a certain percentage of them being temporarily out of commission. The following is a quotation from the report of Admiral Fletcher, commander in chief of the Atlantic Fleet:

The condition of the submarine flotilla has been very unsatisfactory, particularly the condition of the machinery of these vessels. So much time has been required to keep the machinery in condition that little time has been available for training officers and crews to operate their ships. The submarine flotilla, even more than the other types of vessels in the fleet, has been hampered by lack of officers of experience.

I am a strong believer in developing and enlarging the aeroplane service of our Army and Navy. The late Lord Kitchener stated that "an aviator is worth an army corps." Other nations have learned by experience the value of airships and are training thousands of aviators. America, the inventor of the aeroplane, honoring the names of Langley, the Wrights, Curtis, and other pioneers, has been negligent in utilizing this most important arm of the service. Our deficiency in this respect should be corrected at once. Extract from report of the General Board of the Navy:

In view of the advance that has been made in aeronautics during the past year and the demonstration now being made of the vital importance of a proper service to both land and sea warfare, our present situation can be described as nothing less than deplorable. As now developed air craft are the eyes of both armies and navies, and it is difficult to place any limit to their offensive possibilities.

Mr. Speaker, I believe that one of the most serious defects in our naval system is the absence of a continuing policy. Each Secretary of the Navy upon assuming office proposed changes and alterations instead of maintaining a definite program. This operates to the detriment of an efficient navy.

Efficient preparedness does not mean the mere assembling of large military forces and the construction of ships, guns, and ammunition. However important all these may be, and they are the basis of every program, the spirit of the American people, their determination and zeal, and their willingness to make sacrifices are the great impelling forces back of an effective Navy and Army.

Let us hope that the American Navy will soon be restored to the proud position it once occupied, and as we recall the memories of our greatness upon the seas in the heroic past let us remember the *Bon Homme Richard* and the deeds of her great commander, John Paul Jones, who by the capture of the British *Serapis* on September 23, 1779, electrified the world by the most brilliant victory in the annals of the seas. "Lest we forget" let us recall his words reporting the conflict:

No one was now left aboard the *Richard* but our dead. To them I gave the good old ship for their coffin, and in her they found a sublime sepulchre. Our torn and tattered flag was left flying when we abandoned her. As she plunged down by the head at the last her taffrail momentarily rose in the air, so the very last vestige mortal eyes ever saw of the *Bon Homme Richard* was the defiant waving of her unconquered and unstricken flag as she went down. And as I had given them the good old ship for their sepulchre, I now bequeath to my immortal dead the flag they had so desperately defended for their winding sheet.

NOTES ON THE NAVY.

There has been much discussion of the relative cost of Government-constructed ships and war supplies as compared with the cost by private manufacturers. Congressman CALDWELL, of New York, a few months ago secured from the Departments of War and Navy some valuable information on this subject, which I take the liberty of using. In estimating cost of manufacture, the following facts were disclosed:

WAR DEPARTMENT.

Plants carry as an overhead charge interest at the rate of 3 per cent upon the money invested. They also take into consideration depreciation in value of the plants. (Buildings from 2 to 8 per cent, depending upon material of construction; machinery from 4 to 10 per cent.) For supervision, 80 per cent of the total pay of the officers so employed is included in arriving at total cost. As to wages, instructions require that same wages shall be paid as are paid for similar work in the vicinity. The men work eight hours a day, and from June 15 to September 15 are granted a Saturday half holiday with pay. They are also granted a 15 days' leave of absence with pay, as well as legal holidays. The amount which the plants would pay in taxes, if privately owned, is not figured in cost of production, neither is interest on expenditures during manufacture considered in cost data.

NAVY DEPARTMENT.

Interest on capital invested is not taken into account, neither is depreciation in value of plants. Salaries of departmental officials are not included in cost of work, neither are the salaries of navy-yard officials.

Rates of wages conform to the standard of private establishments in immediate vicinity of the yards. Hours of labor are eight per diem. Legal holidays and Saturday half holidays during the summer are granted at full pay, and each man is allowed 15 days' leave of absence with pay. Clerks at the yards are allowed 15 days' additional sick leave absence with pay. The amount which the plants would pay in taxes, if privately owned, is not figured in cost of construction, neither is interest on expenditures during construction considered in cost data.

Plans and specifications are paid for out of department funds and are not charged against cost of ships.

By comparing the above with all the charges which privately owned concerns are forced to assume in figuring costs it is seen, especially in the Navy Department that the cost of Government-built ships do not include all the costs which must be figured in construction work upon ships built in private yards.

NOTE ON MILITARY BILL.

When the military appropriation bill was under discussion on June 21 I offered the following amendment, which was adopted:

Mr. HICKS. Mr. Chairman, I ask unanimous consent to return to page 9, line 24, and offer the following amendment, which I send to the Clerk's desk.

The CHAIRMAN. Is there objection?

There was no objection.

The Clerk read as follows:

"Amend, on page 9, line 24, after the figures '$7,750,000,' by inserting the following:

"*Provided*, That all officers and enlisted men of the National Guard who are Government employees and who respond to the call of the President for service shall at the expiration of the military service to which they are called be restored to the position occupied by them at the time of the call."

Mr. HICKS. Mr. Chairman, I realize that this amendment may be subject to the point of order, and that it is probably useless to ask the chairman of the committee to permanently withhold his objection. It is needless for me to endeavor to explain the purpose of the amendment, for by its wording it is self-explanatory. I offer it in the interest of the men who serve their Government and for the benefit of the Government thus served. It is apparent to me that however much we may differ on some things, we are all united in admitting that it is difficult—yea, almost impossible—to enlist men in the service of their country. This is not due to lack of patriotism; it can not be traced to a waning of the virility of our people, nor is it based on fear and danger. To me the explanation lies in the fact that men who may be the sole support of their mothers or their wives hesitate to enlist in the National Guard or enlist in the Army, knowing that their positions from which they derive the sole support for their families will be taken from them while they are serving their flag. For that reason, Mr. Chairman, I have offered this amendment, feeling that when a man has patriotism and loyalty enough to offer his life for his country, his country should have magnanimity and generosity enough to keep open for him the position he vacated to defend the flag, and I sincerely hope that my friend from Virginia will not make the point of order.

Mr. BORLAND. Will the gentleman yield?

Mr. HICKS. Yes.

Mr. BORLAND. This is not confined to men in the executive offices in the District of Columbia, but it extends to service throughout the United States to all men in Government employ wherever they may be found.

Mr. HICKS. Yes. The idea I had in offering it was to facilitate the enlistment in the National Guard. It is a change of service. A man enlisting in the civil government becomes an enlisted man in the military arm.

Mr. BORLAND. I am in sympathy with the gentleman's amendment. I think it is a splendid thing and it ought to be done, and it ought to be a model for other employers to do the same thing.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York.

The question was taken, and the amendment was agreed to.

I feel that this provision should be extended to include all men who enlist in the service of the Government, whether in the National Guard or not, for if men are willing to make sacrifices it is only just that they be assured of their old places when they return to civil life.

REFERENCE TABLES.

COMPARATIVE NAVAL STRENGTH OF THE SIX LEADING POWERS MAY 1, 1916.

This table includes all United States ships built, building, and authorized to date. For foreign navies the data is per ships built, building, and authorized July 1, 1914, corrected for known losses since that date. There is no information available as to the number and classes of foreign ships that have been built since the commencement of the war or that are now building, but the number for each belligerent nation is undoubtedly large. In the tables, in order to make the comparisons uniform, ships over 20 years old are excluded unless they have been rebuilt within five years. Torpedo craft over 15 years old are excluded. There is no satisfactory method of measuring accurately the relative power of two navies, as all elements must be considered, such as displacement, number and size of guns, muzzle energy of battery, thickness and distribution of armor, speed, and endurance. Displacement is a simple and convenient measure.

Great Britain possesses several battleships with a speed of 25 knots and Germany several with a speed of 23 knots, while the fastest dreadnaught in the United States Navy does not exceed 22 knots. Great Britain has several battle cruisers with a speed of 33 knots and Germany several with a speed almost as great. In armored cruisers Great Britain has a large number with a speed in excess of 24 knots, while our fastest cruisers have a speed only slightly in excess of 22 knots. France and Japan, as well as Russia, have battle cruisers with a speed greater than any ship in the United States Navy.

| Type of vessel. | Great Britain, | | | | Germany. | | | | United States. | | | | France. | | | |

[1] Projected. [2] Not known.

The following report of Admiral Dewey is of interest:

The chief constructor of the Navy stated that there are now in private shipbuilding establishments 10 building slips of sufficient size to take battleships, and of these 4 are capable of taking battle cruisers. The chief constructor also stated that in all private yards they could probably get ready with reasonable expedition 6 more slips upon which capital ships could be built, and also in a limited time 6 similar building slips could be made available in navy yards. The letters from shipbuilding firms indicate there are available building slips to lay down within 6 months after contracts are awarded the following ships: Battleships, 5; battle cruisers, 5; scouts, 9; destroyers, 22; submarines, unlimited. A capital ship can be completed in 32 to 38 months after signing contract; others in much less time. Capital ship can be launched in a year after laying down the keel, and the slips thus become available for building other ships. The authorization at one time of a large number of ships will encourage builders and manufacturers to increase their facilities.

GEORGE DEWEY.

[1] Formerly California.

Ships that have not been put into commission speed is estimated. Beam of above ships from 85 to 97 feet 4½ inches. Draft from 27 to 30 feet.
All the above ships fitted with 21-inch submerged torpedo tubes and with from 14 to 22 5-inch, 51 caliber rapid-fire guns.
Each of the above is manned by some 55 officers and from 860 to 1,000 men.
(Battleships are transferred from first line to second line 10 years after the passage of the act authorizing their construction.)
(The word caliber as used in the Navy for heavy guns designates the length of muzzle; that is, so many times the diameter of the bore. A 14-inch 50-caliber rifle would have a bore 14 inches in diameter and a length of 58 feet 4 inches.)

All above ships fitted with submerged torpedo tubes. (In the batteries the large guns are breech-loading rifles, the rapid-fire guns being those of small caliber.)
Beam of above ships from 69 feet 6 inches to 72 feet 10 inches; draft 24 and 25 feet.

## European War Zone Conditions.

## EXTENSION OF REMARKS
OF
## HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, June 30, 1916.*

Mr. SIEGEL. Mr. Speaker, we have all heard from different sources, varied descriptions of the real conditions in the stricken European war zone. The newspapers have given so much space to the various battles that have been fought, that they have found very little room to give details of the actual conditions amongst those who live in the cities and villages that have been bombarded or seized, now by one combatant and then another.

The State Department and the Department of Labor had both made Herculean and extraordinary efforts to obtain information as to the whereabouts of the wives and children of American citizens who had been temporarily traveling in Europe and visiting near relatives. It soon became apparent, however, that this Government was not in a position to do the entire work effectively, not only because of the lack of funds but also on account of the numerous cases that were daily arising. The Hebrew Sheltering and Immigrant Aid Society of America undertook to relieve the departments as much as possible from this work. Accordingly less than a year ago Mr. Isidore Hershfield, a native-born American citizen and a lawyer of the highest standing in New York City, volunteered to go from the United States, make an accurate and thorough investigation

as to conditions in the war zone, and at the same time open up the lines of communication between stricken Europe and America, so that letters could be sent from the war sufferers to their relatives in the United States, and in return the good men and women of this country who desired to respond to the greatest call for relief the world has ever received could be placed in a position where their correspondence could be delivered to the addressees whom they desired to reach. We have heard of how the message was carried to Garcia in the Spanish-American War, but when the story is written of the great war the name of Isidore Hershfield will be forever associated with it as the one man who earned the gratitude of countless thousands for enabling them to learn what was the true condition of their relatives.

On Thursday evening, June 29, 1916, at Carnegie Hall, New York City, he rendered an oral report as to what he found as a result of his investigation, and the Secretary of Labor, Hon. William B. Wilson, was present to welcome him home in the name of the United States Government.

Mr. Speaker, his report is such a humane document that depicts so touchingly the scenes and conditions which he saw and found that I read it in full:

REPORT ON EUROPEAN TRIP.

Our society, as its name indicates, aims primarily to meet the immigrant Jew at the portal of America, to extend to him a Jewish greeting, to make easier the beginning of his life in America, to bring him at once into such influences as will rapidly Americanize him without taking away the influence or fervor of his Judaism, and in other numerous ways to handle the Jewish immigrant question at every one of its troublesome and important angles.

In times of peace, the Postal Service, banks, and express companies furnish to the immigrant the means of free and open communication with his family and friends in Europe and facilities for sending home money to his loved ones.

This healthy stream of communication between America and that part of Europe which has now become the bloody territory of the eastern war zone, a stream carrying argosies of money and peaceful greetings from relative to relative and friend to friend, was wholly closed at the outbreak of the European war. At a time when this flow of money was more needed than ever, the ordinary channels of intercourse—the Postal Service—broke down. Here in New York and in all America were hundreds of thousands of Jews seeking a message from their loved ones in this eastern war zone. Anxious men knew only that their wives were in towns unknown to the world in times of peace, but now shown on the war maps; fathers were without a word or message from their children living in places that had now become battle fronts; grief-stricken children sought to learn of old parents, in whose homes were now heard the combat of armed forces; and there seemed to be no way in which their justified longing for news of their dear ones could be met and satisfied.

To these hundreds of thousands of Jews here it was but natural that they should bring their inquiries to their first American friend, the Hebrew Sheltering and Immigrant Aid Society of America. Nor did we turn away these inquirers on the technical ground that this demand was not within the four corners of our normal activities. Surely, it seemed to us, no better service could be rendered to the peace of mind of the immigrant Jew and his consequent usefulness to our country.

These inquiries, which were afterwards termed the "welfare and whereabouts inquiries," were first addressed to the Department of State at Washington, to be made through our diplomatic and consular representatives. The Department of State gave us at once its fullest cooperation. The inquiries were growing rapidly from hundreds to tens of thousands. But the mail service was no better for the State Department than for the individual inquirers themselves, and our diplomatic and consular representatives in the countries to which these inquiries were directed did not have the necessary facilities for this work, and were additionally burdened with the diplomatic representation of some of the countries involved in the war.

We did not then understand or know why no message had come from the Jews in that part of Russia occupied by the armed forces of Germany and Austro-Hungary. We knew of the expulsions in May, 1915, of all the Jews from the Gubernia or Province of Kovno; we knew, too, of similar expulsions of Jews from other parts of Russia; we knew in a general way that battle lines drive out civilians and cause the evacuation of whole noncombatant populations; and to this state of affairs we ascribed the absence of communication from abroad. We thought that in these compulsory and hasty expulsions, evacuations, and wanderings our Jewish brethren in the eastern war zone had become dispersed and widely scattered. We believed that the residents of Warsaw may be in Lodz, those of Kovno in Wilna or Grodno; the people of Wloclawek in Lublin; the residents of Pietrokow driven farther east to Bialystock; and we supposed that in the hurry and panic of this enforced and hasty migration the addresses of American relatives had been forgotten or lost.

When I reached Germany, however, I learned that there was a different but sufficient cause for this lack of communication. The German and Austro-Hungarian military forces had, as a war measure, closed all postal and other direct communication between the occupied parts of Russia and all foreign countries, including America. To install a substitute for a postal service and reopen communication was the task to which my work and energy must be directed.

On Thanksgiving Day, November 25, 1915, I reached Berlin. Letters of introduction from Mr. Robert Lansing, our Secretary of State, and from our good friend, who is with us this evening, William B. Wilson, the Secretary of Labor, secured for me the fullest cooperation of Mr. James W. Gerard, the American ambassador at Berlin, and Mr. Julius G. Lay, the American consul general at Berlin. They frankly welcomed the arrival of your representative and his mission, the fulfillment of which would lighten the labors of their respective offices. Both of these offices had an accumulation of thousands of letters from America inquiring for the welfare and whereabouts of relatives in Poland, and thousands of letters from residents of Poland asking for communication with their relatives in America.

Many of the letters which had been received by our ambassador and consul general in Berlin had already been forwarded to the State Department at Washington for remailing to the American relatives, but owing to removals and incorrect addresses these letters were undeliverable by the United States postal authorities. Such letters were returned to the State Department at Washington and subsequently returned to Berlin, causing a long delay. Meanwhile the inquiring families were without news or assistance from America. Your representative asked that all letters of inquiry to and from America received at the embassy or the consul general's office be turned over to him and the German Hilfsverein for attention. Mr. Gerard cabled to the State Department at Washington for permission to so dispose of these letters, and, at my suggestion, referred for the standing of the German Hilfsverein to Mr. Jacob H. Schiff, Mr. Justice Louis D. Brandeis, and Mr. Oscar S. Straus. The State Department promptly cabled its consent; from these letters immediately handed over to us were compiled the first lists sent to America, whose eager reception and great value have been chronicled in the newspapers of our land, and are already items of American-Jewish history. To all American inquirers, the ambassador and consul general sent a form letter stating: "Your letter inquiring in regard to certain relatives or friends in portions of Russia under German occupation has been referred to the Hilfsverein der Deutschen Juden, Stegilzter Strasse 12, Berlin, an organization which is working jointly with the Hebrew Sheltering and Immigrant Aid Society of America, 229 East Broadway, New York City, and the American Relief Committee for Sufferers of the War, 174 Second Avenue, New York City. These charitable organizations have facilities for making inquiries of this nature, and will make inquiries and give replies to inquirers of any information obtained without cost or charge of any kind and without regard to nationality or creed. Moneys for the relief of your relatives or friends can be sent to any of the above-named organizations, who will forward same without charge or deduction of any kind and without regard to nationality or creed. Money can also be sent through any bank or express company transacting an international exchange business."

To this extent, at least, our society, at the commencement of its work, obtained the full cooperation and almost official recognition of the authorities of the United States of America and its diplomatic and consular representatives. You have noticed that this letter states that this work of intercommunication and of facilitating the sending of individual remittances was to be done through our society "without regard to nationality our creed."

I arrived in Warsaw on December 24, 1915, on a blizzard morning. It seemed an appropriate setting for your representative's entry upon the stage of his real work. The elements in wild conflict, the temperature at the zero point, were a fitting reflection of the conflict of the European nations and its chilling of human sympathies and humane tendencies. Warsaw with its 900,000 inhabitants, of which 350,000 are Jews, gave me my first view of a conquered city in a conquered land. The German soldier everywhere in evidence; restrictions upon travel to and from Warsaw and even within the city itself; additional requirements of registration with the military authorities; absence of all telephone communication in the city; local population like that of all occupied Russia, seemingly satisfied to have been freed of its former Russian sovereignty, but racked with the uncertainty of its ultimate disposition and mastership; on its main streets, business and civic activities seemed to be continued along normal lines, but a visit to the poorer residential quarters brought out the story of the suffering and poverty following in the wake of every war.

Prior to the war a Boy Scout movement was organized in Warsaw. Clearly such a movement emanates from the so-called better, intellectual, and cultured classes. Yet in the book of rules and regulations of the Boy Scout Organization, a list of the equipment required of each boy is followed with the statement: "In purchasing the above equipment, as well as in making the purchases that you or your family may need, do not buy anything of the Jews." This book was, of course, published only after being approved by the official Russian censor. It needs no imagination to realize what small measure of compassion and humanity can come from those who teach and are taught such principles of religious hatred.

Prices of food have soared to figures that spell absolute starvation for the poor. Bread, which ordinarily costs 3 kopekas per pound in Warsaw, now costs from 14 to 17 kopekas. Similar prices prevail throughout Poland, Lithuania, Courland, and the Baltic Provinces. The bread is quite black, exceedingly soggy, and contains much potato flour and potato peelings. All food supplies cost on the average from four to five times as much as in peace times. Nor are dumb animals spared from the insufficient food supply. The price of hay and oats has risen to such fabulous sums that the horses which were not taken for the Russian Army, are exceedingly lean and hardly able to do their work of hauling. But of the suffering from the insufficient food supply, I shall speak later.

The American relative must be informed at once that his European relative still lives, where he now resides, and whether he is in need of aid. For this purpose I established local committees in the principal cities of Poland, each city to act not only for itself, but for the surrounding country. The task of each local committee was to establish headquarters and to notify all of the people of that city and district—and again without distinction of nationality or creed—to register upon form lists their names and addresses, and the name and address of the American relative to be communicated with. These lists were headed "List of residents of ——— who seek assistance from their American relatives." Rules and regulations were drafted by your representative for the guidance of the local committees, and they were directed to send these lists to the general committees established by me in Warsaw, which was the relay station for that part of Russia occupied by the German forces, and whence they were to be sent to Berlin for further transmission through Rotterdam to our society in New York. In America the people were informed of the name and address of the European relatives who sought assistance.

My first work was in the general government Warsaw. Here I visited or organized committees in Warsaw, Lodz, Kalish, Wloclawek, Lovicz, Skierniewicze, Sochacew, Plock, Lomza, Wyskow, Serock, Kutno, Mlawa, Lukow, Ostrolenka, Siedlice, Ivangorod, and other places, covering the principal towns along the German frontier, and on both sides of the Vistula River. In each place that I visited in the general government Warsaw, as well as in the Austrian occupation and in Lithuania and Courland, the Jewish population recognized fully the importance and high value of this work of establishing communication with America, and the thanks of hundreds of thousands of people were generously given to the Hebrew Sheltering and Immigrant Aid Society.

The demand of your representative was for nothing less than the opening of a direct postal service between the residents of general gov-

ernment Warsaw and the United States of America. I explained to the military authorities that very many letters are incorrectly addressed and that many persons desired to communicate with relatives in America whose addresses they did not know. For these reasons I urged that all letters permitted to be sent should be addressed to the Hebrew Sheltering and Immigrant Aid Society of America, which has unusual facilities through its long acquaintance with immigrants and immigrant problems for correcting wrong addresses and supplying missing ones. And in order that the letters permitted to be sent should require only a minimum of the censor's time and attention, we drafted a form of letter, which though brief was sufficient. The authorities, in line with their usual attitude of helpfulness and their readiness to extend to me every facility for this work of mercy and practical relief, granted this great privilege of opening a direct mail from all of gubernias within the general government Warsaw to the Hebrew Sheltering and Immigrant Aid Society of America, at 229 East Broadway, New York City.

Notice to this effect was officially published in all of the newspapers, and thousands of placards in German were posted in all towns, cities, and villages, calling the attention of the people to this direct mail service to America. You will be interested in seeing one of these placards, a really historical document marking the opening of the first mail to foreign countries from any part of occupied Russia. The placard reads in English translation:

LETTERS TO AMERICA.

The direct postal service to America for persons who wish to ask for aid from their American relatives is permitted under the following conditions:

First. All letters must be brief, written in German or Polish, and according to the following form:

To ----------,
(Name of addressee.)
City ------,
Street and number -------.

We are well, but urgently need financial assistance. Please help us. We send our best regards.

Name of writer ------ -------,
City ------,
Street and number -------.

Second. In addition to the above information, a death in the family may also be communicated. All other news is absolutely forbidden.

Third. The letters must be placed in an open envelope, which must bear the following address:

"HEBREW S. & I. AID SOCIETY,

"*229 E. Broadway, N. Y. City.*"

On every envelope 20 pfennigs postage must be affixed.

Fourth. The above-named society in New York undertakes to deliver these letters to the American addresses without charge.

Warsaw, 9th February, 1916.

GENERAL GOVERNMENT WARSAW.

The importance of learning of a death in the family is found in the religious requirements of Jews and Catholics to observe periods of mourning and anniversaries.

The name of our society is abbreviated in this placard for the greater convenience of the letter writers.

The posting of these placards in the cities, towns, and villages of this part of occupied Russia was hailed by the civil inhabitants with great joy. I frequently saw them copying the form letter and the name and address of our society, the paper in their hands moistened with their tears of gratitude. Here at last was built and in operation a bridge between Poland and America, over which would travel messages bringing comfort to the anxious American relatives and carrying back financial aid to the impoverished ones. And it was a Jewish organization which built and maintained this priceless bridge, gladdening the hearts and saving the lives of many hundreds of thousands, aye, millions of human beings.

The further use of registration lists in the General Government Warsaw was, of course, thereafter dispensed with, but a similar direct postal service had to be established in the other parts of occupied Russia. Your representative, even before all of the details of the direct postal service with General Government Warsaw had been completed, visited Lublin, to confer there with Gen. von Diller, the Governor General of the part of Russia under Austro-Hungarian occupation. The postal service in General Government Warsaw had to be sanctioned not only by the military authorities at Warsaw, but also by the civil and military authorities at Berlin, including the German foreign office, ministry of war, and the post office department of the German Empire. So, too, for the Austrian occupation, the general plan of a direct postal service had first to be sanctioned at Vienna by the Austro-Hungarian foreign office, ministry of war, and general post office department. A subsequent trip to Lublin and a stay there of 12 days were required to perfect the details and to put into actual operation a direct postal service between the whole southern part of Poland under Austro-Hungarian occupation and America. This being finally sanctioned, official notice was published in all the newspapers and placards similar in form to those in General Government Warsaw were posted in all cities, towns, and villages.

The same tearful, grateful delight welcomed these placards, and the thousands upon thousands of letters which we have received and are still receiving from these parts of occupied Russia attest the practical utility of this postal service and warrant the expenditure of the large amount of money and energy required in this undertaking.

And now for the message that you all so anxiously await. What are the conditions of our Jewish brethren in the occupied part of Russia?

Please understand that my work was solely to open a channel of communication for letters and remittances from relative to relative. I had nothing to do with the distribution of the relief funds collected in America for the benefit of the Jewish sufferers in the war zones; hence it was not part of my task to study the conditions of the Jews in occupied Russia. But no heart through which runs Jewish blood could visit the places where I have been without informing himself of Jewish conditions. The Jewish situation compelled my attention, and my sympathies forced me to acquaint myself as much as possible with conditions there. It was heartbreaking to have to play the rôle of silent spectator and mere auditor. The suffering and poverty that I have seen and which I did not have the means of alleviating caused me many tears and made my work there none too pleasant. I have already mentioned the special economic condition of the Jews in the occupied part of Russia and the effect of the war thereon. I am convinced that there are to-day in occupied Russia fully three-quarters of a million Jews, mostly women and children, who are exposed to disease and in danger of starving.

I have frequently been asked, "Are people dying of starvation?" I can not answer this question. I am unable to diagnose a case of starvation and can not state from an observation of a corpse whether starvation was the cause of death. And, too, few people ever die of starvation alone. If you shut a man in a room under lock and key for a week and find him dead at the end of that period, it is quite reasonable to say that he died of starvation. But when you reduce the food supply to a minimum in quantity and quality, it is surprising how long a human being can drag out an existence under such conditions. He may, as is often the case, fall in his weakness and sustain physical external injuries or a concussion of the brain.

In Warsaw I saw an old man fall in the street and helped him to a doorstep. Neighbors revived him with tea. I asked him whether he needed medical aid, and he replied that there was nothing the matter with him except that he had eaten nothing in two days.

In Lublin I saw in a courtyard a woman who had fainted. When she was revived she asked for food, which, she said, she had not had since the preceding day. Again, many of the ill fed succumb to disease or to epidemics so horribly prevalent because their power of resistance has been reduced and their bodies weakened from insufficient nourishment. The food supply in general being scarce in quantity, and prices being exceedingly high, our Jewish brethren, largely poor even in peace times, find their poverty now more grinding and are less able than ever to procure an adequate supply of food.

The best form of relief, in my opinion, would be the shipment of foodstuffs to occupied Russia. Much has been done and is still being done to obtain the consent of England to raise its blockade to this extent. But money can still buy articles of food. The local Jewish relief committees in almost all cities and towns have instituted food kitchens, free tea halls, and stores for the sale of food supplies at or below cost. The vast numbers who daily patronize these kitchens and stores testify to the acuteness of the demands.

It is particularly pitiful to see the food kitchens which cater specially to children. The scarcity of food has revived in these children the animal instinct of burrowing and concealing food. I have seen at these food kitchens, which give to each child one meal a day, consisting of a bowl of soup and a chunk of bread, children—even little tots of 3 or 4 years of age—eat the soup alone and pocket the bread for use as an evening meal, because they knew that nothing else would await them at night. Milk is also distributed by these Jewish committees. The scarcity of milk and its consequent high price fixes the milk allowance at a half pint per child. I shudder when I think of Jewish infants and nursing mothers perishing for want of milk.

These conditions of hunger, suffering, and disease exist in all parts of occupied Russia. It is impossible to say which town or city has been hit hardest by the ravages of war. Each makes the claim of suffering the most and of having the greatest need for relief, but this is so because each city or town knows and feels only its own privations and want.

Lodz points to its ruined and silent cotton mills, its unemployment, its epidemic of smallpox. Kalisch shows you its main business section entirely destroyed by fire, its lace factories burnt or dynamited by the departing Russians. Bialystock points to its dreadful epidemic of spotted typhus and shows you many streets closed to traffic, with signs reading "Strasse gesperrt eintritt verbotten; fleck typhus," and bearing a skull and crossbones. Not only are these streets closed, but the doors and windows of the houses are nailed up so that the occupants can not leave their homes. The German military authorities send a field kitchen into these streets with cooked food for the dwellers. Wilna takes you to its poor quarters, where you find Jews—men, women, and children—living in subterranean chambers, in subcellars, and in rooms opening from subcellars into which not a ray of daylight ever enters. These I visited by candlelight in the forenoon of a bright sunshiny day. Surely our people are spared under divine guidance for a divine purpose if they can survive such dreadful living conditions.

Kovno exhibits perhaps the most sorrowful spectacle of all—great, powerful Kovno, mighty seat of Jewish learning and scholarship. This center of Jewish inspiration and Jewish idealism has been stricken as was ancient Jerusalem at the time of the destruction of the Temple. Of Kovno one can truly say, in the words of Jeremiah, "How doth the city sit solitary that was full of people? How has she become as a widow?" The city of Kovno had a normal Jewish population of about 45,000, and the Gubernia, or Province, of Kovno had in all a population of 190,000 Jews.

On the 5th day of May, 1915, every Jew—man, woman, and child—in the Province of Kovno was expelled on 24 hours' notice. From this edict of expulsion not one Jew was spared. It included infants, women in childbirth, the aged, the sick, the lame, the poor, the wealthy merchant, the artisan, the lawyer, and the physician. All fled eastward, because to the west was the German battle front. Passenger trains carried many away. Cattle cars which I have seen labeled "24 persons or 6 horses" carried a larger number. Freight cars carried more. But probably half of these 190,000 wandered away on foot. Most of these are practically lost in what is now still Russian territory. Those who fled to Wilna and to other places which have since been occupied by the German forces were later permitted to return. The city of Kovno to-day, however, instead of its normal population of 45,000 Jews, has only about 4,200 Jewish souls. Its business thoroughfares have the silence of a graveyard or a deserted city. Most of the stores are closed and boarded up, the Jewish storekeepers have gone and never returned.

I attended Sabbath services in the large synagogue at Kovno, and found a congregation of perhaps 40, where ordinarily a thousand worshipped.

Stories of May 5 which I heard from the lips of those who were driven out, and who have now been able to return from the city of Wilna, are actually beyond belief. I was asked by the American ambassador in Berlin to deliver a message to a woman in Wilna, from her husband in Buffalo. She had formerly resided in Wilkomir, Kovner Gubernia, with her old mother and three small children, and with the other Jews of the Province of Kovno had been driven out. I learned from one of her relatives in Wilna that she had died on the way from her home town to Wilna, and was buried by the roadside. The grandmother and the three children had continued on to Wilna. The roadsides leading from the Province of Kovno are dotted with Jewish graves.

The family of a Jewish dentist riding out of Kovno on a farmer's wagon on their way to Wilna met an old Jew sitting alone on a mound by the road. No amount of urging could elicit a word from him. He

sat speechless, and in tears. Finally he told that he had been driven from his native town with his sick son of 20; he had carried and dragged the young man along the road toward Wilna, and soon fell behind his townsmen. The following morning his son died. With a spade that he procured from a countryside farmer he dug a grave and buried his son with his own hands. It was on this grave that the old man was found. I saw him later in Wilna, in a hospital. Diagnosis, "melancholia and insanity"; prognosis, "bad."

Lovicz presents a number of houses damaged by shell fire, but finds a moment's diversion in the monument erected in its public square by the German authorities, one side of which testifies to the heroism of the Germans who fell in taking Lovicz, and the other side records, with equal candor, the valor of the Russians who died in the defense of Lovicz.

Sochazew shows complete and utter desolation. Situated on the Bzura River, it was for months in the direct line of battle fire in the campaign to capture Warsaw. Every house in Sochazew without exception has been more or less shattered or destroyed. Not one building stands undamaged. About 400 of its Jewish population had returned and were living in one or two rooms of each house, rooms that have been patched and plastered to make them habitable. This little town looks as if it were being torn down by wreckers, preparatory to new building operations, and as if the wreckers had halted in the middle of their task.

Warsaw escaped physical destruction with the exception of its three bridges over the Vistula River. These, like all of the bridges, railroad stations, freight houses, roundhouses, and railroad bridges, were dynamited by the Russian Army as it fled before the invading Germans. The Warsawites say that a pogrom which would have surpassed in violence and extent any of its predecessors in the history of Russian Jewry had been planned to mark the evacuation of the Russian Army. The Cossacks were already riding through the streets of the Jewish quarter inciting the Polish populace; the cry of "Zhit" was heard; Jewish storekeepers had barricaded their stores and the Jewish population had shut themselves within their homes; that night was one of terror for the Jews of Warsaw. The following day was set for the pogrom; but at early dawn the German Army, unexpected for yet two days, entered Warsaw. The Russian forces were compelled hastily to retreat with barely sufficient time to cross the bridges to Praga. They dynamited the bridges behind them and set fire to Praga. The Jews in Warsaw could see the flames in neighboring Praga, and the Jews in Praga thought that the dynamiting of the bridges was part of the dynamiting and destruction of the whole Jewish quarter of Warsaw.

In many of the places that I visited similar stories of atrocities against the Jews by the fleeing Russians were heard. Many house owners told me of the sums they had paid to the Russian military officers to ransom their homes from fire. Many towns escaped destruction by collecting and presenting to the Russia military commander a generous sum of money as a contribution (?) to the "Russian Red Cross."

You have heard of the hundreds of Jews whom the Russians shot or hung as alleged spies. I talked with the widow of many of them and recall particularly one woman in Sochachew, whose right cheek was permanently bruised and scarred by the heavy heel of the local blacksmith as she resisted the dragging of her husband to be shot.

And what of the Jewish spirit? Has it been undermined and broken by the vicissitudes of warfare, the grinding poverty, the pestelential decimation? The death rate now, twice the normal, may destroy Jewish bodies, but all the calamities Israel has sustained and is sustaining in the eastern war zone have not and will not break the Jewish spirit. The picture of ruin, desolation, and suffering, which I shall never forget, is lightened by a beautiful rainbow of promise. It is only of Jews that one can hear and believe the stories that while Sochazew was being bombarded they held religious services in the cellars. The Mishnayoth classes continued uninterrupted in the cellars of Lovicz while the projectiles were falling all about them.

I will never forget the red-bearded man of Sochazew, who, grasping my coat, told me to pay no heed to the demands of his townsmen for money to relieve their starvation. "Never mind the food," he said. "We have not starved to death, and we shall not. Somehow we will find enough to eat; but look, Mr. American Representative, at this synagogue. It is now months since this roof has been shot through, the ark tumbled over, its side wall a mass of débris. Send us money for the repairing of our synagogue, so that our religious life can continue. God will not see us starve, if we hold to the spirit of our religion." Truly one need only travel through devastated Poland and Lithuania to be assured that we Jews are the "People of the Book."

As to the women and children whose husbands and fathers reside in America. This is wholly an immigration matter, and one to which your representative naturally directed his attention. Many in America are torn with the natural emotions of a husband and father whose wife and children are exposed to the dangers of the war zone. What can be done to bring his loved ones here to him? This question was considered by your representative in conference with German and Austro-Hungarian military and civil authorities. We succeeded in so far regulating this problem that an understanding was agreed upon that these two Governments did not object, in principle, to such women and children emigrating to America to join the heads of their families. Of course, each case and each application must be considered alone and on its own merits. The applicant must be provided with sufficient money or steamship ticket and money to make the journey to America, and must be admissible under the United States immigration laws; the head of the family must have sufficient means and be in a pecuniary position to care for his wife and children so that they will not become public charges; and the applicant must not be under any suspicion of espionage.

At first such women and children when meeting with all the aforementioned conditions were given passes to Berlin or Vienna—as the case might be—there to await further passes to Rotterdam. As these people are not American citizens but are Russian subjects, the application for a further pass for Berlin or Vienna to Rotterdam had to be made through the Spanish Ambassador at Berlin or Vienna, who now represents Russian interests. The resulting delay and inconvenience proving a real hardship, your representative again conferred upon this phase of the question with the German and Austro-Hungarian authorities, with the result that approved applicants are now given passes from their home towns to Rotterdam, without stopping off or delay in Berlin or Vienna. The same rule applies to Galicia.

As to the social and political future of the Jews in Russia itself and in occupied Russia, eyes to America. They confidently expect that in the tribunal wherein peace will be discussed, the voice of American Jewry shall be heard in a demand for equal rights for Jews in all lands. As to how this is to be voiced, they have little concern. Their interest only is that it shall be a united demand, truly representing American Jewry, and presented in a manner that will command heed and compliance.

And now, lastly, a word as to relief. We can not under existing circumstances send food supplies to the occupied part of Russia. But we can send money. Jews residing in America and having relatives in the eastern war zone can confidently be relied upon to strain their financial resources to send to their own loved ones the largest possible remittances. But the duty of relief is not confined to those having relatives there. Are not all Jews brothers? And are we not our brother's keeper? Can those who have no family ties or kin in this terrestrial hell, close their ears, their hearts, and their purses to this great cry of suffering? We, who live in this land of religious equality, who under the equal opportunities afforded to all have in many cases achieved comfort and affluence, must share our comfort and affluence with our poor brothers and sisters and their little ones in Russia, occupied Russia, Roumania, Galicia, and Palestine. The brotherhood of Israel is not limited or closed by geographical or national lines. It is all encompassing. The steady flow of a golden stream from America to those lands must not cease so long as one body is still to be clothed, one mouth still to be fed, and one wound still to be healed.

Mr. Speaker, when Isidore Hershfield sailed from the United States for Europe, at the dock was his aged father, who blessed him and expressed the hope that he might live to see him return to the United States.

It was either fate or destiny that he was to live to see his son return and to pass to the far beyond as soon as his son had given his report of his work, for on Friday he passed away.

The following item from the New York Times tells its own story:

LOUIS HERSHFIELD DEAD.

PIONEER AMONG HIS RACE HERE WAS FATHER OF ISIDORE HERSHFIELD.

Louis Hershfield, father of Isidore Hershfield, director of the Hebrew Sheltering and Immigrant Aid Society of America, who made an appeal for the starving Jews in Europe at a reception in Carnegie Hall on Thursday night in commemoration of his work in aiding his race, died yesterday morning at the home of his daughter, Miss Lillian Hershfield, at 65 East One Hundred and Fourteenth Street.

He was 92 years old and a pioneer among those of his race who came here from Suwalk, Russia, more than 70 years ago. Mr. Hershfield was one of about 2,000 Jews in this city in the early days and was prominent for many years. His funeral will take place to-morrow from the Uptown Talmud Torah, in East One Hundred and Eleventh Street. He was one of the founders of the Ladies' Fuel and Aid Society. Two daughters and four sons survive him.

## Good Roads.

### EXTENSION OF REMARKS
OF
### HON. BENIGNO C. HERNANDEZ,
OF NEW MEXICO,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. HERNANDEZ. Mr. Speaker, we of the Western States are now endeavoring to do all that a poor struggling community can, for the development of our resources, within our sparsely settled Commonwealth.

Within the State of New Mexico there is now an area of 9,935,746 acres in the national forests, very little, if any, of this immense area having been developed by actual settlers or by the Department of Agriculture; none of it is taxable, and it is costing the Government twice as much to administer as the revenues derived therefrom; therefore, as a business proposition, the national forests at the present time are not paying more than half of the cost of administration.

Now, the idea of calling this appropriation "pork" is absurd. It is nothing more nor less than a clean-cut proposition for this Government to improve and develop its own property.

New Mexico and other western States can not afford to go down into their pockets to survey, construct, and maintain all the roads within these national forests, but these communities are perfectly willing to meet the Federal Government half way and do their share of road building aided by the Federal Government, as proposed by this bill.

These immense tracts of land contain millions of feet of merchantable timber, some coal, and perhaps in some instances oil and gas.

In order to make the national forests self-sustaining, and not only self-sustaining but a paying proposition, the mature timber thereon should be sold at the earliest possible date. In most cases this timber is inaccessible, and how are you going to handle it unless you make it accessible by building roads; how are you going to protect the timber unless you can get to where the fire is destroying the timber in case of a forest fire; how are you going to encourage settlers to take up land within the national forests unless they are assisted by good road construction so that they can get their produce out of their farms?

It costs the American farmer between 40 and 75 per cent more to carry his products from the farm to the market than the ordinary farmer in Europe, the reason being simply that the European farmer traverses good roads and splendid highways constructed and maintained by the Government.

All these questions should be answered before any criticism is made of this legislation by gentlemen opposed really to all legislation tending to help these 17 Western States for Federal roads.

Some of these gentlemen complain that it is costing the Government about $3,000,000 in excess of the receipts to administer these lands; very well, these Western States are willing to take these lands, build all the roads, reimburse the Government the amount of money spent on them to date, and they will administer the forests much cheaper than it is done at present by the Department of Agriculture.

A fair illustration of the attitude of some of these gentlemen may be made by comparing the stand that they take in behalf of the Government with a real-estate speculator, either in open land or city lots, who neither sells nor improves his property, but simply holds it, awaiting for the more enterprising man to improve the neighboring property so as to enhance the value of the land or lots of his nonprogressive neighbor.

I know that the Congress of the United States wants to be fair and the high-minded Members mean to act fair toward all of the States, but sometimes they will follow the wrong path for a while and then coming back and meeting their colleagues halfway, and this is as it should be among broad-minded men.

The Western States receive but 25 per cent of the revenues derived from the national forests. Section 8 of this bill provides for an additional 10 per cent as a refunding fund from said proceeds to go toward reimbursing the Government for the ten millions which will be spent in the next 10 years within and in the vicinity of the national forests.

This in a way helps these communities to meet their expenses in road building and educating their children, and every cent of this money is advantageously used in my State.

We have 4,000 miles of main State and intercounty highways, the upkeep of which costs our State over a million dollars a year.

Gentlemen opposing this legislation lose sight of the fact that these Western States alone are paying the revenue now coming into the Treasury from grazing, logging, and other privileges. We pasture our stock, and pay a good fee for doing so; we buy posts, logs, and wood, paying a reasonable price therefor; we get back 25 per cent of the money we pay in, and, in addition to that, we now ask that 10 per cent be laid aside in order to reimburse the Government for the million dollars advanced annually from the Federal Treasury for the construction of good roads.

If you are believers in conservation, which no doubt you are, vote for section 8 to stay in the bill; make the national forests of permanent use; do not regard them as something too valuable to be utilized.

I hope section 8 will be retained in the bill, and that the conference report on the bill in whole will be adopted by this House.

Then we can feel that we have done something for ourselves and something for our western brothers, who are anxious to make our roads the pride of our country.

## Maintenance of Dependent Families of National Guardsmen.

### EXTENSION OF REMARKS
OF
### HON. DUDLEY DOOLITTLE,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. DOOLITTLE. Mr. Speaker, how easy it is to talk of war when war is far away, to read about battles while following them in the columns of an evening paper. From the soft cushions of an easy chair it is not difficult to map out a strenuous and swashbuckling plan of action—for the other fellow. Blustering jingoes charge the trenches in full view of the enemy—at 2,000 miles away—and other generals of strategy win fireside engagements amid the smoke of a 5-cent cigar. And we have numerous fake militants among us who rush to declare that war should be, but who fight the Nation's battles with some other mother's son or father or husband.

To-day we shall vote an appropriation of $2,000,000 to provide the necessaries of life for dependent families of real soldiers who have answered the country's call to the Mexican border. The National Guard and the militia have gone; they have left their homes, their families, and their accustomed employment. Their salaries and their wages have ceased, but not so with the daily requirements for food, for raiment, and for shelter of their loving wives and little children. These husbands and fathers and these sons have performed the highest duty of a citizen and a soldier. They have left the loved ones at home to serve the Nation. It is as little as we can do to make certain that their dependent families shall not be destitute of those things that keep body and soul together. Our men will make the better soldiers when conscious that "the folks at home" are safe from want. Some day—and soon, we pray to God—these war clouds will disappear; a homecoming will happily await the patriot who went to the front and the homefolks he left behind.

## National Defense Military Highway and Post Road from Los Angeles, Cal., Along the East Base of the Sierra Nevada Mountains, Cal., to Lakeview, Oreg.

### EXTENSION OF REMARKS
OF
### HON. JOHN E. RAKER,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. RAKER. Mr. Speaker, the country is interested in building national defense military highways and post roads for the general good that will be accomplished. I have introduced a bill for this purpose. This military national defense highway is proposed to be built where it will be of inestimable value.

The bill this day introduced is known as H. R. 16788 and is as follows:

A bill (H. R. 16788) to acquire, construct, and maintain a military and national-defense highway and post road extending from Los Angeles, Cal., through Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Lake Mono, through Bridgeport, Markleeville, Tallac, Tahoe, Truckee, Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake past the towns of Fairport and New Pine Creek, all in California, to Lakeview, Oreg., and from Alturas, Cal., down Pit River to connect with the California State Highway at Redding Cal.

*Be it enacted, etc.*, That the Secretary of War be, and he is hereby, authorized and directed to cause to be constructed a suitable military and national-defense highway and post road of 60 feet in width, with necessary bridges, out of such materials as may be found most suitable and best fitted, between Los Angeles, Cal., and Lakeview, Oreg., and Alturas, Cal., connecting with the California State Highway at Redding, Cal., following the most convenient and feasible route between said points, using, improving, and reconstructing the present highways between said points when convenient and feasible.

SEC. 2. That said military and national-defense highway and post road shall commence at Los Angeles, Cal., passing Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Lake Mono, through Bridgeport, Markleeville, Tallac, Tahoe, Truckee, Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake past Fairport and New Pine Creek, all in California, to Lakeview, Oreg.; and from Alturas, Cal., down Pit River to connect with the California State Highway at Redding, Cal.

SEC. 3. That said military and national-defense highway and post road shall connect with the various highways that lead from the great valleys through and over the passes east of the Sierra Nevada Mountains, and in addition to serving the general use of the public through commerce and the mining interests to be adapted to the general requirements of general military defensive purposes, such as transportation of troops, arms, ordnance, munitions, supplies, and to the utilization of the many strategical advantages pertinent thereto.

SEC. 4. That the Office of Public Roads and Rural Engineering of the Department of Agriculture and the highway engineers connected therewith shall make all necessary surveys and superintend its construction (with the use of such available machinery as may be possessed by the Department of Agriculture), under the direction of the Secretary of War.

SEC. 5. That the Secretary of War is hereby authorized to accept on behalf of the United States the free offers of all necessary rights of way, material, and other assistance for the construction of said military and national-defense highway and post road that may be offered, and that the work of construction shall begin as soon as possible after the passage of this act. That the rights of way for the said military and national-defense highway and post road shall be acquired from the States of California and Oregon and the several counties through which the said highway runs on conditions satisfactory to the Secretary of War.

SEC. 6. That the sum of $3,500,000, or so much thereof as may be necessary, be, and the same is hereby, appropriated, out of any funds in the Treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act.

SEC. 7. That in addition to the said military and national-defense highway and post road being used as a military and national-defense highway and post road, the same shall be open to the use of the general public free of tolls and under State control except when used for military and national-defense purposes. That the Secretary of War shall establish rules and regulations for the use of said military and national

defense highway and post road not inconsistent with the provisions of this act.

The following letter from Hon. W. G. Scott, executive secretary Inyo Good Road Club, vice president National Midland Trail Association for California, chairman Division of National Parks in Council of National Advisors, National Highways Association, of date June 28, 1916, and articles on the construction of this road, will fully explain the importance and value of the same:

HOTEL TERMINAL,
*San Francisco, Cal., June 28, 1916.*

Hon. JOHN E. RAKER,
*Member House of Representatives, Washington, D. C.*

ESTEEMED SIR: Inclosed please find literature pertaining to the matter of a military highway along the east base of the Sierra Nevadas from Los Angeles to Oregon, for the purpose of controlling the various mountain passes and thus forming an insuperable link in the defense system of the Pacific coast.

It is believed that the literature is self-explanatory.

Some few statements deserving special emphasis have been marked. The project has behind it the Inyo Good Road Club, the Lake Tahoe Good Road Club, and the Pacific Military Highway League.

The road is now in use for motor-car travel, but a large proportion of it is unimproved, and the proposition desirable is to make the entire thoroughfare a properly graded and constructed motor-truck highway for local use as well as for national service.

The matter has been placed before the directors of the California Auxiliary of the Naval Consulting Board of the United States.

It is very desirable to have this brought to the attention of the War Department.

Possibly cooperation between the Federal Government and the State might be arranged, or an appropriation might be secured in line with something like the inclosed suggestion therefor.

The object of this is to apprise you of the project and respectfully request your careful investigation, advice, and support.

The exact plan for concentrated action has not yet been fully determined. When decided it will be made known without delay.

Your suggestions and assistance will be considered an invaluable factor.

Any further developments of interest will be communicated.

I ask to remain, with assurance of highest and most respectful esteem,

Your obedient servant,

W. G. SCOTT,
*Executive Secretary Inyo Good Road Club, Vice President National Midland Trail Association for California, Chairman Division of National Parks in Council of National Advisors, National Highways Association.*

—

ANNOUNCEMENT CONCERNING THE MIDLAND TRAIL, YOSEMITE ROUTE.

An event which is now a part of the good-roads history of America was the official opening, on July 28, 1915, of the Tioga Pass, or, as it is now known, the Midland Trail, Yosemite Route.

Present on this memorable occasion were:

Hon. Stephen T. Mather, Assistant Secretary of Interior; Hon. FREDERICK H. GILLETT, Member of Congress, Massachusetts; Mr. Emerson Hough, the well-known writer; Mr. Gilbert H. Grosvenor, editor National Geographic Magazine; Mr. Robert Bradford Marshall, chief geographer, United States Geological Survey; Mr. Henry Fairfield Osborn, president Museum of Natural History, New York; Mr. C. H. Seavey, member of board of control, California; Mark Daniels, C. E., general superintendent and landscape engineer of national parks, United States of America; Wilbur F. McClure, C. E., State engineer, California; Henry Floy, consulting engineer, New York; F. Bruce Johnstone, Esq., attorney, of Chicago; B. M. Maddux, Esq., vice president Mount Whitney Power Co.; Samuel E. Simmons, M. D., of Sacramento; E. O. McCormack, vice president Southern Pacific Railroad; Mr. Horace M. Albright, secretary to Assistant Mather.

Also the following members of the Inyo Good Road Club:

G. P. Doyle, M. D., president; M. Q. Watterson, vice president; F. M. Hess, recording secretary; J. S. McQueen, D. D. S.; W. L. Smith; A. H. Swallow; Frank Campbell, C. E.; R. L. Spalsbury; L. L. Goen; Hon. Fred Eaton, ex-mayor of Los Angeles; W. G. Scott, executive secretary of club, member Council of National Advisors, National Highways Association.

The Inyo Register, in its issue of August 12, 1915, says that Assistant Secretary Mather sent the following telegram from San Francisco to A. G. Batchelder, chairman executive board of the American Automobile Association:

"Tioga Road through Yosemite Park was formally opened by me few day ago. I passed over it from one end to other in automobile and found it in very good condition. Also passed over part of El Camino Sierra, on eastern side of Sierras, which connects with Midland Trail, and found this road in excellent condition. Can therefore advise eastern tourists to go to exposition via Midland Trail and Tioga Road. Near Tioga Pass in upper part of Yosemite Park Sierra Club maintains supply station, where all visiting automobilists can be satisfactorily supplied with tents and subsistence. Fishing good and scenery wonderful all along route."

—

FOREIGN INVASION—THE PERIL OF INDIFFERENCE—CALIFORNIA HIGHWAYS FOR NATIONAL DEFENSE.

[By W. G. Scott, executive secretary Inyo Good Road Club.]

(As a writer who has always something to say worth while, Mr. Scott is one of the best-known contributors to Pacific Motor, and every article from his pen is enjoyed by our readers. The following article in regard to national defense is intensely interesting and appropriately topical at this time, when the whole world is stirred by the fearful horror in which Europe is now clouded:)

The great European cataclysm of maniacal fury which seems destined to remodel the map of the world, should result in the adoption by this country of a policy to increase the efficiency of national defense by every method known to engineering skill and military strategy.

At present there is in process of development a State-wide public utility of supreme importance—the State highway system of California. It requires but brief consideration to appreciate the intimacy of the relation existing between it and the protection of this coast against foreign invasion.

THE BASIS OF SECURITY.

The main trunk lines of the road plan of this State have been established. A thoroughfare along the entire coast of California has been decided upon, and another route has been selected traversing the State longitudinally through the great valleys of the interior, approximately parallel to the seaboard route.

This scheme forms an admirable basis upon which to frame further and effective security against incursion by a foreign foe.

With such excellent beginning, it is of vital importance that the purpose of national defense should enter into all calculations in the laying out of the entire Pacific highway system. In the consideration of unforeseen national contingencies, prudence suggests that careful study be devoted to possible reverses as well as to success.

In accordance with such precept and to make clear the ideas intended to be herein conveyed, we will suppose that a hostile force has succeeded in landing on the coast of California.

A NATURAL BULWARK.

The next move would be seizure of the railroad and highway lines. The defenders, forced to fall back, would establish a principal line of defense along the main-trunk highway in the middle interior the length of the State.

We will suppose the invaders penetrate inland and the defenders again be forced back. The Sierra Nevada Mountain Range straightway becomes the bulwark of the Republic, for which it seems to have been created. The next main line of defense established by the defenders would be on the other side and along the base of the Sierras.

The Sierra Nevada Range of mountains would be a barrier which the invaders could not cross with an extended front and the usual transportation incumbrances of an advancing army.

CRITICAL AREAS.

The various passes would become the portals through which the invaders would be compelled to push, should they persist in forward movement. These passes would immediately become "critical areas" of the highest strategical value for defense, upon which the safety of a nation might depend.

At present the passes of the Sierra Nevadas south of Tahoe, with the exception of Sonora, Tioga, Walker, and Tehachapi, are accessible only over rough, irregular, and indistinct trails, known only to a few cowboys, shepherds, and hunters.

The important crossings of the Sierras at Mammoth, Bishop, Big Pine, the Kearsarge Pass at Independence, Army and Cottonwood Passes near Lone Pine should all be made accessible by trails of good width and grade, constructed according to approved engineering practice, after which should be prepared military maps showing all the sites available for defensive purposes.

FACILITIES FOR ARMY TRANSPORTATION.

Then, with another or third main-trunk highway of boulevard construction along the east base of the Sierras, say, from Mojave to Lake Tahoe, connecting with the various improved trails and lateral routes in the Sierra defiles and passes, such facilities would exist for rapid transportation of men and supplies by motor cars and saddle and pack trains that the California Highlands could be made an insuperable barrier against alien aggression.

The ideas here briefly suggested are indorsed by high military engineering authority.

The creation of a third, or north and south trans-Sierra main-trunk highway, which will at the same time fulfill the function of a county-seat lateral authorized by the highway act, connecting Independence, the county seat of Inyo County, with the State highway system at Bridgeport, is being considered by the State highway commission, and there appears no well-grounded reason to apprehend other than favorable action.

EL CAMINO SIERRA.

This road, to which has been given the name of El Camino Sierra, is in reality possessed of both interstate and transcontinental importance, because the Midland Trail from New York City through St. Louis, Kansas City, Denver, Salt Lake, Tonopah, and Goldfield—one of the four main cross-continent highways—joins and becomes a part of it at Big Pine, and in addition it affords the only all-year route between Ely and San Francisco.

The construction of trails in defiles and passes is scarcely less important than improvement of main highway, and should receive the cooperative support of the Departments of War, Interior, and Forestry, in addition to that of the State and county, and energetic movement to that effect is contemplated by the Inyo Good Road Club.

THE PERIL OF INDIFFERENCE.

The Sierras can easily be made an impregnable line of defense. All that is needed is a system of main trails and selection of sites for camps, intrenchment, aviation, and signal purposes.

It is no idle dream to imagine the landing of a hostile force and a breaking through of the shore line of defense. Would it not be well to have roads and trails and the Sierra Nevadas all in a state of preparedness?

Present world happenings suggest the peril of indifference in everything that pertains to national defense.

—

THE PERIL OF INDIFFERENCE—ITS EXISTENCE IS BEING RECOGNIZED. POLICY OF BETTER COAST DEFENSE IS RECEIVING ABLE SUPPORT.

[By W. G. Scott.]

[The following is supplementary to an article entitled "Foreign Invasion," that appeared in the September issue of this magazine, in which general allusion was made to the relation between the State highway system and the coast protection of California. In the article here presented attention is more particularly directed to the necessity of improving the Sierra Passes, for the combined purposes of national security and as a State investment for immediate return. Since the preparation of these articles by Mr. Scott it is noted as confirmatory of his views that an able and thorough disquisition somewhat similar in tenor, by the talented writer, Arthur I. Street, entitled "The battle of the Pacific," appeared in November "Sunset," perusal of which is commended. Further corroboration of Mr. Scott's position is shown by the sturdy patriotism displayed by Congressman AUGUSTUS P. GARDNER, of Massachusetts, in his effort to induce the Government to avert possible danger—and the further fact that within the present month, in New York City, has been organized the National Security League, for purpose of formulating a policy for stronger national defense.—Editor's Note.]

During the past year the Inyo Good Road Club has on divers occasions advocated increased coast protection.

It is strikingly noticeable that such action is now being justified by the trend of world events—and that such prominent authorities on national affairs as THOMAS R. MARSHALL, Vice President of the United States, and ex-President Theodore Roosevelt are publicly declaring sentiments identical in general purport with those expressed by the club.

The former in a late interview in Chicago unequivocally stated the pressing need of better protection for our coast.

The latter, who combines in rare degree the qualities of military strategist and statesman, in a recent speech at Princeton, N. J., urged the necessity of general improvement of coast defense, and announced a policy positively startling in similarity to that already advocated by the good-road organization mentioned.

This improved system of coast defense, more particularly in this State, should not be confined to the shore area, but should include inland plans, so as to provide one or more additional lines of defense in case an invading force effected a landing.

While the military value of mountain passes is commonly understood, it may not be amiss to call attention to the conclusive proof thereof afforded by the present European war, where in the Carpathian Mountains futile attempts by a superior force to gain possession of passes necessitated modification of an entire campaign.

Taking the coast of California for direct illustration: Nature has reared in the interior a great bulwark that parallels the seaboard distant therefrom only a day's motor journey.

This titanic barrier that constitutes a secondary line of defense of superhuman efficiency is the Sierra Nevada Range, crossed by several natural depressions, none of which present insurmountable difficulty to an excellent highway.

In fact, each pass is now traversed by a road which only requires improvement and in some places reconstruction to make what the situation requires—a motor-truck thoroughfare.

These natural crossings of the Sierras are the passes of Tehachapi, Walker, Tioga, Sonora, Truckee, and Beckworth.

Each should be traversed by a highway adapted to motor-truck transportation, and such eventually will probably be the result.

Tehachapi already has an excellent road, except that in a few places the percentage of grade might be moderated, with increased comfort to teams and gratification to motorists.

Walker deserves to be improved and made more available for automobile travel because of its attractiveness as a touring route.

There is one pass, however, where exists imperative need of a highway adapted to motor cars, and its immediate demand is more urgent than that of any other.

It is Tioga Pass.

The project of a thoroughfare through this part of the Sierras should be vigorously supported by all motorists because of the transcendental scenery, which includes that of the famed Yosemite.

It should have the active and substantial assistance of the Federal Government, because it would connect El Camino Sierra, the main trunk highway of Trans-Sierra California with the State highway of the San Joaquin, passing through the Yosemite National Park.

The value of such road from a motor-touring viewpoint and from a military strategic estimate to both State and Nation is incalculable.

It would afford direct connection with the Midland Trail and make that route the shortest transcontinental highway between New York and San Francisco.

The Inyo Good Road Club has for some time urged the creation of a motor road through Tioga Pass, but being purely a local organization, it considered the task not strictly within its jurisdiction.

The motor-touring interests of trans-Sierra California, however—as well as of all California—will be so incalculably benefited by such highway, that the club feels impelled to arouse the operant aid of all concerned.

It has been pledged vigorous cooperation by the Sierra Club, the Woman's Pacific Coast Good Roads Association, the Automobile Club of Southern California, and the Modesto Chamber of Commerce, and is now engaged in consideration of the matter with representatives of the Government.

The domain of the Pacific brought into such world prominence by the completion of the Panama Canal is certain to be the scene of a stupendous conflict between more than 500,000,000 of swarth-faced orientals and the American people.

Whether this conflict be solely for commercial supremacy, in which industrial, financial, and diplomatic achievement will prove the determining factor, or whether it be a struggle of armed violence, goaded by national jealousy into another holocaust of murderous frenzy like that of Europe, depends entirely upon this country's preparedness for war—the best and most convincing of which is an efficient Navy and a complete and carefully wrought system of coast protection, including development of the secondary line of defense presented by the Sierras, which embraces the primal feature of motor-truck highways through the passes—first in importance being that of Tioga.

Such condition of preparedness would insure us respectful consideration if the strife were confined to commercial rivalry.

But in the event of tendency to overt aggression by foreign power it would insure such potent reason for deference as would tend to deter and in all probability avert a war, compared with which the destruction and human slaughter now devastating Europe, would appear like a preliminary bout that precedes the main event.

California will receive a great influx of motor tourists, because the touring of Europe with automobiles will be discontinued.

The Golden State owes it to itself to have good highways through the principal passes of the Sierra Nevadas, not alone to gratify the touring stranger but as a business proposition that will return each year a dividend greater than the total amount invested.

Add to this the military strategic considerations and you have two irrefutable reasons why each Sierra pass should have a motor-truck thoroughfare for the benefit of the State and for the safety of the Nation.

---

AN IMPORTANT LETTER OF BOTH NATIONAL AND STATE INTEREST.

[The following letter is a part of recent proceedings of the Inyo Good Road Club. By special permission we print it because of its direct relation to the touring interests of California. It opens up a great subject, and we believe it will receive the attention it merits.—Editor.]

JUNE 11, 1914.

Lieut. Col. ROBERT H. NOBLE,
*United States Army, Officer in Charge of Militia Affairs,*
*Western Department, San Francisco, Cal.*

DEAR SIR: The Pacific coast, with its unlimited natural resources, is generally acknowledged to be the treasure repository of the United States.

The part of the coast most conspicuous in this respect is California.

And, startling though the assertion may be, of all the natural resources of California none have greater value to the State at large than its scenic assets, if the same be properly developed and commercialized.

As partial justification for this strong statement, American tourists spend $400,000,000 each year visiting for pleasure the scenic attractions of Europe, which, compared with those of the Pacific coast, are less in extent and admittedly inferior.

The secret of this lies in the development, accessibility, promotion of personal ease and comfort, and the additional prolific charms devised by art, science, and wealth, all of which have resulted in a commercialization so vast that in Switzerland alone it forms the larger part of national revenue.

By the judicious application of capital, intelligence, and energy similar results are possible in California.

Of all the assets of the Golden State none have greater value than the mountain passes in the Sierra Nevada Range, at present neglected and overlooked.

Such value, however, is incidental to the main theme of this letter.

The completion of the Panama Canal exposes the Pacific coast to the intrigues and ambitions for commercial supremacy, at whatever cost, of shrewd and scheming nations of the Orient, secretly encouraged, perchance, by other powers.

This condition suggests the vital question of coast defense in case of attempted invasion by a foreign foe.

Granted that years have been devoted to preparation for this emergency, the question of adding to the efficiency of defense still remains.

It is in this connection that the mountain passes of the Sierras are selected for consideration.

To present this subject in form best adapted to convey meaning, we will indulge in various suppositions merely for purpose of illustration, and not for discussion.

We only ask that you permit them to pass unchallenged for the purpose they serve.

Suppose a foreign foe should suddenly strike and effect a landing on the coast of California and gain a foothold.

The coast highway and railway lines would be seized and utilized.

Suppose the defending force should then reestablish its base in the great valleys along the central trunk highway and railway systems, and the invaders should follow by an advance into the interior, and suppose the defenders should again be forced back.

The next logical main line for defense and necessarily more stubborn resistance, we will assume, would be established along the east base of the Sierra Nevadas.

The precipitious east Sierras without foothills and with a State highway along the foot of the slope would be features of inestimable value.

Should the invaders advance eastward they would be opposed by the gigantic barrier of the Sierras, and the movement of large bodies of troops in regular formation with extended front and all the necessary impedimenta of an advancing army would be effectually checked by insurmountable mountain faces and jagged crests.

Attention would at once be directed to the mountain passes.

These passes instantly become critical areas, with topographic conditions admirably adapted for defense.

The invading army would be compelled to abandon advance with an expanded front formation and would be forced into a contracted column in order to thread the narrow defiles.

The defenders presumably having carefully selected positions adapted to the purpose could effectually stop the invaders' advance.

A few thousand men could check an advancing column very many times greater in number—and persistency would result in its certain annihilation.

The State highway in condition of a boulevard would be adapted to rapid transportation or mobilization of troops, so that 5,000 automobiles commandeered for the purpose in event of great national crisis could rush a reinforcement of 25,000 men from one pass to another a hundred miles away between sun and sun.

The Sierra Nevadas are a great rampart. The passes are the portals that admit to the interior of the Republic.

Of several such natural portals, those which seem first entitled to consideration are the passes in the Sierras between the Truckee Summit and Tehachapi.

The Tioga, the Sonora, the Mammoth, the Kearsarge, the Walker, and several others.

The ones specified being of paramount importance.

Some of these passes are little known and neglected and difficult to traverse owing to rough and broken trails.

The principal knowledge of them seems confined to a few local residents of adjacent localities, a superficial acquaintance gained by adventurous sportsmen and a few intrepid tourists, while here and there are fragmentary portions that have been included in the commendable detail work of the United States Geological Survey.

The adage, that is old but of undiminished force, says "In time of peace prepare for war."

It is based upon prudence, wisdom, and unanswerable logic.

Where nature has done so much, why not further perfect the work in the interest of national safety?

If the plan has not already been put in execution, would it not be advisable, without delay, for the War Department to cause to be prepared with great thoroughness in detail for preservation in Government archives military maps of these passes, with special reference to advantageous sites for observation and signal use, locations best adapted to intrenchment or fortified defense, the spots most favorable for camps for men and saddle and pack trains and aviation stations, all to be accompanied with the construction of permanent trails by approved engineering methods, good for all time, and serving a double purpose—that of attracting a multitude of tourists to nature's great recreation grounds, while in case of attempted invasion there would exist a condition of instant preparedness, which in itself is generally equivalent to victory.

Much of the area now comprised in the territory is included in national parks or forest reserves, and private ownership would present slight obstacle, if any.

While the surveys could be conducted by the Army, possibly the expense of trail construction could be shared by the Interior Department or Forestry Bureau and the State and perhaps the county.

This would afford the Government data and plans that would be a vital element of national strength; it would arouse touring interest that would divert many millions to the enrichment of this State, and it would provide in addition a drill ground for militia forces that would make an adept reserve army skilled in all the varieties of mountain campaigning invaluable in case of national emergency.

You will pardon our temerity for venturing to discuss a topic so technical in character, but the importance of the subject from a touring as well as military standpoint prompts this somewhat lengthy effusion.

We will conclude by adding that there is substantial reason to believe the sentiments here expressed are approved by a large and influential affiliation of good-road and commercial organizations with which we have the honor to be associated, and which sets forth as one of its objects the encouragement of touring, and we are sure the increase of national security would arouse enthusiastic and intense patriotic approval.

If these maps exist, then the work of physical development and improvement only remains to be performed.

If the maps do not exist, then the project here outlined is waiting.

We have the honor to remain, with cordial and sincere respect,

INYO GOOD ROAD CLUB,
W. G. SCOTT, *Executive Secretary.*

EL CAMINO SIERRA—THE THIRD TRUNK HIGHWAY FOR CALIFORNIA AND ITS IMPORTANCE TO STATE AND NATION—THE BEST GUARANTY OF PEACE IS PREPAREDNESS AGAINST WAR.

[By W. G. Scott, executive secretary, Inyo Good Roads Club, chairman Division of National Parks, member Council of National Advisors, National Highways Association.]

[Paper read before the convention of the Women's Pacific Coast Good Roads Association in the Oregon Building at Panama-Pacific International Exposition, May 7, 1915.]

On every side we are reminded that this is an era of good roads.

The first successful trip of the modern motor vehicle marked the beginning of this desirable epoch, which means so much to State and Nation and with which we behold so prominently identified the intelligence and the influence of the association under whose auspices we are here assembled.

Motor cars have become so numerous in California and so diversified in character and application as to attract Nation-wide attention, and the system of highways now under construction is commensurate, both as to quality and extent, with the State's conspicuousness in the motor world.

Briefly expressed, California's highway system as provided by the highway act consists of two main trunk lines extending the length of the State from Oregon to Mexico.

One along the coast, the other approximately parallel, east of the coast range, traversing the length of the great valleys in the interior.

With these two trunk lines the county seats of outlying counties are to be connected by lateral or branch highways which enter into and become a part of the general system.

This plan for all that part of the State lying west of the summit of the Sierra Nevada Mountains seems adequate—but conditions are very dissimilar in that portion lying east of the Sierra Nevadas, which is a large and omportant part of the State, sometimes designated as "Trans-Sierra California," consisting principally of Modoc, Lassen, and Plumas Counties in the north, and Alpine, Mono, and Inyo Counties in the eastern center; all bounded by Nevada on the east.

There are many Californians in the great valleys and long the coast who are prone either to regard the crest line of the Sierras as the eastern limit of the State, or to underestimate the importance of that vast territory lying east of the Sierra Nevadas, yet inside the boundary of California.

To afford a slight idea of the extent of territory in the six counties named we will select a single county, Inyo, with an area of 10,019 square miles, within which you could put the whole State of Massachusetts and still have enough left for a fair-sized county.

Inyo and Mono County next on the north combined, have an area of 13,949 square miles.

While battle-torn Belgium—that pivotal center of Europe's destiny; that once prosperous but now devastated kingdom, with more than 6,000,000 inhabitants and 2,900 miles of railroad—has an area of only 11,400 square miles.

The county seats of these five large and important Trans-Sierra counties can not be connected directly with the main trunk line of the valley because of the great barrier of the Sierra Nevada Range, from 12,000 to 14,000 feet in height, which intervenes.

The Pit and Beckworth Passes in the north are the most feasible routes for laterals to connect with the valley trunk line, the county seats of Modoc, Lassen, and Plumas Counties, while the Sonora and Tioga Passes farther south afford connection for the county seats of Alpine, Mono, and Inyo Counties.

But there are other very important physical conditions which must be taken into the consideration of highway connection for Trans-Sierra California.

The eastern slope of the Sierra Nevada Range is precipitous with a notable absence of foothills, which admits of a highway along the east base of the Sierras from Los Angeles to Lake Tahoe that has been formally christened El Camino Sierra, and which for a long time has been an established route for travel through Kern, Inyo, and Mono Counties and the towns of Mojave, Lone Pine, Independence, Big Pine, Bishop, and Bridgeport.

From the last-named town to Lake Tahoe, about 70 miles north, is a road authorized by the State, and nearly completed, through Markleeville and Woodfords, in Alpine County.

Lake Tahoe is the terminus of a State road from Sacramento, hence Bridgeport, the county seat of Mono County, is joined to the State road system, which circumstances makes it a desirable point of connection for the road from the county seat of Inyo County, Independence, about 140 miles south.

This fact has been duly recognized by the highway commission, and it now has a survey force in the field moving north from Independence toward Bridgeport, preliminary to work of construction.

El Camino Sierra is intersected at Big Pine by a transcontinental highway from New York City—the Midland Trail.

This great cross-continent route has been surveyed and mapped its entire length by the American Automobile Association, and it has been incorporated in a projected system of national highways by the National Highways Association.

At Mono Lake, El Camino Sierra is intersected by the Tioga Pass highway, lately acquired by the Federal Government.

With the assistance of Los Angeles and Kern Counties on the south, and the further aid of convict labor where necessary, it is assured that in the near future the road known as "El Camino Sierra" will be a boulevard the entire distance from Los Angeles to Lake Tahoe.

This, to be a world-famous highway, should be continued north from Tahoe through Truckee, Sierraville, Quincy, Susanville, and Alturas toward Lakeview, Oreg.

This would make a third main trunk line east of the Sierras, affording much-needed opportunity for communication between adjacent counties and, by laterals through the passes named, connection with the main trunk valley system.

In addition it would permit direct access from the east to the proposed national parks of Mount Shasta and Mount Lassen—the live American volcano, which now enables California to compete with Italy, and to Lake Tahoe, to the world-famed Yosemite, and to the proposed enlarged Sequoia Park farther south that will surpass in magnitude anything of the kind in either the Old World or the New. (The route alluded to has been shown on sketch maps in Pacific Motor, where it appeared as parts of the two great scenic circuit motor tours of the State, the Pasear for central and southern, and the Round Robin for northern California.—Note by Editor.)

But whatever the social or commercial advantages of the Trans-Sierra trunk highway—all will be far exceeded by its value to the State as one of the most fascinating scenic routes in America—a route that will repay to the people of California, in cash revenue from tourists, annually an amount greater than its total cost.

This is not idle conjecture; it is a thoughtful conclusion.

While this third main trunk line, in large part soon to be realized, will be of prodigious value to the State it will possess a national value incalculable and of a significance positively startling.

By the term "national value," reference is had to a Trans-Sierra road as part of a more efficient system of coast defense.

The best authorities agree that the Pacific coast is lacking in its preparedness for resistance in case of attempted invasion.

There are, however, some mistaken theorists who decry adoption of measures for protection on the ground that it invites instead of averting hostilities.

In practice exactly the opposite is true.

If you are moved to strike at a fly, you do so without hesitancy because it is defenseless.

If you are moved to strike at a wasp, you hesitate because of its preparedness for defense, and in nearly every instance hostilities are averted.

Without waste of time or words in dissertation concerning possibilities of war, you are asked to accept without argument the following statement and hypothesis:

The operation of the Panama Canal is likely to result in a struggle for the commercial supremacy of the Pacific, out of which may grow undreamed of complications involving preservation of the rights and honor of the United States.

The entire Pacific coast, and California in particular, would be deeply concerned.

It is axiomatic that all things are possible in war.

We will suppose that attempt is made by a foreign foe to invade California and that a successful landing is effected.

First to occur would be the seizure of all coast railroad lines and highways.

The defenders would naturally establish a base in the great valleys along the rail and wagon roads.

Next would be an advance movement by the invaders.

We will suppose—all things being possible in war, as before stated—that the defenders are again forced back.

The next base for defensive operations greatly increased in strenuosity and determination would be the main trunk highway east of the Sierras.

Farther advance by the invaders would require entire change of plans.

The titanic ramparts of the Sierra Nevada Range would effectually block the forward movement of a great armed force with extendest front formation and all the impedimenta of transportation incident to an advancing army.

Attention would be at once directed to the passes as the natural points of least resistance.

These passes would at once become, in military parlance, "critical areas."

To make headway through the defiles the advancing army would be compressed into a column formation with abbreviated front.

The defenders, with choice of location for intrenchment and fortification and with thorough knowledge of topographic and other conditions, would have infinite advantage.

A comparatively small force properly disposed with adequate rear support would ordinarily be able to repulse if not annihilate the advance of an army of greatly superior numbers.

With a motor-truck boulevard along the base of the mountains and, say, 5,000 automobiles commandeered for the purpose, the defenders could rush an army of 20,000 men from one pass to another 100 miles away, between sun and sun.

Defensive transportation facilities would be of most effective character, while the invaders would have to rely upon means of transport of minimum efficiency.

The operations of opposing armies in the passes of the Carpathians in the present war in Europe are a practical demonstration.

On more than one occasion a comparatively small resistant force has compelled a much larger army to fall back and change plan of campaign.

The Sierra Nevadas are a great palladium of infinite extent and power waiting to be utilized for national security.

And to slightly digress, a most appropriate and valuable field practice for State troops would be an occasional campaign of mountaineering, including experience in all the exigencies of mountain transportation and subsistence and handling of armament in all the various features of maneuver, embracing elaborate military surveys of the passes and adjacent territory, with location of sites adapted to camp, signal, intrenchment, fortification, aviation, and other purposes, all to be mapped and preserved in the military archives for emergency reference.

The extraordinary possibilities of a national character indicated, added to the impressive array of local and State benefits, are an indisputable reason why the Sierras and that portion of the State which lies beyond should receive consideration, and why the additional bond issue of $15,000,000 proposed for the completion of the State's highway system should be strongly supported by the people of California.

The situation suggests:

That there be a motor-truck highway through each important Sierra pass—the Pit, Beckworth, Truckee, Sonora, Tioga, Walker, Tehachapi, and Tejon.

That there be a main trunk highway on the best route and grade through trans-Sierra California from Los Angeles to Oregon, intersecting county seats of the eastern counties and connecting with all the mountain-pass highways alluded to.

With this accomplished, there would be made accessible an extensive area of the State hitherto neglected, where enormous and prolific resources pertaining to agriculture and to mining promise rich reward for exploitation and development.

Astonishing as would be the local benefits, scarcely less surprising would be the contribution to State growth and prosperity, and however great the foregoing might prove there must be added the perpetual augmentation resulting from the myriad of tourists attracted by the magnificence of Shasta standing at the Northland gate, the grim and weird Lassen, helpless victim of a hidden giant in a destructive mood; beautiful Tahoe, that inland sea of liquid emerald whereon are mirrored the clouds of day and the stars of night; Mono, the Dead Sea of the West, where the very desolation lends entrancement to the scene; Yosemite, that masterpiece of creation; the Inyo Glaciers and Mount Whitney, nearest to the sky—the monarch of all the mountain kings—the first in all of California to receive each morn the greeting of the regal sun and the last each night to receive his parting benediction.

And countless other scenes of equal if not greater charm, which baffle artistic skill, defy poetic imagery, and reveal the inadequacy of language.

This is but an imperfect intimation of a subject that requires a subtle pen and bulky volume—the highway with a hundred byways, each byway with a hundred wonders.

## An Explanation of the Rural-Credit Law which was Framed by the Joint Committee on Rural Credits and Introduced into the House by Mr. Moss of Indiana.

### EXTENSION OF REMARKS
OF
### HON. RALPH W. MOSS,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. MOSS of Indiana. Mr. Speaker, under permission of the House to extend my remarks on the subject of rural credits I beg to submit the following statement in explanation of the rural-credits bill, commonly known as the Moss-Hollis bill:

The passage of the rural-credits bill will make this Congress an historic body. I had rather have my name recorded in favor of this measure than in support of any other legislative proposal to aid agriculture since the passage of the homestead laws. There has been a national campaign of agitation, and I am glad to say also of education on the subject of rural credits. It has been the common purpose of those supporting this propaganda to secure better credit facilities for American farmers—credit in more ample volume, at lower interest rates, and upon better terms of repayment. It is not necessary to discuss the genesis of this great movement in this country. Happily, that lies behind us; and I shall relegate to the historian the duty of writing history. I have what I trust is a pardonable pride in my connection with this movement from its earliest inception to the last work of the conference committee. But it is more important now to encourage farmers to enter the new system promptly and confidently than it is to seek personal recognition or partisan advantage for its enactment. We have now before us the exact terms of the statute, and it is our duty to interpret its provisions and to encourage our farmer constituents to enter the system and to share in its benefits. I shall not attempt to answer the criticisms which have been offered against the law. The actual operation of the law itself will confound its critics more effectually than did the Federal reserve law. The Republican Party has been rash enough to denominate it an ineffectual rural-credit law. The great majority of Republican Members in both Houses of Congress who so earnestly, faithfully, and patriotically supported this bill during its preparation and on its final passage, will secure a complete vindication from this charge in their national party platform the day that farm-loan associations are organized in their respective congressional districts and their farmer constituents become shareholders in what is destined to become the largest and most successful banking institution in the world.

METHODS OF ORGANIZATION.

Land banks may be organized either under joint stock or cooperative methods. This bill gives preference to the cooperative method and seeks to popularize cooperative business association among American farmers. It very properly, however, recognizes both methods and permits the purposes of the law to be realized under either class of agencies. No bank or association can be organized under the law which is not wholly dedicated to the service of farm borrowers, and no agent can charge a greater profit than 1 per cent annually on the unpaid principal of the debt. The only possible rivalry between cooperative and joint-stock banks is that noble contention of which best can work and best can serve in lowering interest rates to farm borrowers and in ameliorating the onerous conditions which debt has imposed on them. In this liberality we have followed the example of every other country in the world where rural credits have been successfully organized, and there is no room for prudent apprehension that we have erred by so doing.

IMPORTANCE OF LOW-INTEREST RATES.

I have in this foreword mentioned the purposes and the plans of this bill. Before passing to a discussion of its terms, I wish to add a word as to the importance of lower interest rates. Personally, I attach great importance to a reduction in the interest rates which American farmers are compelled under present conditions to pay. Mr. Taft, while President of the United States, issued a statement to the effect that the farmers of the Nation owed a mortgage debt of $6,330,000,000, upon which they are paying an annual rate of interest, including commissions and renewal fees, of 8½ per cent. If this estimate was correct, there is an annual charge resting upon American agriculture from this one source alone of more than $530,000,000. This estimate must rest entirely upon the eminent authority of a President of the United States. Other men have made different estimates. There are absolutely no satisfactory and reliable official records which purport to give the entire mortgage indebtness of the farmers of our Nation. Neither can the average rate of interest be determined with absolute certainty.

The rates under present conditions vary widely and are highest in those sections where agriculture is most poorly developed. When financial operations are left wholly to private contract, capital has always taken undue advantage of urgent necessity. This is the situation among farmers in many if not all sections of the United States to-day. By way of comparison, I may say that the city of Terre Haute, which is situated in my district, recently borrowed $300,000 for a long period of years at 4½ per cent interest, and it is not to be expected that farmers who own improved farms will be satisfied to continue indefinitely to pay rates for money which are much higher than that which this organized community is now paying for public purposes. And I wish now to predict that under this new law farmers will be able to borrow money at a lower rate, including amortizement and cost of administration, than they are now compelled to pay for interest alone. Thus the new generation of farmers under the beneficent provisions of this rural-credits law will be enabled to purchase and improve farms in large part with borrowed capital, and to repay the debt entirely at a lower annual rate than the farmers of the country now are paying for carrying charges alone and which includes no reduction whatsoever in the principal sum. I shall illustrate this statement by certain tables giving the annual installments which will be required under the new plan of loaning money as proposed by this law. A comparison of these payments with those required under existing contracts and conditions will prove conclusively that we are enacting a new homestead law. The homestead law of Lincoln's day gave title to wild and unimproved public lands upon a small payment and a term of faithful residence on the proposed homestead entry. This new law will enable the man who goes in debt to purchase a tract of agricultural land or to improve a tract he already owns, to pay off his debt within a moderate term of years, out of the saving in interest payments which he is required to make under his present conditions. This is in effect making a present of the principal sum to every borrower who is so fortunate as to become a shareholder in our proposed farm-loan associations.

HOW LOANS ARE MADE UNDER THIS LAW.

There are two distinct processes in the making of every mortgage loan. The first is to secure loanable funds, and the second the negotiation of loans with individual borrowers. Under our bill we have created a particular type of institution to perform each of these functions. We divide the United States into 12 land-bank districts. In each of these districts a bank having the power to issue and sell farm-loan bonds is created. The chief purpose of this bank is to secure the money to loan to farmers in that particular district. These banks will really borrow money from the public in order to reloan it to the farmers. They are given the power to sell their bonds to everybody, but they are permitted to loan only to farmers who are shareholders in the system. This is a very well-known principle in all rural-credit legislation; that is, that everybody may contribute money to the system, but only its own members may borrow money from the system. In order to facilitate the making of individual loans, the bill creates local institutions, known as farm-loan associations. These associations can be organized by 10 or more farmers who desire to secure mortgage loans from the land bank. The first duty, therefore, of farmers is to organize one of these local associations, because the land bank

can loan money only through an association. The purpose of the association is to solicit loans, pass upon the character of the borrower, and give a first estimate of the value of the lands proposed for security. Assuming that a land bank has been organized in your land-bank district, and a loan association has been organized in your neighborhood, the method of securing a loan will be as follows: The borrower would make an application to the association for membership and for a loan.

The directors of the association would first vote upon his application for membership, just as a lodge votes to admit or to reject candidates for initiation. If this application for membership be accepted, then a loan committee of three members of the association would appraise or place an estimate upon the value of the land offered for security, and would make a written report to the association. The secretary-treasurer of the association would forward the application for the loan and the report of the loan committee, together with the description of the land and an abstract of title, to the land bank. The land bank would thereupon send another appraiser, representing the bank, to estimate the value of the land. If this report be favorable, then the bank would lend the applicant not exceeding 50 per cent of the value of his land and 20 per cent of the insurable value of his buildings for a period not less than 5 nor more than 40 years. The borrower would send his mortgage through his association to the land bank, and the land bank would send the money to the borrower through the secretary-treasurer of the association. The borrower would make all of his subsequent payments, both of interest and principal, to the secretary-treasurer of his local association. Thus the borrower will deal entirely with his local association, whose membership is composed of his own neighbors and whose location is in his own immediate locality. The borrower determines the period for which the loan is granted. The rate of interest, however, is determined by the farm-loan board.

HOW THE RATE OF INTEREST IS FIXED.

The land bank has the power to borrow money through the sale of its bonds. These bonds are issued free from taxation and are as well secured as United States Government bonds. We believe that they will sell readily under existing conditions at a 4 per cent interest rate. Every effort has been made to make these bonds an attractive investment, so that they will command a very large sale at low rates of interest, and the success or failure of the system will depend upon our success or failure in securing this result. In order, however, that this low interest rate may reach the farm borrowers we have compelled the land bank to loan to borrowers at a rate not exceeding 1 per cent of that carried in their latest issue of bonds; and we have even gone further and have given the farm-loan board the power to reduce this margin below 1 per cent if an economical administration of the system will permit such a reduction. Thus every effort has been made to enable land banks to borrow money at the lowest possible rate and then to compel these banks to loan money to farm borrowers at a rate only slightly above the rate which the bank itself is compelled to pay. We have here a simple system which any farmer can understand and through which most farmers can borrow money without leaving their own neighborhood and can conduct their negotiations with officers of the association who are their neighbors.

WHY SOME FARMERS ARE NOT PERMITTED TO BORROW FROM THE COOPERATIVE LAND BANKS.

I have said that most farmers can borrow money through this system, and it is important to point out the exceptions and to state why these exceptions are made. Speculation is a prevalent vice in the United States, and in no field of enterprise is speculation more harmful than in the purchase of the agricultural lands of our Nation. It ought to be made possible for any American citizen who desires to live on a farm and engage in its cultivation to acquire title and ownership to the land he cultivates. Next to acquiring the ownership of land it is important that every man who owns a tract of land should be able to improve it, to stock it, and to purchase tools, implements, and fertilizers, so as to conduct his farm operations in the most economical manner and to secure the largest possible yields from his fields under cultivation. These results are not only necessary in order to make farming profitable, but they are absolutely vital to the existence of the Nation, to the permanence of our food supply, and to the maximum production of national wealth. These results can not be secured except that actual farmers of the Nation be given credit in sufficient volume and at attractive interest rates. For these reasons no loans will be made by any cooperative land bank except to resident farmers and to accomplish some one of these purposes. We seek to help the actual resident farmer both to acquire a reasonable tract of land and to improve it for agricultural purposes, and we refuse to permit a dollar to be borrowed under the system by any other man or for any other purpose. We seek to encourage better productive farm operations and discourage all speculation having for its purpose the acquisition of title to agricultural lands by those who do not propose to engage in their cultivation and in their improvement for agricultural purposes.

In order to carry out these express purposes of the bill loans are made only to members of farm-loan associations, and no person can secure membership in an association unless he is at the time or shortly to become engaged in the cultivation of the farm to be mortgaged and who states in his application that the money when loaned is to be used either to acquire the ownership of agricultural land or to improve it for agricultural purposes. I have purposely omitted mention of loans made for these purposes through agents. There is an exception made, whereby any farmer may mortgage his land to secure money to pay off his debts which he actually owes at the time this law goes into effect. This is only a temporary provision, and can only affect farmers who are in debt at the time that the law is enacted.

HOW PREFERENCE IS EXTENDED TO COOPERATIVE BANKS AND ASSOCIATIONS.

The greatest difficulty in founding any cooperative business enterprise is to secure the initial capital, and this difficulty is emphasized in this situation by reason of the fact that all the shareholders are borrowers. We are organizing a corporation in which every stockholder seeks to secure a loan and does not care to advance capital, even temporarily, to found or organize a corporation. To solve this difficulty we require the United States Government to advance $750,000 to each one of the 12 banks, making a total of $9,000,000 advanced to the entire system in the United States. And while this money is ultimately to be repaid to the Government, no interest or dividends are paid for the use of it. We thus found the system with a nice cash capital, and yet we do not impose any burden of interest or dividend charges.

This $750,000 is a revolving fund to be loaned to the farmer and is not intended to form any part of the permanent capital of the land bank. In order that the land bank may become a truly cooperative institution, it is necessary that shares of stock shall be owned and controlled by those who take out loans in the system. Moreover, it is further necessary, in order to perfect an ideal cooperative organization, that this stock shall be held in proportion to the loans which each stockholder may have; that if one man borrows a thousand dollars and his neighbor borrows $2,000, the latter should hold twice as much stock as the former. In this way the profits and the losses of the system will be divided ratably according to the volume of business transacted by the bank. This is the very essence of cooperation. Every business draws its profit from the volume of its transactions, and if every customer is to secure his rightful proportion of the earnings of the system, the net earnings must be distributed to every customer in proportion that his individual business bears to the whole volume of business transacted. It follows, too, that no dividends should be paid to any person who did not help to create the earnings of the system by increasing the volume of its business. The stock ownership of this system is founded on these fundamental principles of cooperation.

HOW STOCK IS ISSUED AND DIVIDENDS PAID TO SHAREHOLDERS.

Every borrower when he makes an application for his loan agrees to subscribe to the stock of the local association to the amount of 5 per cent of his loan. The local association when it forwards its member's application for the loan to the land bank also agrees to subscribe a like amount to the stock of the land bank. When the loan is granted, the land bank retains out of the face of the loan the amount of the stock subscription. Thus if Mr. Jones makes an application for a loan of $1,000, the transaction which results is as follows: Mr. Jones executes his mortgage for $1,000 and the local association forwards it to the land bank; the land bank issues to the local association $50 in par value of stock in the land bank and transmits $950 in current funds. The local association likewise issues to Mr. Jones $50 of stock in the association and turns over to him the $950 received from the land bank.

The association must pay to Jones dividends on $50 stock issued to him and in turn receives dividends on $50 of stock which it holds in the land bank. The land bank has issued bonds to the amount of $1,000 which it has sold to the public. It pays interest to its bondholders on this amount and receives interest from Mr. Jones on the face of his mortgage, which is $1,000. The land bank also has $50 in cash which it deducted from the face of the loan to pay for the stock issued to the local association when it received Jones's application. This sum of $50 is invested, and its income helps to pay the dividends on the corresponding shares of stock. When Mr. Jones's debt

is paid in full the land bank cancels the stock of $50 held by the association, paying the association its par value; likewise the association cancels its stock issued to Mr. Jones and pays him the $50 par value. Mr. Jones is no longer a borrower in the system; he is no longer a stockholder. He does not now help to create any business for the system and he is not entitled to share longer in its dividend distributions. I trust this illustration will make it perfectly plain that this system is purely mutual and cooperative; that it is owned solely by the borrowers; and that every cent of its earnings which are distributed as dividends are paid directly to the borrowers in proportion that their loans bear to the whole volume of loans granted by the land bank.

HOW THE BORROWERS OWN AND CONTROL THE LAND BANKS AND THE FARM-LOAN ASSOCIATIONS.

The directors of the local associations are elected by the members of that association; the majority of the directors of the land bank in turn are chosen by the directors of the local associations; thus the control of the land bank as well as of the association is vested absolutely in the borrowers. The borrowers both own and control the entire system, receive every cent of its surplus earnings in the way of dividends, and thus actually secure their loans at actual cost, or, to put it in other words, the borrowers will pay the same rate for money that the bank pays to its bondholders plus only the actual cost of administration, the actual losses sustained, and whatever sum may be set aside to augment the reserve fund. It is thus literally true that every governmental favor which is granted the system, every economy which can be devised in its management, and every element of safety which is thrown around the system are advantages extended directly to the borrowers in this system, and these advantages can not be absorbed by any middle man.

HOW THE SYSTEM WILL TEND TO PROMOTE A UNIFORM INTEREST RATE.

One of the greatest advantages which will flow from this system will be the tendency toward a uniformly low rate of interest in all States and parts of the Union. I shall not predict that at the very beginning there will be this uniform rate. There can not, however, be more than one rate for each land-bank district. As each bank indorses the bonds issued by every other bank, the security behind the bonds is exactly the same regardless of which bank district may issue the mortgages. In addition to the ample reserve funds which are required to be held in liquid assets we have permitted the Secretary of the Treasury to make temporary deposits of public funds in these land banks amounting to $6,000,000 at any one time. These deposits will only be used to meet payments of interest or principal on maturing land bonds. It is inconceivable that, enjoying so many elements of safety, the bonds of any of these Federal land banks will ever be in default of either interest or principal, and when this fact becomes fully established to the satisfaction of the investing public rates of interest will become stable and uniform in all parts and sections of the United States.

We will thus make possible a truly national development of our agriculture and will drive out usury and oppression from every section of our country. I will repeat that the operation of this system will confound its critics more effectually than did the Federal reserve law.

MANIFEST ADVANTAGES OF AMORTIZATION PAYMENTS.

There remains only an explanation to be made of that method of payment known as amortization. The term "amortization" means a method of paying a debt by creating a sinking fund which will extinguish both principal and interest at the close of an agreed period. Under this plan the annual payments are all of the same amount and the last payment discharges the debt in full. We have familiar examples of this principle in the endowment life-insurance policy or a certificate in a building and loan association.

It is founded on the fact that the regular payment is larger than the interest charges on the principal borrowed, so that every payment discharges a part of the debt. To one who is not familiar with the advantages of this plan, it is surprising how fast small savings grow when faithfully extended over a long period of years. For example, if a man were to borrow $1,000 at 5 per cent interest, the annual interest charge will be $50. If the borrower pays only $50 per year, he can never discharge his obligation; he will always owe the full sum of $1,000. But under the amortization plan as proposed in this bill, if he will pay $60 per year, which is only $10 more than the annual interest charge, he will pay his debt in full at the close of 36 years. He has thus actually paid off his obligation of $1,000 with $360, if you compute simple interest at the rate of 5 per cent. If a farmer in any State in the Union to-day were offered money on an unrecallable contract for 36 years at a rate of interest as low as 3¼ per cent, he would jump at the chance to secure the loan. This is the simple-interest rate which any borrower will actually receive under this bill if he is enabled to borrow money at 5 per cent on the amortization plan and will agree to make an annual payment of $60 per year for 36 years. A simple computation will prove to you that this result is correct. Thirty-six payments of $60 each is a gross sum of $2,160. This sum pays both interest and principal. Subtracting the principal, it leaves $1,160 which has been paid for interest in 36 years. This is an average of $32.22 per year, or an average rate of 3.22 per cent, which is slightly less than a rate of 3¼ per cent. Of course, this most remarkable result is really accomplished by the constant reduction which is made in the principal and by constantly decreasing the annual interest charge. The rate given—that of 3.22 per cent—represents, however, the average rate of interest paid during the entire period if computation be made on the original principal of $1,000, which is the ordinary method of borrowing money.

THE SAVING TO THE BORROWERS ILLUSTRATED IN DOLLARS AND CENTS.

I have assumed that the banks will be able to issue bonds under this law at 4 per cent. This will enable them to make loans to farmers at a rate not exceeding 5 per cent, which will include administration charges. If this result be achieved, the aggregate saving to the farmers of the Nation will be stupendous. Prof. Thompson, of the Department of Agriculture, submitted a carefully prepared statement to the joint committee on rural credits, in which he estimates the total mortgage indebtedness of the farmers of our Nation at $3,598,985,000. (See p. 107, pt. 3, of the hearings.) He also submitted a table showing the average rate of interest paid in every State of the Union. This table is found on page 101, same hearings.

Assuming that the average rate of interest on this debt, including renewal and commission fees, is 7.5 per cent, the farmers are now paying annually $75 interest on every $1,000 of this debt without reducing the principal. If this debt were to be refunded under this law at 5 per cent interest and the farmers would continue to pay the sum of $75 per year on every $1,000 of their debt, as they are now paying, the entire debt would be fully discharged in 22 years and 6 months. This would be equivalent to a saving of the entire principal of their debt in this period of time, because their present interest payments, converted into a sinking fund under the lower rate of interest, would pay the entire debt in that period. This would mean a total saving of $3,598,985,000 in 22 years and 6 months, or a yearly saving of $159,954,888. This result is equivalent to an annual saving of $44.44 on every $1,000 of the entire mortgage debt in the Nation as compared with existing conditions.

The mortgage debt of the farmers of Indiana is given by Prof. Thompson as $132,325,000 and the average rate of interest as being 6.2 per cent. If this debt were refunded under this law at 5 per cent interest and the borrowers would agree to make annual installment payments of $62 on each $1,000, which is the amount they are now paying for interest alone, the debt would be paid in full in 33 years and 6 months. This would mean an annual saving of $3,950,000 to the farmers of my State. It would mean an average saving of $29.88 per year for every $1,000 of mortgage debt. A similar computation might be made for every State, but I trust these two examples will clearly illustrate the vast importance of this law to those who may be fortunate enough to be able to refund their present indebtedness under its terms and conditions.

ADVANTAGES OF BORROWING FOR A LONG TERM OF YEARS.

I have discussed the instance where a debt of $1,000 at 5 per cent interest may be repaid in 36 years by an annual payment of $60. If the borrower were able to make an annual payment of $70 per year he will discharge his debt at the close of 25 years. In this instance, he has paid off a debt of $1,000 with $500. In case the borrower can pay annually, say, $80, he will discharge his debt in 20 years. He has then paid off a debt of $1,000 with $600. It will be seen that this plan is best adapted to long-time contracts. The law will permit loans to run for at least 40 years. I urge borrowers to accept a reasonably long period of repayment. The curse of American farm-mortgage debt has been the pressure to repay within a short period. It has entailed hardships on the family. It has robbed the children of an education. It has prevented the taking of short vacations and trips of travel. It has made debt an oppressor, and has given a mortgage a baleful influence over the destinies of the family of the debtor. It is the pressure to pay within a short period which has created the "slavery of debt." Yet under the old conditions, it was impossible to avoid these influences. No sinking fund could be created; no small savings could be made under conditions which were favorable to the debtor. This law abolishes these evils. It makes possible a mortgage contract which is unrecallable. No foreclosure can take place, except

for breach of conditions on part of the debtor. No renewal charges or commissions can be demanded.

Every payment reduces the principal of your debt and you have perfect assurance that if you continue to make the annual installment payments that your debt will be discharged at the end of the contract period without any additional payment on your part. Any borrower can make heavier payments at any time and thus shorten the period of his contract. He can pay off his entire debt at any time he may command the money. The borrower thus does not lose any freedom by making a long-time contract; he is only insuring himself against pressure to pay out large sums and thereby reduce the income available to educate his family and discharge his other obligations which he owes to himself, to his family, and to society.

MY PERSONAL PREDICTION AS TO THE SUCCESS OF THE LAW.

Without in any degree seeking to disparage the valuable work of my colleagues, I can truly say that I have given years of faithful endeavor to this work and I am confident that we have enacted the most progressive statute on mortgage credit of any nation in the world. We have not sought to organize eleemosynary institutions or to create a chain of idealistic agencies to practice altruism, but we have striven to remember that sound credit has other bases than vast riches. We believe that we have devised simple machinery with which to destroy the egoism of the investment banker and break the death grip of usury on the honest and industrious agricultural population of the United States. It is from their hard labors which come not only the daily bread of our Nation but the vast volume of wealth which is enriching our Nation beyond the dreams of any man of our day and generation. Rural-credit legislation has made Germany a nation of home owners; it has given them the best agriculture in the world; it has given that nation the greatest domestic resources of any nation; and has enabled that brave people to wage a world's war against the greatest odds any nation has ever faced on the battle field. We confidently offer this law to the Nation not only as a compliance with the platform promises of the Democratic Party but as a measure of industrial preparedness which will strengthen this Nation in the great battles for the world's wealth and power in a greater degree than any fleet of battleships which can be constructed in a generation.

---

**On the Necessity for Every Democrat Remaining at His Post During the Remainder of This Session of Congress.**

---

## EXTENSION OF REMARKS

OF

## HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. STEPHENS of Texas. Mr. Speaker, the country must and will recognize that the present session of Congress is one of the most important since the Civil War. The great war in Europe, the alarming conditions in Mexico, the changed trade and business relations growing out of these world calamities make it absolutely necessary for the President and Congress to be more alert in framing policies and laws to meet the existing and contemplated troubles than ever before. It is, therefore, more necessary than at any other time since I have been a Member of this House that Democrats should remain on guard, and, if necessary, forfeit their seats here to some one running against them at home, rather than desert the Democratic ship, so well commanded by Woodrow Wilson in this great storm period of our national history.

Our constituents at home, I know, despise deserters and desire every Democrat to remain here and aid our presidential leader in his great endeavor to prevent war in Mexico or elsewhere if possible, or if war is forced upon us, to furnish all the means and legislation necessary to conquer the enemies of our country.

Keeping these things in mind, I think and hope that all Democrats in Congress should remain here and endeavor to carry out the splendid policies of the Woodrow Wilson administration. I know by experience that it is hard to remain here at our post of duty while our opponents are fighting us at home for our seats, and by taking advantage of our absence are misrepresenting to our constituents our votes and records here, claiming that we have never done anything for them while in Congress.

To refute this false statement as to myself, I desire here and now to quote some of my record in Congress from the congressional records, which show that I was the author of the following measures that have become laws through my efforts:

I was the author and promoter of the original bill which extended the national irrigation law so as to include within its provisions the State of Texas. This law will eventually result in Texas securing several millions of dollars from the reclamation fund for irrigating our arid lands.

I have, during this session of Congress, secured the passage through the House of a bill to pension the old indigent Texas Rangers who served on the Texas frontier from 1859 to 1876. The bill has already been favorably reported by the Senate Pensions Committee, and I shall render every service possible to secure its final enactment into law.

I have secured for our district several agricultural experiment stations; also several soil and geological surveys. I now have bills pending for several public buildings in the district, for 1-cent postage on all drop letters, for a fish hatchery, for a national park on the headwaters of Red River, and another for an agricultural experiment station at Plainview, and shall do everything in my power to secure the passage and enactment into law of these bills during the present Congress.

I secured the passage of the bill that provided for the settlement of the disputed boundary line between Texas and New Mexico. This law gave to Texas the undisputed title to more than 100,000 acres of land, the title to which was formerly claimed by the United States as a part of New Mexico. The towns of Texline and Farwell were involved in this controversy and would have been lost to Texas if my bill had failed to pass and the contention of New Mexico and the United States had been sustained.

When I came to Congress there were no Federal buildings in the district, but during my service here I have secured the passage of bills providing for several. I was the first Congressman to secure for his district free roadside mail boxes on star routes, which service was the forerunner of free rural and parcel-post delivery. I have secured for my people more free rural delivery routes than any other Congressman in Texas.

I am the chairman of the Committee on Indian Affairs and the only chairman of an appropriation committee from Texas. My work on this committee has borne much valuable fruit for my district and the whole country.

I introduced and secured the passage of the bill providing for the opening of the large Indian reservations in southwestern Oklahoma, which opening, development, and settlement of this vast territory has furnished homes for hundreds of homeless families. Several railroads have been built through these reservations and have been extended into Texas, which has brought much capital and many settlers from other States to our district. Wichita Falls, Vernon, Quanah, Wellington, Amarillo, and several intermediate towns have secured the above roads and have been greatly benefited in population, real-estate values, and in many other ways. None of these railroads would have been built had it not been for the opening of these Indian reservations.

I have also voted for and assisted to the utmost in the passage of the following wise and beneficial Democratic laws:

The present banking and currency system, which makes panics impossible.

The Parcel Post System, which makes express company robbery no longer possible and gives the farmer a better chance.

The antitrust laws, that regulate big business, and make it no longer safe for any man to laugh the law in the face, no matter how rich and powerful he is.

The eight-hour day for workingmen in Government works.

The law prohibiting certain gambling contracts in cotton futures.

The graduated income-tax law, which is a tax upon wealth, and not consumption.

The tariff bill, which reduced the tax upon consumption.

The election of United States Senators by a direct vote of the people.

The anti-injunction bill, which regulates the granting of injunctions in labor disputes.

The bill to grant jury trials in indirect-contempt proceedings growing out of labor disputes.

The above citations from my record in Congress will show the falsity of my opponent's claim that I have never done anything in Congress to benefit my constituents. This false charge convicts its maker of either willfully misrepresenting facts, as shown by the CONGRESSIONAL RECORD, or of inexcusable ignorance of the past political history of his country.

In any event he proves himself unworthy to be my successor in this House.

Mr. Speaker, I desire to state that I am a conservative in all matters of legislation and that I am not an advocate of peace at any price, but only when it can be had by patiently waiting and diplomacy as the President so far has so well accomplished. The country is to be congratulated in having President Wilson now at the helm. He is a man of conservatism and prudence rather than a man of fiery and warlike instincts.

My votes at this session of Congress on the various preparedness measures coming before us show that I am in favor of adopting such strong military measures as the President may find necessary to prevent any further butchery of our soldiers or citizens by Mexican bandits.

That I favor the building of merchant marine and warships in the Government shipyards. I also favor the Government building plants and manufacturing all of its munitions of war, and I shall vote, as heretofore, for reasonable appropriations of money in the Army, Navy, and fortifications bills as will, in my judgment, be sufficient to adequately defend our country from foreign invasion.

That I favor a small standing army in time of peace and the use of the National Guard to supplement the Regular Army in time of war; in other words, I favor the same system that has served us so well since the foundation of our Government.

That I am opposed to compulsory military service and favor the volunteer system.

I voted for the Hay bill because it was a comprehensive method of meeting all different views promulgated upon the preparedness question, and dealt with this question from a reasonable standpoint and did not go to either extreme. The Hay bill provided for a standing army of 140,000 men, which is an increase of 40,000 over the present standing Army. I voted against the Kahn amendment, which provided for an increase of the standing Army to 220,000.

I favored the President's policy of warning our citizens against going into Mexico and also requesting those citizens already there to come out and remain out of that unhappy country. I also believe that our citizens should have been likewise warned from traveling on armed merchantmen of belligerent nations, as I can see no difference in the two propositions.

Mr. Speaker, I desire to further state that I voted for the Burnett bill, restricting foreign immigration so as to protect our home laborers and prevent Europe from shipping to this country at the close of the present war millions of undesirable and ignorant foreigners. I voted for and favor the rural-credit plan of financing our farming interests as proposed in the Baltimore Democratic platform of 1912, and shall do everything I can to secure its enactment into law during this session.

That I am in favor of State and national prohibition.

That I am in favor of granting independence at once to the Filipinos for the reason that in the event of a foreign war we would first be attacked in these islands and as a chain is no stronger than its weakest link, we would be forced to defend the Philippines with the same force and stubbornness as we would one of our States. Its inaccessibility would prove a great handicap and an element of weakness rather than strength to our chain of empire.

---

## Suggestions as to How Farmers May Secure Loans Under the New Federal Rural Credits Law.

---

### EXTENSION OF REMARKS

OF

### HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 6, 1916.*

Mr. McKELLAR. Mr. Speaker, during the discussion of the rural-credits bill in the House, I actively took part in the debate, believing then, as I do now, that a proper rural-credits system will do more for the development and prosperity of our country than any other one measure before the American Congress. I voted for the bill, not because all of its provisions met my approval, but because I believed that it was a long step in the right direction toward securing for this country a farm-credits system, and believing that we can perfect the measure later on by amendment.

PROVISIONS WHICH I DO NOT APPROVE.

There are three notable provisions in the bill which I opposed because I did not believe that they were to the best interest of the farmers. These three provisions are: First, the cumbersome machinery of the act, the expensive system of farm-loan associations, of joint-stock banks, and of profit-making middlemen, and the like, and the large amount of red tape necessary for the farmer to secure a loan; second, the requirement making it necessary for a farmer to subscribe for stock in the farm-land bank to the amount of 5 per cent of his loan before he can obtain a loan; third, the provisions requiring him to become responsible for his fellow members' loans to the extent of 10 per cent of his loan.

I believed then and believe now that all three of these provisions are unwise and unnecessary. I believe that the Government should have established the 12 land banks and permitted them to establish their own agencies at the smallest possible cost, and loan the money direct to the farmers without red tape and without creating profit-making middlemen. I believe that the formation of farm-loan associations and joint-stock banks will be expensive, cumbersome, and wholly unnecessary; but a majority of the House thought differently about these provisions, though my amendment in the committee striking them out failed by only 6 votes, and the bill as finally passed contains them. After all, only the future can tell who is right; and so great is my belief in the lasting good of the rural-credits system that I now feel that all friends of rural credits should join heartily in trying to make this system a success, so that the best results to the farmers of our country may be secured. With this purpose in view, therefore, Mr. Speaker, it is not my intention to discuss the merits of this legislation in these remarks, but I simply wish to explain in a general way the provisions of the bill and point out how farmers can take advantage of its terms, hoping that it will be helpful to my constituents.

RURAL CREDITS COMPANION LEGISLATION TO FEDERAL RESERVE ACT.

The rural-credits act which has become the law is based on the same general plan followed in the banking and currency system recently enacted by a Democratic Congress and which has proved such a marvelous success. As the banking and currency act provides for a system to benefit the business, commercial, manufacturing, and industrial needs of our country, so it is believed that the same kind of a system formed to meet the needs of agriculture will accomplish a like result. The Federal reserve act has proved a phenomenal success, and it alone would entitle the Democratic administration to an indorsement. We believe the rural-credits act will prove a like success. The banking and currency law provides for a central board at Washington, known as the Federal Reserve Board, and divides the United States into 12 districts and establishes a Federal reserve bank in each district. And so the rural-credits act establishes a Federal farm-loan board of five members at Washington—four members and the Secretary of the Treasury—divides the country into 12 districts, and establishes a Federal farm-land bank in each district. Both systems have the backing of the Government and are very similar. Both acts are Democratic measures, and both acts have been approved by a large majority of the Republicans in the Congress.

FEDERAL FARM LOAN BOARD.

The Federal farm-loan board consists of five members, four to be appointed by the President with the consent of the Senate, each, except the Secretary of the Treasury, to receive an annual salary of $10,000, and the Secretary of the Treasury is an ex officio member, and they can not be officers or directors or own any interest in any other kind of banking business. This board is required to appoint a loan registrar in each land-bank district, and it also appoints such appraisers and examiners in each district as may be necessary. All of these are Government officials, and, except appraisers, their salaries and expenses are paid by the Government. This board has authority also to employ such attorneys, experts, clerks, and the like as may be necessary, and all these are paid by the Government. This board organizes and charters the Federal land banks, ultimately fixes the rate of interest, and has general supervision and control of the whole system.

FEDERAL LAND BANK.

The Federal farm-loan board is required to divide continental United States into 12 districts, and a bank with not less than $750,000 capital stock is established in each district in a city within said district designated by said board. At first these banks are to be managed by five temporary directors selected by the Federal farm-loan board, but afterwards they are to be selected, in part, three by the board and, in part, six by the farm-loan associations, and in a general way as the directors in the present reserve system are selected. The capital stock of these Federal land banks may be subscribed to by anyone, but if it is not subscribed within 30 days, then the United States Government will subscribe for the stock. Of course, the stock will be

subscribed for by the Government. At all events, it will be at first.

NATIONAL FARM-LOAN ASSOCIATIONS.

The act provides for the formation of national farm-loan associations. It is most important that the farmer should know about these associations, with which he must come directly in contact. In order for a farmer to secure a loan he must become a member of one of these farm-loan associations. These are formed by 10 or more borrowers, who associate themselves under the act as a corporation, and they select a secretary-treasurer, who manages the affairs of the association. The secretary-treasurer is the business manager of the association, and, of course, will control it. The board of directors' duty in these associations will be largely nominal. As soon as the application for articles of incorporation is forwarded to the Federal land bank, the bank sends an appraiser to the locality to appraise the lands included in the application. If he finds them eligible for loans, the charter is granted.

HOW TO OBTAIN A LOAN.

If a farm-loan association has not already been formed, it requires at least 10 farmers who desire to make loans to form one. Each member is to subscribe an oath saying that he is the owner, or about to become the owner, of farm lands, qualified under the act of being the basis of a mortgage loan; that the loan desired by each person is not more than $10,000 nor less than $100; and that the aggregate loans of each association are not less than $20,000. These affidavits are to be accompanied by subscriptions to stock in the farm-land bank equal to 5 per cent of the mortgage loan desired. When the land bank gets these affidavits they form a farm-loan association, as above set out. To cite a concrete case, a farmer has a piece of land worth $1,800, with improvements worth $500 thereon, in all $2,500. He becomes a member of the association as above pointed out. He then applies for a loan of not exceeding $900 on the land and $100 on the improvements. In other words, he can borrow 50 per cent of the value of his land and 20 per cent of the value of his improvements. He does not get in cash the whole sum of $1,000, because he is to take 5 per cent of the amount of his loan in stock, or $50 in the case illustrated. He is entitled to whatever profits are made on his stock, if any are made, and when the loan is paid off he is credited with the $50 stock at all events, and the stock then canceled. In addition to this, he must sign an agreement guaranteeing to the extent of 10 per cent, or $100, or double the amount of his stock, the loans of his fellow members. Under a well-regulated system, supervised by the Government, it is not believed that he will ever have to pay any loss on account of this guarantee, and this amount is not deducted from his loan and not paid at all unless there is a loss. Of course, when his loan is paid off his stock is canceled and this agreement is at an end. In other words, his stock is simply an investment which he must make to secure his loan.

The result is that a farmer, when the system is organized, will have to apply to the secretary-treasurer of the loan association, have his land appraised, and be elected a member, and furnish an abstract of title to his property, which will be examined by the attorneys of the system at a figure ultimately fixed by the farm-loan board. He will have to subscribe to the amount of 5 per cent of his loan in a farm-loan association, which will in turn subscribe for a like amount of stock in the Federal land bank, which will either be paid for in cash or deducted from the loan or added to the loan.

The result, so far as it can be estimated ahead of time, will be about as follows:

| | |
|---|---|
| Security offered: | |
| Land | $1,800 |
| Improvements | 500 |
| Total | 2,300 |
| Cost: | |
| Subscription to stock in land bank | 50 |
| Cost of abstract of title (estimated) | 10 |
| Cost of examining abstract (estimated) | 5 |
| Cost of appraisement (estimated) | 5 |
| Cost of recording mortgage (estimated) | 2 |
| Total | 72 |
| Total loan | 1,000 |
| Farmer receives in cash | 928 |

Counting his stock as an investment, he borrows $950 at an expense which it is believed will not exceed $22.

It is believed that the Torrens title system or some other similar system will soon be adopted, and that shortly all these initial expenses will be reduced to a minimum. Of course, if the farmer already has an abstract of title and taxes, that cost will not have to be borne again. Even the initial fees may be paid for by the bank and deducted from the loan.

HOW LOAN IS REPAID.

Under the amortization plan provided by the act, the loan will be made on long time, not exceeding 40 years and not less than 5 years, and to illustrate how the payments are paid the following table, showing a loan of $1,000 for 20 years at 5 per cent, is given:

| Annual periods. | Total annual payment. | Interest at 5 per cent. | Paid on principal. | Amount of principal still unpaid |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.01 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.65 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.55 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | |
| Total | 1,604.80 | 604.80 | 1,000.00 | |

In addition he will get the $50 stock subscription back in cash, with its earnings, if any; or the same will be credited on his cash payments. In other words, he will not lose this $50 unless the system fails. Of course, the borrower has the right to pay off the loan at any interest-paying period. Larger loans can be worked out on the same basis.

RATE OF INTEREST.

In the above illustration the interest is given at 5 per cent. Under the terms of the bill the rate can not exceed 6 per cent. Of course, the interest payments will be one-sixth larger than those shown in the above table if the farmer is required to pay a 6 per cent rate. In this connection I wish to say that the interest rate depends upon the interest rate of the bonds issued and sold by the farm-land banks. It is believed that these bonds will prove such a safe and popular investment that the rate of interest paid by the farmers for their money will not exceed 5 per cent, and may be less than that.

RESTRICTIONS ON LOANS.

A loan may only be made upon duly recorded first mortgages on farm lands. They must be made for the purpose of purchasing land for agricultural uses, or for the purpose of purchasing equipment and live stock necessary for farming, or to improve farm buildings, or for improvements on farm lands, or to liquidate the indebtedness of owners of land already mortgaged. These loans shall only be made for 50 per cent of the value of the land, and 20 per cent of the value of the improvements as fixed by the Government appraisers. The loan can only be made to those who are engaged in the cultivation of a farm mortgaged, or shortly to become so engaged. The amount of any one loan shall never exceed $10,000. The application must state the purpose for which the money is borrowed. The borrower is to pay all premiums for insurances and taxes.

HOW THE MONEY IS OBTAINED BY THE BANKS.

When the Federal land bank begins operation and secures these farm first mortgages, then it is given the right to issue its own bonds. The security of these bonds is: (1) The capital stock of the bank itself; (2) whatever earnings and reserves the bank may have made; (3) the indorsement of the local farm-loan associations, which will be backed by the guaranty of all members of the association to the extent of 10 per cent of the loan of each; (4) the first mortgages of farm lands at 50 per cent of their value, and on improvements at 20 per cent of their value; (5) the bonds are exempted from local, State, county, and national taxation; (6) the supervision of the Federal farm-loan board; (7) the act makes the bonds a lawful investment for all fiduciary and trust funds.

Under these circumstances these bonds ought to be just as good as any United States Government bonds, and ought to sell at a very low rate of interest, and, no doubt, soon after the system gets in good working order the rate of interest at which a farmer will be enabled to obtain money will be low, indeed. From the sale of these bonds the banks will get the money to lend to the farmers.

JOINT-STOCK LAND BANKS.

There is a provision in the bill for joint-stock land banks that ought not to be in it. This provision merely authorizes the organization of private land banks with practically all the privileges of the Federal land banks. The farmers should not obtain their money from these private banks, but should patronize the Federal land banks and make them a success. The Federal land banks, of course, will be interested in reducing interest rates. The private land banks will be interested in increasing interest rates. The farmer should not be misled into borrowing from these private institutions thus authorized. It was a serious mistake to authorize these private land banks, and one that ought to be remedied by amendment. But the farmers can themselves remedy this matter by not patronizing them.

FEDERAL DEPOSITS.

In case of necessity the Government is authorized to deposit as much as $500,000 in a Federal land bank at any time, so that it may not be unduly hampered in its operations. It will thus be seen that every precaution is taken to make the system a success.

ADVANTAGES OF THIS SYSTEM.

In my judgment the distinct advantages of this system are: (1) It will immeasurably reduce the interest rates now being paid by the farmers, saving them in the aggregate in the United States an enormous sum annually; (2) it will provide farmers with money on long time, with small annual payments which will not be burdensome; (3) it will cut off all the payments of large commissions and further renewal commissions; (4) it will secure the loan at a minimum cost; in other words, the amount charged for abstracts, title examinations, and appraisements will be reduced to a minimum; (5) it will permit the farmer to pay off the whole loan at any interest-paying period; (6) it will make farm first mortgages bankable assets anywhere; (7) it will see to it that the farmer gets his money at the lowest possible cost; (8) it will make money always available to the farmer who has the land.

ACT WILL BENEFIT RENTERS AND SHARE CROPPERS.

In my judgment it will prove the greatest impetus ever given agriculture in this country, inasmuch as it will encourage renters to save and become farmers in their own right, and will cause great numbers of men now engaged in a less profitable business to become farmers, and will enable all farmers to obtain necessary finances.

The man who now rents his farm may purchase one under this new law in two ways: He may either save up 50 per cent of the cost of his farm and then mortgage it under the bill on long time and use the money in paying for the land, or he may be able to get the owner of the land to let him have the title and mortgage it for 50 per cent of its value and turn this over as his first payment, then execute a second mortgage to the landowner for the remainder of the purchase money and then work it out instead of paying rent.

HOW THE ACT WILL AFFECT TENNESSEE.

In 1910 there were 144,125 farms in Tennessee. Of these only 24,006 were mortgaged, an exceedingly small percentage of them in comparison with those mortgaged in many other States. The total mortgaged indebtedness in Tennessee, as far as could be ascertained, was $12,600,000. The average rate of interest paid on these mortgages was 8½ per cent, exclusive of commissions, and the total amount paid by these farmers in interest on their mortgaged farms was $1,071,000. If these mortgages are transferred to the Federal system on a 6 per cent basis, the farmers of Tennessee who now have their farms mortgaged will save annually in interest $315,000. If they get a 5 per cent rate, as it is believed they will, they will save $441,000 annually. As a matter of fact, counting commissions and all expenses, farmers in Tennessee most likely pay as much as 10 per cent now, and if these mortgages are transferred to the Federal system on a 5 per cent basis they will save annually $630,000 in lessened interest charges alone.

The proportion of farms mortgaged in Tennessee is comparatively small. This does not necessarily show a good condition. The proportion of farms mortgaged in 1910 was higher in Wisconsin and Iowa than in any other States, and yet those States are among the most prosperous in the Union from an agricultural standpoint, and the interest rate there is as cheap or cheaper than in any other State, and the value of the farm land probably greater.

Mr. Speaker, in my late campaign in Tennessee for the Democratic nomination for United States Senator one of the chief planks in my platform was national rural-credits legislation. I promised the farmers that I would use every effort to obtain such legislation, and I am delighted to be able to say that this promise has been redeemed and that a workable rural-credits system is now a reality. I am convinced that it will accomplish great good to the farmers of Tennessee and to the farmers of the entire Nation.

## Compensation to Certain Families of the Drafted Forces of the United States.

### EXTENSION OF REMARKS
OF
### HON. ARTHUR W. OVERMYER,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. OVERMYER. Mr. Speaker, I am heartily in favor of legislation providing compensation for certain families of the drafted forces of the United States. I voted for this provision a few days ago when it was included in the so-called drafting bill, and I am pleased to note that the vote on the measure to-day will be practically unanimous.

During the consideration of the Agricultural appropriation bill I called the attention of the House to some figures I had collected from reliable sources showing the enormous wealth of this country to-day, ranking first as it easily does. In that statement I submitted figures to prove that it will not be many years until our wealth will be calculated at a trillion dollars. This being the case, and the possibilities and prospects being practically unlimited, owing to its vast undeveloped resources and its large area, I am sure there is no other nation on earth so well able financially to engage in legislation of this kind as the United States; and in view of similar legislation already existing in Austria-Hungary, Belgium, France, Germany, Great Britain, Italy, Roumania, Russia, Sweden, and Switzerland, as shown by the statement offered by the worthy chairman of the committee, Mr. HAY, it seems to me that we have been somewhat negligent in the matter.

My home county of Sandusky, in Ohio—a county which has furnished such well-known soldiers as Gen. Rutherford Birchard Hayes, afterwards President of the United States; Gen. Ralph P. Buckland, on Sherman's staff; Gen. James B. McPherson, the highest ranking officer killed on the Union side during the Civil War; and George Burton Meek, the first American soldier killed in the War with Spain—is again demonstrating her patriotism by furnishing from Fremont, Ohio, the largest company in the Sixth Regiment of the Ohio National Guard, which left for the mobilization camp at Columbus, Ohio, to-day with 148 men, and a company from Clyde, Ohio, the former home of Gen. McPherson.

My district has now seven companies in camp at Columbus, Ohio, and among them are many laboring men, who left their positions, which furnished their only source of income, and enlisted in defense of the country. Their employers have assured all of them that their positions would be awaiting them when they returned; and the citizens of Fremont, Ohio, have raised a fund which will insure the payment of $4 per month to every enlisted man of Company K for some time to come. I know that my constituents will heartily approve this proposed legislation.

It seems to me that at this moment, when the entire National Guard of the United States is mobilizing for possible duty, when the threatening war clouds hang low over our country, that there is no more powerful appeal we can make than to pass this bill and thereby hold out the promise that if our citizens respond to their country's call in the hour of danger they need not fear for the welfare of their families during their absence.

In reading the current accounts in our daily newspapers of the scenes now being enacted in thousands of American homes, when a loving and devoted husband and father, the sole support of a family, or perhaps an only son, is called to break home ties on a moment's notice, to leave the wife or mother with new and heavy responsibilities resting on her already burdened shoulders, we are forcibly reminded of similar scenes enacted in hundreds of thousands of American homes a half century ago; and thousands of those homes never recovered financially from the sacrifices made when the sole producer of the family was absent for several years, while those who lacked the patriotism to enlist were able to accumulate wealth through the opportunity afforded by the high prices during the war. It is not necessary or possible for all men to enlist, but patriotism does not consist alone in going to war. It consists also in a willing-

ness to sustain and support and encourage those who do go to the front. [Applause.]

It has been my pleasure to vote for every pension bill that has come up for consideration at this session, including the bill pensioning widows of the veterans of the War with Spain, the bill providing pension for the veterans of the Indian wars, and the bill providing pension and increased pension to certain widows of Civil War veterans. I voted for these pension bills, because I believed it right for a Government to show its gratitude to the men who responded in defense of it, and to hold out the promise that the widows and orphans will be provided for. I have been particularly fortunate also, as a new Member, in securing relief by special acts during the present session for 14 veterans and 2 widows of veterans of the Civil War. I have also secured relief for several veterans of the War with Spain, and have aided more than 60 veterans in securing original pension and increase of pension through the Bureau of Pensions. I feel that while a new Member of this House can not expect to be taken into the higher councils of this body, or be expected to perform great services that attract national attention, he can make himself equally useful as an important part of the machinery of this body by giving attention to matters of this kind where the most deserving and needy of his constituents will benefit by his services.

The argument has been advanced by the few who oppose the bill under consideration that there is no precedent for legislation of this character, and that therefore we ought not to pass it. I believe that I live under a Government which recognizes the needs of its people as those needs arise, and, recognizing those needs, takes prompt action. If there is no precedent, let us create one. [Applause.]

## Preparedness.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM H. COLEMAN,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. COLEMAN. Mr. Speaker, the pending bill, H. R. 16734, by a previous understanding was to have been called up for consideration on Monday next, the day preceding our greatest national holiday. Owing to a subsequent agreement, in view of the adjournment of the House over the Fourth of July, the consideration of this measure has been advanced and is now before us on the anniversary of the beginning of the famed Battle of Gettysburg and still within the shadow of the one hundred and fortieth anniversary of the declaration of our independence as a Nation.

It is but natural that under these circumstances, in the consideration of a measure of this kind, with a possible conflict with Mexico confronting us, our thoughts should tend to those former days when the spirit of '76 prompted the people to declare their independence and by their heroic deeds make that declaration not only a collection of beautiful words but a thing of meaning and power, giving birth to a new Nation dedicated to the principle of liberty.

Thomas Jefferson, the author of that declaration, is remembered and revered to-day by reason of that authorship more than for any other act in his remarkably brilliant career. When he wrote, "We hold these truths to be self-evident, that all men are created free and equal, endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness," he simply put into words the belief of the people of that day and thereby expressed the fundamental doctrine of Americanism.

Now, the words "inalienable rights" expressed a well-defined and understood principle of government in that day. It meant that there were certain natural rights of man with which governments had no right to interfere, and among these were life, liberty, and the pursuit of happiness. Individual liberty, therefore, is the great foundation stone of our Americanism. Of course, it is to the Constitution rather than the declaration that we must go for the framework of our Government, and in these days of rapidly changing opinions it seems to me that it would be well to give some heed to those who are crying "Back to the Constitution."

Of this one thing, however, we can be sure that by the spirit of '76 we mean the spirit of liberty and the patriotism manifested by the people in their willingness to suffer and, if need be, die for that principle. It was this liberty that the declaration proclaimed, and it was this same principle that the Constitution sought to protect, and its value to the present and future generations can not be too much emphasized. And the minority is entitled to liberty just as much as the majority, and for this purpose certain guaranties were insisted upon in the first amendments to the Constitution. Remember, though, that statements in famed declarations and provisions in constitutions do not of themselves insure freedom. They may protect it temporarily from a passing frenzy, but it can be permanently guaranteed only by the people so cherishing the principle because of its value to them as individuals as to prompt them to the protection of others in the similar right, for individual liberty can not be curtailed without endangering the liberty of the Nation. When Rome was free there was nothing more glorious than to be a Roman. Likewise there is nothing more glorious to-day than to be an American, and this because of American liberty.

The declaration was something more than that of the independence of the united Colonies. It was a pronunciamento to the world of a new order of things; it was the expression of the conviction of the people of that day in a better civil government; it was a setting of their faces in the direction of that better condition which they believed they were entitled to enjoy and could enjoy through self-government. True, they were in large measure influenced by the traditions of the past. We can not extricate ourselves from the influences of bygone days; nor can we properly interpret present-day movements without a knowledge of the conditions from which these movements sprung. I am a believer in the historical school and am strongly of the opinion that we ought, in order to build wisely, pay close attention to the past, so that we may better understand the present. But, on the other hand, we can not continue to live in the past, as China seeks to do. We must be alive to our present-day opportunities and ready to advance to higher realms, as our fathers of '76 were ready and able to do.

And just here I direct your attention to the fact that our Nation has arrived at a great crossroads, and in determining the course that we shall follow we must have regard to the future welfare of mankind as well as consideration of the history and precedents of the past. The signs we read at this crossroads are militarism, pacifism, preparedness. In which direction shall we travel?

Now, the discussion of the subject of preparedness is appropriate to the consideration of the question now before us in connection with the spirit of those early days when this Nation was born, and especially so in view of the present European struggle and a conflict with Mexico possible. And what a splendid opportunity to unfurl the flag and wave it frantically and urge ultrapreparedness and cry "on to Mexico!" and thus fan the war spirit of our people. But I would rather take a contrary course and seek to say a word that would cause our people to think seriously about the present situation as they strive to realize what their decision at the present time means with respect to our future.

In the first place, what do we mean by preparedness? To put the question in another form, What do you personally understand by preparedness? The militarist is demanding a Navy as large as England's, an immense standing Regular Army, and universal military training in order that the whole Nation in a crisis may be called to arms. The pacificist is the person who believes in the spirit and efficacy of international tribunals, and is working for the curtailment of armaments and the substitution of courts for the settlement of disputes between nations. In which direction shall we march? The first undoubtedly conforms to the cruelty and barbarism of the middle ages with improved weapons and instruments of death; the latter points to a new ideal, the justice of law instead of force, and the preservation rather than the destruction of precious human lives.

Now, I am not unmindful of the fact that there is merit in the contentions of those who range themselves on either side in this controversy. I realize that universal peace, however much to be desired, is not directly at hand. But I also am impressed with the importance of the trend of affairs at this critical period of the world's history and especially in this country respecting the attitude and conduct of the generations immediately following ours.

Let me get before you vividly, if I can, the end of the road upon which we now enter, and perhaps the following illustration will help: On Flag Day this year there was a great preparedness parade in the Capital City and thousands of patriotic men marched in that parade and thereby went on record as favoring preparedness, but probably with a mental reservation

as to the degree of preparedness in which they believed. Then the Mexican border trouble became acute and the National Guard of the District of Columbia had difficulty in recruiting up to minimum war strength, and so in the papers of Washington, on June 30, I read the following words, purporting to have come from one of the recruiting officers: "We want just 500 of the patriotic young men who marched so jauntily in the preparedness parade on Flag Day—just 500 of them." Now, that is not an unnatural nor an unreasonable request. The point is this: Let us be certain of what we do favor before taking the step. Is the end of our road universal military service or does it lead to universal peace?

With this viewpoint let me now direct your attention to a large body of Americans who are not in sympathy with either the extreme militarist or the extreme pacificist. On the contrary, these men have not made up their minds as to a permanent policy, but with the war sparks falling all around them, with the consequent possible dangers, they believe that some effort of a substantial nature should be put forth temporarily without committing themselves to a permanent policy, and this, as I understand it, is the attitude of Congress.

Consequently the militarist is criticizing the action of Congress and contending they have not risen to the emergency, while the pacificist is arguing that Congress has gone too far. Now, what has the present Congress done? Up to date in bills passed or pending they have provided for appropriations for military purposes to the amount of $538,712,000, not including the sum of $158,000,000 for the payment of pensions. In the preceding year the military appropriations amounted to $258,766,000, from which you can calculate that the expenditures this year are more than double those of last year, from which it can be fairly argued that something of a substantial nature has been accomplished.

In order that you do not misunderstand my own attitude, let me say that I voted for these preparedness measures, with the exception of $20,000,000 for a Government nitrate plant and $11,000,000 for a Government armor plant, neither of which expenditures I believed was justified. I favored a 250,000 Federal Army, the federalization of the National Guard, and supported a motion for the building of two battleships in addition to the five battle cruisers provided in the House bill, and in doing so was prompted by the present emergency and was not committing myself to a permanent military policy. But, notwithstanding these immense appropriations, there are those who still hold that this vast expenditure of money is not a reasonable beginning. If this is not a reasonable beginning, is it not already time to contemplate what shall be the end?

Now, remember that the appropriations for military purposes, authorized or pending, including pensions, amount to $696,777,000, a sum greater than has been required heretofore for the total annual expense of the Government up to the fiscal year 1916. And if the Army War College recommendations had been agreed to by Congress the Army appropriation this year would have carried an additional sum of approximately $160,000,000, and if added to this the Navy Board's recommendations had been accepted we would have committed ourselves to the expenditure of additional sums covering a five-year program of Navy building approximating $500,000,000.

And this great sum at the end of the five-year period would have left our Navy less than one-half the size of England's. This would have been moderate preparedness and in no sense adequate, argue the strong militarists. From this can we not reason that adequate preparedness is almost impossible of attainment? For if it were within our power to attain to a Navy as large as that of Great Britain, would we not, in order to be safe, have to build a navy the size of that controlled by Britain and her allies? Either this or enter into combinations with other powers, and such combination is as likely to get us into as to keep us out of war.

In view of the tremendous expense involved in a military policy of European proportions, in view of the well-nigh impossible attainment of equaling the naval armaments of other nations without alliances and combinations, in view of our traditions against foreign entanglements and our reliance on the justice with which we deal with other powers to keep us out of trouble, had we not better take heed before entering upon a reckless expenditure for immense armaments that gives little assurance of keeping us out of war.

Now, I am fully conscious of the arguments that can be advanced for greater military preparedness as a result of our experience in preparing for a possible conflict with Mexico. Senator CHAMBERLAIN, chairman of the Senate Military Committee, is quoted in the Washington Times of June 30 in an argument for greater preparedness, and winds up with this sentence: "Compulsory military training for all is the answer." Is that your answer? Is that what you believe in? Let me call to your attention that the Chamber of Commerce of the United States have voted 16 to 1 in favor of universal military training, warning you of the sentiment that already exists in this country in this connection.

The question then is, What does Americanism mean with reference to militarism? Heretofore it certainly has been pronouncedly against it, but what is its attitude to be in the future? Why has it been so suddenly and so forcibly thrust upon our notice? Why are we now urged to abandon our traditions and embark on a policy of European militarism, against which we have heretofore so firmly set ourselves? Why do ministers of the gospel in large numbers march in preparedness parades, as they did in New York City, and by their presence proclaim for militarism? Is it because the Prince of Peace is a militarist? If so, why do the militarists not take their arguments from the New instead of the Old Testament?

England is being criticized in this war for her lack of military preparation, and yet she has the greatest navy in the world. Germany, with a wonderful army, the like of which has never before been seen under one flag, is now hemmed in on every side. All of which indicates the impossibility of preparing to meet all emergencies. This great navy and this great army were ostensibly created for the maintenance of peace, but instead of peace came a most horrible war. What caused that war? Many answers have been and will be given, and perhaps none more true than this "military preparedness."

I wonder to-day if the warring nations of Europe could have had their present vision before entering into this death struggle if they would not have found more good reasons why they should dwell together in harmony than why they should engage in war. What do you think about it? Think of England and what her Government, holding so much in common with our own, meant to humanity the world over. Think of Germany and what she has done for the uplift of man by reason of her efficiency and scientific research. Think of the ideals of all of the warring countries, most of them professing to be Christian nations, and ask yourself this question, In what manner can this conflict aid humanity?

I can see but one result that can justify this fearful sacrifice of life, and that is the consciousness of the world's leading nations in the futility of war and the necessity of establishing international courts for the settlement of disputes between nations. And to this end my vision tells me this great Nation of ours, with its high ideals and its keen sense of justice, should set itself. Even in the midst of the present military spirit that is passing like a great wave over our land there are many who fervently believe in the new order that will materially lessen if not put an end to war. They see a vision of permanent peace establishment, and the present cruel war a means to that end rather than an end to that vision. If this is to be the new order of things, and we as a Nation are to take an active part in bringing it about, then the measure of our present preparedness and our future preparedness plans become important from this angle of vision.

It is not easy to determine at this time just what the attitude of the American people is. A short time since we witnessed the remarkable spectacle of the President of the United States starting over the country for the purpose of convincing the people of the necessity of a large military establishment, and instead of convincing them, returning to his post forced by the greatest power in America—public opinion—to change his own views and modify his demands on Congress, and in doing so to break with one of the leading members of his Cabinet.

I am confident to-day that whether we class ourselves as militarists, pacifists, or preparedness advocates, that we are all believers in the superior advantages of peace. But if in the judgment of the authorities at Washington it becomes necessary to declare war on Mexico, then all of us, without regard to our individual opinions, as becomes true and loyal Americans, will patriotically and devotedly follow the fortunes of our country's flag. Let us, however, remember that the honor of our Nation requires that we, while insisting upon our rights, are careful to perform our duties, and that it is quite important that they be fully performed, and especially when we are dealing with a weak and lowly government, distracted with civil strife. Our great glory in the Boxer troubles was our munificent treatment of helpless China, and in such treatment, perhaps, there is more real protection against war than in battleships and armament. For as a just man is revered, so likewise is a just nation.

Now, however much we may feel like intervening in Mexico to protect the rights of American citizens and to punish the Mexicans for wrongs inflicted upon our people, we must not overlook the fact that the Mexican authorities have not, according to their own understanding, given permission to our Government to take

troops into Mexico. It is true that after protest they permitted the first detachment of American troops that entered Mexico in pursuit of Villa to remain, with an understanding that when the Villa band was captured or dispersed they would return to their own country. This condition Mexico contends has been accomplished and the Villa band has been dispersed, and yet our troops remain. More, an additional expedition was sent into Mexican territory in the direction of Boquillas about the 10th or 11th of May without any further understanding with the authorities of that country, and this they resented as being a threatening attitude on the part of a professedly friendly power. Following this was the unfortunate Carrizal affair and the present bone of contention, in which Capt. Boyd's troopers were fired upon and some of them killed and others taken prisoners. The last word on this event has as yet not been said, and we must await further reliable information.

Of course, we are not to take the word of Mexico in preference to that of our own authorities, but until we have official information from our own Government we must withhold our opinion of the cause of that deplorable incident, and in the meantime we can assert, and boldly, that this Government of ours can not afford to engage in war with Mexico or any other power on any grounds that it can not justify before the world to the satisfaction of this or future generations.

My friends, I am a believer in the efficacy of a world court, and sincerely trust that this Government shall lend its valued assistance to the creation of such a court when the present devastating war is concluded. I hope that in the meantime we shall keep ourselves out of war, in order that we can the more gracefully propose a world court and the convening of the third Hague conference with a view to the permanent betterment of international relations and the consequent advantage of human kind. Do you believe that if there had been a world court and the grievances of the present warring nations had been referred to it that we would have witnessed the fearful carnage of this day? It seems to me that such a tribunal would have spared such suffering following so swiftly as it did on the heels of ultimatums.

Now, I know there are many splendid souls in this country who fervently advocate a world court and at the same time believe that we should have large armaments and universal military training. They may be right in their contention. It may be true that the people in a Republic such as ours can resort to universal military service without endangering their peace ideals. Yet, on the other hand, there is not a great difference between human nature in America and in Europe. Men on either continent are swayed by the same impulses, the same passions. An ultimatum from the President of this Republic is quite as likely to lead to a war as an ultimatum from an emperor. That Congress instead of the President is the authorized body to declare war does not make so much difference as would at first thought appear.

But, however much we may decry or deplore war, it may soon be upon us. If it should come, then I am sure that the response of the people will be equal to the emergency and that the young men of to-day will prove themselves worthy descendants of the heroes of our former wars. The members of the National Guard now so willingly and courageously answering the summons of their country are prompted by the same high patriotism that characterized the heroes of Bunker Hill and the brave men on either side at Gettysburg and their descendants at San Juan Hill or Manila Bay. I trust that they will not see reaf service and that our differences with Mexico will be peacefully adjusted. However this may be, they are ready, as their fathers before them were ready, and if the occasion demands, like their fathers, they will give a good account of themselves. While they constitute the second line of defense, they will follow the standard set by the brave men in the Regular Army and by their deeds prove they are of the same blood and equally true to the traditions of the past.

In connection with the provisions of the bill before us I wish to say that I was one who favored the Senate substitute when the similar provision was before us in the conference report. This because I was of the opinion that the present emergency was not sufficiently serious to justify the forcing of married men or others with helpless dependent families from their places in the home to a military camp and a possible, though not probable, war. But the measure in itself is a most meritorious one, and with the other provision no longer before us I gladly support the provisions of this bill, believing that those who remain at home at such a time should bear the burden of maintaining the dependents of the brave men who risk their lives in their country's service.

While I hope for peace and trust that a world court is a possibility and more a probability within a reasonable time, yet I can see in the present threatening war clouds a wholesome lesson to our people, and they should remind us of the duty we owe to our country and which we should ever stand ready to perform. In this day we do not seem to think so much of duties as we do of rights. It is remarkable how men so boldly demand their rights from the Government without any serious thought of corresponding duties.

Let us on this anniversary of the Battle of Gettysburg, with the Fourth of July approaching so closely, resolve that in the future we shall not be so much concerned with the rights to which we are entitled as with the duties we should perform. Let the aroused patriotic feeling of this day direct our thoughts to a more intelligent appreciation of the liberties we enjoy, with a consequent realization of our obligations to the Government. Let us be impressed with the fact that our citizenship carries with it duties as well as rights, obligations as well as privileges. Let us this day rededicate ourselves to the American principle of liberty, the American idea of justice, and add thereto the spirit of fraternity which prompts to the consideration of the welfare of all mankind.

## EXTENSION OF REMARKS

OF

## HON. WILLIAM A. CULLOP,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr CULLOP. Mr. Speaker, this is a meritorious measure, one which appeals to the patriotism of every Member here, and one which should, in my judgment, receive the enthusiastic support of every Member of this House.

I can conceive of no greater ingratitude on the part of a great Government like ours than to refuse to make ample provision for the care of the dependent families of those who quit their business to go to the front to fight the battles of their country in its hour of peril. Men who leave their homes, their families, and all that is near and dear to them to defend the Government, when it is assailed by an enemy which would, if it could, destroy the Union and humiliate our people before the world.

These men display a heroism worthy of the kindest attention to those dependent upon them that a grateful Nation can bestow. By their action they earn the gratitude of a great Nation, which should never be parsimonious with them and theirs and should see to it that every consideration is manifested which their loyalty requires.

Men who quit their duties, lay down their business, leave their families, and take their places in the line of battle to bare their breasts to the shot and shell of a desperate enemy for the upholding of the dignity and honor of our common country display a courage and patriotism that immortalizes them and furnish an example of patriotism which is an inspiration to every citizen living under our flag and professing allegiance to our institutions.

Their great sacrifice calls forth not only our commendation, but also demands a substantial recognition which will encourage them in their patriotic efforts as they battle for the cause of the Union and the principles upon which it was founded.

The spirit of 1776 is abroad in the land to-day, the flag of our country is an inspiration for liberty and for humanity wherever unfurled, and men follow it to victory because it stands for all that is good in the development of the human race and the equality of mankind.

In this measure we assure the men who make their great sacrifice in behalf of their country that the Government will provide for those dependent upon them for support while they are engaged in their country's service. It is the proper thing for it to do. This Government should not hesitate to reward the men who volunteer to defend it, who carry the burden of battle, and the people expect it to act with liberality and in keeping with its position among the nations of the earth.

As the representatives of a great, a justice-loving, and patriotic people, it is highly important that we make such provision for the families of the men called into its service as the exigencies of the occasion require in order that unusual hardships may not be visited upon them during the absence of these brave men who

are in the field to fight the battles of their country and preserve its dignity and honor.

If we should fail in this respect it would show ingratitude upon our part, a dereliction of duty. The country would criticize our action and the people would at the first opportunity resent our course.

This great Nation is amply able to make such provision. It has never hesitated in the past to act with generosity toward its defenders. It will do so now, as heretofore, in recognizing the patriotism of those who go forth to battle in this its hour of need.

We lead the world in all that makes a nation great and strong, and our high standard will be maintained on this occasion in keeping with our position among the nations of the world.

America should be first in everything that advances the cause of humanity, that promotes the welfare of the people and renders assistance to the needy. Patriotism here is always recognized and rewarded, and hence the loyal devotion of our citizenship to our Government.

## Compensation to Certain Families of the National Guard.

### EXTENSION OF REMARKS

OF

### HON. THOMAS W. MILLER,

OF DELAWARE,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. MILLER of Delaware. Mr. Speaker, this measure, entitled a bill—

To pay to certain families of the men of the drafted forces of the United States a sum of money for their maintenance during the term of service of such drafted men in the service of the United States—

can aptly be called emergency legislation, but nevertheless the exigencies of the occasion demand that it shall be passed and become a law as soon as possible. I shall vote for this measure, not only from the standpoint of duty, but also with a feeling of personal pleasure, because I number among my own acquaintances many whose families will suffer by reason of their being drafted for this service. The only criticism that I have is that the bill does not include within its scope such enlisted men of the Regular Establishment whose families may be in need of the same help, because all of the soldiers that we are recruiting, either as Regulars or as Volunteers, for service in Mexico or on the border are of the same clay and have the same purpose in view, viz, service to our country when they are called.

This piece of legislation needed at this time should not be considered as a precedent for the future, immediate or distant. We should remember, however, that the present Mexican situation has come upon us in the midst of a reorganization of our military forces on land, both as they refer to the Regular Army and to the National Guard.

Under the new Army legislation the members of the National Guard of the several States will know just what is expected of them before they enlist and therefore can be governed accordingly. It is hardly fair to ask those members of the National Guard in the various States who have families or people dependent upon them for their very existence to leave those dependents in view of the situation which has caused the calling out of the National Guard at this time. I say this not to belittle in any way the serious situation that confronts this country on our southern border, but no one will argue that it is a pressing enough situation for numberless people to be placed in a position of jeopardy because the breadwinner of the family has been called into service at this time. If the situation were such that the country was in danger from invasion and attack from an enemy our equal not only those who constitute the present National Guard of our States but every able-bodied male would have to go forth, leaving his family or those dependent upon him to fare as best they could, in which event no one would be worse off than his neighbor. On Saturday, June 17, the men went to their homes at the end of the week's work with no inkling that a call into the Federal service would be confronting them on Monday morning. They answered that call, as they were bound to do, and in view of the emergency created and the conditions touched upon above relating to this present situation I deem it only proper that an exception should be made at this time and money advanced by Congress to aid the families or dependents of those men who have been drafted into the service of the Nation at this time.

Since the call for the National Guard we have seen evidences all over the country that corporations, private employers, and industrial concerns are doing their share in bearing the burdens of the present emergency, and it certainly is no great strain upon those of us who were not in a position to be called upon to take care in a slight measure of those who are in need by reason of the call.

In closing it is only proper to say that, so far as I have been able to find out, no man or set of men connected with the National Guard has asked for this legislation, but it comes spontaneously from the Representatives of the people in Congress assembled and is an evidence of the generosity of this great Government at a time when its help is most needed, and then upon no great expenditure of its own funds.

## One-Cent Letter Postage.

### EXTENSION OF REMARKS

OF

### HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. BRITT. Mr. Speaker, I beg to submit for the information of the House the following list of organizations which have adopted formal resolutions indorsing a 1-cent rate for letter postage. In this list are organizations of national and local character, comprising a membership of several million patrons of the Postal Service.

It is needless for me to remind the House that a determined fight is being waged for such readjustment of postal rates as will at once give the common user of the mail service 1-cent local delivery letters, and ultimately general 1-cent letter postage. This Congress would be fully justified in granting the request for a reduction in the letter rate, especially on letters of local origin for delivery within the limits of the same delivery district.

One cent will much more than pay the cost of all local delivery letters, and the establishment of such a rate will, in my judgment, be a powerful stimulus to urban business and local correspondence. Our postal establishment should not be regarded solely as a money-making institution, but one offering the American people the very best possible service at actual cost.

The list which I submit is highly interesting because of the variety and character of the organizations represented. It will be noticed that every State in the Union is represented by several well-known organizations. I hope the Members of this House will appreciate the arguments which have been offered from time to time in behalf of this reform and grant the request of the people for a lower rate on letters.

ASSOCIATIONS THAT HAVE INDORSED 1-CENT LETTER POSTAGE.

Alabama: The Business Men's League, Birmingham; the Alabama Retail Hardware Association, Atlanta, Ga.; Chamber of Commerce, Birmingham; Commercial Club, Eufaula; Commercial Club, Florence; Business Men's Club, Gadsden; Gadsden Chamber of Commerce, Gadsden; Chamber of Commerce, Huntsville; Jasper Industrial Club, Jasper; Montgomery Association of Credit Men, Montgomery; Wholesale Grocers' Association, Montgomery; Alabama Banker's Association, Pell City.

Arizona: Warren District Commercial Club, Bisbee; Board of Trade, Phoenix; Arizona Bankers' Association, Prescott; Prescott Chamber of Commerce, Prescott.

Arkansas: Commercial Club, Ashdown; Batesville Board of Trade, Batesville; the Merchant's Association, Blytheville; Commercial Club, Cotton Plant; Business Men's Club, Fort Smith; Gravette Commercial Club, Gravette; Merchants' Association, Hot Springs; Merchants' Association, Jonesboro; Arkansas Bankers' Association, Little Rock; Arkansas Retail Hardware Association, Little Rock; Board of Trade, Little Rock; Board of Trade, Paragould.

California: Auburn Chamber of Commerce, Auburn; Berkeley Chamber of Commerce, Berkeley; Campbell Improvement Club, Campbell; Fortuna Board of Trade, Fortuna; Fresno Traffic Association, the Merchants' Association of Fresno, San Joaquin Valley Commercial Association, San Joaquin Valley Lumbermen's Club, Fresno; the Grangers' Union, Hollister; Lodi Merchants' Association, Lodi; Los Angeles Clearing House Association, Los Angeles Chamber of Commerce, Los Angeles Paint, Oil, and Varnish Club, Los Angeles Wholesalers' Board of Trade, Retail Dry Goods Merchants' Association, Retail Hardware Merchants' Association, Southern California Retail Lumber Dealers' Association, Southern California Wholesale Grocers' Association, Los Angeles; Los Gatos Chamber of Commerce, Los Gatos; Merced County Chamber of Commerce, Merced; Merchants' Association of Modesto, Modesto; California Retail Harness Dealers' Association (Niles), California State Retail Hardware Association, Chamber of Commerce and Commercial Club, Merchants' Exchange of Oakland, Oakland Rotary Club, Oakland; Pasadena Merchants' Association, Pasadena; Richmond Real Estate Association, Richmond; Riverside Chamber of Commerce, Riverside; Chamber of Commerce of Sacramento, Real Estate Agents' Association, Sacramento Valley Home Products League, Sacramento; Chamber of Commerce, San Bernardino; the Chamber of Commerce of San Diego County, Manufacturers' Association, Merchants' Association

of San Diego, San Diego Federation of State Societies, Wholesalers' Board of Trade and Credit Association, San Diego; Board of Trade, California Association of Electrical Contractors and Dealers, California Bankers' Association, California Fruit Canners' Association, California Wine Association, Home Industry League of California, Pacific Coast Commercial Travelers' Association, San Francisco Chamber of Commerce, San Francisco; Campbell Improvement Club, San Jose; Turlock Board of Trade, Turlock; Visalia Merchants' Association, Visalia; the Chamber of Commerce of Watsonville and Pajaro Valley, Watsonville; Whittier Board of Trade, Whittier.

Colorado: The El Paso County Retail Grocers and Butchers, Colorado Springs; Craig Commercial Association, Craig; Colorado Association Commercial Executives, Colorado Bankers Association, Colorado Jewelers' Association, the Colorado and Wyoming Lumber Dealers Association, Denver Chamber of Commerce, Denver Credit Men's Association, Retail Association of the Denver Chamber of Commerce, the Western Fruit Jobbers' Association of America, Denver; Dolores Board of Trade, Dolores; Durango Board of Trade, San Juan Congress, Durango; Fort Collins Commercial Club, Fort Collins; Golden Improvement Club, Golden; the Grand Junction Fruit Growers' Association, Grand Junction; Commercial Club, Holyoke; the Business Men's Association, Julesburg; Longmont Commercial Association, Longmont; Chamber of Commerce, Loveland; Commercial Club, Manco; Mountain States Retail Hardware and Implement Association, the Pueblo Retail Butchers and Grocers' Association, Pueblo; Salida Commercial Club, Salida; Commercial Club, Stratton; the Wellington Commercial Club, Wellington.

Connecticut: Connecticut Funeral Directors' Association, Bridgeport; Connecticut State Association of Plumbers, Gas, and Steam Fitters, Derby; Connecticut Association of Insurance Agents, New Haven; Business Men's Association, Norwich; Rockville Business Men's Association, Rockville; Connecticut Bankers' Association, South Norwalk; Waterbury Business Men's Association, Waterburyo Connecticut Retail Hardware Association, Woodbury.

Delaware: Mercantile Association, Wilmington.

District of Columbia: National Association of Piano Merchants of America, National Board of Trade, National Canners' Association, National League of Commission Merchants, the Retail Grocers' Protective Association, Washington Chamber of Commerce, Washington, D. C.

Florida: Florida Retail Hardware Association, Atlanta, Ga.; Chamber of Commerce, Apalachicola; Board of Trade, Arcadia; Retail Merchants' Association, Arcadia; Daytona Board of Trade, Daytona; Eustis Board of Trade, Eustis; Florida Bankers' Association, Jacksonville Board of Trade, Jacksonville Credit Men's Association, Manufacturers' Association of Jacksonville, Southern Wholesale Grocers' Association, Jacksonville; Lakeland Chamber of Commerce, Lakeland; Marianna Board of Trade, Marianna; the Florida Local Underwriters' Association, Plant City; Board of Trade, Tampa; Tampa Merchants' Association, Tampa; Board of Trade, Winter Garden.

Georgia: Athens Chamber of Commerce, Athens; Atlanta Chamber of Commerce, Atlanta Hotel Men's Association, Georgia Bankers' Association, Georgia Hardware Association, Georgia State Dental Society, Jobbers' Club of Atlanta, Merchants and Manufacturers' Association, Southeastern Hardware Association, State Hotelmen's Association, U. C. T. Grand Council, Atlanta; Chamber of Commerce, Merchants and Manufacturers' Association, Augusta; Clarksville Board of Trade, Clarksville; Columbus Board of Trade, Columbus; Columbus Clearing House Association, Columbus; Chamber of Commerce, Fitzgerald; Chamber of Commerce, Georgia Local Underwriters' Association, Macon; Milledgeville Chamber of Commerce, Milledgeville; Manufacturers and Merchants' Association, Rome; Retail Merchants' Association, Savannah; Savannah Cotton Exchange, Savannah Credit Men's Association, Savannah.

Idaho: Commercial Club, Blackfoot; Idaho Retail Hardware and Implement Dealers' Association, Boise; Chamber of Commerce, Coeur d'Alene; Commercial Club, Rexburg.

Illinois: Alton Retail Merchants' Association, Alton; Fox River Valley Manufacturers' Association, Batavia; Commercial Club, Belvidere; Bloomington Commercial Club, Bloomington; Cairo Retail Merchants' Association, Cairo; Chamber of Commerce; the Illinois Butter Manufacturers' Improvement Association; Illinois Grain Dealers' Association, Champaign; American Association Creamery Butter Manufacturers; Board of Trade of the City of Chicago; Casket Manufacturers Association of America; Central Bureau of Extension Table Manufacturers; Central Supply Association; Chicago Architects' Business Association; Chicago Automobile Trade Association; Chicago Brass Manufacturers' Association; Chicago Coal Dealers' Association; Chicago Garment Manufacturers' Association; Chicago Grocers and Butchers' Association; Chicago Retail Hardware Association; Commercial Law League of America; Credit Clearing House Association; the Detroit Conference; Electrical Credit Association of Chicago; Electrical Supply Jobbers' Association; Hardware Club of Chicago; Illinois Bankers' Association; Illinois Commercial Men's Association; Illinois Lumber and Builders Supply Dealers' Association; Illinois Manufacturers' Association; Lumbermen's Credit Association; the Millinery Jobbers' Association; National Association of Brass Manufacturers; National Association Building Owners and Managers; National Association of Retail Druggists; National Builders' Supply Association; National Bureau of Metal and Spring Bed Manufacturers; National Business League of America; National Canned Goods and Dried Fruit Brokers' Association; National Confectioners' Association of the United States; National Electrical Credit Association; National Implement and Vehicle Association of the United States of America; National Lumber Manufacturers' Association; National Metal Trades' Association; National Salesmen's Training Association; National Shoe Wholesalers' Association; Paint, Oil, and Varnish Club of Chicago; Private School Managers' Association; Seventy-ninth Street Development Association; United Commercial Travelers, Englewood Council, No. 469; United Commercial Travelers, Grand Council; United Glass Manufacturers Association; United Grocers and Butchers' Association of Chicago; Western Association of Shoe Wholesalers; Wholesale Saddlery Association of the United States; Woodlawn Business Men's Association, Chicago; Decatur Chamber of Commerce, Decatur; Du Quoin Retail Merchants' Association, Du Quoin; East St. Louis Commercial Club, East St. Louis; Retail Merchants' Association, Edwardsville; Elgin Commercial Club; Elgin Liquor Dealers' Association; Illinois Retail Hardware Association, Elgin; National Funeral Directors' Association, Elmwood; Gibson Commercial Club; Gibson City; Hoopeston Business Men's Association, Hoopeston; Commercial Club, Joliet; Merchants' Association of Joliet, Joliet; Kankakee Commercial Association, Kankakee; La Salle Commercial Association; Laundrymen's National Association of America, La Salle; Litchfield Merchants' Protective Association, Litchfield; Tri City Manufacturers' Association, Moline; Business Men's Association, Mount Sterling; Commercial Club, Mount Vernon; Mount Vernon Retail Merchants' Association, Mount Vernon; Normal Improvement Association, Normal; La Salle-Peru-Oglesby Commercial Association, Oglesby; Commercial Association of Oregon, Oregon; Peoria Association of Commerce; Retail Merchants' Association of Illinois, Peoria; Polo Commercial Club, Polo; Quincy Chamber of Commerce, Quincy; Rockford Merchants and Business Men's Association, Rockford; Savanna Improvement Association, Savanna; Retail Grocers and Marchants' Association; Springfield Commercial Association, Springfield; American Society of Agricultural Engineers, Urbana; Business Men's Association, Yorkville.

Indiana: The Indiana Retail Hardware Association, Argos; the National Retail Hardware Association, Argos; Evansville Manufacturers' Association, Indiana State Association of Master Plumbers, Evansville; Fort Wayne Mercantile Accident Association, Fort Wayne; Citizens' Improvement Association, Frankfort; the Commercial Club of Goshen, Goshen; Commercial Club, Hobart; Berghoff Brewing Association, Fort Wayne; Board of Trade, Indiana Hardwood Lumbermen's Association, Indiana Manufacturers' Association, Indiana Retail Shoe Dealers' Association, Indianapolis Chamber of Commerce, State Retail Furniture Dealers Association, Travelers' Club of Indiana, United Commercial Travelers, Grand Council of Indiana, Indianapolis; Kokoma Chamber of Commerce, Kokomo; United Commercial Travelers of America, Lafayette Council, No. 341, Lafayette; Citizens Commercial Club, Lebanon; Logansport Commercial Club, Logansport; Commercial Club, Indiana Wholesale Grocers' Association, Muncie; Travelers' Protective Association, New Albany; Commercial Club, North Manchester; the Peru Credit Exchange, Peru; National Mutual Union, South Bend Retail Grocers & Butchers' Association (Inc.), South Bend Chamber of Commerce, South Bend; Indiana Bituminous Coal Operators' Association, United Commercial Travelers, Grand Council of Indiana, Terre Haute; Indiana Retail Merchants' Association, Vincennes.

Iowa: Ames Retail Merchants' Association, Ames; Commercial Club, Anamosa; Commercial Exchange, Burlington; Cedar Rapids Commercial Club, Cedar Rapids; Clinton Commercial Club, Clinton; Iowa-Nebraska Wholesale Grocers' Association, Mid-West Implement Dealers' Association, Retail Grocers & Butchers' Association, Council Bluffs; Union County Association Retail Druggists, Creston.

Iowa: Davenport Retail Grocers' Association, Davenport; Interstate Business Men's Accident Association, Commercial Club, Great Western Accident Association, Iowa Bankers' Association, Iowa Retail Clothiers' Association, Iowa State Traveling Men's Association, National Association of Retail Clothiers, Retail Merchants' Association of Des Moines, Des Moines; Iowa Implement Dealers' Association, Donnellson; Dubuque Industrial Corporation, Iowa Retail Merchants' Association, Dubuque; U. C. ## The Pension Appropriation Bill.

### EXTENSION OF REMARKS
OF

# HON. L. C. DYER,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, June 17, 1916.*

Mr. DYER. Mr. Speaker, there ought to be no politics in doing our duty to the men who have fought the battles of our country. There ought to be no reference to partisanship in granting to the veterans a pension and the necessary care in their remaining days in the country that they by their valor have made what it is. However, the Democrats are trying to make political capital out of what they have done for them. They bragged about it in their platform that they recently adopted at St. Louis. The Republicans at Chicago did not mention the matter for the very good reason that they do not want to bring politics into the question of doing our duty to the valor and bravery of the heroes of our Nation. Yet everyone knows, and especially the veterans and their widows and children, the name of the party that has always stood up and done what has been done for them. It has not been the Democratic Party, and since that party has seen fit to try and get votes in the coming election because of its alleged friendliness for the veterans and for pensions, let me challenge anyone in this Congress to point to a single law for the benefit of the veteran soldiers, their widows, and orphans, including pensions, and so forth, that has been passed and enacted into a law during this present administration—a Democratic one in every branch, legislative and executive. Not one have they enacted into a law. The last law for the benefit of the soldiers and sailors of our country was the Sherwood Act, and that was passed by a Republican Senate and signed by a Republican President. It is true, of course, that the House, which was Democratic, passed it also, but since the Senate has been Democratic and Woodrow Wilson has been in the White House no pension legislation of a general nature has been enacted into law.

For the veterans, their widows and orphans, they have done nothing. Their talk and bragging about what the Democratic Party has done in this regard is therefore simply "molasses to catch flies," but in this case they will not succeed. The old soldiers and the younger ones, as well as their widows and their children and friends, are not such fools as to be misled. They can read; and in no place can they find a statute enacted for the benefit of the veterans while the Democratic Party has had entire control of the Government. I challenge anyone to show a different situation than I have described.

Mr. Speaker, there is another evidence of the desire of the Democratic Party to use the soldiers and sailors of the country for the purpose of advancing their political life. It is with regard to the National Homes for Disabled Volunteer Soldiers. It is claimed, with ample proof, that these homes are being used by the Democratic Party to find jobs for their faithful followers and without regard to duty we owe those for whom the homes were established. In other words, they have become a political asset for the Democratic Party. I have much data and facts to prove this. For the present I submit a letter from a comrade of the Danville (Ill.) home and a statement of the law governing the homes, and what the board as at present made up is and has been doing to give the offices and positions in the homes to civilians instead of to the veterans, as the law contemplates:

DANVILLE, ILL., *April 26, 1916.*

Hon. L. C. DYER,
*Commander in Chief Spanish War Veterans,*
*Washington, D. C.*

DEAR SIR: Herewith permit me to hand you copy of letter from myself to the honorable Secretary of War in relation to conditions existing at the Danville Branch, National Home for Disabled Volunteer Soldiers, also copy of my letter addressed to Fred J. Close, then president of the board of managers.

These homes, as you are well aware, were created for the benefit of the disabled volunteer soldiers of the country, and under the rules and regulations provided for the government of these institutions the members of the homes "will be employed, consistent with the best interest of the home."

As a matter of fact, this is not done, but J. S. Catherwood, the local manager, with the aid and connivance of James E. Miller, inspector general, have persistently removed the soldiers, both young and old, to make room for civilians—political henchmen.

There is no necessity for such action, as material to fill every position connected with any of the homes can be found in abundance among the members for any position, from president down to the most minor position about the homes; mechanics of all kinds, clerks, stenographers and typewriters, accountants, men accustomed to figures far beyond anything they would have to meet in the homes can be found at hand, if any attempt can be made to select them, as provided by the rules.

Young and old soldiers alike are turned down, kicked out, humiliated, and practically driven away from the homes by the politicians * * * in order to provide smooth places for their political henchmen. * * *

As a former Missourian and ex-Union soldier, I appeal to you to try to stop these dirty, underhanded, two-by-four political "grafters" from befouling these homes. They were created for us, for our comfort and our own home, where we could have every convenience necessary to same.

At this time one of the barracks erected by the Government is being altered and remodeled, taken away from the use of the soldier, and being made into flats for the convenience of civilians, without the slightest color of authority in law for such proceedings. The expense of such remodeling is to be provided for from moneys in the local post fund, in direct violation of any semblance of laws.

Kindly look up these matters at once and stop this robbery of the post fund, which is created for the use and benefit of the soldiers.

It would be the best thing that could happen if you could come here and personally look over the ground and make inquiries for yourself.

You can rely upon the statements here made, and would find that one-half has not been told of the true inwardness of things here.

Won't you for the sake of the soldiers, who seem to be without any champion at this time, take up the matter and do something?

With best wishes, I beg to remain,

Yours, truly,

L. S. GOODELL,
*409 Robinson Street, Danville, Ill.*

---

SUMMARY OF REPORTS RECEIVED FROM THE GOVERNORS OF THE SEVERAL BRANCHES OF THE NATIONAL HOME FOR DISABLED VOLUNTEER SOLDIERS AND CONCLUSIONS BASED THEREON.

1. The business and affairs of the National Home for Disabled Volunteer Soldiers are administered by a board of managers appointed by Congress under joint resolution No. 53, approved October 19, 1914.

2. Prior to the act of June 28, 1902, provision for the appointment of officers of the home by the board of managers was made through the act of March 21, 1866, as amended by the acts of April 11, 1892, and February 9, 1897.

The act of June 28, 1902, however, which provides for the appointment of all officers of the home, superseded all previous legislation bearing on the subject and should be in force. Judging from the fact, however, that civilians are from time to time appointed as officers to fill vacancies in the home, it would seem that the law of June 28, 1902, covering the subject is ignored. This is especially so as regards the appointment of medical officers, and the board invokes the law of February 9, 1897, for its authority to appoint these civilians.

3. The number of members in the several branches of the home, according to the reports received from the governors, is 20,476, of which 3,435, or 17 per cent, served during the War with Spain or the Philippine insurrection.

4. The number of officers in the several branches is 90, of which 39, or 43 per cent, are veterans and 51, or 56 per cent, are civilians.

If the law of June 28, 1902, is in effect, those of the 56 per cent of civilian officers who have been appointed since the passage of that act were appointed illegally.

5. The number of employees of the several branches other than officers is 3,765, of which 2,473, or 66 per cent, are veterans and 1,292, or 34 per cent, are civilians.

6. The most flagrant violation of the law seems to have been in the appointment of medical officers—surgeons and assistant surgeons. Of 10 surgeons and 40 assistant surgeons employed in the several branches of the home only 2 surgeons and 8 assistant surgeons, a total of 10, or 20 per cent of the whole number employed, have had any military service. In the appointment of these medical officers the board of managers ignores the act of June 28, 1902, and falls back on the law of February 9, 1897, for its authority to appoint civilians.

7. On November 10, 1914, the board of managers passed a resolution providing for the appointment in the future of none but veterans as officers. Since the passage of that resolution by the board at least nine civilians have been appointed and are holding office at the present time.

---

UNITED STATES STATUTES AND RESOLUTION OF BOARD OF MANAGERS RELATING TO APPOINTMENT OF OFFICERS OF NATIONAL HOME FOR DISABLED VOLUNTEER SOLDIERS.

ACT OF APRIL 11, 1892.

[Stat. L., vol. 27, p. 15.]

That section 4829 of the Revised Statutes of the United States, being section 6 of the act of Congress approved March 21, 1866, concerning the National Home for Disabled Volunteer Soldiers, be, and the same is hereby, amended to read as follows, to wit:

"SEC. 4829. The officers of the national home shall consist of a governor, a deputy governor, a secretary, a treasurer, and such other officers as the managers may deem necessary. They shall be appointed from honorably discharged soldiers who served as mentioned in the following section, and they may be appointed and removed from time to time as the interests of the institution may require by the board of managers."

ACT OF FEBRUARY 9, 1897.

[Stat. L., vol. 29, p. 517.]

That section 4829 of the Revised Statutes of the United States be amended by the addition of the following words: "*Provided*, That surgeons, assistant surgeons, and other medical officers of the National Home for Disabled Volunteer Soldiers and the several branches thereof may be appointed from others than those who have been disabled in the military service of the United States."

(NOTE.—This act was passed when the Civil War surgeons had grown too old to be appointed medical officers to the soldiers' homes and before there were Spanish War surgeons available. It is superseded by the following act (June 28, 1902), but the board of managers fall back upon it for an excuse for appointing medical officers who are non-veterans.)

ACT OF JUNE 28, 1902.

[Stat. L., vol. 32, p. 472.]

Hereafter the officers of the National Home for Disabled Volunteer Soldiers and officers under the board of managers thereof shall be appointed, so far as may be practicable, from persons whose military or naval service would render them eligible, if disabled and not otherwise

provided for, for admission to the home, and they may be appointed, removed, and transferred from time to time, as the interests of the institution may require, by the board of managers.

(NOTE.—This act, which includes all officers of the homes, including surgeons, was passed after the Spanish War soldiers became available for appointment, and should supersede the act of Feb. 9, 1897, as well as other preceding laws.)

RESOLUTION PASSED BY THE BOARD OF MANAGERS NOVEMBER 10, 1914.

That in making appointments of officers at any branch of the home preference shall be given, first, to veterans of the Civil War; second, to veterans of other wars of the United States; and that civilians will not be appointed if a proper candidate with record of military service can be obtained.

[House Public Resolution No. 53, 63d Congress.]

Joint resolution (H. J. Res. 241) for the appointment of five members of the Board of Managers of the National Home for Disabled Volunteer Soldiers.

*Resolved, etc.*, That James Steele Catherwood, of Illinois; George H. Wood, of Ohio; John C. Nelson, of Indiana; Frederick J. Close, of Kansas; and Thomas S. Bridgham, of Maine, be, and they are hereby, appointed members of the Board of Managers of the National Home for Disabled Volunteer Soldiers of the United States, to succeed Oscar M. Goltschall, of Ohio; William Warner, of Missouri; Franklin Murphy, of New Jersey, whose terms of office expired April 21, 1912, and Patrick H. Barry, whose resignation as a member of the said board has been accepted, and John M. Holley, deceased: *Provided*, Said board, after the passage of this resolution, shall be composed of seven members, and four members shall constitute a quorum for the transaction of business at any regular or special meeting thereof.

Approved, October 19, 1914.

## Good Roads Bill.

### EXTENSION OF REMARKS
OF
### HON. FRANK W. MONDELL,
OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. MONDELL. Mr. Speaker, I am glad to vote for this good-roads bill, not because I entirely approve the plan it proposes for Federal aid in road construction but, first, because it makes a start in Federal aid, and, second, the basis of the apportionment under the bill, to wit, the mileage of post roads, the population, and the area is what I have contended for from the beginning of the good-roads agitation, and section 8 of the bill providing appropriations for roads in forest reserves, reimbursable out of forest receipts is in line with the policy first proposed in the House in a bill which I introduced for the Wind River and Jackson Hole Road.

There may be some question with regard to the authority of our State officials under our constitutional provisions and our present legislation to enter upon the arrangements and engagements provided for in the bill. If such should prove to be the case, it would not prevent the counties from taking the necessary and appropriate action, and our next legislature will undoubtedly take such action as may be necessary and appropriate to clothe the proper State officials with the necessary authority.

I did not vote for the present bill as it passed the House, though I have given my support to the good roads movement constantly, because I desired to emphasize my disapproval of the action of the House committee in declining to accept area as one of the factors of apportionment. That having been now provided for, as well as section 8, which gives us an appropriation of a million dollars a year for 10 years for forest-reserve roads, for which we have been working, the bill is entitled to our hearty support as the best measure possible to secure at this time. The addition of the factor of area, in addition to the factors of population and post roads, more than doubles our Wyoming share of the appropriations.

Wyoming's apportionment under the bill, as it now becomes a law, will be as follows:

| | |
|---|---|
| First year ($5,000,000) | $63,750 |
| Second year ($10,000,000) | 127,500 |
| Third year ($15,000,000) | 191,250 |
| Fourth year ($20,000,000) | 255,000 |
| Fifth year ($25,000,000) | 318,750 |
| Total for five years | 956,250 |

In order to secure these funds the State or the counties must expend at least an equal amount.

There is no definite apportionment of the appropriation of a million dollars for forest-reserve roads, as the Secretary of Agriculture is to expend these funds as the necessities of the case appear, as the showing of forest income warrants, and as the counties or the State indicate their willingness to enter into cooperative agreements. In the case of these forest-reserve roads the requirements of equal expenditures by the local authorities which applies to the general appropriation does not exist, but the local authorities, which in these cases would be in the majority of instances the county officials, must enter into mutually fair and equitable cooperative agreements with the Secretary of Agriculture.

These cooperative agreements, I assume, would in the majority of cases relate to the construction and maintenance of the county roads connecting with the roads through the forest reserves. We have every reason to believe that Wyoming will be fairly treated in the expenditure of this fund, particularly in view of the fact that the first bill introduced in the House contemplating an advance of funds for forest-reserve construction appertained to a Wyoming road, to wit, the Wind River and Jackson Hole Road, for which I introduced a bill on the 6th of December last, and in view of the further fact that this road and several others in the State seem to meet all the requirements of the legislation.

## Aid to Dependent Families of Enlisted Men of the National Guard.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM A. AYRES,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. AYRES. Mr. Speaker, a few days ago this House passed practically the same measure as is now proposed, and there was scarcely a vote against it. For some cause or causes the other branch of lawmakers seem to have failed to agree with us. They seem to think that it is a much wiser method to say to the man who is blessed with a family that he should not offer his services to his country for its protection and preservation until all single men have had a chance first to enlist.

It seems to me, sir, that a husband and father has as much right to show his patriotism and to offer to fight for his country as a single man. To pass such a law, if such a law could be agreed upon which would empower the President to call out all single men before attempting to enlist the married men, would seem to me too absurd for argument, and it is certainly not in keeping with the true American spirit. What we should do, and do it without a hitch or hesitation, is to provide for the maintenance of those dependent upon the National Guard, if it be $50 per month or whatever is necessary to do it.

This is a rich and prosperous Nation, notwithstanding the fact that some would try to make it appear otherwise. Our Government can well afford to protect the family or those dependent upon a National Guardsman, whether it be a wife or children, or both, or whether it happens to be dependent brother, a sister, a father, or a mother. By extending this aid we do not in the least cheapen patriotism, nor do we establish a precedent that will prove dangerous.

A vast majority of the thousands of men who are now being sent to the front have been working for wages or perhaps ordinary salaries only enough to keep their families or those depending upon them, and maybe a small payment each month upon a modest home. Not possessed of any great abundance of this world's goods, they can not now continue to meet these obligations on their salary in the Army of $15 per month. It is not right to ask his family, in addition to giving up their loved one, to endure the material sacrifices and privations that must necessarily follow in a great many cases. It is not right that this rich Nation should ask these dependent ones to submit to the humiliation of accepting charity from societies or from their neighbors, and to allow such a condition would outrage our standards of patriotism. Those left behind have enough to bear without having to undergo these hardships. The man who braves the storms of battle and the hardships of camp life, who offers his life as a sacrifice to his country in times of peril and danger, should not be compelled to feel that such a sacrifice is not appreciated and that he has made it in vain.

We are not an ungrateful people. This Congress has been most liberal in granting pensions to those who have heretofore fought for the Nation, and there is now an opportunity offered to do something that we have never done before, care for those who are left behind to suffer, not only the anxiety for the safety

for the one on the field of battle but, in addition, the hardships that are incident to such occasions.

Some of you gentlemen who have spoken here to-day know what these things meant to you during the War between the States, and the mere fact that we as a Nation could not do for them what we can do now should not prevent us from taking this very appropriate action now. Nothing affords more pleasure and satisfaction than to hear those who fought in the Federal Army and those who fought on the Confederate side and the sons of both all joining in the support of this measure, which should pass both Houses without a dissenting vote.

## The Taylor System of "Scientific" Shop Management.

### SPEECH
OF
### HON. CLYDE H. TAVENNER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 1, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes.

Mr. TAVENNER. Mr. Chairman, the stop-watch system of shop management should be styled a system to place workmen on the scrap heap prematurely. That is what it does. Of course by speeding up workmen, they can be made to turn out more work, just as a man by running instead of walking may be able to cover a block more quickly, but he will not be able to cover blocks all day and day after day at the same pace without injury to his constitution.

I do not care who the man is, Mr. Brandeis or any one else, he can not successfully defend the Taylor system, as Mr. Taylor himself described it, before any audience of average American people. Let us see what Mr. Taylor said about his system. He invented it. He said, telling how the system was put into effect at the Bethlehem Steel Co. plant:

> The tasks were all purposely made so severe that not more than one out of five laborers, perhaps even a smaller percentage than that, could keep up.

Mr. GORDON. Mr. Chairman, will the gentleman yield?

Mr. TAVENNER. If I have the time.

Mr. GORDON. Does the Government impose a task that is five times as great as anybody can perform?

Mr. TAVENNER. We are not going to permit any Government official to do it, if we can help it. I want to read some more from Mr. Taylor's book on "Scientific management." He lays great stress on "scientific" persuasion. Eight bosses sometimes assist in the "persuading." Five of them are directly over the workman urging him on. In other words, this system is so inhuman in some cases foremen evidently refused to enforce it, so Mr. Taylor provided a method of overforemen to take care of any weak-hearted foreman. Mr. Taylor said:

> The functions of these overforemen are twofold:
> First. That of teaching each of the bosses under them the exact nature of his duties, and at the start also of nerving and bracing them up to the point of insisting that the workmen shall carry out the orders exactly as specified on the instruction card.

Mr. Taylor said that foremen make a great mistake in trying to persuade several men at once. He indicates a way to successfully intimidate a workman, and that is for all the foremen to center their persuasion "right onto a single man" and keep after him until he is persuaded.

Mr. Taylor added:

> No workman can long resist the help and persuasion of five foremen over him. He will either do the work as he is told or leave.

In other words, to set over them the bosses and give the workmen to understand they must speed up or leave. Of course, the workman can not easily leave and go to some other shop for employment. He has a family at home, perhaps, and several children for whom he has to provide and there are not always jobs to be had at other places.

Here is another "persuasive" feature of the Taylor system:

> In piecework of this class the task idea should always be maintained by keeping it clearly before each man that his average daily earnings must amount to a given high sum (as in the case of the Bethlehem laborers, $1.85 per day), and that failure to average this amount will surely result in his being laid off.

With the prospect of being laid off constantly before them, the men are going to work faster and faster. They must have employment to maintain their homes.

Mr. Taylor further said:

> For the success of the system, the number of men employed on practically the same class of work should be large enough for the workmen quite often to have the object lesson of seeing men laid off for failing to earn high wages, and others substituted in their places.

This system has been investigated by five different committees of Congress, and every one of those committees deprecated the use of the stop watch. Senator LODGE, of Massachusetts, made one of the strongest arguments that has been made against the use of the stop watch.

Mr. BROWNE. I desire to ask the gentleman if the Industrial Commission did not make a report against the gentleman's proposition—the Tavenner bill?

Mr. TAVENNER. No, sir; the commission's report opposed the principles underlying the Taylor system. The workmen in the arsenals are now efficient, and there is absolutely no necessity for the use of the stop watch. The arsenals are manufacturing munitions from 20 to 60 per cent below the prices charged by private establishments in which the Taylor system was in use.

The CHAIRMAN. The time of the gentleman has expired.

Mr. TAVENNER. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

## Good Roads.

### EXTENSION OF REMARKS
OF
### HON. JOHN M. EVANS,
OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 6, 1916.*

Mr. EVANS. Mr. Speaker, for the past 50 years there have been intermittent efforts on the part of the people to interest Congress in the question of Federal aid for wagon roads, and it now appears that the justice of their demands is to be recognized by this body. In the early history of the Government the Federal authorities embarked in road building, and George Washington, in one of his messages, advocated and recommended Federal assistance for the construction of roads. As early as 1806, Thomas Jefferson likewise advocated Federal aid, and Congress appropriated $7,000,000 to construct what is known as the Cumberland Road, starting at Cumberland, Md., and with the Ohio River as its western terminus.

Why the policy of aiding in the construction of wagon roads by the Federal Government was abandoned I do not know, but every man conversant with the history of his country realizes that the problem of good roads concerns every citizen. The principal argument made against this policy is that State and local governments should build their own roads. But the roads of every State are utilized for National and Federal purposes. Over every road in the country is carried the crops from that vicinity to the nearest railroad station. The mails are transported over these roads. The wealth and prosperity of this or any other Nation must, of necessity, depend upon its farm products and the capacity and ability of its people to transport and market those products. So with the enactment of this bill into law Congress will have done more to serve the real producers of wealth than by any other piece of legislation during this or recent sessions.

PROVISIONS OF THIS BILL.

The $85,000,000 appropriated by this bill will be apportioned among the various States as follows:

First. One-third will be distributed on the basis of population, the ratio that the population of each State is to the total population of all of the United States.

Second. One-third on the basis that the area of each State is to the total area of the United States.

Third. One-third on the basis that the mileage of the rural and star routes of each State bears to the total mileage of rural and star routes in the United States.

This bill further provides that the State shall pay 50 per cent of the total cost of the road upon which it receives governmental aid. The bill further provides that these roads shall be located and constructed under the direction of the State highway commission and the Secretary of Agriculture.

It further provides that $10,000,000 of the amount appropriated shall be advanced in building roads through the national parks and forest reserves at the rate of $1,000,000 per year, the amount thus expended to be reimbursed from the forest products and other revenues received from the national forest reserves.

I ask permission, Mr. Speaker, to incorporate in my remarks a brief statement showing the amount of Federal money that will be expended in the State of Montana under the provisions of this act when it becomes a law:

| | |
|---|---|
| 1916 | $100,850 |
| 1917 | 201,700 |
| 1918 | 302,550 |
| 1919 | 403,400 |
| 1920 | 504,250 |
| Total | 1,512,750 |

In other words, $1,512,750 will be appropriated from the Federal Treasury to assist in building roads in Montana during the ensuing five years.

In addition to that amount, section 8 of this bill provides for the annual expenditure of $1,000,000 for a period of 10 years in the forest-reserve States, and as Montana has about one-tenth of the national forests of the Union, approximately $1,000,000 will be expended in the next 10 years of the money derived from that source. So, in round figures, Montana will profit to the amount of about $2,500,000 by the passage of this bill.

---

## The Taylor System of "Scientific" Shop Management.

### SPEECH

OF

### HON. CLYDE H. TAVENNER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, June 22, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 14303) making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes.

The CHAIRMAN. Without objection, the amendment will be again read.

The Clerk read as follows:

Amendment offered by Mr. TAVENNER: Page 14, line 18, after the word "rate," strike out the period and insert in lieu thereof a colon and the following:

"*Provided*, That no part of the appropriations made in this act shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States while making or causing to be made with a stop watch, or other time-measuring device, a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this act be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant."

Mr. TAVENNER. Mr. Chairman, recently I noted the statement in an editorial in a manufacturers' magazine to the effect that no hearing had ever been held on this proposition. That is a mistaken impression. There have been five hearings held by committees of Congress on this subject and one hearing by the Commission on Industrial Relations. Four committees of the House have held hearings on the subject of this amendment. One committee of the Senate, of which Senator BORAH, of Idaho, was chairman, also had the anti-stop-watch bill before it. All five of the reports of these committees condemned the speeding-up system. This proposition has been before the House three times, and each time the House passed adversely on the use of stop watches on human beings. The naval bill, which was before the House two weeks ago, contained this same amendment. A motion was made to strike it out, and after a spirited debate it was retained in the bill by a vote of 100 to 74.

The effect of the Taylor system is to speed men up to the very top notch, and then after they are tuned up to top speed they are kept there. The attitude of the workingmen is that while it may be possible for them to produce a certain article in an hour, for instance, where a stop watch is held on them, and where they are offered special inducements, they can not keep up this pace day in and day out without wearing themselves out prematurely.

I have received a letter signed by a committee of workers at the Watertown Arsenal, which states that 75 per cent of the men at that arsenal are in favor of this legislation. There are 2,000 workmen at the Rock Island Arsenal, in the district that I represent. There may be men there who are not in favor of this legislation, but if there are I have never heard of such a one. All the letters I have received from the workers in the arsenals and navy yards and from organized labor throughout the United States express hearty sympathy for this proposed legislation and want it to be passed. The American Federation of Labor at its last three conventions went on record in favor of the legislation embodied in the pending amendment and in opposition to the speeding-up system.

As to whether the Taylor system is a speeding-up system or not, I want to quote again, as I did the other day, from the book of Mr. Taylor, the man who invented this system, which was first used in the plants of the Midvale Steel Co. and the Bethlehem Steel Co., where working conditions are probably as bad as they are at any place in the United States. The Taylor system is typical in every way of the conditions in the plants in which it was born. I want to call attention to a statement of Mr. Taylor in his book on scientific management, where he said:

The tasks were all purposely made so severe that not more than one out of five laborers, perhaps even a smaller percentage than this, could keep up.

The tasks were purposely made so severe that only one out of five could keep up. And at another place in his book he practically says that if you are going to install this system you have to lay aside sentiment; that this is a business proposition; and the business of it is this: To bring about production at a lower labor cost. For instance, when these efficiency engineers go to a manufacturer they put it up to him like this: "What is the article that you manufacture costing you per piece?" If he says it is costing him $2, the efficiency engineer holds out the hope to him that he can reduce the cost to $1.50 or $1.

Those who are opposing this legislation contend that they are opposing it in the interest of the workingmen. I do not believe they can sustain this assertion, for the reason that this system not only overspeeds the worker but in reality operates not to increase wages, but to reduce wages. I am going to try to prove this by Mr. Taylor's own statements; not statements that he made to the public so that workmen would hear them, but the arguments that he made for the benefit of private employers.

When Mr. Taylor undertook to install this system in the plant of the Bethlehem Steel Co. the laborers handling pig iron were receiving $1.15 per day and were handling between 12 and 13 tons per man per day. After the Taylor system was finally installed the men were handling 48 tons per man per day, and the wages of the fastest workers had been increased to $1.85 per day. Thus it will be seen that before the installation of the Taylor system laborers were receiving 8.8 cents per ton for handling pig iron and after it was installed they were receiving 3.8 cents per ton. Mr. Taylor relates that when he started in at the Bethlehem plant the workmen were turning out four or five castings of a certain type per day, receiving therefor 50 cents each, and that he succeeded in speeding up the men to a point where they turned out from 8 to 10 castings a day. The price was then reduced from 50 cents to 25 cents per casting. The Taylor system increases the earnings of some of the fastest workers, at least to start with, but it reduces wages in that it reduces the pay of the workman per piece. In the same proportion that it reduces the labor cost it increases dividends, which makes it attractive to some, but not all, employers. Let the proponents of the Taylor system claim for it that it increases dividends, but let them admit that it destroys man.

The more the workingmen of the Nation investigate the Taylor system, the more they analyze the motives back of its introduction, the stronger their opposition to it becomes. In fact, I have never heard of a single labor organization in the United States being in favor of the Taylor system.

Since committees of this House have investigated this subject very thoroughly and have always reported adversely to the use of the stop watch in Government establishments, I trust the House will to-day record itself in favor of the pending amendment.

## The Democratic Party.

### EXTENSION OF REMARKS
OF
### HON. HENRY I. EMERSON,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 8, 1916.*

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following clippings from the Cleveland Leader and American Economist. The clippings are as follows:

The Democratic Party, year after year for fully 40 years, has declared its belief in a tariff for revenue, and now when its own administration is in power in the Union, and there is a Democratic majority in the Senate and in the House, and the revenues of the country are far short of meeting the current expenses of the Nation, the administration and the congressional leaders do not declare for a tariff for revenue, but seek the imposition upon the country of direct taxes upon the people.

The great majority of the people desire the protection of our industries to an extent that, while it will not create monopolies, it will save our industrial classes from having the products of their labor driven out of our own markets by the outputs of cheap foreign labor, and the great majority of the voters of the Democratic ticket desire that same policy carried out.

This can be done by wise tariff legislation. This can be done and as the Democratic Party has ever declared they should be provided through the tariff. The Democratic Party has had handicaps enough placed upon it by this administration not to desire any more failures to redeem party pledges, and if the Congress does adjourn without keeping this line-time and well-thought pledge of the Democratic Party of a tariff for revenue, it will add largely to the strength of its political adversary.

We call the attention of the party leaders to the following statistics as to imports:

The first 19 weeks of 1913, under a Republican tariff law, there were imports at the port of New York to the value of $377,080,235. During the first 19 weeks of 1914, under the Democratic tariff law, the imports amounted to the value of $390,419,675 at the same port.

During the first 19 weeks of 1915, with war on every ocean and upon every continent save our own, with imports cut off by war operations and vessels obtained with great difficulty, New York port imports were $365,241,304, or but $25,000,000 less value than in the prior year. Now, mark the first 19 weeks of 1916, with vessels scarcer than ever before, with freight rates for ocean transportation enormously high, with blockades, seizures, and other war detriments to trade greater than ever, the imports at the port of New York amounted in value to $484,504,118.

One hundred and seven million five hundred thousand dollars more than in 1913, under the Republican tariff law; $94,000,000 greater than under the Democratic tariff law in 1914, and $119,000,000 greater than under the Democratic tariff law in 1915! Do the Democratic leaders recall the warnings of Secretary Redfield as to "dumping" of outputs of foreign countries in this Republic?

Do they realize what is certain to happen in the way of such "dumping" when peace comes and every product and output of European and Asiatic countries seek our markets, to be sold at any price to raise cash for the people abroad?

Do they comprehend how small that $484,000,000 of imports at New York this year will seem when the commercial fleets of Great Britain, France, Germany, Austria, Italy, Russia, Greece, China, and Japan, after the war closes, will be loaded to the Plimsoll line with cargoes bound to the markets of the United States to enter under a Democratic tariff law, which fails to raise the Nation's revenues by hundreds of millions of dollars?

Do they think what the effect of such "dumping" will have upon the profits of our manufacturers, the gains of our agriculturists, the wages of our millions of working people?

Why not, then, do what the Democratic Party has agreed to do, viz: Raise the Nation's revenues through the tariff, and thus at the same time protect our people from the ruinous competition of cheap foreign labor, from the forced sales of the products and outputs of bankrupt nations of Europe and Asia in the markets of the United States?

In connection with the conservation of our wealth and prosperity there must be considered the question of adequate and proper legal protection to American industries. We are a Nation of producers as distinguished from a nation of consumers. Our national resources and conditions place us in this position and give us this advantage. The producers include the owners whose interests are represented by stocks in corporations or otherwise and by those who, as employees, perform the larger portion of the manual labor. Many of the latter are holders of corporate stock, but the large majority are not. However, all are interested exactly alike. Together they are in normal times in competition, severe even though good-natured, with the producers of other countries. As to many products, some of the other countries can produce at a lower cost than we can produce, based on the past and present scale of wages for labor. The labor of this country is thus brought into direct competition with the labor of other countries. It is well known that wages in the leading foreign countries have been about one-half the amount paid here for similar services, and that in some countries, such as China, it is many times lower.

Many foreigners have heretofore been in competition with us in selling to nonproducing countries, and they have also dumped their surplus stock here in times of depression, at prices even below our costs and sometimes below their own. The articles sold in competition with us include large numbers of manufactured products, and also raw products, such as wool, cotton, fruits, etc. Many of you have seen lemons by the millions, grown in California, going to waste because imported lemons were selling there at prices less than the cost of picking, boxing, and shipping. Most of the foreign producing countries have in force tariff laws that fully protect their industries, and probably all will hereafter have similar laws; such are the indications as published in the daily press. Besides, many of the Governments furnish aid to their industries in many ways not necessary to mention at this time.

WHEN THE WAR ENDS.

After the war is over the contending nations will be impoverished and in great need of business and money. They will produce as much as possible, and their facilities are generally unimpaired. They will sell wherever they can find a market and at low prices if necessary, including this country, if we are not protected against them; and we can not sell in their countries because they are and will be protected against us. We have for many months last past been secure by reason of the well-known conditions of war, but if we carry our minds back to the circumstances existing shortly prior to the war we know what we may expect after the close, unless there is a change in our laws.

From the time the present tariff laws came into force, in October, 1913, until some time after the war was started, the effect upon our business was very bad. It was almost desperate with many. The prices of imported products dumped into our markets, though not large in volume as to some items, were so low that we were compelled to put our prices down to about cost and, in instances, below. Many were operating at a loss. We were going from bad to worse. Except for the war and war orders, wages would necessarily have been materially reduced, and even then many employers would have been compelled to suspend. We know by sad experience that unless our tariff laws are changed so as to protect our business and place us on a parity with our foreign competitors, the large majority of producers will suffer, that business will be depressed, that the number of idle mills and cars and men will be increased, and that wages will be lowered. We have seen these conditions before, and there is reason to fear that they may be worse than ever unless our tariff laws are improved.

FAIR AND REASONABLE PROTECTION.

It may be observed, by way of diversion (for general public sentiment may not have become focused on the subject), that it is not of first importance to consider the forms or details to be adopted. There should be included in the laws features which will furnish reasonable and adequate protection to American industries, and also the necessary revenue for Government purposes; a plan for reciprocity or reciprocal negotiations and relations with other countries, so that all conditions, changes, and emergencies can be met and solved for the benefit of all concerned; and the amounts of tariffs applicable to various commodities should be carefully, logically, and scientifically ascertained, and necessary, fair, and reasonable protection, no more and no less, thus afforded. If these amounts are to be reported upon by a commission, competent and disinterested, the report should be made to the Ways and Means Committee for consideration and report to the House of Representatives. The party in power perhaps ought to have the right of final decision, especially as long as the tariff is made a party issue, and submitted to the vote of the people at large. By the method suggested it seems probable there would be removed the struggle between different localities to secure advantages for one place or one industry over another, which has heretofore resulted in unsatisfactory rates in some cases.

ITS VALUE HAS BEEN DEMONSTRATED.

The principle of protection to industry by means of tariff laws has built up the commerce and the wealth of this country and other producing countries that have had a surplus for export. Its value has been demonstrated. As between nations, it is simply a safe, sound, business proposition. So long as one country maintains it others similarly circumstanced must do likewise in order to protect the interests of the large majority, including particularly the great aggregate of workmen. A benefit to the majority in the end advances the interests of even the minority, so closely connected and interdependent are the interests of each. When our competitors in other leading countries are ready to adopt the laws of free trade for our commodities it will be soon enough for us to favorably consider similar action. If we were to have free trade throughout the world we could probably take care of ourselves in any contest for the disposal of what we have for sale. In view of conditions as they exist in normal times, it is not logical to place or to leave the United States in a position of disadvantage when we have the opportunity to establish a parity. The doctrine of America first, which is a patriotic one, applies with peculiar force to the idea of sufficient protection to American industries. This means not a prohibitive tariff, but one large enough to permit continued success in competition with the outside world.

Nothing so clearly indicates the depth and intensity of bitterness felt by the allies toward the central powers as their formally reached determination to wage united business and industrial warfare on their present foes, indefinitely, after the conflict of arms is over.

Great Britain, France, Russia, Italy, Japan, Belgium, Servia, and Portugal have mutually bound themselves to cooperate for the advancement of their own business and industries in all possible ways and to exert as much actual restraint and retardent influence as they can upon the business and industries of Germany, Austria-Hungary, Turkey, and Bulgaria. Definite measures which seem sure to prove effective, at least to some extent, have already been agreed upon.

Like the present warfare of armies, this warfare of money, brains, and work will, if it is persisted in, exert a profound influence upon the entire world. It is designed to benefit the allied nations and, if the agreement is adhered to, impressive results of that nature may be achieved. Just how much punishment can be inflicted upon the central powers and their supporters is more or less conjectural but is perhaps capable of being estimated. But what will be the effect upon the neutral nations, chief among which, in size and interests at stake, is the United States?

Economic problems troublesome enough are sure to confront this country at the conclusion of military peace in Europe on account of that immense change alone. What others will be forced upon it by a relentless business and industrial warfare as is proposed, engaged in by nearly all the greatest nations of the world?

ANY TARIFF COMMISSION APPOINTED BY WILSON SURE TO BE ANTI-PROTECTIONIST.

President Wilson is anticipating the passage of a law to create a tariff commission and, according to authentic report, is already making up the list of those who are to receive the appointments. It is the talk in Washington among those who are close to the White House that the chairman of this new body has already been selected, and that it is to be Mr. Daniel C. Roper, of North Carolina. He has received the formal indorsement of Senator SIMMONS, the chairman of the Senate Finance Committee, and Representative KITCHIN, the chair-

man of the Ways and Means Committee of the House, and these are the two committees of Congress that have charge of tariff and customs matters.

The thought of Chairman Roper, of the Tariff Commission, is something that will send a shiver through the whole industrial world of the United States. Mr. Roper was the clerk of the Ways and Means Committee when the present Democratic tariff law was drawn, and the right-hand man of Mr. UNDERWOOD in drawing up its schedules. To him the present law is naturally a thing of beauty and, in his judgment, should be a joy forever. He is in accord with its rates and in harmony with its tariff principle. Since his service with the Ways and Means Committee he has been acting as First Assistant Postmaster General, selected for the post by Mr. Burleson, who knew him to be a kindred soul in the way of spoils and partisanship.

If this is a sample of what the nonpartisan tariff commission is to be, it is useless for the American manufacturer to expect anything else from it than rebuff and opposition. How interesting it will be for the producer of the United States to appear before this board and ask for changes in the existing law, when the man at the head of the commission had a large hand in the framing of that law. The application of the very first principles of fair play would dictate to Mr. Wilson that such an appointment should not be made. If a person who has helped to write an antiprotection tariff law and has acted as chief executive officer in beheading Republican postmasters is the White House idea of a nonpartisan and so eligible for such a position, what can business expect from the work of a body made up in such manner?

TARIFF OUT OF POLITICS?

Take the tariff out of politics—take the sentiment out of love. (New York Evening Sun.)

Take the letters out of the alphabet. (New York Press.)

And the mirth out of laughter. (Philadelphia Inquirer.)

Take the oxygen out of air. (Erie (Pa.) Dispatch.)

Take business out of business by free trade. (Lyons (N. Y.) Republican.)

Better say the present tariff put notes on much property. (Tazewell (Va.) Republican.)

Take the Satan out of hades,
Take the headache out of booze,
Take the motion out of movies,
Take the sleepiness from snooze.
(Lackawanna (N. Y.) Journal.)

Oh, well; take politics out of politics. (New York Evening Sun.)

Take the Prince of Denmark out of Hamlet. (San Francisco Chronicle.)

Take the poetry out of verse. (New York Evening Sun.)

The American Protective Tariff League desires us to add a line to "Take the tariff out of politics." Anything to oblige: "Take the P. O. out of pork." (Cleveland Leader.)

Take the people out of politics; take liberty out of government. (Monmouth (Ill.) Atlas, January 31.)

Take the heat out of fire. (Seacaucus (N. J.) News, January 29.)

Take daylight out of darkness. (Omro (Wis.) Herald, January 29.)

Take the flowers out of speech. (New York Evening Sun, Feb. 3.)

Take the cloves out of prohibition. (Idaho Statesman.)

Take the chat out of a movie audience. (Coeur d'Alene (Idaho) Press.)

Take the lips out of kisses. (Dover (Del.) Sentinel.)

Take the full house out of poker,
Take the frenzy from the mob,
Take the stroke from Willie Hoppe,
Take the bingle from Ty Cobb.
(Scottdale (Pa.) Independent.)

Take the tariff out of politics? Why, sure! by all means—if you're the chap to do it—and at the same time take the heartaches out of booze. (Augusta (Me.) Journal.)

Take the air out of rubber tires, take the gas away from glass making; it will shrink, it will wither, it may fail even to survive, for "the devil take the hindmost" is a motto we must bear; we'll live it, too, by ginger, when the free traders arrive. (Jeannette (Pa.) News.)

Politics and the tariff have been, are, and will be as inseparable as sunshine and the sun—take the sun out of sunshine! (Salisbury (Md.) Tribune, Feb. 11.)

Take the laughter out of childhood. (Payette (Idaho) Independent, Feb. 10.)

Take the "kick" out of whisky. (Roundup (Mont.) Record, Feb. 4.)

Take the tariff out of politics! As well try to take the "pep" out of pepper. (Brewster (Wash.) Herald.)

If you want to fix the West,
Take the salmon out the can;
Pinchotize the timber,
Take away from girls the tan.
(Chinook (Wash.) Observer.)

Take the flop out of Woodrow. (Bay Shore (L. I.) Journal.)

"Take the tariff out of politics!" shout the Democratic statesmen as a faint hope. Yes; take the color out of the rainbow. When the Democracy admit that we are right and they are wrong, let us enact a protective tariff and quit tampering with it. The tariff will be out of politics, but not until then. (Batavia (Ohio) Courier.)

Take free trade from Democracy—if you can. (A Harmon (Ill.) correspondent.)

Take Hiram from the Johnsonites,
Take Teddy from the Progs,
Take the tariff out of politics,
And the world will slip its cogs.
(Sanger (Cal.) News.)

Take the devil out of all of us and there will be less room for pain. (Carmi (Ill.) Convincer, February.)

Take the tariff out of politics?—with ease! Take the wind out of Tornado and the water out of seas; take the light out of sunshine and the cold out of freeze.

Take the tariff out of politics?—for sure! Take safe out of safety and healing out of cure; take stable out of stability—no nation will endure. (Chesterton (Md.) Enterprise.)

Take the value out of money,
Take the sting out of bees,
Take the sweetness out of honey,
Take the timber out of trees.
(Newport (N. H.) Champion.)

The talk of taking the tariff out of politics is the same as asking for taxation without representation. (World's Work.)

While there is a great endeavor to take the tariff out of politics, why does not some statesman take politics out of the tariff? (Bay City (Mich.) National Farmer.)

Take the tariff out of politics? Take the hugs and kisses out of spooning. (Marion (Ill.) anonymous correspondent.)

Take the substance out of flour and the sweetness out of sugar. (Trenton (Mich.) Times.)

Take the stars from the field of Old Glory. (Huntingburg (Ind.) Independent.)

Take the value out of money,
Take the pleasure out of fun,
Take the sweetness out of honey,
Take—Oh, what's the use? It can't be done.
(Plymouth (Mass.) News, Mar. 24.)

Take the 1 out of 100. (Milwaukee Sentinel.)

Take the lesson from the learner,
Take the writing from the clerk;
Take the earnings from the earner,
And the worker from his work.
(Gladstone (Mich.) Delta.)

Take the tariff out of politics? Why not take "e" out of alphabet or laughter out of childhood? (Ashtabula ,Ohio) Star.)

Take the tariff out of politics,
Take the moisture out of rain;
Take the colors from the rainbow,
Take the kernel out of grain.
(Brookfield (Mo.) Gazette.)

Take the tariff out of politics? Not till we have absolute free trade. (Union (N. Y.) Union-Endicott News.)

Take the raindrops out of showers,
Take the fragrance out of flowers.
(Ord (Nebr.) Quiz.)

Take the tariff out of politics? It is a cry born of forlorn hope. It is as feasible an to try to take the lye out of soft soap. (Tahlequah (Okla.) Sun.)

Or take the Bull out of Bull Moose. (Grand Rapids (Mich.) Herald.)

Take the stars and stripes out of our flag. Take hope out of life. (American Economist reader.)

"Take the tariff out of politics," says the New York Sun. Take the angel out of heaven; take the cooing from the dove; take the warble from the birdlet; take religion out of love. (Elkton (Mich.) Review.)

They can't take the tariff out of politics, but they can take it out of the hands of the free-trade tariff tinkers. (Kansas City (Mo.) Liberal News.)

The differences of opinion and conviction which put the tariff question into politics are not differences as to facts, but as to the interpretation of facts. Hence the fallacy of "taking the tariff question out of politics" by creating a mere statistical board, bureau, or commission. (Muncie (Ind.) National Republican.)

Take disaster from our labor and industries without the reestablishment of a high protective tariff. (Breaux Bridge (La.) Advance.)

Take the tariff out of politics? Might as well take the honey out of the honeymoon. (Rhinelander (Wis.) News.)

---

Take the limberness from limber.
Take the spiciness from spice.
Take the wood from out the timber.
Take the water out of ice.

Next!

(Astoria (Oreg.) Morning Astorian.)

Take the tariff out of politics?
Take the moisture out of snow.
Take the "our" out of flour.
And the "leven" out of dough.

(Fedora (S. Dak.) Messenger.)

---

Take the tariff out of politics! You might as well try to take the bung out of bungle. (Decorah (Iowa) Republican.)

---

As well try taking selfishness
From out the heart of man;
For the Demys, in their foolishness,
Will make trade free if they can.

(Columbus (Ohio) Saturday Monitor.)

**What About the Progressives?**

---

## EXTENSION OF REMARKS

OF

# HON. DUDLEY DOOLITTLE,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. DOOLITTLE. Mr. Speaker, the recent contest at the Chicago conventions between the Progressive and the Republican Parties is not a personal affair of mine, but a short statement of facts in relation to what happened before, at the time, and what has happened since may be worth while. Col. Roosevelt declined the nomination of his party for President although he was a candidate and afterwards indorsed Judge Hughes, the Republican nominee, urging at the same time the delivery, bag and baggage, the rank and file of the Progressives, for the sole purpose to "beat Wilson."

Mr. Roosevelt is a personality of strong emotions and deep-anchored prejudices. He hates President Wilson, and the cause for that passion is the basis of his desire and purpose to "beat Wilson." It is largely a personal matter with him. The reason has been an open secret in Washington for months, and the story, briefly told, is as follows:

When Mr. Roosevelt was President, to use his own words, he "took Panama," desired by the United States for a route for the canal, which, up to that time, was a part of the Republic of Colombia. When Mr. Wilson became President, through his then Secretary of State, Mr. Bryan, the claims and grievances of Colombia were given a hearing, resulting in the Colombian treaty, which looks toward a friendly settlement of our differences and compensation to Colombia for the aforesaid "taking of Panama." The point with Mr. Roosevelt is, that any compensation to Colombia would be the acknowledgment of mistreatment of Colombia by him. Mr. Roosevelt believes this would be a personal reflection on him and his acts while President.

There are hundreds of thousands of Progressives who will not follow Mr. Roosevelt in his efforts to "beat Wilson." The newspapers of the country are, in most instances, anti-Democratic, and print conspicuously items telling of leading Progressives who express their intention of supporting Judge Hughes, but which do not print items concerning other leading Progressives who prefer President Wilson. Just what the rank and file of the Progressive Party will do when it comes to voting for President, if that is in any way indicated by the division among their leaders, is a very two-sided matter, as shown by the following articles appearing in the Baltimore Sun and the Washington Post:

[From the Baltimore Sun, July 3, 1916.]

QUIT T. R. FOR WILSON—MANY FORMER PROGRESSIVE LEADERS REFUSE TO FOLLOW COLONEL INTO G. O. P.—FRANCIS J. HENEY THE LATEST—ONE-TIME BULL MOOSE CANDIDATE FOR SENATE PRAISES PRESIDENT'S POLICIES AND PLEDGES SUPPORT.

WASHINGTON, *July 2.*

One by one the militant and thoroughly independent leaders of the late Progressive Party are coming out for President Wilson, and are serving notice upon Theodore Roosevelt and Charles E. Hughes that they will not be delivered into the hands of the men who have dominated the Republican organization since 1912.

Raymond Robbins, chairman of the Progressive convention at Chicago; John M. Parker, vice presidential nominee of that convention; Bainbridge Colby, who placed Roosevelt in nomination; Roscoe G. Fertich, one of the Bull Moose founders in Indiana; J. A. H. Hopkins, State chairman of the Progressive organization in New Jersey; and Norman Hapgood, one of the most brilliant factors in the one-time party, have let it be known that they will not swallow Mr. Hughes.

FRANCIS J. HENEY FOR WILSON.

To-day the White House gave out a telegram received from Francis J. Heney, the graft prosecutor, of San Francisco, former Bull Moose candidate for the United States Senate and one of the stanchest of the Progressive leaders, East or West, in which he announced his determination to support Mr. Wilson, and tenders his services to the Democratic national committee during the campaign.

No declaration yet made by a former follower of Col. Roosevelt is more significant than that contained in the Heney telegram. This is not based upon mere resentment that Roosevelt should have surrendered to the Republicans nor upon the sole fact that the Republican Party now is controlled by the same reactionary influences that controlled it four years ago. This circumstance is cited by Mr. Heney as one reason why sincere Progressives can not ally themselves with the old party, but his most impressive point is the statement that the Wilson administration commends itself to every patriotic American.

The President's foreign policies are praised by Mr. Heney. He refers to our negotiations with Germany as the triumph of a wholesome diplomacy that has kept the country out of war without sacrificing either American honor or prestige. He praises the Mexican policy just as generously, and then cites the success of the domestic program of the Wilson administration.

DOES NOT LIKE G. O. P. LEADERS.

After referring to the fact that the Republican Party is still firmly in the hands of BOIES PENROSE, Murray Crane, William Barnes, Elihu Root, and other leaders, who deprived Roosevelt of the nomination four years ago, Mr. Heney in his telegram to the President says:

"Under the circumstances I can not follow Theodore Roosevelt back into the Republican Party while it is controlled by these men. If he had accepted the nomination of the Progressive Party at Chicago this year, I would have loyally and vigorously supported him, because he then would have represented the basic principle upon which the Progressive Party was founded.

"To my mind the nomination of Mr. Hughes represents the fruition of political corruption which was so successfully practiced by the Republican national committee four years ago, under the guidance of men I have named. For that reason I can not vote for or support him. Personally, I shall not vote for any Republican candidate for President hereafter as long as the corrupt control of the nominating machine of the Republican Party is thus permitted to continue in existence."

Mr. Heney then expresses his hearty approval of the Wilson administration as follows:

"Please permit me also at this time to offer my heartiest approval of your administration toward Mexico. It seems to me that you have consistently and amid great difficulties and discouragements striven to treat that unfortunate neighboring nation with that patience and forbearance which one powerful and enlightened nation ought to exercise toward a much less powerful and a much less enlightened nation. No patriotic citizen can fail to pray that we shall be delivered from the necessity of entering into a war with the distracted people who inhabit Mexico.

"Your temperate, restrained but lofty, exercise of the powerful weapons of diplomacy have kept this country safely out of the terrible struggle in Europe without any sacrifice of American honor or prestige, and you have wrung the most important concessions from belligerent foreign rulers while steadfastly maintaining the dignity, peace, and safety of the United States.

AS TO OTHER ACCOMPLISHMENTS.

"The legislative accomplishments of your administration constitute a record little short of marvelous. In three short years your administration has wrested the financial control from Wall Street and lodged it with the people, thus rendering future trust-creating panics and manipulation practically impossible.

"You have provided an income tax for raising revenue, thus placing the burdens of government where they belong and where they can best be borne. You are providing a nonpartisan tariff commission, as advocated by the national Progressive platform of 1912, that will take the tariff out of partisan politics, where it has long been an agency for evil.

"I might also speak of other important enactments, such as the trade commission law, the Clayton Antitrust Act, the agricultural expansion act, the industrial employees arbitration act, the extension of the parcel-post system, the driving of the notorious lobby out of Washington, the consummation of a constitutional amendment providing for the election of United States Senators by the people, and scores of other important legislation, for which the country is largely indebted to you and your administration.

"I trust you will feel free to call upon me," the telegram concludes, "to aid in any way that I can in your reelection to the Presidency in November."

---

[From the Washington Post, July 7, 1916.]

TURNS AGAINST HUGHES—ACTING MOOSE CHAIRMAN HALE CRITICIZES INDORSEMENT—DELEGATES NOT CONSULTED—NATIONAL COMMITTEE'S "ATTEMPT TO DELIVER" PARTY TO REPUBLICAN CANDIDATE AN "AFFRONT," HE ASSERTS—MICHIGAN STATE BODY ALSO REPUDIATES THE ACTION OF THE LEADERS.

NEW YORK, *July 7.*

Matthew Hale, of Boston, acting chairman of the Progressive national committee, made public to-day a statement to delegates of the Progressive national convention, criticizing the indorsement of Charles E. Hughes by the committee. He has conferred recently with Vance McCormick, chairman of the Democratic national committee.

Mr. Hale said the indorsement was without authority from the delegates or the State organizations, and without any attempt to get authority. He asserted that neither delegates to the convention nor members of the State organizations were consulted before the Republican candidate was indorsed by the national committee.

CALLS ACTION AN AFFRONT.

In Alabama, Michigan, New Jersey, Tennessee, and Virginia, he declared, neither delegates to the convention or State organizations had expressed opposition to indorsing the Republican candidate.

In closing his statement, he said:

"An attempt by a small group of men to deliver the Progressive Party organization to the Republican candidate in a manner which violates one of the most fundamental principles of the Progressive Party is an affront to the sincerity of all Progressives."

REPUDIATED IN MICHIGAN.

DETROIT, MICH., *July 7.*

At a meeting of the State central committee of the National Progressive Party here this afternoon, the action of the national committee in indorsing Charles E. Hughes was repudiated. The committee declared for the perpetuation of the party and the entering of complete State and local tickets in the coming campaign. The recommendation contained a letter from George W. Perkins that Republican clubs be formed among the Progressives and was unanimously rejected.

This is indicative of what is happening all over the country, though seldom mentioned by anti-Wilson newspapers.

## The Possibilities of a National University in the Capital.

### EXTENSION OF REMARKS
OF
### HON. PATRICK H. KELLEY,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 8, 1916.*

Mr. KELLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address of Hon. S. D. FESS delivered in Madison Square Garden, New York, before the National Educational Association in annual session, July 7, 1916. The address is as follows:

THE POSSIBILITIES OF A NATIONAL UNIVERSITY IN THE CAPITAL.

[Address of S. D. FESS in Madison Square Garden, New York, before the National Educational Association in annual session, July 7, 1916.]

Mr. President, fellow teachers, ladies, and gentlemen, I am here not upon my own invitation to discuss a theme not of my own choosing. I come in response to an invitation of your committee to discuss the possibilities of a national university in the Capital. I very much dislike to absent myself from the House during an important discussion such as we have before the country to-day. However, being assured that I would be here permitted to address a wider constituency from this platform than I would in the House, I accepted the invitation.

There are three measures before the country, all with peculiar interest to the educators, which have won my heartiest approval and active energies.

The first is the national archives building. It may be a shock to you to know that ours is the only country of significance that has no "hall of records" to house our valuable documents. The documentary evidences of millions of our property are scattered throughout the city, stored in garrets and cellars of buildings owned or rented by the Government.

On June 3 of this year I called the country's attention to this situation. I also printed a list of over 230 fires since 1873 in public buildings in the Capital. I also printed a list of fires resulting in total destruction of valuable documents. I also printed a history of the 50 years' attempt to induce the Government to erect a fireproof archives building.

You will be greatly pleased to learn that the Congress has taken action, and all the preliminary steps have now been taken to insure a fireproof structure at a limit of cost of $2,000,000 for the building. This is a real triumph.

Another measure in which I am profoundly interested is the proposed Federal aid to vocational education. This phase of education has received much attention in this convention. I am sure you who heard Secretary Redfield must have been impressed with the importance from a national point of view.

I can now merely say that as a member of the President's Vocational Commission, having sat for three months listening to experts representing every phase of the question, after which having made what I think is the most voluminous report ever made upon the subject, I am deeply interested in the passage of the bill we proposed, and which was simultaneously introduced in the Senate and House, and known to the country as the Smith-Hughes bill.

It was unanimously approved by the Education Committee of each branch of Congress, but owing to the pressure of public matters could not be reached in the Sixty-third Congress.

At the opening of this present Congress it was again introduced and again reported and now awaits its turn upon the calendar. I feel safe in saying to you here and now that its passage this session is expected. But the matter which I came to discuss is the national university proposition, which for the first time in the history of the country was unanimously reported from the committee, both Sixty-third and Sixty-fourth Congresses. It is now on the calendar awaiting action.

Among the many surprises to grow out of this the world's greatest conflict now raging in Europe is the resourcefulness of the German scholar. It is not too much to say that the German scientist in the laboratory is doing as much if not more than the German soldier in the field. His fertility in finding substitute for the supplies cut off by the embargoes is the standing wonder of the world.

An investigation will show that most of these discoveries emanate from the laboratories of universities, especially from Berlin.

This institution, perhaps the world's greatest research center, was the outgrowth of a dictum of the head of the German nation. At the close of the Napoleonic wars, when Prussia was reduced in her material as well as political integrity, the King caused the establishment of a national research institution at Berlin to retrieve by intellectual endeavor what had been lost by warfare. From modest beginning there has grown up this institution with a group of investigators whose service to science is now displayed in the stress of war.

There is no country in the world with the possibilities of scholarship in the fields of research equal to ours. Washington already is a center of research workers. Each department is a laboratory for investigation. Here with the marvelous facilities of laboratory and library equipment greater than those of all the colleges and universities in the country outside of the Capital, could be gathered the greatest group of head masters in research, with the largest collection of special students in the world. Washington must not only be made the center for the special research for American scholars, but for the scholars of other countries. The national university is designed to make available this rare equipment for the special research worker. It looks to an organization to which application can be made for such work with as little red tape as college entrance elsewhere requires. The recent passage of the bill for an archives building here in Washington to house all the valuable governmental documents should be but one item in the plan for research. No better time could be chosen for the establishment of the world's greatest university than now, when war with its disorganizing elements calls for rehabilitation through the enlistment of the scholars of our day. The country ought to make possible the realization of this dream of Gen. Washington and the list of public men and associations indorsing such a consummation. It is but adding the finishing touch to our magnificent educational system.

Popular education lies at the foundation of our democratic system of government. To supply it must largely rest with the States. Marked advancement has been made in this field. Illiteracy is being rapidly banished. Vocational training is receiving attention.

Higher education is also well cared for in colleges, universities, and technical schools. Almost every State has its system of State normal schools for the training of teachers. Most of them have the State university, primarily for agricultural and mechanical training, but in later years the modern State university, answering to wider demands which does graduate work. There are nearly 500 colleges, private and denominational, within the boundaries of the United States. Among these there are a few heavily endowed institutions which do graduate work, in addition to the regular college work.

Notwithstanding the galaxy of American higher educational institutions, its colleges, universities, and technical schools, many of which stand very high educationally, the country does not have a university in the true sense. In every institution, however good, the chief work, the mass of students, the large proportion of teaching force, the major use of laboratories, etc., are devoted to undergraduate work, to college rather than university work. We have no single institution devoted to the sort and degree of work chiefly done by the Berlin University. Johns Hopkins comes the nearest to it. Such an institution as is here proposed would complete our system of education by utilizing the vast resources here in the capital for the special research of the expert investigator. The recent discoveries of Dr. Rittman in the Bureau of Mines are directly to the point. This is but a suggestion of what may be done.

The proposal here is to materialize the ambition of the founder of the Nation.

Washington made a national university a specific item of recommendation at different times in his messages to Congress. He communicated his views in writing to such men as Randolph, Hamilton, and Jefferson, members of his Cabinet. He made specific recommendations to State officials of Virginia, including Gov. Brooke, in 1795; he solemnly urged it in his Farewell Address in 1796, and in the same year he communicated his wish to the Commissioners of the District of Columbia, even going so far as to indicate his willingness to set aside a

fund for its establishment and to specify the probable site of the plant.

Before his death he had the indorsement of most public men, inside and outside of the two Houses of Congress. In 1799 his will contained a bequest of 50 shares ($500 each) of Potomac stock for the beginning.

His scheme was most heartily indorsed in official capacity by John Adams, Thomas Jefferson, James Madison, James Monroe, J. Q. Adams, and Andrew Jackson. Jefferson, one of the country's earliest patrons of education, even went to the extent of proposing to Gen. Washington the transplanting of a European college, faculty and all, as an early step in the enterprise.

The appearance near the forties of sectional differences and the expression of the fear of too much centralization caused the friends of the enterprise to rest. In the forties and fifties much talk and some efforts were active in building such an institution at Albany, N. Y. The Civil War further shut out interest in the Washington project.

Interest was finally revived in 1869 by John W. Hoyt, who had made a tour of careful inspection of the European institutions of higher learning. The merits of Commissioner Hoyt's efforts lie in his effective work in creating a favorable impression among educators in the country. The results of his propaganda were noticed in the interest of the National Teachers' Association. At its annual meeting in 1869, held at Trenton, N. J., the association adopted a resolution offered by A. J. Rickoff, of Ohio, committing the association to the project. It also appointed a committee of 35, representing all parts of the Union and all the liberal as well as business professions, and upon which appear the names of Rickoff, of Ohio, and Wickersham, of Pennsylvania. From that day to this, this great association has stood committed to the consummation of the great undertaking. Of all its many great heads not one has rendered more valiant service than its recent head, President Swain of Swarthmore College.

It was largely through this body, ably seconded by numerous great scholars in college and university circles, that there was won support of such men as Senator Charles Sumner, T. O. White, J. W. Paterson, M. H. Carpenter, J. J. Ingalls, W. B. Allison, L. Q. C. Lamar, A. H. Garland, and many others. Through the influence of these men a bill was introduced in both Houses of Congress in 1872. By this time the propaganda was winning the support of most of the college heads of the country. One very important exception was President Charles W. Eliot. In 1873 President Grant made the university proposition an item of favorable recommendation in his annual message. The National Education Association continued by resolution and addresses to keep the matter before the public. President Hayes indorsed the project in 1878. L. Q. C. Lamar, Secretary of the Interior under Cleveland, called the attention of the country to the neglect in his report to the President. In 1890 the Senate created a special standing committee, to be known as the National University Committee, which is still in existence, although quite dormant. The National Association of State University Presidents, representing all the State universities of the Nation, is also another significant association backing the movement.

Looking over the activities working for this consummation, one is bewildered over the fact that in the face of it all there is nothing accomplished by the Government.

Note the factors:

1. Urged by Washington.
2. Seconded by at least 10 of his successors.
3. Supported by at least half a dozen Justices of the Supreme Court, including Chief Justices Jay, Rutledge, Marshall, and Chase.
4. Formally recommended by at least 20 Cabinet ministers, among them the most brilliant lights of our Nation.
5. Formal support by the heads of both the Army and Navy.
6. Enthusiastic advocacy of the heads of at least 400 colleges and universities.
7. Almost unanimous indorsement of both the scholars and learned associations of the country.
8. Advocacy by the leading clergymen of the country.
9. Advocacy by the public-school men and women in the country.
10. Support of various women's organizations of the land.
11. Warm support at different times of the Senate as a body.

This array of advocates would seem enough to enact any law that had an element of merit in it.

This support is based upon the following facts:

What we need in Washington is an institution not so much to multiply scholars as to develop scholarship; not to teach learners, but to produce research workers; not so much to disseminate knowledge already known, but to cultivate the power to find what is yet unknown.

Such an institution will not interfere with nor supersede the hundreds of institutions already existing, but it will supplement them, as it will indeed depend upon them for its supply of students seeking the rank of special experts. Instead of weakening the existent university or college, like the multiplied collective strand, it gains its strength from a combination of all without weakening any one.

It will be in a unique sense our university and will develop the sense of pride and democratic support not now felt by any institution. It will thus be sought by our ambitious men as they pass from college or university to the more specialized field of expert investigation. Graduate, as well as professor, who may be desired for some special work now and then, will look toward it. It will thus divert the flow of American students from Berlin, Paris, Oxford, Jena, and Vienna to Washington.

Not only this, but it will most certainly become the most metropolitan institution, patronized by the largest groups of European students, as well as students from all other progressive countries in the world. The records of immigration to America for the past 50 years are conclusive of this statement.

There can not be serious doubt of the effect of such a national university upon scholarship in our own country. Washington long ago had come to be one of the greatest scientific centers of the earth. Here are assembled the most remarkable collections in the way of scientific material known to the scientific world. Here the various departments of scientific investigation, headed by the world's best experts, aided by a group of trained workers, with separate laboratories and experimental facilities, run up into the hundreds. Here, also, are domiciled 34 associations devoted to the investigations of truth in various spheres. At least that number are incorporated by act of Congress. These make Washington attractive to the scholar of all countries. Many of the societies that are not domiciled here hold their annual meetings at the Capital.

If anyone should doubt the wisdom of the establishment of such an institution upon the ground that we do not need it, or upon the ground of expense, or of corrupt control, or upon any other ground, a complete answer is the Smithsonian Institution. This institution, established in 1840, with a $500,000 bequest, has proved itself to be one of the most successful in the advancement of knowledge. To-day it is well housed in buildings worth at least as much as the original gift, and it has accumulated collections of books and manuscripts by the simple method of Government exchange, with slight cost to anyone of an amount beyond the original gift. Besides this, here under such men as Henry, Baird, Powell, Newcomb, Goode, Langley, and others, have grown up these rare agencies of advancement in useful knowledge. Here telegraphy was perfected and then turned over to the Government. Research on the lines of climate, meteorology, etc., was conducted by these leaders of science and was finally allowed to grow under governmental agencies into the present Weather Bureau. Under the direction of Prof. Baird investigations of life in the sea, with special relation to fish purely in a scientific interest, grew into the Government Fish Commission, now so important as an agency under experts attempting to supply needed food from the wastes of ocean waters. Other important governmental agencies had their beginnings here. The Congressional Library, America's greatest collection of books, housed in the world's most beautiful building, was started in the same way by the same institution.

In view of such results flowing from this single establishment, we ask, What is the possibility of a national university under a similar management with means multiplied and a field unlimited? Even to-day there exists in the Capital the university, only awaiting organization, housing, and research students. Probably in no one place in the world is there such a rare and numerous aggregation of material for laboratory use as in Washington. No university could gather such laboratory facilities.

The bill provides that there shall be established in the District of Columbia an institution of higher learning, to be known as the National University of the United States.

Its purpose is to promote the advancement of science, pure and applied, and of the liberal and fine arts by original investigation and research and such other means as may appear suitable. Furthermore, to train men and women for posts of responsibility in the public and private service of State and Nation; also to cooperate with the scientific departments of the Federal Government and with the various colleges and universities, public and private, throughout the country. This last purpose is one of the most important.

Located in the various parts of the city are museums, bureaus, observatories, exchanges, laboratories, etc., the equal of any one of which in richness of material is not to be found in any other place in the country. The Agricultural Department alone is a good example. Here in one department of investigation are found: (a) The Weather Bureau, with almost a score of experts at work; (b) the Bureau of Animal Industry, with over a dozen experts; (c) the Bureau of Plant Industry, with nearly 40 experts; (d) the Forest Service, with about 30 experts; (e) the Bureau of Chemistry, with at least 35 experts; (f) the Bureau of Soils, with 7 experts; (g) the Bureau of Entomology, with more than a dozen experts; (h) the Bureau of Biological Survey, with a half dozen experts; besides from 6 to 15 experts in charge of separate Bureaus of Accounts and Disbursements, Publications, Statistics, Library, Experiment Stations, and Public Roads. This last is the youngest of many research foundations here in the Capital which fitly represent the scientific operations of the Government. There is scarcely a single field of expert investigation that is not well worked here, and by the world's greatest experts, and with the highest results. The annual reports of these various bureaus that number in the hundreds would make a library. The monetary value represented will reach into the millions of dollars. To operate them requires about five millions a year. The experts employed and those elsewhere affiliated with the work here will number into the hundreds.

The new discoveries announced from time to time are world-wide in import, and some of them revolutionize scientific knowledge. Air navigation was solved by governmental investigation. The Panama Canal was made possible by governmental engineering skill. Yellow fever was annihilated by a Government expert. Probably more useful applications of scientific knowledge have been perfected in Washington than in any other place in the world.

The easy possibility of utilizing these unequaled resources for stimulating wide-awake students is the chief and immediate ground for the proposed institution.

It is to be a graduate institution.

The ultimate authority in the government of the institution is vested in a board of trustees appointed by the President of the United States; but this board must consult and consider the counsel and advice of a national advisory council, consisting of one representative from each State in the Union, this representative to be the president of the State university in those States in which there is a State university, and in those States where no such institution exists a person to be appointed by the governor of the State. This form of organization secures two great advantages. It secures the efficiency, economy, promptness, and vigor of administration characteristic of a small board vested with full authority to act.

The institution is authorized to accept gifts and donations of money or property from any private citizen or public body, provided these gifts be given with no conditions attached for the general purposes of the university. This university will have an organic affiliation with educational institutions of other countries by which we will have the exchange of professorships. It would be difficult to estimate the influence upon a better understanding and relationship with all countries of ideas as an organization of this sort located at the Capital of the Nation. It would be a far greater insurance against world warfare than battleships. Now, when Europe is in the throes of war and all education is at a standstill, is the time to establish this institution.

It goes without saying that such an institution must be free from all characteristics that dominate modern college life. Modern athletics, college spirit, and the consequent police disciplinary features, all proper in their places, will have no place here. Even degrees are not to be sought.

In this beautiful Capital of the Nation, with the galaxy of great buildings, housing such treasures of art and science, with its many associations, representing great learning, the significant item of world meaning, the crown of it all is lacking—a national university.

If the Government would make good the $25,000, the gift of the father of the country for this purpose, it would materialize now a sum sufficient to provide not only the necessary administration building but an endowment sufficient to care for all the future needs. Twenty-five thousand dollars at 6 per cent compound interest from 1799 to 1916 would amount to over $24,000,000. If we add to this such gifts as may be offered by benefactors, the endowment can be placed easily in the $100,000,000 mark.

The bill carries an initial appropriation of $500,000. The organization and location of buildings will be left to the board of control. The committee believes such an institution is demanded in the interest of learning by the highest dignity and welfare of the Nation and the honor of the founder of the Republic, who urgently recommended it, and which has been strongly urged by many other distinguished Americans.

## The Democratic Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. FREDERICK W. DALLINGER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, July 10, 1916.*

Mr. DALLINGER. Mr. Speaker, under the rule adopted by the Democratic majority I have not been permitted to offer two amendments to this bill of great importance to the people of Massachusetts. The amendments are as follows:

On page 26, line 25, after the word "fourth," insert the words "cooperative bank or"; and on page 27, line 18, after the word "tenth," strike out the word "farmers'."

The object of this first amendment is to exempt from the corporation-income tax the cooperative banks of Massachusetts and other New England States which combine the saving features of the mutual savings banks and the loan features of the domestic building and loan associations, both of which are exempt from tax under the provisions of this bill. In these banks there are deposited many millions of dollars of the savings of our working people, and through their agency thousands of laboring men have been able to own their own homes. The object of the second amendment is to put all mutual fire insurance companies on a par with farmers' mutual insurance companies, which are exempted from tax by the bill. There is every reason why these banks and insurance companies should enjoy the same exemption that is granted to similar institutions. The fact that they are omitted from the list of exemptions is only another evidence of the unfair and sectional character of Democratic revenue legislation.

Mr. Speaker, attention has already been called to the arbitrary procedure adopted by the Democratic majority under which we are forced to vote either for or against this omnibus bill as a whole with no opportunity for a record vote on a number of separate and distinct propositions. For instance, I am in favor of the repeal of the unnecessary stamp taxes, which never should have been imposed, and against the extension of which we Republicans voted at the commencement of the present session. Moreover, in common with Republicans generally, I am in favor of an excise tax on the manufacture of munitions of war to meet in part at least the cost of national preparedness. A separate bill for this purpose should have been reported and passed as soon as possible after the outbreak of the European war instead of being incorporated in a general revenue measure at this late day, when the revenue that can be derived from it is bound to be a steadily diminishing factor.

I am also in favor of the Republican principle of a tariff commission. A separate bill for this purpose has been pending since the commencement of the present session and should have been passed months ago, so that the tariff might have been intelligently revised with a view to obtaining the greatest possible revenue from import duties levied on commodities coming into competition with American production. If this had been done, a sufficient rate of duty might have been imposed upon foreign dyestuffs to insure the establishment of the dyestuff industry in the United States instead of the totally inadequate duties provided for in Title V of this bill, which will simply prove an expense and annoyance to our manufacturers, with no resulting good to anyone. Moreover, an increase of tariff duties with a view to safeguard our own industries against undue foreign competition after the close of the present European war would not only have resulted in the collection of a very large amount of revenue from foreign producers seeking to enter the rich American market, but would also render unnecessary the ridiculous antidumping features of this bill as well as the imposition of a Federal inheritance tax, a form of taxation which ought to be left to the States and never resorted to by the National Government except in times of great emergency.

The same thing is true, although to a lesser degree, of the income tax. The existing tax on individual incomes was deliberately imposed as a substitute for tariff duties "in order," as our Democratic President sardonically remarked, "that our manufacturers might feel the spur of foreign competition."

The doubling of the tax provided for in this bill is rendered necessary by the admitted failure of the Underwood free-trade tariff law to yield sufficient revenue to run the Government, combined with the reckless, pork-barrel legislation of the present Congress.

I sometimes wonder how much longer the people of the great States of the North are going to stand the placing of practically the entire burden of Federal taxation upon the shoulders of their people and of the continual looting of the Federal Treasury for the benefit of the States of the South. As has already been so ably pointed out, four States, of which the State I have the honor in part to represent is one, will be obliged to pay three-quarters of all the revenue that will be raised under the income, corporation, and inheritance tax provisions of this bill in order that the money wrung from their people may be squandered on unnavigable streams and unnecessary public buildings in the Southern States. Raise the national revenue so far as can be by the American system of tariff duties on luxuries and articles coming into competition with American labor, and the balance by an equitable system of internal taxation, and spend the money thus raised for objects really necessary for the common defense and general welfare of the people of the whole country, and Massachusetts will cheerfully pay its share.

While this bill apparently has some good features cleverly inserted to attract Republican votes and to deceive the people, most of these prove on investigation to be a delusion and a snare. What little of good there may be in it is more than counterbalanced by the evils of continuing an unjust and unnecessary system of Federal taxation, which I believe will at the election in November be repudiated by the American people. As one of their Representatives I shall vote for a motion to recommit the bill to the Committee on Ways and Means, with instructions to bring in a proper and equitable revenue measure; and if that motion does not prevail, I shall be compelled to vote against the bill.

## Maintenance of Families of National Guardsmen Should be a Contract Duty of the Government, Not a Charity.

### EXTENSION OF REMARKS

OF

### HON. DAVID A. HOLLINGSWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Saturday, July 1, 1916.*

Mr. HOLLINGSWORTH. Mr. Speaker, availing myself of the unanimous consent granted to all Members, whether on the Military Committee or not, to print their remarks in the RECORD on the pending bill (H. R. 16734) to provide for the maintenance of the families and others dependent upon soldiers of the National Guard drafted into the service of the United States, I desire to put on record my most unequivocal approval of this measure. Its passage will create a contractual relation between the Government and the men it has called to the colors, binding alike upon all. It is not a charity; it is not perhaps a necessity on the part of the Government. It is simply a mutual contract for military service on the one hand and family care and maintenance on the other.

Already a just and patriotic people all over our broad land, through the churches, friendly societies, and many other systematically organized charities, are actively engaged in preparing to take care of the needy families and other dependents who have by the exigencies of war, over which they have no control, been suddenly deprived of their breadwinners. Gladly and willingly have a generous people undertaken this task.

But, after all, there being no legal obligation, it is at best only a charity liable to be withdrawn at any time upon adverse change in public sentiment.

There is also something in the acceptance of charity which causes hesitancy and regret on the part of thoroughly independent spirits, such as the families of our volunteer soldiers usually are and have a right to be.

The justly proud and faithful wife and mother hesitates long, hesitates sometimes until the larder is actually empty and the children cry for bread before seeking alms or even letting her needs be known to her charitably inclined neighbors.

Pass this bill and she ceases to depend upon charity; the Government becomes her debtor, and its check in payment can be accepted by her without any feeling or thought of humiliation and with the same independent spirit in which we accept the princely salaries paid to us as Members of the House under our contract with the same Government. She furnishes as her contribution a brave young soldier to the Government, that which is all in all to her, while we, for a much larger payment to us than is given her in this bill, furnish—well, some of us talk, some think, some work in the committee rooms, some, crowded out of desirable committee work, sit around in the House and listen like bumps on a log, and others go to the ball games or home to look after their political fences. Something is said in criticism of the large expense incident to the passage of this bill. All wars are costly. But a glance at the fabulous appropriations made and further expected to be made by this Congress in preparation for possible future wars, which, many think, may never occur, will suggest to thoughtful Members other and better places for the exercise of economy on the part of a great Nation than by any cheese-paring denial of proper provisions for the care and comfort of the families and dependents of those who go bravely to the front to fight for the common honor and rights of all our citizens. As happily expressed by our minority leader, I am proud of the "opportunity to help by contributing my little mite—staying here—to help take care of those dependent upon the ones who go to the front."

A distinguished Member and leader at the other end of the Capitol, where this same provision for the maintenance of the families and dependents of soldiers while in service was stricken out of another bill as it passed the House, is quoted as favoring an addition of $100,000,000 to the amount appropriated by the House for Army purposes, and as saying they expect such figures to stagger some Members of the House. No doubt of it, although some rural Members like myself are already staggered at the stupendous amounts already included in the revenue bills of this Congress.

Such figures are also likely to startle the country if this just measure shall again be thrown out of the Senate when passed by the House, as it will be to-day.

## Labor Legislation.

PROMISES AND PERFORMANCES.

"Thus, the workers have before them the platform declarations of the Republican, Democratic, and Progressive Parties upon the subjects which most directly affect them. Now, the workers must make up their minds as to which of these political parties is most likely, if intrusted with power, to carry their declarations into effect, and to the adequacy of the response which each party made to labor's demands. For 30 years wage earners had vainly endeavored to secure the amendment of the Sherman antitrust law, so as to place voluntary organizations of toilers outside the pale of antitrust legislation that they should not be regarded in the same category as trusts and organizations organized for profit. For 30 years organized labor had been vainly knocking at the door of Congress to secure relief from the injunction abuse and to have restored the right of trial by jury in contempt cases. For 30 years the workers of America had vainly asked Congress to relieve the seamen from the position of bondmen, and all this occurred under the domination of Congress and the Presidency by the Republican Party. The Democratic Congress passed and President Wilson signed the Clayton antitrust law. * * * The Democratic Congress passed the seamen's act, and President Wilson signed the act."—(Samuel Gompers, president American Federation of Labor, in Federationist.)

### EXTENSION OF REMARKS

OF

### HON. DAVID J. LEWIS,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. LEWIS. Mr. Speaker, in the six years since the Democratic Party has been in control of the House of Representatives and the three years since it controlled the Senate the following bills affecting the rights of laboring men have become laws:

BILLS NOW LAWS.

First. The eight-hour law, applying to work done for the Government as well as work done by the Government.

Second. An eight-hour law applying to female employees in the District of Columbia, over which Congress has jurisdiction.

Third. The dredge workers' eight-hour bill applying to men employed on dredging work in our rivers and harbors.

Fourth. An eight-hour provision applicable to civilians engaged in the manufacture of ordnance and powder for the Government.

Fifth. An eight-hour provision for post-office clerks and carriers.

Sixth. An eight-hour provision as to the mining of all coal to be used by the Navy.

Seventh. The Children's Bureau bill to promote the welfare of children and to devise means preventive of the necessities of parents retarding development of the child.

Eighth. The Industrial Commission bill to investigate the entire subject of industrial relations.

Ninth. The phosphorus match bill to protect the health of workers in the match industry.

Tenth. The trades disputes act embracing the relation of labor organizations to the antitrust laws of the country; the regulation of the issuance of injunctions, and the guaranty of the right of trial by jury for alleged contempts committed out of the presence of the court.

Eleventh. The seamen's bill. This bill passed the Sixty-second Congress and was pocket vetoed by President Taft. Its principal objects look to abolishing imprisonment as a penalty for desertion, and corporal punishment on board ship, Sunday work while in safe harbor reduced and regulated, establishes seaman's right to half wages upon arrival at any port, and 120 feet boat space for each seaman and apprentice; two years' service on lakes, bays, and sounds to entitle the sailor to rank of able seaman; and 12 months on the sea; regulating the number of lifeboats and saving equipment each vessel is to carry.

Twelfth. A great many State labor laws have been invalidated by the States courts. This provision allows an appeal to the Supreme Court of the United States in such cases, and will doubtless save many State laws, as, for example, the semimonthly pay law of New York, recently sustained by that court. As the law formerly stood, when a labor statute was stricken down by a State court, the laborer could not appeal to the Supreme Court to have it sustained. But his adversary, on the other hand, could go to the Supreme Court to again attack the measure if his attack failed in the State court.

Thirteenth. The Department of Labor bill, creating a department with a Secretary who shall be a member of the President's Cabinet. Mr. Speaker, the Department of Labor is a real living and dynamic fact. And why? Its Secretary is a real son of labor. I insert his biography as taken from the Congressional Directory:

William Bauchop Wilson, of Blossburg, Pa., Secretary of Labor, was born at Blantyre, Scotland, April 2, 1862; came to this country with his parents in 1870 and settled at Arnot, Tioga County, Pa. In March, 1871, he began working in the coal mines; in November, 1873, became half member of the mine workers' union; has taken an active part in trade-union affairs from early manhood; was international secretary-treasurer of the United Mine Workers of America from 1900 to 1908, having been elected each year without opposition; is engaged in farming at Blossburg; is married and has nine children; was elected to the Sixtieth, Sixty-first, and Sixty-second Congresses from the fifteenth congressional district of Pennsylvania; chairman Committee on Labor, House of Representatives, Sixty-second Congress. Took the oath of office as Secretary of Labor March 5, 1913.

Surely in the case of the Department of Labor there was no "making the promise to the ear and breaking it to the heart." A distinguished Member of this House has said that if in argument you should grant the Secretary of Labor any of his premise, defeat was certain to follow, so surely does his Scotch processes of logic plow their way through all obstructions when given a single admission. He is a credit to his race. He is a credit to the labor sentiment of the country, which has trusted and supported him, and a credit to the administration whose arduous responsibilities he so splendidly shares. Surely in William B. Wilson labor has a voice in the great councils of the Nation.

It is high time, Mr. Speaker, that industrial controversies should be adjusted on the merits rather than by force.

In his address in Washington on Tuesday, at the dedication of the new building of the American Federation of Labor, President Wilson made an earnest plea for the application of law and reason to the settlement of industrial disputes.

"If you come at me with your fists doubled, I think I can promise you that mine will double as fast as yours, but if you come at me and say, 'Let us sit down and take counsel together, and, if we differ from one another, understand why it is we differ from one another, just what the points at issue are,' we will presently find that we are not so far apart after all—that the points in which we differ are few and the points in which we agree are many, and that if we only have the patience and the candor and the desire to get together, we will get together.

"The trouble in a great many of the labor contests we have had, my fellow citizens, as you will bear me out in saying, is that one side or the other did not wish to sit down and talk it over, and that the great difficulty in the settlement of a great many labor disputes has been the difficulty of getting candid and dispassionate conference with regard to the points at issue."

During the period from March 4, 1913, to June 6, 1916, the good offices of the department were invoked in 238 trade disputes. In 149 of these instances it was successful in bringing about an amicable adjustment. In only 33 cases were its efforts unsuccessful. In the balance, 52 cases, negotiations are still pending. Workmen directly affected were 249,810; those indirectly affected, 341,802. The disturbances ranged in magnitude from a controversy affecting directly some 8, and indirectly some 300 telegraphers, to the great Colorado, West Virginia, and Ohio mine strikes, as well as that of the longshoremen on the Pacific coast, involving from 10,000 to 20,000 workmen. They affected many and varied industries, and extended from Massachusetts to California. It is hardly possible to overstate the serious consequences which might have ensued had these struggles been permitted to proceed to the point where one of the contestants was forced to surrender, but certain it is that through the mediatorial influences which the Department of Labor was enabled to bring to bear, millions of dollars in property interests have been conserved, and the untold sufferings and misery on the part of workmen, which are the usual concomitants of prolonged strife, averted.

February, 1915, to April, 1916, officers of the Immigration Service, in the Department of Labor, in addition to their regular duties, did this work for the unemployed:

Nineteen thousand nine hundred and four employers applied for help.

Seventy-six thousand and thirty persons were applied for.

Two hundred and twenty-four thousand and ninety-seven applied for jobs.

Sixty-two thousand six hundred and fifty-nine got work.

In 1914, 75,000 field workers got $2.75 a day and board for an average of four weeks through the Department of Labor. In all, the department secured over $7,000,000 in earnings for labor.

THE EIGHT-HOUR LAWS.

Of these eight-hour bills the present Secretary of Labor, Hon. William B. Wilson, who is a former coal miner, who entered the coal mines at 9 years of age, an experience identical with my own, observes:

It has been said on the floor of this House that the labor measures we have passed would not give an additional sandwich to any wage-worker. This act alone will reduce the hours of labor of hundreds of thousands of workmen directly or indirectly employed by or for the Government, giving greater opportunity for rest, recreation, and mental development to those who are affected by it. It will do more than that. While men working an 8-hour workday can naturally be more efficient per hour than when working 10 hours, it has never been contended that men can accomplish as much in 8 hours as they can in 10. The shortening of the workday, therefore, means the giving of employment to thousands of those who are now among the unemployed, giving them an opportunity of earning a livelihood which they do not now have, and that means not only a sandwich, but a full meal.

LABOR'S MAGNA CHARTA.

Mr. Speaker, it is no exaggeration to say that the above law is the greatest single piece of legislation ever passed for the legal protection of laboring people on the American Continent. At a single stroke it adjusts all the perversions of ex parte court procedure that have arisen by the confessed misuse of the injunction so frequently occurring, grants the constitutional right of trial before an open-minded jury, and corrects the juridical mistake as to the intent of Congress in passing the Sherman law. It is not too much to say, I repeat, that by this single stroke of the legislative hand more is being done in our country to rectify the judicial status of the great toiling masses than has ever been accomplished in our history before. Nor does this mean violent or radical treatment of the relations of labor and capital.

Section 7 of the Clayton bill, taken with its complementary sections, places the American workman where the British workman was placed by Parliament in 1906. The British experience shows that property will be as safe, the rights of employers will be as secure, with this measure enacted into a law, a measure which I predict will become known as the Magna Charta of American workmen.

Everybody understands that section 7 would have been written into the Sherman Act in 1890 had there been any thought of the interpretation since made of that great act. Everybody knows that Congress at that time had no thought of legislating with regard to the relations of employers and employees. I challenge contradiction for that statement. If Congress had ever intended to legislate upon these relations and saw fit to do what the States may well do and are doing, for it is their subject matter and not a Federal subject matter—prescribing penalties for individual wrongs when committed—I challenge gentlemen of this House to say that Congress would have ever said to the toiler: "If you overstep the line and commit a tort, you shall be subject to threefold damages." That was the natural sentence to have pronounced on the trust, an outlaw organization that sought to suck up all the commercial profit

and power of the Republic. That is a sentence—the sentence of outlawry—that never can be pronounced, now nor in the future, on a peaceful organization of workingmen.

I know there is some misapprehension. Some honest people are inclined to think that this section of the Clayton bill may mean a species of class legislation. They commit the error of considering labor as a commodity, a natural error inspired by the circumstances under which the price of labor, unfortunately, is sometimes determined by the iron laws of the market; but there is this distinction between labor and a barrel of oil—a commodity: Labor is never in truth a commodity; labor can never under our institutions be property, either before the court or before the legislature. The Civil War settled that. Under our Constitution property in human beings has forever ceased. While a barrel of oil is not only a commodity in the market it is a commodity before the courts; it is a commodity before the legislature. The legal attribute of a commodity is property, but the legal attribute of the workingmen is citizenship. A different principle of sociology and justice apply to these two subjects matter when they are before Congress or before the courts. The rules that are rationally applicable to the commodity can seldom be justly applied to the man.

Quoting from President Wilson again, on the same occasion:

"I am sorry that there were judges in the United States who had to be told that. It is so obvious that it seems to me that that section of the Clayton Act was a return to the primer of human liberty; but if judges have to have the primer opened before them, I am willing to open it."

BILLS WHICH HAVE PASSED THE HOUSE.

First. The Bureau of Safety Devices bill. This measure, the Mann-Bremner bill, already favorably reported in the Senate, is designed to create in the Department of Labor a clearing house for devices preventive of industrial accidents. The ratio of accidents in the United States tends to run from two to four times as great as in other countries, and it is meant through this bureau to supply employers and employees with the best methods and devices in order to reduce as far as possible the frightful carnage in life and limb.

Second. The child-labor bill. Mr. Speaker, this bill calls for the most thorough discussion, but for my present purpose I can only briefly describe its provisions. Urging the precedent of the convict-labor-made goods bills which have already passed this House, it provides—

That it shall be unlawful for any producer, manufacturer, or dealer to ship or deliver for shipment in interstate commerce the products of any mine or quarry which have been produced in whole or in part by the labor of children under the age of 16 years or the products of any mill, cannery, workshop, or manufacturing establishment which have been produced in whole or in part by the labor of children under the age of 14 years, or by the labor of children between the ages of 14 years and 16 years, who work more than eight hours in any one day or more than six days in any week or after the hour of 7 o'clock postmeridian or before the hour of 7 o'clock antemeridian.

I believe, sir, that the tender conscience of the people where childhood is involved and the national sense of the necessity of Federal action to protect those who can not protect themselves will justify us in passing this bill reported from the Committee on Labor, passed twice by the House, approved in the Democratic platform, and now pending and awaiting its turn on the calendar of the Senate.

The last two bills have received the indorsement of the Democratic platform, and will doubtless become laws during the Sixty-fourth Congress.

I say it is something more than a coincidence that these measures have passed a Democratic Congress and were not even considered by the Cannon rule. What is the cause? What is the difference? The difference, sir, I submit is this: The party of JOSEPH G. CANNON represented only a part of the people. The party of Wilson and CLARK represents them all. One is the Tory, who thinks all law-made changes are dangerous, and, as Wendell Phillips said, is afraid to brush down the cobwebs lest the ceiling may fall. The other is the Liberal and Progressive, who knows that as social and economic conditions change so must change the rules of the State which regulate the relations of human beings.

Mr. Speaker, it is not claimed for these measures that they will end the labor problem; that they will realize for labor all its rights or secure the employer from all occasional wrongs. We know that the rights of labor involve vastly more than its relations to the employer. Having secured fair wages and conditions of employment from his employer, the workman has then to meet that other problem common to all consumers, namely, how shall he be able to make his wages bring him an equitable share of the products of other men's labor? And it is here even more than with the employer that his task of rightful adjustment really lies.

A brilliant orator a generation ago, taking his inspiration from the magnificent achievements in mechanics, declared that the inventor would soon emancipate the sons of toil from their physical drudgery and painful forms of labor by the substitution of machine for pick and spade. Well, sir, what do we find? Truly the inventor is doing his part; but how about the correlative processes of exchange and distribution? Well, that problem remains unchanged, and has now become so aggravated as to be generally conceded as the cause of our high cost of living. How shall he make his wages bring him something like an equivalent of what he gave for such wages? I think all students now agree that the labor problem has become chiefly the consumers' problem. It is something to have stated the problem clearly. I shall do no more to-day. But, sir, we do not leave this problem, momentous as it is, entirely without hope. There ought to be some way by which the inordinate tax imposed by the processes of distribution—the tax that doubles, yes, trebles, the price of the product between producer and consumer—may be greatly lightened. In the last two generations the producer and transporter have done their part in cheapening the cost of the article. Productive and transportation costs have been pulled down and down in an almost never-ending scale of reduction. Meanwhile distribution agencies, unorganized and ever multiplying, show a piling up of expenditures, ever increasing the distribution tax, from which all must suffer, for we are all consumers. Can not this problem be adjusted? Must we confess our helplessness in its presence—this ever-widening maw that is swallowing nearly all of the fruits of mechanical advancement, and threatens to swallow more?

In this connection we can point to the development of the parcel post by this administration as a promising means, when our people learn to use it, to purchase direct from the trucker and farmer and as it becomes further perfected for that purpose.

Mr. Speaker, such is the record of the Democratic Party in labor legislation in the Sixty-second and Sixty-third and Sixty-fourth Congresses. Valuable as it is in itself, it is yet even more significant as an earnest of the fixed determination of our party to meet the problems of a growing and changing state of society and to adjust them—to adjust them calmly and justly, but to adjust them. It can not be said that our work has been partial and one-sided and that we have confined our work to a single class. We have met in the same spirit all the problems of our day. The direct election of Senators, the parcel or postal express, the prevention of corrupt practices at primaries and elections, the national banking law, the antitrust laws, the conservation bills, the income tax, the rural-credits law, the Shackleford road law, and many other useful measures in the interest of society generally. Compare this record with the almost blank pages under standpatism for 20 years—a record of unblushing toryism and inertia.

Mr. Speaker, with the rescue of this House under your leadership and a responsible Senate through direct election of its Members, with a President the very first premier of his age, with a people loosened from the bonds of party prejudice which have bound them, can we not look confidently into the future, assured that its patriotism and statesmanship will justly solve the other great problems that are before us?

### EXTENSION OF REMARKS

OF

### HON. RALPH W. MOSS,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, July 7, 1916.*

Mr. MOSS of Indiana. Mr. Speaker, it must be understood that a borrower under this bill can choose the length of time he wishes his debt to run, provided the period is not less than 5 nor more than 40 years. The rate of interest will be the same, whether he chooses a long or a short period of repayment, but the annual installment will vary. His annual payment will be larger for a short period than for a longer one for the same amount at the same rate of interest. Thus if two neighbors were to borrow $1,000 each at 5 per cent interest, and agree to pay the debt, one man choosing 20 years and the other one 36 years,

their annual installment payments would be different. The man who chose 20 years would be required to pay $80.24 per year, while the one who chose 36 years would pay annually $60.43. The following tables will illustrate how these installments will be credited upon the note and show what part goes for interest and what part is credited upon the principal. The table also shows what sum remains unpaid at the end of any year. It will be noticed that while the annual installment remains the same, the sum deducted to pay interest is constantly decreasing, and, of course, that part which is applied to the payment of the principal is constantly increasing. Similar tables may be prepared for any contract which the borrower may make with the bank. I trust that these two tables will illustrate sufficiently the method of making "amortization" payments on long-time loans. I have computed the 36-year table showing an annual installment of $60, and, as noted, there remains a balance of $41.60 after the last payment is made. If the annual payment had been $60.43, the debt would have disappeared when the thirty-sixth payment was made.

This table shows an annual installment of $80.24 made on a loan of $1,000 at 5 per cent interest to mature in 20 years.

| Annual periods. | Total annual payment | Interest at 5 per cent. | Paid on principal | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $80.24 | $50.00 | $30.24 | $969.76 |
| 2 | 80.24 | 48.48 | 31.75 | 938.00 |
| 3 | 80.24 | 46.90 | 33.34 | 904.67 |
| 4 | 80.24 | 45.23 | 35.01 | 869.66 |
| 5 | 80.24 | 43.48 | 36.76 | 832.90 |
| 6 | 80.24 | 41.64 | 38.59 | 794.31 |
| 7 | 80.24 | 39.71 | 40.52 | 753.79 |
| 8 | 80.24 | 37.68 | 42.55 | 711.23 |
| 9 | 80.24 | 35.56 | 44.68 | 666.56 |
| 10 | 80.24 | 33.32 | 46.91 | 619.64 |
| 11 | 80.24 | 30.98 | 49.26 | 570.39 |
| 12 | 80.24 | 28.51 | 51.72 | 518.67 |
| 13 | 80.24 | 25.93 | 54.31 | 464.36 |
| 14 | 80.24 | 23.21 | 57.02 | 407.34 |
| 15 | 80.24 | 20.36 | 59.87 | 347.46 |
| 16 | 80.24 | 17.37 | 62.87 | 284.60 |
| 17 | 80.24 | 14.23 | 66.01 | 218.59 |
| 18 | 80.24 | 10.93 | 69.31 | 149.28 |
| 19 | 80.24 | 7.46 | 72.78 | 76.50 |
| 20 | 80.24 | 3.82 | 76.50 | ---------- |
| Total | 1,604.80 | 604.80 | 1,000.00 | ---------- |

This table shows the payments made on a loan of $1,000 at 5 per cent interest, with an annual installment of $60. This loan fails slightly to mature in 36 years, there being a balance of $41.60 due when the thirty-sixth payment is made:

| Annual periods. | Annual installment. | Interest at 5 per cent. | Part of installment paid on principal. | Amount of principal still unpaid. |
|---|---|---|---|---|
| 1 | $60.00 | $50.00 | $10.00 | $990.00 |
| 2 | 60.00 | 49.50 | 10.50 | 979.50 |
| 3 | 60.00 | 48.97 | 11.03 | 968.47 |
| 4 | 60.00 | 48.42 | 11.58 | 956.89 |
| 5 | 60.00 | 47.84 | 12.16 | 944.73 |
| 6 | 60.00 | 47.24 | 12.76 | 931.97 |
| 7 | 60.00 | 46.60 | 13.40 | 918.57 |
| 8 | 60.00 | 45.93 | 14.07 | 904.50 |
| 9 | 60.00 | 45.23 | 14.78 | 889.72 |
| 10 | 60.00 | 44.49 | 15.51 | 874.21 |
| 11 | 60.00 | 43.71 | 16.29 | 857.92 |
| 12 | 60.00 | 42.90 | 17.10 | 840.82 |
| 13 | 60.00 | 42.04 | 17.96 | 822.86 |
| 14 | 60.00 | 41.14 | 18.86 | 804.00 |
| 15 | 60.00 | 40.20 | 19.80 | 784.20 |
| 16 | 60.00 | 39.21 | 20.79 | 763.41 |
| 17 | 60.00 | 38.17 | 21.83 | 741.58 |
| 18 | 60.00 | 37.08 | 22.92 | 718.66 |
| 19 | 60.00 | 35.93 | 24.07 | 694.59 |
| 20 | 60.00 | 34.73 | 25.27 | 669.32 |
| 21 | 60.00 | 33.47 | 26.53 | 642.79 |
| 22 | 60.00 | 32.14 | 27.86 | 614.93 |
| 23 | 60.00 | 30.75 | 29.25 | 585.68 |
| 24 | 60.00 | 29.28 | 30.72 | 554.96 |
| 25 | 60.00 | 27.75 | 32.25 | 522.71 |
| 26 | 60.00 | 26.13 | 33.87 | 488.84 |
| 27 | 60.00 | 24.44 | 35.51 | 453.28 |
| 28 | 60.00 | 22.66 | 37.34 | 415.94 |
| 29 | 60.00 | 20.80 | 39.20 | 376.74 |
| 30 | 60.00 | 18.84 | 41.16 | 335.58 |
| 31 | 60.00 | 16.78 | 43.22 | 292.36 |
| 32 | 60.00 | 14.62 | 45.38 | 246.98 |
| 33 | 60.00 | 12.35 | 47.65 | 199.33 |
| 34 | 60.00 | 9.97 | 50.03 | 149.30 |
| 35 | 60.00 | 7.46 | 52.54 | 96.76 |
| 36 | 60.00 | 4.84 | 55.16 | 41.60 |

Balance due after 36 payments is $41.60. The exact annual installment required to discharge the obligation in full within the period of 36 years is $60.43.

Annual installments for larger or smaller sums will be in proportion—that is, an installment for $500 will be one-half as large as for $1,000, while it will be twice as large for a debt of $2,000 as for a debt of $1,000.

## Justice to Confederates.

## EXTENSION OF REMARKS

OF

# HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. HUDDLESTON. Mr. Speaker, on Monday, June 26, 1916, the House, having under consideration the Army appropriation bill, adopted an amendment which I offered repealing section 4716 of the Revised Statutes. The bill carrying this amendment as a rider, after being passed by the House, was sent to the Senate, where it has been reported favorably by the Committee on Military Affairs, so that the measure embodied in the amendment will doubtless become a law in a few days.

My amendment, the effect of which was to make Confederate soldiers and their widows eligible for pensions, has excited much public interest. Newspapers, especially in the South, have expressed hearty approval of my action in offering the amendment, and in consequence I am receiving many letters making inquiries on the subject. Few of these letters have come from my own district. I attribute this to the fact that only one of the newspapers in my home city has mentioned the adoption of the amendment or printed anything concerning the matter. However, as nearly all these letters of inquiry come from former Confederate soldiers and their widows, I have felt impelled to answer them at length, explaining the purport of the amendment and the effect that the repeal of the statute will have.

I have felt it my duty to explain at length on account of my high respect for the class of persons from whom the inquiries come. It has occurred to me that the scope of the amendment and its meaning should be explained in full in the CONGRESSIONAL RECORD, so that all persons interested may have access to the information.

Section 4716 of the Revised Statutes, which is the statute under which those who served in the Confederate Army or aided the Confederacy are made ineligible to receive pensions, is as follows:

> No money on account of pension shall be paid to any person, or to the widow, children, or heirs of any deceased person, who in any manner voluntarily engaged in or aided or abetted the late rebellion against the authority of the United States.

Under this statute soldiers who had been pensioned for service in the Mexican and Indian wars were dropped from the pension rolls. Men who served in the Regular Army and Navy after the Civil War were made ineligible to receive pensions. Dependent parents of sons who lost their lives in the Regular Army and Navy could not be pensioned. Widows were denied pensions for the death of a husband or son. If a man had in any way aided or abetted the Confederacy, had served under its flag or sympathized with it, he, and after his decease his widow, were forever barred from eligibility as pensioners. In short, the Confederate soldier and sympathizer, his wife and family, were selected as the one class to whom under no circumstances would pensions be paid.

Under the statute the Confederate soldier and sympathizer, his wife, and children were selected as the peculiar objects of the Government's displeasure. Pensions were paid to parents who were not citizens of the United States on account of the service of their sons in our Army. In 1915 residents of foreign countries to the number of 4,660 were on our pension rolls. Even criminals were pensionable. Of all classes of persons this statute raised the bar only against those who had aided or abetted the Confederacy and their wives and children.

The harshness of the statute (sec. 4716, R. S.) was recognized soon after its passage, and its severity has been softened by a number of amendments. By act approved March 3, 1877, the statute was amended in so far as it applied to persons who, after the Civil War, entered the United States Army and were disabled therein. Again, by act approved March 9, 1878, it was amended so as to restore to the pension rolls pensioners of the

War of 1812 and the Indian wars, whose names had been dropped on account of their connection with the Confederacy. By act approved July 29, 1887, it was provided that section 4716 should be repealed in so far as it was applicable to persons who had served in the Mexican War. Persons who had served in the Black Hawk, Creek, Cherokee disturbances, and Seminole wars, were, by act of July 27, 1892, excepted from the statute. By act approved August 1, 1892, the statute was again amended so as to make pensionable those who had been disabled while serving in the Navy after the Civil War. Again, by act of April 18, 1898, the statute was repealed in so far as it applied to parents of soldiers of the Spanish War.

By the adoption of the amendments which I have mentioned, section 4716 and its prohibitions were left applicable only to Confederate parents of soldiers serving in the Regular Army and Navy other than in the Spanish War. The old Confederate men and women against whom the statute was thus left as a bar comprised a very limited number of persons. However, with the conscription of the National Guard for service in the Mexican trouble many thousands of young men of the South have been called into the Army. Many of these patriotic young soldiers are sons of Confederate veterans. Some of them have mothers who are the widows of Confederates, who are dependent upon them for support. It would be a most outrageous injustice to draft these southern boys into our Army under such terms as would make it impossible for their dependent parents to receive pensions if their boys should lose their lives in the Army.

It would be an action unworthy of our great Government to draft our southern boys into service upon terms which discriminated against their parents. They must receive equal treatment. The parents of soldiers from the South must be placed upon an equality with parents of soldiers from other parts of the country. The offer of my amendment to repeal the discriminating statute was timely, and its adoption by the unanimous voice of Congress was inevitable.

The purpose and effect of my amendment should not be misunderstood. It does not give pensions to Confederates or their widows as such. It does not grant pensions for service in the Confederate Army. It merely repeals the statute which forbade that pensions should be paid them on any account. It takes down the bar and places the old Confederate and his widow upon the same footing as other citizens. In other words, if a former Confederate soldier has rendered a service for which the law would give anyone else a pension he is enabled to receive the pension notwithstanding his Confederate service. For instance, if the son of a Confederate or of a Confederate's widow loses his life in the Regular Army and Navy, or in Mexico, his parents dependent upon him for support may be pensioned just as though they had not aided the Confederacy. His parents are placed upon the same footing as other people.

From the newspaper accounts of the amendment, some former Confederates have been given the impression that they are to receive pensions from the Government the same as though they had served in the Union Army. This is a great error. No pensions are to be paid to them or to Confederate widows on account of Confederate service. The repeal of the statute serves merely to wipe out all disability on account of such service.

The matter of the payment of pensions by the Federal Government to the Confederate soldier has been frequently mentioned during recent years. It has now come to be generally recognized in the North as well as in the South that the Confederate soldier was a patriot, that he was conscientious in his service, and that in serving his State after it had seceded from the Union he believed himself to be performing the highest duty of a citizen. That the Confederate soldier fought nobly and well, that he was a brave and chivalrous soldier has never been denied even in the midst of our bloody civil strife. As the years go by the disposition increases to look upon him as a high-minded patriot who served his country as he saw it and who suffered and bled for his convictions. The old Confederates are passing away. Few and fewer gather at their reunions. Soon they will live only in their splendid history. With all this has come a fairer and more generous spirit over the country, as a whole, to give some recognition by the National Government to those who fought on the losing side in the sixties.

Unfortunately, there are yet many who can not see the way clear for the National Government to do anything in a material way toward making more easy the declining years of the old Confederate veterans. Principle seems to be in the way. Principle seems to forbid that the Government against which these men felt it a duty to take arms should appear to reward them for their action. It is to be hoped that some plan may yet be devised by which some aid can be given to the old soldiers of the South. Many of them would decline to receive pensions from the Government. They would consider that a question of honor was involved and that the acceptance of pensions would constitute a betrayal of the cause for which they fought. Others would perhaps look upon the matter in a different light. I personally know that many of these old soldiers are in dire need and are eking out a bare existence upon the small pension which they receive from the States. I wish that some way might be found by which the National Government consistently with proper public policy might give some material aid to destitute Confederates and their widows in a manner in which the most delicate sense of honor would permit its acceptance.

My friend the gentleman from Arkansas [Mr. TILLMAN] has introduced a bill which has for its purpose the payment of the cotton tax and the proceeds of captured and abandoned cotton into a fund from which Confederate soldiers and widows might be aided. This seems to me a good solution of a vexing question. The National Government has no moral right to this money. The persons to whom it rightfully belongs are dead and their heirs are scattered, and the proof is gone with which to sustain their claims. I trust that the committee having the Tillman bill under consideration will make a favorable report on it and that the Confederate beneficiaries may approve the proposal. I shall be happy, indeed, to support the measure to the utmost of my ability.

Mr. Speaker, although I am heartily in favor of same, I fear that the delay in acting upon the generous measure proposed by Mr. TILLMAN indicates that it is not favored by the committee, and therefore will not be enacted into law. It seems more than doubtful that Confederate soldiers and their widows may hope for any material aid from the Government. These brave spirits, it seems, will be left to console themselves with the glorious memories of their struggles and sacrifices.

I am proud that I was able to contribute my mite toward their recognition and relief by securing the repeal of the statute which discriminated against the Confederates. The advantage which they may receive from my action may not be great. It will testify, however, to the love, respect, and veneration which I cherish and which I am proud to acknowledge for the noble men and women of the Confederacy.

---

## "Well Done."

---

### EXTENSION OF REMARKS

OF

### HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. MEEKER. Mr. Speaker, in the June number of Voices I find a brief message from the gentleman from Minnesota [Mr. SCHALL] which should be an inspiration to us all. Such a message, coming from a man who is physically blind and yet, as we all know, has such a marvelous vision of things as they really are, is worthy of a place in the RECORD.

His words to the blind and to the unfortunate are as follows:

"THOMAS D. SCHALL, Member of Congress from Minnesota, sends us the following:

"Let us give thanks—
Friends are dear and duty lies close at hand.

"'To the blind more than to any other class duty is his pleasure and friends are the breath of life. The hand that reaches out of the dark, the friendly voice that says "Well done," is the keenest pleasure the blind man knows. It is not charity, it is not sympathy the blind man craves, it is opportunity. The penny in the blind man's cup means a glow of self-satisfaction to the donor. The only real help to the blind man is that which enables him to put his own penny's worth in his cup.

"'"How can you possibly do that work, being blind?" is not the question the seeing person should reiterate, but, "How could you possibly get that work to do, being blind?"

"'The doors of opportunity, so well barricaded against assault by even the nimblest and best trained, are doubly fortified against the blind. The burden of proof is on him, not only that he is qualified in general training but that he is able to apply that training to this particular job. The majority of people unconsciously associate mental with physical blindness.

"'Although they invariably assert that "Blindness develops a sixth sense," they are fain to deny that the blind man may

possess common sense. And so of the employers I ask not that you give the blind man a chance, but that you shall not deny him his chance because he happens to be blind. Idleness, not blindness, is the curse of being blind.

"'And to the blind I would say, "Our strength is shown not in never falling but in rising when we fall."'"

## Mississippi Valley and Eastern Wine Growers Defending Themselves Against Annihilation by California Wine Trust.

### EXTENSION OF REMARKS
OF
### HON. JACOB E. MEEKER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. MEEKER. Mr. Speaker, I wish to present at this time the amendments which I would have offered to the revenue bill had it been possible for me to get in, but because of the lack of time on the part of the committee I insert here the amendments which I would have offered, in the earnest hope that each and every one would have been adopted.

I wish to further extend my remarks by incorporating a very carefully prepared brief of the whole situation as exists between the vineyard men and wine makers of Missouri, Illinois, Ohio, and, in fact, all of the Eastern States, and the great Wine Growers' Association of California. I sincerely trust that this brief will be considered by every Member of Congress for the sake of seeing that justice is done to the grape growers and wine manufacturers of the Middle and Eastern States, and to the further end that while the vineyard men of California will not be crippled by the legislation proposed, the life of the vineyard men of the Middle and Eastern States will be preserved.

Mr. MEEKER offers the following amendments:

Page 70, line 13, strike out the word "fruit."

Page 70, line 14, strike out the word "special."

Page 70, line 23, after the word "wines," strike out the words "cordials, liquors, or similar compounds."

Page 70, line 14, after the word "spirits," insert the words "or grain spirits."

Page 70, line 17, strike out the figures "10" and insert in lieu thereof the figures "70."

Page 70, line 18, after the word "spirits," insert the words "or grain spirits."

BRIEF ON VITICULTURE IN CALIFORNIA AS COMPARED WITH OTHER STATES.

[By Ottmar George Stark, president of Mississippi Valley Wine Growers' and Grape Growers' Association.]

ST. LOUIS, MO., *July 7, 1916.*

Hon. CLAUDE KITCHIN,
*Chairman Ways and Means Committee,*
*Washington, D. C.*

DEAR SIR: I respectfully submit data on the wine and grape industry in California as compared with that in the other States.

I am furnishing you figures which I, while in Washington, D. C., copied from the United States census books of 1910 and from the records of the United States Internal Revenue Department at Washington, D. C., to wit:

The number of farmers growing grapes in 1910, the number of grape vines existing in 1910, and the number of pounds of grapes produced in the years of 1899 and 1909 in the various States, respectively, were as follows:

[—means decrease, +means increase.]

| | Number of farmers growing grapes in 1910. | Number of grape-vines in 1910. | Number of pounds of grapes produced in 1899. | | Number of pounds of grapes produced in 1909. |
|---|---|---|---|---|---|
| Arkansas | 11,247 | 805,921 | 3,621,100 | — | 2,593,727 |
| Connecticut | 4,170 | 107,054 | 1,822,900 | — | 1,317,682 |
| Delaware | 1,309 | 260,963 | 1,375,300 | + | 1,938,267 |
| District of Columbia | 14 | 5,196 | 34,300 | — | 25,530 |
| Florida | 2,970 | 20,962 | 1,681,700 | — | 1,086,314 |
| Georgia | 15,831 | 277,658 | 8,330,485 | — | 2,767,366 |
| Illinois | 75,818 | 2,170,340 | 20,009,400 | — | 16,582,785 |
| Indiana | 73,892 | 1,049,232 | 18,651,380 | — | 12,817,353 |
| Iowa | 51,917 | 1,983,465 | 7,403,900 | + | 11,708,336 |
| Kansas | 44,311 | 2,889,845 | 15,786,019 | — | 6,317,684 |
| Kentucky | 26,956 | 605,002 | 5,134,215 | — | 3,680,182 |
| Maryland | 11,718 | 138,801 | 1,685,900 | + | 2,152,382 |
| Massachusetts | 6,003 | 58,277 | 1,308,300 | — | 1,132,838 |
| Michigan | 41,485 | 11,013,576 | 41,530,369 | + | 120,695,937 |
| Minnesota | 2,138 | 61,916 | 573,272 | — | 293,805 |
| Mississippi | 8,271 | 77,012 | 1,070,625 | — | 760,563 |
| Missouri | 75,888 | 3,026,526 | 13,783,656 | + | 17,871,816 |
| Nebraska | 29,403 | 1,221,736 | 3,171,034 | + | 4,752,217 |
| New Jersey | 5,368 | 1,603,280 | 4,235,000 | + | 6,501,221 |
| New Mexico | 820 | 250,076 | 1,515,900 | + | 423,415 |
| New York | 34,258 | 31,802,097 | 247,698,056 | — | 253,005,361 |
| North Carolina | 43,121 | 411,278 | 12,341,001 | + | 15,116,920 |
| Ohio | 82,576 | 8,326,800 | 79,173,873 | — | 43,933,207 |
| Oklahoma | 26,039 | 2,388,213 | 6,344,031 | — | 3,762,727 |
| Pennsylvania | 84,929 | 5,271,264 | 47,125,437 | — | 34,020,198 |
| Rhode Island | 534 | 7,662 | 189,700 | — | 152,937 |
| South Carolina | 12,239 | 79,708 | 3,323,835 | — | 2,016,506 |
| Tennessee | 23,675 | 338,758 | 4,355,122 | — | 1,979,480 |
| Texas | 13,495 | 712,201 | 4,086,220 | — | 1,802,618 |
| Virginia | 27,078 | 424,701 | 3,608,903 | + | 4,108,694 |
| West Virginia | 25,733 | 284,074 | 2,192,147 | + | 3,224,751 |
| Total | 863,204 | 77,673,594 | 563,169,080 | | 578,545,909 |
| California | 17,793 | 141,097,670 | 721,433,400 | | +1,979,686,525 |
| Grand total | 880,997 | 221,771,264 | 1,284,602,480 | | 2,558,232,431 |

You will notice that the increase of production of grapes in California during the period of 10 years from 1899 to 1909 has been enormous, principally due to the California wine industry.

The increase of grape production for the same period in New York and Michigan is also marked, which in Michigan is almost entirely due to its unfermented grape juice industry, and in New York State principally due to its unfermented grape juice industry and secondarily to its native wine industry. New York, Pennsylvania, and Michigan also ship vast quantities of choice "table" grapes all over the States.

Take notice that with the exception of the "wine" producing States of Missouri, New Jersey, New York, North Caro-

lina, Virginia, and West Virginia, in which there is a perceptible increase in the production of grapes, the remaining States show a decrease or standstill, excepting Michigan and California.

If you will eliminate the State of Michigan from the above quoted list of States, and it should be eliminated from a wine-grower's point of view and to bring out the point I am trying to make, for the increase of Michigan grape production is due almost exclusively to the establishment of unfermented grape juice factories in Michigan, then after such elimination from above list you will find the following:

[+ means increase; — means decrease.]

| | Number of pounds of grapes produced in 1899. | Number of pounds of grapes produced in 1909. |
|---|---|---|
| Total for the States listed above other than California.. | 563,169,080 | 578,545,909 |
| Deduct Michigan | 41,530,369 | +120,695,937 |
| Net for other States excluding California. | 521,638,711 | −457,849,972 |

Or a decrease of 63,788,799 pounds of grapes produced in 1909 than were produced in 1899 in the United States exclusive of Michigan and California.

On the other hand, behold the tremendous and rapid increase in California during the same period of time.

CALIFORNIA.

[+ means increase.]

| | |
|---|---|
| Number of pounds of grapes produced in 1899 | 721,433,400 |
| Number of pounds of grapes produced in 1909 | +1,979,686,525 |

Or an increase of 1,258,253,125 pounds of grapes produced more in 1909 than were produced in 1899.

The principal eastern wine manufacturing States are Ohio, Missouri, Virginia, New York, and New Jersey. The wineries buy up the bulk of the grapes grown at home, and in addition purchase grapes grown in North Carolina, West Virginia, Pennsylvania, Delaware, and Maryland; that accounts for a slight increase in the production in the last-named five States.

As aforesaid, the States east of California, in which wines were produced from their grapes, show a small increase in grape production (excepting Ohio). In these States "quality" wines were made in a limited capacity and to the full extent of the demand of the market, and more these wineries could not expand. Only with "quality" wines, i e., wines of high grade and fine vintages, could these eastern wine makers compete with California wine makers (for reasons hereinafter stated), as the California wines are not considered to be of the same high grade as are the better classes of Missouri and other eastern wines, including "sparkling" wines. As aforesaid, however, the market for "quality" wines is limited; on the other hand, there is a large field for cheap, ordinary wines (Vins Ordinaire).

This field was completely in the hands of the Californians. For some time most of the Ohioans tried to compete with the Californians in cheap wines, but could not meet their low prices, and the result was a loss of trade, respectively a decrease in the Ohio grape production, as the Ohio farmers could not sell all their wine grapes to the Ohio wineries, and consequently many pulled out the vines.

You will ask, Why could not the eastern wine makers compete with the California wine makers?

Here is the reason: The native sons of California were favored by a congressional act discriminating against the eastern wine makers and in favor of the California wine makers. True enough the Federal laws apply equally in all sections of the country, but the law for which I understand the Californians were responsible, was so cleverly worded as to effect us eastern wine makers unfavorably and the Californians favorably, because it described the "condition" of the wines to which would accrue the benefits of that act, and the description of said wines fitted exactly the California "type" of wines and left out in the cold altogether the eastern "type" of wines. This act of Congress became law on October 1, 1890, and immediately thereafter the California wine business began to boom; also the grape business. All attempts on the part of us eastern wine makers to get relief were in vain. Under that act the Federal Government permitted wine makers to add wine spirits (brandy) to their wines to preserve same without paying the $1.10 per gallon internal-revenue tax on the brandy, but as the eastern style of wines did not come under that class, only the Californians benefited by that law and rapidly grew immensely wealthy.

We eastern wine makers were denied such "tax free" brandy and therefore had to fortify our wines with spirits on which an internal-revenue tax of $1.10 on each gallon of 100 proof strength was collected. That put the eastern wine makers at a tremendous disadvantage and they could only market their wines at a high price and talk "quality."

Why did eastern wine men not make the same type of wine which the Californians make? That will be your question.

The reason is that in the section east of the Rocky Mountains grape growers have up to this date been unable to raise other grapes than those of American origin—such as Concord, Catawba, Elvira, Norton's Virginia Seedling, Scuppernong, and hundreds of other hybrids originating from the native wild grape. Many efforts by ourselves and others to grow European, Asiatic, and northern African grapes here resulted in failures, although the California vineyards are composed of those very varieties. However, they can not stand our climate, hot summers, or cold winters. Only our "native" grapes will stand such extreme climates of extremely cold blizzards in winter, and heat and drouth in summer; the foreign southern varieties die before the winter is over and the northern European varieties die during the hot, dry summers.

The horticultural departments of the various States will verify this claim.

The report of the United States Commissioner of Internal Revenue for the fiscal year ending June 30, 1912, states that during that fiscal year 6,322,303.9 gallons of full 100-proof strength of brandy spirits were used by mixing same with wines for the purpose of fortifying same and preserving same, and the greater portion of the wines were overfortified by making same excessively high in alcoholic strength, 48 proof or over half as strong as whisky as a rule is sold and consumed, being highly intoxicating, and such overfortified wines were sold to patent medicine manufacturers and other manufacturers, who bought the wines only because they need alcohol to make their medicines and their temperance drinks, and the alcohol in the wine was cheap as the Government did not collect the customary tax of $1.10 per gallon of 100-proof strength. Thus the Government which meant to help develop the legitimate wine industry was shamefully defrauded out of millions of dollars of tax annually—6,322,303.9 proof gallons of brandy at $1.10 tax per proof gallon would amount to $6,954,534.29. The greater portion of this tax remitted by the Government for the benefit of the American wine industry in fact became a "bonus" to the patent medicine industry, and a good many patent medicines are alcoholic beverages sold under disguise in prohibition States and in local option counties.

On October 1, 1890, as aforesaid, the Federal act gave wine makers brandy for fortifying wines and no tax was collected on the brandy.

On June 7, 1906, this act was amended and a nominal charge of 3 cents was assessed against such brandy and was thereafter collected in order to reimburse the Government for the official supervision of the proper use of such brandy at the wineries.

This law continued in force until October 22, 1914, when at our instance Congress amended the previous acts and assessed and thereafter collected a tax of 55 cents on each proof gallon of brandy used for fortifying wines. There were, however, no full concessions made in that act so as to enable us eastern wine men to produce palatable and marketable wines on a profitable basis, by applying the only method of wine making under which the eastern wine industry will prosper, and by which "method" native wines have been made by us Missourians since the year of 1847, and by Ohioans and other easterners even prior to that, and by those in Germany long before that.

Wines which we made thus without interference heretofore we could make by using spirits on which a tax of $1.10 per proof gallon was collected, but since the year 1913 the United States Department of Agriculture and the United States Treasury Department have issued rulings and decisions which even interfere with our handicapped practice of the past; all we believe to be due to Californian activity.

In the meantime the Californians are working in classified groups, and have been doing so in the past. When the big California Wine Trust has put in its licks, then the next Congress is confronted by the small wine growers' league of California; when they have gained their point, then the next Congress is besieged by the grape growers' union, then comes along the California "associated" raisins growers, a trust who claim to control 95 per cent of the raisin output. It is a great system they work under, but they usually get what they go after.

I hear that the raisin crowd is, under cover, right now working on the departments and on Congress to again repeal the tax

on fortifying brandy or at least reduce it materially, and at the same time to tighten the screws on the eastern method of making wines.

Eastern grapes are high in fruit acid, just like in northern European countries with cold climates such as Germany and Switzerland, and so forth, and it is necessary to add water to reduce the acid and to add sugar to bring the sweetness up to a standard.

The California grapes are very sweet and deficient in acid; hence they need not add sugar, nor must the acid be reduced with water; on the contrary, their wines are flat and insipid, and they are permitted by the Federal food department to add tartaric acid and tannic acid, which is called permissible "cellar treatment." Some New York State and New Jersey wine makers have even called the adding of sugar and water to be "cellar treatment," and they got by with it, as they were not interfered with, but the Federal food department has prosecuted our Ohio wine makers for adding water and sugar. The Californians are trying to put a stop to the eastern method of ameliorating wines with an aqueous sugar solution so as to monopolize the entire American wine trade themselves. The reason why the Raisin Trust is very interested this year in this wine situation is this:

When the wine makers in California in September and October of 1914 anticipated a tax on brandy to be used for fortifying, and it was very plain that Congress was determined to raise revenue, and subsequently did on October 22, 1914, enact the emergency tax act, which includes a tax of 55 cents a gallon on fortifying brandy, they in California worked day and night and turned all kinds of grapes into sweet wines—sweet-wine grapes, sour-wine grapes, table grapes, and raisin grapes—in order to get away with as much tax-free brandy as possible before the emergency tax bill could be enacted. Exactly the same tactics were practiced by the "whisky ring" of old repute. It is admitted by the Californians that many have made enough fortified wines to last them several years, and by that time they expect another Congress to repeal the brandy tax, so that they would never have been touched.

The 55-cent brandy tax became effective at midnight, October 22, 1914. The California wineries were well stocked up. Very little fortifying has been done since then, as only a few unprepared ones had to do it, and only on a minimum scale—from hand to mouth. Therefore, when the 1915 crop of sweet-wine grapes were ripe no wineries would buy them; they had their cellars full. There was nothing else to do but to use these sweet-wine grapes—Tokay, Muscat, and so forth—and make raisins out of same, and they made good raisins. Now, here is the act where the raisin kings appear on the stage. There was a howl that rang all over the grape-growing belt of California. It seriously interfered with the program of the raisin people. The California associated raisin growers claim to control 95 per cent of the entire output. The grape growers who made raisins out of their sweet-wine grapes sold their raisins—dried grapes—directly into the open market, and that interfered decidedly with the schedule of the California Raisin Trust. For that reason solely do they believe they have license to take a hand in the framing of "wine" and "brandy" tax laws and thus clear the field for themselves.

Why the Californians are letting out such a yell I can not understand, unless it is because now they can not sell their fortified wines to patent-medicine manufacturers in competition with the "grain distillers," who sell grain alcohol in its pure form to the patent-medicine men at a lower price delivered, being located closer.

The oppressive taxation about which the Californians are making all this noise is 2.2 cents for each gallon of sweet wine.

In California wines can be and are fermented as high as to attain an alcoholic strength of 16 to 16½ per cent and still retain sufficient sweetness as to contain 4 per cent saccharine strength, all due to the tropical varieties of very sweet grapes grown there. Seventeen per cent alcoholic strength suffices to preserve wine. Eighteen per cent is an absolute guaranty that it will remain in undisturbed condition, and that is the standard alcoholic strength of sweet wines intended for use as a "beverage." If the California fermented wine has an alcoholic strength of 16 to 16½ per cent and it is to be fortified with distilled spirits so as to bring it up to 18 per cent alcoholic strength, it requires only 2 per cent of absolute alcohol, or 4 proof, which equals four one-hundredths part of a gallon of distilled spirits having 100 proof strength. (One gallon of 100 per cent alcoholic strength equals 200 proof strength, in accordance with the measuring standard used by the United States Internal Revenue Department.) As they need only four one one-hundredths part of a proof gallon of brandy spirits for each gallon of wine, and as the tax collected on the brandy is now at the rate of 55 cents for each proof gallon of 100 proof strength, therefore the tax now amounts to four one-hundredths part of 55 cents, or exactly 2.2 cents for each gallon of wine. (One per cent of sugar produces one-half per cent alcohol and one-half per cent carbonic gas, and the gas escapes.)

We in the East can not do as well. If our wines are thoroughly fermented, so as to not leave a particle of sugar or sweetness in the wine, same will not exceed 12½ to 13 per cent alcoholic strength. Note how much alcohol we must add to bring the strength up to 18 per cent, and, what is worse, we are restricted to use distilled alcohol, on which the regular tax of $1.10 per proof gallon has been collected, for reasons hereinbefore explained.

As sweet wines should be of a sweetness of at least 6 per cent saccharine strength to suit the public taste, the California wines need an addition of only 2 per cent sugar, as same have left after fermentation is complete a sugar strength of 4 per cent.

In our case in the East the wines have all the sugar fermented out, and we must sweeten same to the full expense of 6 per cent sugar by volume.

Furthermore grapes in California sell from $5 to $10 per ton—have done so for years—whereas we pay never less than $30 to $60 per ton, and for some varieties $100 per ton, same having a beautiful bouquet. The Californians have a decided advantage over us, but still they are not satisfied.

It is to be regretted that the Hon. David Houston, Secretary of the United States Department of Agriculture, himself a resident of Missouri, has given us eastern wine men very unfair treatment, repeatedly so, while he has granted audiences to the California crowd by the hour and invariably ruled in their favor, even going so far as to have his department officials antagonize us before the Finance Committee of the United States Senate.

The much advertised State of California has powerful influence.

Secretary Houston even annulled Food Inspection Decision 120, rendered in May, 1910, by the three Secretaries—Wilson, of the Agricultural Department; MacVeagh, of the Treasury Department; and Nagel, of the Commerce and Labor Department—and which was satisfactory to us; and he issued a decision instead which, if enforced, would wipe us all out of business at one lick. According to the printed reports of the United States Commissioner of Internal Revenue, there were produced during the six years from July 1, 1909, to June 30, 1915, the following:

| Fiscal year ending June 30— | Total production of distilled spirits from all kinds of material. | Brandy produced | Brandy used free of tax in fortification of sweet wines. | Sweet wines produced. |
|---|---|---|---|---|
| | *Gallons.* | *Gallons.* | *Gallons.* | *Gallons.* |
| 1910 | 163,893,960.0 | 7,656,433.6 | 4,888,445.0 | 19,012,397.02 |
| 1911 | 183,355,527.4 | 7,953,131.9 | 5,101,517.5 | 19,498,767.24 |
| 1912 | 187,571,808.5 | 9,321,823.5 | 6,322,303.9 | 24,198,626.19 |
| 1913 | 193,606,257.9 | 8,252,874.8 | 4,939,464.7 | 19,281,753.13 |
| 1914 | 181,919,542.2 | 7,307,897.2 | 4,852,848.7 | 18,580,373.72 |
| 1915 | 140,656,103.2 | 8,521,951.0 | 4,505,218.7 | 17,218,661.93 |

Of the 4,505,218.7 proof gallons of brandy used during the fiscal year ending June 30, 1915, only 373,199.3 proof gallons were used after the act of October 22, 1914, took effect and a tax of 55 cents per gallon, amounting to $205,259.62, was assessed. The other 4,132,019.4 proof gallons were used up free of tax before the act of October 22, 1914, took effect. The Californians anticipated that a tax would be imposed by Congress, and they worked day and night to pack away as much free brandy as they were able to do after the grapes ripened and before Congress would act.

It is a fact that for quite a number of years the increased use of free brandy was at the rate of about a million gallons more each year than the preceding year, and the climax was reached in 1912. After that there was an uncertainty as to what would be done by Congress, as we easterners in 1913 had started our campaign, and therefore there was not so much brandy stuck into sweet wine during the years of 1913, 1914, and 1915.

From the above statement you will find that of the total brandy produced a great portion was disposed of by putting it into sweet wine without paying a revenue tax thereon, excepting lately 3 cents a gallon, to cover the cost of supervision by Government gaugers and storekeepers. During the fiscal year ending June 30, 1912, for instance, 9,321,823.5 proof gallons of brandy were produced, of which 6,322,303.9 proof gallons, or

more than two-thirds of the entire production, were stuck into sweet wines "free" of tax.

In order that you may conceive the magnitude of the amount of free brandy used each year for fortifying sweet wines, which has been going on for over 25 years, I will illustrate the one single fiscal year ending June 30, 1912, during which 6,322,303.9 proof gallons of free brandy were used to fortify sweet wines.

A barrel holds 50 gallons; that makes 126,446 barrels.

A barrel weighs 500 pounds; that makes 63,223,000 pounds, or 31,611½ tons.

A carload holds 48 barrels, or 12 tons each; that makes 2,634½ carloads.

Thirty cars constitute a long train; that makes 68 trains of free brandy.

A train of 30 cars, engine, and caboose is about 1,500 feet long; that makes 132,000 feet, or exactly 25 miles of free brandy for that one year.

Figured in drinks of 1½ ounces each, the usual quantity of a good-sized drink, it amounts to 539,503,266, or over one-half billion drinks of straight 100-proof brandy, without any tax having been paid thereon, and if the same were reduced to 90 proof, as same is in fact and as a rule consumed, then it amounts to still more, to wit, 593,453,582 drinks at 1½ ounces each of 90-proof strength free brandy for the fiscal year beginning July 1, 1911, and ending June 30, 1912, about six drinks of "free" brandy for every man, woman, and child in the United States. This free brandy traffic has been going on over 25 years and the United States Government holds the bag; in fact, was, up to June 7, 1906, even put to an "expense" of supervising the work and did not get one cent in return therefor.

It is far different with the housewife. Every time she bakes a cake or makes ice cream and uses lemon extracts or vanilla extracts she pays a heavy revenue tax to the Government, but these California wine men got away with millions and millions of dollars of revenue taxes.

The flavor extract manufacturers must use double-strength spirits to make extracts, hence they pay a revenue tax of $2.20 on each gallon of alcohol; therefore every child who buys candy or ice cream, and every housewife who bakes cakes, in all of which are used flavoring extracts, pay an internal revenue tax on the flavoring extract contained therein and at the rate of $2.20 for each gallon of alcohol, whereas the California wine men get their alcohol free of tax and the Government up to June 7, 1906, threw in the gaugers' and storekeepers' services free to boot. It is hard for anyone outside of the wine business to believe, but it is the naked truth. Write to the Commissioner of Internal Revenue yourself and he will verify my statement; in fact, I herewith quote from his printed report for the fiscal year ending June 30, 1915. See page 13, which reads as follows:

By an act approved October 1, 1890, grape brandy or wine spirits used in fortifying pure sweet wine was, under certain conditions imposed, exempt from tax. By an act approved June 7, 1906, a charge of 3 cents per proof gallon on the brandy or spirits so used was imposed "to cover the expense of the Government attending the making of fortification of such sweet wines. These laws were reenacted, with various amendments, in the revenue act of October 22, 1914; and in lieu of the provisions above referred to, a tax of 55 cents per proof gallon was imposed on the brandy or spirits thereafter so used. This tax, however, under the provisions of section 24 of the act, will expire by limitation January 1, 1916; and owing to the absence of any saving clause the question has arisen whether brandy or spirits used in fortifying such wines on and after that date will be subject to the same rate of tax as that imposed on other distilled spirits, or will be wholly exempt from tax.

As construed by this office the exempting provision of the act of 1890 was, in effect, repealed by the amendatory act of 1914, and will not be restored by the repeal, or expiration by limitation, of the tax imposed by the last-named act.

While so holding I am not unmindful of the fact that the exaction of the full tax of $1.10 per gallon on the brandy so used may be very burdensome to the sweet-wine producer who stores his wine for any considerable length of time before sale; and that, under present conditions, it may also seriously affect the grape-growing industry in certain sections of the country. I am, however, firmly of the opinion that these highly fortified wines, marketed in direct competition with other taxable spirits, and as a beverage consumed by the well-to-do classes, should not escape taxation.

Since the passage of the wine act of 1890 there have been used, free of tax, 73,653,970.7 proof gallons of brandy and wine spirits in fortifying wines of this class; and from information received it appears that a very considerable quantity of these wines, known as "sherry material," has been used in the manufacture of medical preparations and other compounds. In other words, these so-called wines have been largely used as a vehicle for placing on the market untax-paid spirits.

The purpose of the law in making this special tax exemption was, presumably, to encourage the production of "pure sweet wine," and to enable the producer and dealer to place the same on the market at a greatly reduced price. But it may, I think, be fairly questioned whether the law has accomplished this purpose.

As shown by the records these wines have been fortified, mainly with raw high-proof spirits, averaging in proof about 172°, or nearly the proof strength of ordinary grain alcohol. Of the total quantity of spirits thus added, less than 10 per cent has been stored in warehouse, the balance, or something over 90 per cent, having been removed to the wineries directly from the distilleries, and usually during the month of production.

From information obtained it also appears that certain types of these wines, produced at a cost not exceeding 20 or 25 cents per gallon, and often marketed soon after fortification, have retailed at from $2 to $4 per gallon.

I see no good reason, from a revenue or other standpoint, why the spirits used in fortifying these wines should be exempt from taxation, especially in view of the large falling off in receipts from other distilled spirits and the fact that, under the limitations fixed by the act of 1914, no tax whatever will be imposed on the wines, as such, after December 31 next.

I therefore recommend that a fair and equitable tax be imposed on all such spirits; and in order to relieve the wine producer from any unnecessary burden, that provision similar to that now contained in the act of 1914 be made for the deferred payment of the tax so imposed.

A careful examination of this subject, both as to the rate of tax and the restrictions which should be imposed upon the use of brandy in fortifying wines, is now being made by this office, and a further report thereon will be prepared at an early date.

On page 39 the commissioner says the following:

FORTIFIED WINES.

By the act of October 22, 1914, a tax of 55 cents per proof gallon is now imposed on brandy and wine spirits used in fortifying domestic wine. This tax, however, will, under the provisions of the act, expire by limitation January 1, 1916. It is therefore recommended that a like tax be imposed on all brandy or spirits used in fortifying such wine on and after that date.

Now, if this honorable Congress would secure for us the rights to which we are entitled in order to save the wine industry east of the Rocky Mountains, and also secure at least one Federal experimental horticultural field station for Missouri, then you certainly will add greatly to the wealth and resources of this great Commonwealth of Missouri and the other States of the Mississippi Valley, in which our 1,000 members reside. The Ozark Mountains and the bluffs along the Missouri and the Mississippi Rivers are ideal for growing wine grapes, just like along the River Rhine.

The Californians got to quit a kickin' my houn' dawg around.

Respectfully,

O. G. STARK,
*President of Mississippi Valley Wine Growers and Grape Growers' Association.*

---

BRIEF ON THE QUESTION OF THE PROPER DEFINITION OF MISSOURI, OHIO, AND OTHER WINES GROWN EAST OF THE ROCKY MOUNTAINS.

*To the honorable Senators and Congressmen of the United States in Congress assembled:*

We beg to submit the following brief on the question of the proper definition of Ohio and Missouri wines and wines grown in other States east of the Rocky Mountains.

In order to determine what is a proper definition of Missouri, Ohio, and eastern wines, we believe it best to divide the consideration of our subject into three general parts, as follows:

First. A consideration of the natural conditions existing in Missouri, Ohio, and other States east of the Rocky Mountains necessarily affecting the character of the wines produced and, in connection therewith, the methods and processes necessary to employ, on account of those natural conditions, to produce merchantable wine.

Second. A consideration of the extent and value of the wine industry of Missouri, Ohio, and other States east of the Rocky Mountains.

Third. The extent to which those natural conditions, methods, and processes should be taken into consideration in determining a proper definition for those wines.

I.—NATURAL CONDITIONS.

The wines of commerce are divided into two general classes: (1) Dry wines and (2) sweet or fortified wines; and the dry wines are again divided into two general classes: (1) Still wines and (2) sparkling wines.

The peculiar class of wines with which we are primarily concerned is that class known as dry still wines; and as sweet wines or fortified wines produced in Missouri, Ohio, and other States east of the Rocky Mountains can be made only from dry still wines, a determination of the proper defining of dry still wines should also determine the proper defining of Missouri, Ohio, or other eastern sweet or fortified wines.

The grapes from which wines are produced in Missouri, Ohio, and, in fact, all States east of the Rocky Mountains, are native American varieties, differing in this respect from the grapes from which California wines are produced, which are as a rule foreign varieties. The American varieties can not be successfully produced in California, and the foreign varieties can not be successfully produced in Missouri, Ohio, and the other States east of the Rocky Mountains.

A merchantable Missouri, Ohio, and other eastern dry still wine should not contain more than about 5 per mill acid and

sometimes as high as about 13 per cent of alcohol. Some wine makers claim that the acid should not run more than 4½ per mill. But, owing to the nature of the soil and the nature of the climate in Missouri, Ohio, and the other States east of the Rocky Mountains, the grapes produced in these States are always low in sugar content and always high in acidity, the acidity never being less than about 8½ per mill, and being this low only in very favorable years. The sugar content is also always too low to produce the required amount of alcohol—that is, the amount of alcohol necessary to keep the wine from fermenting when produced, and which we have stated should be about 13 per cent.

(*The above statement that the grapes are always low in sugar content should be modified. What we mean is that the grapes never contain enough sugar to make the alcohol high enough after water has been added to ameliorate the excessive acid that is always in the grapes. Often the grapes have sufficient sugar to produce 12 to 12½ per cent of alcohol, but at the same time have an excessive amount of acid, which must be ameliorated, after which amelioration the alcohol will not be high enough unless sugar has been added with the water.*)

It will be seen from the foregoing that at no time is it possible to produce merchantable wine in these States without correcting its acidity and its alcohol content.

In support of our statement that a merchantable wine should not contain more than about 5 per mill acid and that it should contain sometimes as high as 13 per cent of alcohol, we beg to submit the following:

First. The assurance of each member of this association, who are practical wine makers and who have been engaged in manufacturing wines in the different States in the Mississippi Valley, from native grapes, for a great number of years, and selling those wines, and whose assurances are based on practical experience in the Mississippi Valley, particularly in Missouri and Ohio, covering a period of time in at least one instance, that of the Stone Hill Wine Co., at Hermann, Mo., from 1847 down to the present date.

Second. Mr. George Husmann, in his book entitled "American Grape Growing and Wine Making," 1907 edition, published by the Orange-Judd Co. (see Congressional Library), says:

A normal "must," to suit the prevailing taste here, should contain about four-thousandths parts of acids, while in Europe it varies from four and a half to seven-hundredths, as the taste there is generally in favor of more acid wines.

The Universal Encyclopedia of 1900, in an article by E. W. Hilgard on "Wine and wine making," says:

The following table gives the volume-percentage of alcohol contained in some of the best-known wines, varying, of course, from year to year:

| | |
|---|---|
| Rhenish and Moselle wines | 9. 1 to 12. 0 |
| Grumberger, Naumberger (northeast Germany) | 6. 5 to |
| Burgundy, red | 7. 5 to 13. 5 |
| Bordeaux, first class | 7. 0 to 11. 5 |
| Catawba, Concord, etc | 8. 5 to 12. 7 |
| California wines | 10. 5 to 15. 7 |
| Port | 18. 0 to 23. 0 |
| Sherry | 17. 0 to 21. 0 |
| Madeira | 17. 0 to 19. 0 |
| Tokay | 12. 0 to 20. 0 |
| Greek and Syrian wines | 14. 0 to 18. 0 |

Third. The actual facts, which may be ascertained upon investigation, we might refer to other authorities, but we deem the foregoing sufficient for the purposes of this brief.

Therefore we start with the proposition that merchantable Missouri, Ohio, and other eastern wines should contain not more than about 5 per mill acid and sometimes as high as about 13 per cent of alcohol.

Now let us consider the natural conditions in the Mississippi Valley and Eastern States in connection with the above proposition, and what do we find:

First. We find that owing to natural conditions in these States a merchantable wine can not be produced from the natural juice of the grape, because the acid in the grape will be too high and the amount of sugar too low to produce the required amount of alcohol (*after the acid has been ameliorated with water*).

Second. We find that it is necessary to correct the natural juice of the grape before fermentation in such a manner that the acid will be reduced to the proper amount and the alcohol increased to its proper amount. This being accomplished by the addition of a solution of sugar in water, mixed in such proportion that the water will reduce the acid by dilution to the proper degree and the sugar by conversion into alcohol in the process of fermentation will bring up the amount of alcohol to the per cent required.

In support of the first of these propositions we again offer the assurance of each member of this association, who are all practical wine makers and who have been engaged in manufacturing wines along the Missouri, Mississippi, and Ohio Rivers and the Great Lakes, and elsewhere in the great Mississippi Valley from native grapes for a great number of years, and selling those wines, and whose assurances are based on practical experience in the great Mississippi Valley covering a period of time, in at least one instance, from 1847 down to date. Mr. A. Textor, of A. Textor & Co. of Sandusky, Ohio, who is one of the oldest wine makers in the association, says that the first wine was made in Sandusky, Ohio, in 1856; that he has been in the business of making and selling wine at Sandusky since 1862 and is still in business there; and that during all that time there has never been a year in which he could make merchantable wine without the use of an aqueous sugar solution. He has always made wine by the same standard, which conforms in amount of acid and alcohol to that herein stated. He says Ohio wines have always been corrected with a solution of sugar. He says he imported grape sugar to be used in making his wines in 1865; that he has generally used "anhydrous" sugar; and that he has used anhydrous sugar [dextrose] since 1884.

We also wish to cite The Universal Encyclopedia of 1900, under "Wine and wine making," by E. W. Hilgard:

The wines of the States east of the Rocky Mountains made from American grapes only differ from those of Europe and all other countries in mostly possessing more or less of the [foxy] aroma of the berries. As in Europe, the must often fails to acquire, north of the Potomac, the desirable amount of sugar.

In passing this subject we might add further that the natural conditions may be divided into two parts: First, the nature of the soil which permits of only certain classes of grapes being grown to advantage in the Mississippi Valley and Eastern States; and, second, the climate of those States, which has an effect on the maturing and ripening of the grapes.

METHODS AND PROCESSES.

We have now arrived at a point where we are confronted with the following facts:

First. That owing to natural conditions a merchantable wine can not be produced east of the Rocky Mountains from the natural juice of the grape.

Second. That in order to produce merchantable wines east of the Rocky Mountains it is necessary to add to the juice before fermentation an aqueous solution of sugar to ameliorate the acid and bring up the alcohol.

Let us now pass to a consideration of the methods and processes employed to make merchantable wine east of the Rocky Mountains, and especially in the Mississippi Valley and along the Great Lakes, with a particular view to consider the justification of the use of such methods.

In the first place, we beg to submit that wine is seldom, if ever, a natural product—that is, it is seldom that wine is made directly from the juice of one grape and without any blending or additions of any kind. On the contrary, the making of wine is an art, and the wine is the product of that art rather than a natural product. That the nature of the wine and the value of the wine is controlled by and depends upon the skill employed in its production admits of no argument. What the wine maker aims to produce is a product that the consumer will like. The more pleasing that product is to the consumer the greater its value. Therefore the wine maker strives to please, and the product which he finds will please is usually a product that is the result of his ingenuity and art. That product may be obtained by a process of blending, or, as in the Mississippi Valley wines and in the eastern wines, it may be the result of both correcting and blending.

On this point the Universal Encyclopedia—Wine and wine making, by E. W. Hilgard—has this to say:

Few wines reach the consumer as they would result from the process above detailed, as applied to one kind of grape. It is the general practice to adopt the various kinds and qualities of wines to the taste of the consumers by the intermixture of such as will improve each other. To this practice no reasonable objection can be made since from beginning to end intelligent management influence the nature of wine nearly as much as its origin, and it would be difficult to determine just what should be understood by "natural wine."

Since, then, wine is the product of an art and is frequently, without objection, the product of blending, can it be said it is objectionable or unjustifiable to take an unpalatable and unmerchantable wine in a state where all so-called natural wine would be unpalatable and unmerchantable, and by the art of correcting that wine with an aqueous sugar solution make it palatable and merchantable? On this subject we again beg to quote the Universal Encyclopedia—1900, Wine and wine making, by E. W. Hilgard:

Of all articles of human consumption wine is probably the one most commonly modified by additions and adulterations. So long as these additions merely make up for deficiencies in what might be considered the normal composition of must, as is done in adding sugar to the must of vintages that have suffered from unfavorable weather, it is questionable whether the consumer has reason to complain; and hence the practice ("chaptalizing") is very general in the colder wine countries and is hardly made a secret of. The simultaneous addition

of water ("gallizing") might claim equal immunity when made on similar grounds and not for the fraudulent increase of quantity.

We also desire to quote at length on this subject from Mr. George Husmann in his book entitled "American Grape Growing and Wine Making," published by the Orange Judd Co., of New York, 1907 edition, which book you will find in the Congressional Library. He says (p. 157, Ch. XXXII):

So far I have only spoken of the handling of the raw product of nature, taking for granted that we had a fair must in good condition to work with. But this, unfortunately, is rarely the case, and the natural juice of the grape seldom contains all the elementary constituents of a good wine in the proper proportions. In fact, very many of our American varieties are very imperfect, even in the best seasons, and contain generally a superabundance of acid and flavoring matter or aroma. What, then, is the intelligent operator to do? Shall he use them as they are, although he is aware they are imperfect and produce a poor, undrinkable, unsalable, and even unhealthful article? Or shall he, with the reason and knowledge God has given him, seek to remedy nature's imperfections, dilute the acid and aroma, add sugar, if necessary, and thus make a salable, pleasant, and healthful beverage? I think the intelligent wine makers—and it is only for them I am writing—can not hesitate which course to take.

I am aware that I am treading on dangerous ground, that I have been severely censured for my advocacy of Dr. Gall in my former little book; but truth remains truth, whether assailed or not, and the laws of chemistry will not change to please any of the "Simon-pure naturalists," who rail against gallizing, because they do not know anything about its true principles. But let me put myself right before my readers before entering upon the details of the operation. I advocate gallizing only so far as it is the best means of improving otherwise imperfect must, not as an indiscriminate means of increasing the quantity at the expense of quality. Only so far as by the addition of water and sugar an imperfect must can be made the most perfect is gallizing not only justifiable but a necessity. As soon as it aims only at increasing the quantity without regard to quality it is reprehensible and should be frowned upon. This may be called gallonizing, not gallizing; and that these gallonizers have done a great deal of mischief by bringing their trash before the public and calling it wine can not be denied. But those who, from a mistaken idea that a wine to be good and healthful must be natural, as they call it, have made it as nature gave it, and have, therefore, disgusted the palates of refined wine connoisseurs by their pure but weak, foxy, and acid Concords and Ives, etc., thus doing even more to bring American wines into discredit than the gallonizers. Both of these, the natural wine makers and the gallonizers, have been the curse and bane of our wine markets; those who, in the innocent belief that they were tasting fair samples of American wines swallowed their compounds and were disgusted, and when they met with good productions were deterred from tasting again. The true course lies in the middle, as usual. The wine maker has certain unerring guides which teach him, with a little practice and experimenting, "thus far shalt thou go, but no farther."

Having thus defined what we intend to do, which is simply to improve our must, if deficient, let us, to see our way clearly before us, examine as to the constituent parts of must or grape juice. A chemical analysis of must shows the following result:

Grape juice contains water, sugar, free acids, tannin, gummy and mucous substances or gluten, coloring matter, fragrant or flavoring substances (aroma, bouquet). A good normal must should contain all these ingredients in due proportion. If there is an excess of one and a lack of another, it can not make a perfect wine. This would seem apparent to every reasoning wine maker. Must which contains all of these in exactly the right proportion we call a perfect or normal must, and only by determining the amount of each of the ingredients in this so-called normal must can we gain the knowledge that will enable us to improve must which has not the necessary proportion of each. The frequency of unfavorable seasons in Europe set intelligent men to thinking; their grapes were sadly deficient in sugar, did not ripen fully, and also lacked in flavor. How, then, could this defect be remedied and a grape crop which was almost worthless from its want of sugar and excess of acids be made to yield at least a fair article, instead of the sour and unsalable wine generally produced in such seasons? Among the foremost who experimented with this object in view I will here mention Chaptal, Petiol, but especially Dr. Ludwig Gall, who has at least reduced the whole science of wine making to such a mathematical certainty that we are amazed that so simple a process should not have been discovered long ago. It is the old story of the egg of Columbus, but the poor wine makers of Germany and France, and we in this country also, are none the less indebted to those intelligent and persevering men for the incalculable benefits they have conferred upon us.

The production of good wine is thus reduced to a science, though we can not, perhaps, in a bad season, produce as high flavored and delicate wines as in the best years, we can now always make a fair article by following the simple rules laid down by Dr. Gall. Nay, as most of our grapes in a good season contain flavor in excess we can often make fully as palatable wine in a poor season, when that flavor is not so fully developed, by merely adding water and sugar to dilute the acid. In this respect we can make a more uniform product from our strongly flavored varieties than the Europeans can from their delicately flavored varieties of vini-fera, which are deficient in flavor in bad seasons.

When this method was first introduced it was calumniated and despised, called adulteration of wine, and even prohibited by the Governments of Europe, but Dr. Gall fearlessly challenged his opponents to have his wines analyzed by the most eminent chemists. This was repeatedly done, and the results showed that they could find nothing but such ingredients as pure wine should contain; and since men like Von Babo, Dobereiner, and others have openly indorsed and recommended Gallizing, prejudice is giving away before the light of scientific knowledge. The same will be the case here. Intelligent men will see that there is nothing reprehensible in the practice, and the public will in time prefer the properly Gallized and therefore more palatable and more healthful wines to the foxy and acid productions of the sticklers for natural wines.

* * * * * * *

A normal must, to suit the prevailing taste here, should contain about four-thousandths parts of acid, while in Europe it varies from four and a half to seven-thousandths, as the taste there is generally in favor of more acid wines. I can not do better here than to quote from Dr. Gall, who gives the following directions as a guide to distinguish and determine the proportion of acids which a must should contain to be still agreeable to the palate and good:

"Chemists distinguish the acids contained in the grape as the vinous, malic, grape, citric, tannic, gelatinous, and para-citric acids. Whether all of these are contained in the must, or which of them, is of small moment for us to know. For the practical wine maker it is sufficient to know, with full certainty, that, as the grape ripens, while the proportion of sugar increases, the quantity of acids continually diminishes, and hence, by leaving the grapes on the vines as long as possible, we have a double means of improving their products—the must or wine.

"All wines, without exception, to be of good and agreeable taste, must contain from four and a half to seven thousandths part of free acids, and each must containing more than seven thousandths part of free acids may be considered as having too little water and sugar in proportion to its acids.

"In all the wine-growing countries of Europe for a number of years past experience has proved that a corresponding addition of sugar and water is the means of converting the sourest must not only into a good drinkable wine but also into as good a wine as can be produced in favorable years except in that peculiar and delicate aroma found only in the must of well-ripened grapes, and which must and will always distinguish the wines made in the best seasons from those made in poor seasons.

"The saccharometer and acidimeter, properly used, will give us the exact knowledge of what the must contains and what it lacks, and we have the means at hand, by adding water, to reduce the acids to their proper proportions, and by adding sugar to increase the amount of sugar the must should contain; in other words, we can change the poor must of indifferent seasons into the normal must of the best seasons in everything except its bouquet or aroma, thereby converting an unwholesome and disagreeable drink into an agreeable and healthful one."

* * * * * * *

Experiments continued for a number of years have proved that in favorable seasons grape juice contains on an average in 1,000 pounds:

| | Pounds. |
|---|---|
| Sugar | 240 |
| Acids | 6 |
| Water | 754 |
| | 1,000 |

This proportion would constitute what I call a normal must. But suppose that in an inferior season the must contains, instead of the above, as follows:

| | Pounds. |
|---|---|
| Sugar | 150 |
| Acids | 9 |
| Water | 841 |
| | 1,000 |

What should we do to bring such a must to the condition of a normal must? We calculate thus: If with 6 pounds of acids in a normal must there is 240 pounds of sugar, how much is wanted for 9 pounds of acids? Answer, 360 pounds. Our next problem is: If with 6 pounds of acids in a normal must 754 pounds of water appear, how much water is required for 9 pounds of acids? Answer, 1,131 pounds. As, therefore, the must which we intend to improve by neutralizing its acids should contain 360 pounds of sugar, 9 pounds of acids, and 1,131 pounds of water, but contains already 150 pounds of sugar, 9 pounds of acids, and 841 pounds of water, there remain to be added 210 pounds of sugar, no acids, and 290 pounds of water.

By ameliorating a quantity of 1,000 pounds of must by 210 pounds of sugar and 290 pounds of water, we obtain 1,500 pounds of must consisting of the same properties as the normal must, which makes a first-class wine.

CONCLUSION.

We believe that in asking this honorable Congress to hold as suggested we are not asking anything unreasonable or unjust.

We have purposely refrained from going into European or foreign laws or conditions to any extent, because we are dealing here with American products, perhaps more distinctly American than any other wines produced in America, because they are produced from native American grapes, and because they are produced under American conditions. We believe those conditions can not be ignored, and that laws or regulations applying to these products should be based on a full consideration of those conditions and not on a consideration of conditions existing elsewhere. We do not believe in the establishing of an ideal standard by which to control a commercial product when that standard has the effect of embarrassing an industry whose standard must of necessity be a practical one. But we believe the standard should be a practical one, the conditions being considered.

On this line of reasoning we ask this Congress to recognize as a standard wine in the States in the Mississippi Valley that product which is merchantable wine when produced in those States. And if that product is the result of adding sugar and water to the juice of the grape before fermentation, still it is none the less the wine of those States. If it is not wine, then wine can not be produced in those States; or, in other words, to deny that it is wine is to deny that wine can be produced in the Mississippi Valley. Such a contention would seem to be absurd. If the contention is made that the fermented juice of the grape alone is wine as applied to Ohio or Missouri, it would be an "ideal" only and not a "practical" standard. The wine made by such a standard would be far from ideal; it would be unpalatable, unmerchantable, and worthless as a drink. And will anyone contend for a moment that such a worthless product should be held to be a wine to the exclusion of all others?

We are not dealing here with an isolated territory, with the product of one vineyard or one place; but we are dealing here with one of the commercial products of many of the sovereign

States of the Union, and dealing with the total output of that product in those States, and a product that has been known as wine in Ohio and Missouri since about 1840.

It is not reasonable or just to say that wine becomes wine in Ohio or Missouri short of that product which is merchantable as wine. Neither is it reasonable or just to say that an unpalatable, unmerchantable, and worthless drink is wine, and that any additions thereto or correcting thereof to make that product palatable, merchantable, and valuable is an adulteration. And the only reasonable or just stand that any man can take is that the merchantable product, and that product alone, is wine. The name "wine" should cover that product and all that is in it and be held to be its complete and proper name.

The pure uncorrected juice of the grape will not make a merchantable wine in Ohio or Missouri, and it certainly is not reasonable to say that such a product is wine, and that when sugar and water is added it should be sold as "wine" and something else, or as "modified wine" or as "corrected wine," because such a contention assumes that the unmerchantable product is wine.

We must be mindful, however, of the fact that elsewhere in this country they may produce a product to which nothing has been added that is a merchantable wine. In such a place such a product might well be known as wine, because it is the wine of that place. But such a product is not the wine of Ohio or Missouri. It does not follow, however, that such a product is always superior to the wine of Ohio or Missouri, or that the wine of Ohio or Missouri is always inferior to the wine of other places. On the other hand, while the wines of Ohio and Missouri are always made by the addition of a sugar solution, the must from which they are made is always higher in flavor than the must of other grapes, and a dilution of that must and that flavor does not necessarily produce a wine with a weaker flavor or aroma than the undiluted wine from grapes of deficient flavor. And right here we wish it to be understood that the wines of Ohio and Missouri are not inferior wines, but that they are wines that will average well with the highest quality of wines from anywhere on earth.

We are willing to sell these wines on their own merits and that other wines be sold on theirs.

These wines are the wines of Ohio and the wines of Missouri, and we suggest that they be labeled and known as "Ohio wine" and "Missouri wine," as distinguished from all other wines.

The same conditions that exist in Ohio and Missouri with respect to dry still wines exist also in New York and elsewhere. But the great bulk of the wine produced in New York is sparkling wine of the champagne type, and the acidity of the wine is not so much of an important factor, as the treatment of sparkling wine overcomes any acid conditions.

In closing we do not think it amiss to call attention to the fact that the interest of the wine producers and the grape growers is identical in this respect. And in order to encourage and perpetuate the grape-growing industry the wine producers must have a practical standard that will permit the continuance of the wine industry in these two States.

Respectfully submitted.

THE MISSISSIPPI VALLEY WINE GROWERS
AND GRAPE GROWERS' ASSOCIATION,
By OTTMAR G. STARK, *President*.

JULY 10, 1916.

---

FACTS AND A BILL OF COMPLAINT REGARDING THE SWEET-WINE LAW OF OCTOBER 1, 1890.

[By Thomas E. Lannen, attorney for the National Wine Growers' Association, and by Ottmar G. Stark, president of the Mississippi Valley Wine Growers' and Grape Growers' Association.]

A BILL OF COMPLAINT.

*To the honorable Senators and Congressmen of the United States of America in Congress assembled:*

Your orators, the National Wine Growers Association of America, consisting of wine makers located in the Eastern States, and the Mississippi Valley Wine Growers' and Grape Growers' Association, consisting of grape growers and wine makers located in the States of Arkansas, Illinois Indiana, Iowa, Minnesota, Missouri, Nebraska, Ohio, and Wisconsin, respectfully submit this, their bill of complaint, and for grounds of complaint allege and say:

That in existing internal-revenue laws, as well as in the enforcement of the same, there is and has been a gross discrimination against your orators and other eastern wine makers and grape growers and in favor of the wine makers of the State of California, in this, to wit: That the act of October 1, 1890, as amended, granting to sweet-wine makers the right to distill and use distilled spirits free of tax, for fortifying sweet wines, was and is so drawn and worded as to fit conditions in California only, and does not give your orators or other eastern wine makers the right to legally participate in the use of such distilled spirits free of tax, which inequality gives to the State of California an immense commercial advantage over your orators, amounting to, approximately, $7,000,000 a year; and, further, in this, to wit, that we believe said law has been erroneously interpreted and enforced by the Internal-Revenue Department, and that such interpretation has permitted traffic in said free brandy by California distillers, to the great commercial advantage of said distillers and the great disadvantage of your orators and other eastern grape growers, wine makers, and distillers, and to the great loss of the revenues of the United States, and that by reason of said erroneous interpretation of said law there is now due the Government of the United States back taxes amounting to a sum which your orators roughly estimate at $30,000,000, but beg leave to refer to the records of the Internal-Revenue Department for greater particularity in this behalf.

Your orators further allege that by reason of said inequality in the laws of our country, and said unjust discrimination against your orators, the grape-growing and wine-making industry east of the Rocky Mountains is gradually being crushed out of existence.

Wherefore, your orators pray that you consider the facts that are hereinafter set forth and grant them relief in the premises.

THE NATIONAL WINE GROWERS'
ASSOCIATION OF AMERICA,
By THOMAS E. LANNEN, *Attorney*.
THE MISSISSIPPI VALLEY WINE GROWERS'
AND GRAPE GROWERS' ASSOCIATION,
By OTTMAR G. STARK, *President*.

WASHINGTON, D. C., *September 29, 1914*.

AN EXPLANATION.

There are two general classes of wines, to wit, dry wines and sweet wines.

Dry wines: A dry wine is a wine that is made by letting the grape juice ferment in fermenting vats and storage casks until all the sugar contained therein has been converted into alcohol. Therefore a dry wine may be said to be for a general definition, a wine that contains no sugar; in other words, a sour wine.

Sweet wines: A sweet wine is a wine that contains a certain amount of sugar, which makes it sweet, and which contains a sufficient amount of added alcohol to preserve it; that is, to prevent the sugar which makes said wine sweet from fermenting.

In addition to the above there are different divisions of dry wines and sweet wines. For instance, a champagne wine is a dry wine that is effervescent, which effervescence is caused by retaining the carbonic acid gas, which is created when grape juice ferments in a sealed bottle, which is the natural way to make champagne, or by charging a dry wine with artificial carbonic acid gas, much the same as soda water and other aerated waters are charged with said gas, and such a wine is called a carbonated wine. Sweet wines vary from the extremely sweet Angelica wine to the Sherry wine, which latter is sometimes made so dry that its sweetness can scarcely be detected by the sense of taste.

EXAMPLES OF DRY WINES.

White wines: Rhine wines, Moselle wines, Riesling wine, dry catawba wine, Goethe wine, Elvira wine, sauterne wine, and champagne wines.

Red wines: Bordeaux wines, Chianti wine, claret wines, Concord wine, Bergundy wine, Ives seedling wine, and Virginia seedling wine.

EXAMPLES OF SWEET WINES.

White wines: Angelica wine, sweet muscatel wine, sweet catawba wine, tokay wine, marsala wine, and sweet scuppernong wine.

Also classed as white wines: Sherry wine, malaga wine, madeira wine.

(Red wine) port wine.

NOTE.—All of the dry wines above named, as well as all other dry wines, do not contain more than 14 per cent of alcohol, while all of the sweet wines above named, as well as all other sweet wines, do contain more than 14 per cent of alcohol.

METHODS OF MANUFACTURING SWEET WINES.

There are two methods of making sweet wines in this country. One is the method employed by all wine makers east of the Rocky Mountains, and the other is the one employed by California wine makers.

Eastern sweet wines: The method of making sweet wines in the East is—and always has been—to first make a dry wine in the manner hereinbefore indicated. This wine goes through all the treatment of any dry wine. Ordinarily it takes about a year to produce such a wine; sometimes such wines are not used

for sweet wine purposes until they are two years old. At the time they are used for sweet wine purposes, they have been thoroughly finished and completed as dry wines, and contain between 12 and 13 per cent of alcohol. To make a sweet wine out of them, add a sufficient amount of pure granulated sugar to give them the desired sweetness. Then we add a sufficient amount of tax-paid distilled spirits to bring the alcoholic content up to about 16 or 17 per cent. This alcoholic content is sufficient to preserve the sugar we have added and to preserve the wines as sweet wines. The adding of the distilled spirits is called fortification. This constitutes a sweet wine in the East. On all distilled spirits used by us for fortifying sweet wines, the Government is paid a tax of $1.10 per proof gallon, which increases the cost of producing our sweet wines accordingly.

California sweet wines: In California a sweet wine is made as follows: The juice of the grape, containing naturally, for example, 26 per cent of sugar, is put into a vat and permitted to ferment until its sugar content has been reduced by fermentation to, for example, 8 per cent. Eighteen per cent of the natural sugar has been converted into alcohol. As two parts of sugar produce one part of alcohol, the 18 per cent of sugar that is fermented produces approximately 9 per cent of alcohol. At this stage the product is a partly fermented grape juice, containing about 9 per cent of alcohol and 8 per cent of unfermented sugar. This amount of unfermented natural sugar is sufficient to give this partly fermented grape juice the desired amount of sweetness (and, incidentally, saves the Californians the expense of buying sugar to sweeten with, which expense the eastern wine makers have to contend with, in addition to the expense of buying tax-paid distilled spirits for fortifying). At this stage, about 11 to 14 per cent of distilled spirits is added to this partly fermented grape juice, to arrest fermentation. This brings the alcoholic content of the product up to about 20 to 23 per cent. This constitutes a California sweet wine. This product can be produced up to this stage in about a week or 10 days. The California sweet wine makers get the distilled spirits they use for fortifying their sweet wines free of tax (by operation of the so-called "free brandy" act of October 1, 1890), and the Government loses $1.10 per gallon tax on all such distilled spirits so used, which amounts to a loss of revenue of approximately $7,000,000 per year.

WHY DRY WINES DO NOT CONTAIN MORE THAN 14 PER CENT OF ALCOHOL.

The alcohol in wine is produced by the fermentation of the sugar contained in the grape juice. Roughly speaking, two parts of sugar will produce one part of alcohol. Thus, if the grape juice contains 20 per cent of sugar, it will produce, upon being completely fermented, approximately 10 per cent of alcohol. The conversion of the sugar into alcohol is brought about by certain living organisms, spoken of as "yeasts," which cause fermentation, and during the processes of fermentation change the sugar into alcohol. These organisms abound on the skins of grapes in vineyards, and are widely scattered through the air everywhere. But a peculiarity of these organisms is that they are only able to produce a certain amount of alcohol in any fermentable substance in which they are present. The amount of alcohol they are able to produce is about 15 per cent, but it is not practicable to produce this amount of alcohol by fermentation under ordinary circumstances.

The greatest amount of alcohol that can be produced by fermentation under ordinary circumstances is somewhere between 13 and 14 per cent. For example: If you have a fermentable liquid which contains 34 per cent sugar, such a liquid upon complete fermentation should produce approximately 17 per cent of alcohol. But if you set up fermentation in such a liquid the fermentation will proceed until the organisms referred to above have produced about 11 or 12 per cent of alcohol, then the fermentation will become noticeably slower. It will proceed, however, slowly, and still more slowly until between 13 and 14 per cent of alcohol is produced. Then ordinarily it will cease entirely. The reason is that the organisms which produce fermentation are rendered inactive in the presence of between 13 and 14 per cent of alcohol, and when they produce that much alcohol they simply lie dormant in its presence and will not do any more work. This is speaking generally of practical fermentations. It is possible under certain favorable conditions, such as in laboratory tests, to produce as much as 15 per cent of alcohol by forced fermentation, and some claim to have produced even 16 per cent of alcohol by fermentation under certain favorable conditions. But such instances are rare and not to be met with in everyday practical wine making.

It will thus be seen that in the manufacture of dry wine, where the grape juice is simply permitted to ferment as much as it will, the amount of alcohol that will be produced will not exceed 14 per cent. Hence the standard dry wines found upon the market do not contain more than 14 per cent of alcohol. Even were it possible to always produce more than 14 per cent of alcohol by ordinary fermentation, the grapes from which dry wines are made as a rule do not contain a sufficient amount of sugar to produce more than 14 per cent of alcohol.

WHY IT IS NECESSARY TO FORTIFY SWEET WINES WITH ALCOHOL.

Sweet wines the world over, no matter how they are made or where they are made, contain added alcohol. The reason is as follows: Sweet wines are sweet because they contain sugar that has not been converted into alcohol. This sugar has a tendency to ferment and create alcohol. The wine in which it is present is filled with organisms that produce fermentation. In order to prevent these organisms from attacking the sugar and causing it to ferment it is necessary to have present in the wine a sufficient amount of alcohol to render these organisms positively inactive. We have seen from the foregoing paragraph, under the heading of "Why dry wines do not contain more than 14 per cent of alcohol," that it is not possible in practical operations to produce more than 14 per cent of alcohol by fermentation.

Now, while it is true that in the presence of the 14 per cent alcohol that can be produced by fermentation the organisms of fermentation become incapable of producing more alcohol, still they are not dead. Were you to put sugar into a wine containing 14 per cent alcohol that had been produced by fermentation, or did such a wine contain some natural sugar still unfermented, these organisms of fermentation would keep agitating and disturbing the wine so as to render it cloudy, unsettled, and unmarketable. Since it is not possible, as we have seen, to produce any more alcohol by fermentation than the 14 per cent, and this amount is not sufficient to render the organisms positively inactive, the only way to render them inactive is to add alcohol and bring the alcoholic content of the wine up to such a point that the organisms are rendered positively inactive. Then the sugar in the wine, which makes it a sweet wine, will remain as sugar and the wine will remain clear and perfectly clarified. The minimum amount of alcohol that will positively render the organisms of fermentation inactive is about 17 per cent. Hence all sweet wines must contain not less than 17 per cent of alcohol. As between 13 and 14 per cent is the greatest amount that can be produced by fermentation under ordinary circumstances in practical wine making, it will be seen that in order to have sweet wine contain 17 per cent of alcohol it is necessary to add between 3 and 4 per cent of distilled alcohol, or what is commonly called "distilled spirits." This is what is called "fortification." [NOTE—All alcohol is actually produced by fermentation, but it may be removed from the fermented mass by distillation and condensed; it is then frequently called "distilled spirits."] Wine makers east of the Rocky Mountains do not, as a rule, add more than 3 to 4 per cent of distilled alcohol to fortify their sweet wines, because they have to pay a tax on such alcohol of $1.10 per proof gallon. Hence the eastern sweet wines do not contain more than the amount of alcohol absolutely necessary to preserve them; but California sweet wine makers add from 8 to 14 per cent of alcohol, because they get it free and no tax is paid on it, and hence their sweet wines contain from 20 to 23 per cent of alcohol, which is greatly in excess of the amount necessary to preserve them, but which makes them very valuable products to certain industries, such as compounders and patent-medicine firms, who can secure in these wines from 20 to 23 per cent of alcohol at a very cheap price, because no tax has been paid on the same, and who could not secure that amount of alcohol free of tax in any other medium. What the Government loses by such operations can only be conjectured.

HISTORY OF THE "FREE-BRANDY" LAW.

Prior to October 1, 1890, the existing internal-revenue laws of the United States levied a tax of 90 cents per gallon on all distilled spirits, and there was no provision that such distilled spirits might be used, free of tax, for the fortification of sweet wines. But when the tariff act of October 1 was pending before Congress a bill providing for the use of wine spirits free of tax was introduced by a Representative from the State of California. The history of that legislation may be noted from the remarks made by Senator POMERENE, of Ohio, in reference thereto, in a speech made on the floor of the Senate on September 18, 1913, as follows:

A Representative from the State of California in 1890 introduced a bill providing for the use of these wine spirits free of tax. It was referred to the Ways and Means Committee of the House, was incorporated into the bill as reported back to the House, and was later passed by the House. It then came to the Senate and was referred to the Finance Committee. The Finance Committee reported the bill to the Senate and eliminated from it all of its free-tax provisions. On the floor of the Senate Mr. Aldrich, then a Senator from Rhode Island, asked the adoption of the amendment of the Finance Committee. At that moment a Senator from California—Mr. Hearst—arose and suggested that he desired to offer certain amendments. He was assured by the Senator from Rhode Island that those amendments would be

taken care of in conference. The bill passed the Senate with these provisions eliminated. The conference committee reported the bill back with the House provisions reinserted into the measure. There was no discussion of the merits of the provisions of that bill, as I have been informed by those who have thoroughly examined the RECORD, either in the House or in the Senate. So, as a result of that legislation, the California sweet-wine producers were given grape brandy or wine spirits free of tax.

Sections Nos. 42 and 43 of the act with which we are concerned, as passed October 1, 1890, were as follows:

SEC. 42. That any producer of pure sweet wines who is also a distiller authorized to separate from fermented grape juice, under internal-revenue laws, wine spirits, may use, free of tax, in the preparation of such sweet wines, under such regulations and after the filing of such notices and bonds, together with the keeping of such records and the rendition of such reports as to materials and products as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, so much of such wine spirits so separated by him as may be necessary to fortify the wine for the preservation of the saccharine matter contained therein: *Provided*, That the wine spirits so used free of tax shall not be in excess of the amount required to introduce into such wine in (an) alcoholic strength equal to 14 per cent of the volume of such wines after such use: *Provided further*, That such wine containing after such fortification more than 24 per cent of alcohol, as defined by section 3249 of the Revised Statutes, shall be forfeited to the United States: *Provided further*, That such use of wine spirits free from tax shall be confined to the months of August, September, October, November, December, January, February, March, and April of each year. The Commissioner of Internal Revenue, in determining the liability of any distiller of fermented grape juice to assessment under section 3309 of the Revised Statutes, is authorized to allow such distiller credit in his computation for the wine spirits used by him in preparing sweet wine under the provisions of this section.

SEC. 43. That the wine spirits mentioned in section 42 of this act is the product resulting from the distillation of fermented grape juice, and shall be held to include the product commonly known as grape brandy; and the pure sweet wine which may be fortified free of tax, as provided in said section, is fermented grape juice only, and shall contain no other substance whatever, introduced before, at the time of, or after fermentation; and such sweet wine shall contain not less than 4 per cent of saccharine matter, which saccharine strength may be determined by testing with Balling's saccharometer or must scale such sweet wine after the evaporation of the spirits contained therein and restoring the sample tested to original volume by addition of water.

It will be seen from the foregoing that the California wine maker may produce his wine spirits free of tax and use the same to fortify his wine. The foregoing sections 42 and 43 remained unchanged until 1894, when, by section 68 of the act of August 28, 1894, there was added to said section 43 the following:

*Provided*, That the addition of pure boiled or condensed grape must or pure crystallized cane or beet sugar to the pure grape juice aforesaid, or the fermented product of such grape juice prior to the fortification provided by this act for the sole purpose of perfecting sweet wines according to commercial standard, shall not be excluded by the definition of pure sweet wine aforesaid: *Provided, however*, That the cane or beet sugar so used shall not be in excess of 10 per cent of the weight of the wine to be fortified under this act.

It will be seen from this last-quoted law that in addition to the 14 per cent of tax free wine spirits permitted by the act of October 1, 1890, 10 per cent of sugar might be added by permission of the act of August 28, 1894, thus making a total of 24 per cent of foreign materials that might be added to the pure fermented grape juice, and within the meaning of the internal-revenue law the product would still remain "pure sweet wine."

But it appears that the California wine makers were still not satisfied, and it appears that Congress was willing to do even more for them. Congress had already given them the right to use tax free spirits to the extent of 14 per cent, and the right to use sugar to the extent of 10 per cent, but it seems this was not enough. They were again benefited by more liberal legislation. Congress gave them the right to use tax free spirits, but compelled them to manufacture it by the distillation of fermented grape juice. Now, if they could get permission to make this tax free spirits from what would be left of the grapes after they had pressed most of the juice out of them, or in other words the residue or the grape pomace, it would be a very material gain. So it appears that they again sought the help of Congress and got it in section 1 of the act of June 7, 1906, which not only gave them the right to manufacture the tax free spirits from the residue of the grapes, but also gave them a right to add 10 per cent of water to their wine in addition to the 10 per cent of sugar and the 14 per cent of spirits already authorized, making a total of 34 per cent of substances, other than grape juice, that might be added to their wines and these California wines still be designated "pure sweet wines."

As a matter of fact, the Californians may actually add 24 per cent of water on account of the way the law is worded. For instance, the law expressly permits the addition of 10 per cent of water, because section 43 provides—

That the cane or beet sugar or pure anhydrous sugar or water so used shall not in either case be in excess of 10 per cent of the weight of the wine to be fortified under this act.

But section 42 provides—

That wine spirits so used free of tax shall not be in excess of the amount required to introduce into such wines an alcoholic strength equal to 14 per cent of the volume of such wines after such use.

It will be observed from this language that the limitation of 14 per cent is placed on an absolute alcohol basis. That is, wine spirits may be added to such an extent as "to introduce into such wines an alcoholic strength equal to 14 per cent of the volume of such wines after such use." Now, wine spirits are not absolute alcohol. They always contain a certain amount of water. Absolute alcohol is 200 proof, which means that it is pure alcohol free from water. But wine spirits may be only 100 proof, which means that they contain 50 per cent water and 50 per cent absolute alcohol. For instance, ordinary whisky is 100 proof—that is, it contains 50 per cent water and 50 per cent alcohol. Now, it can be seen that if the wine spirits added contain only 50 per cent alcohol, then in order to increase "the alcoholic strength equal to 14 per cent of the volume of such wine after such use," it is necessary to actually add approximately 28 per cent of wine spirits. Therefore, by this operation 14 per cent of water is added. In order to prove that we are not merely imagining such a situation, we refer to regulations No. 28, revised, dated May 14, 1913, of the United States Internal-Revenue Office, which contains a table on page 100 showing how much wine spirits it is necessary to add to sweet wines to increase the alcoholic strength not to exceed 14 per cent, and the table contains calculations on wine spirits of various proof or alcoholic strength. The calculations are made on wine spirits containing from 95 per cent alcohol down to only 50 per cent alcohol. The table shows that in order to introduce into 100 gallons of sweet wine a sufficient amount of wine spirits containing only 50 per cent alcohol to increase the alcoholic strength of said sweet wine not to exceed 14 per cent of the volume of such wine after such introduction, it is necessary to add to every 100 gallons of sweet wine 38.46 gallons of 100 proof wine spirits; that is, wine spirits containing only 50 per cent alcohol and 50 per cent water.

So that, as a matter of fact, the total amount of foreign substances that the law permits to be added to California sweet wines may be shown to be as follows:

| | Per cent. |
|---|---|
| 10 per cent of water for mechanical purposes, and approximately 14 per cent of water contained in wine spirits of only 100 proof | 24 |
| 14 per cent absolute alcohol contained in wine spirits added | 14 |
| Cane, beet, or anhydrous sugar | 10 |
| Total foreign substances | 48 |

NOTE.—The above calculations are based on the percentages of these foreign substances in the wine after being introduced. That is, they are percentages of the finished product; in other words, the finished product consists of 48 parts added foreign substances and 52 parts of natural substances.

We now set out section 43 of the law showing all the amendments. The parts in italics show the amendment by the act of August 28, 1894. The parts capitalized show the amendment of the act of June 7, 1906.

SEC. 43. That the wine spirits mentioned in section 42 of this act is the product resulting from the distillation of fermented grape juice (act of 1906) TO WHICH WATER MAY HAVE BEEN ADDED PRIOR TO, DURING, OR AFTER FERMENTATION, FOR THE SOLE PURPOSE OF FACILITATING THE FERMENTATION AND ECONOMICAL DISTILLATION THEREOF, and shall be held to include the product (act of 1906) FROM GRAPES OR THEIR RESIDUES, commonly known as grape brandy; and the pure sweet wine, which may be fortified free of tax, as provided in said section, is fermented grape juice only, and shall contain no other substance whatever introduced before, at the time of, or after fermentation (act of 1906) EXCEPT AS HEREIN EXPRESSLY PROVIDED; and such sweet wine shall contain not less than 4 per cent of saccharine matter, which saccharine strength may be determined by testing with Balling's saccharometer or must scale, such sweet wine, after the evaporation of the spirits contained therein, and restoring the sample tested to the original volume by addition of water: (act of 1894) *Provided, That the addition of pure boiled or condensed grape must or pure crystallized cane or beet sugar* (act of 1906) OR PURE ANHYDROUS SUGAR (act of 1894) *to the pure grape juice aforesaid, or the fermented product of such grape juice prior to the fortification provided by this act for the sole purpose of perfecting sweet wines according to commercial standards* (act of 1906), OR THE ADDITION OF WATER IN SUCH QUANTITIES ONLY AS MAY BE NECESSARY IN THE MECHANICAL OPERATION OF GRAPE CONVEYORS, CRUSHERS, AND PIPES LEADING TO FERMENTING TANKS (act of 1894) *shall not be excluded by the definition of pure sweet wine aforesaid: Provided, however, That the cane or beet sugar* (act of 1906) OR PURE ANHYDROUS SUGAR OR WATER (act of 1894) *so used shall* (act of 1906) NOT IN EITHER (act of 1894) *case be in excess of 10 per cent of the weight of the wine to be fortified under this act:* (act of 1906) AND PROVIDED FURTHER THAT THE ADDITION OF WATER HEREIN AUTHORIZED SHALL BE UNDER SUCH REGULATIONS AND LIMITATIONS AS THE COMMISSIONER OF INTERNAL REVENUE, WITH THE APPROVAL OF THE SECRETARY OF THE TREASURY, MAY FROM TIME TO TIME PRESCRIBE; BUT IN NO CASE SHALL SUCH WINES TO WHICH WATER HAS BEEN ADDED BE ELIGIBLE FOR FORTIFICATION, UNDER THE PROVISION OF THIS ACT WHERE THE SAME, AFTER FERMENTATION AND BEFORE FORTIFICATION, HAVE AN ALCOHOLIC STRENGTH OF LESS THAN 5 PER CENT OF THEIR VOLUME.

To sum up, these acts give the California wine makers the following privileges:

By the act of October 1, 1890, the right to make wine spirits free of tax from grape juice fermented and use the spirits to the extent of 14 per cent in wines.

By the act of August 28, 1894, the right to add 10 per cent of sugar to wine so fortified.

By the act of June 7, 1906, the right to add 10 per cent of water and to recover the spirits from the residue of grapes instead of entirely from fermented grape juice, and the right to use pure anhydrous sugar as well as cane or beet sugar.

We are aware of the fact that our interpretation of the foregoing law as to the total amount of foreign ingredients that may be added to a sweet wine under said law is disputed by the Californians, and there seems to be some question as to whether said law permits the addition of a total of 34 per cent of foreign substances, viz, 10 per cent water, 10 per cent sugar, and 14 per cent distilled spirits, or whether it simply permits the addition of 10 per cent of a mixture of sugar and water and 14 per cent distilled spirits, making a total of 24 per cent of added substances. Nevertheless, the principal thing we are concerned with is the fact that said law does permit the use of 14 per cent wine spirit free of tax, and about that there can be no dispute.

By adding wine spirits to an extent of 14 per cent alcoholic strength, which equals 28 proof spirits, the Government rebates at $1.10 per proof gallon an amount of exactly 30.8 cents per gallon of sweet wine.

THE FOREGOING LAW DISCRIMINATES AGAINST EASTERN WINE MAKERS.

From a careful reading of the foregoing law it will be seen that it throws certain restrictions around the use of free distilled spirits, and upon a more careful analysis of same, it will be seen that these restrictions are of such a nature as to prohibit the use of said free spirits by eastern wine makers while permitting their use by the Californians. Here are the reasons why the eastern wine makers can not take advantage of the provisions of said law:

Reason No. 1: The law provides that any wine maker to be entitled to use the distilled spirits free of tax, must be a producer of pure sweet wine, a distiller, and must have his winery located at his vineyard. In California the wineries are at the vineyards, as the vineyards are extensive in area, but in the States east of the Rocky Mountains the grapes are grown in farmers' vineyards scattered throughout the country, while the wineries are located in the cities and towns. The farmers in the East haul their grapes to the wineries and sell them to the wine makers, the same as they haul their grain to the grain elevators. Sometimes they enter into yearly contracts with certain wine makers to cultivate and produce a certain acreage of grapes for the benefit of such wineries. Thus it will be seen that in the Eastern States the grape-growing industry is separate and distinct from the wine-making industry. The wine maker of the East, as a rule, does not have his winery located at his vineyard, or at any vineyard, and consequently he can not take advantage of that provision of section 45 of said law which provides that—

"The use of wine spirits, free of tax, for the fortification of sweet wines under this act shall be begun and completed at the vineyard of the wine grower where the grapes are crushed and the grape juice is expressed and fermented."

Reason No. 2: Section 43 of said law provides that the pure sweet wine which may be fortified free of tax is fermented grape juice only, and shall contain no other substance whatever introduced before, at the time of, or after fermentation, except as provided for in the amendments to said section, which will be noted from the section as hereinbefore printed. On account of natural conditions of climate and soil, eastern wine makers are compelled to correct natural deficiencies in practically all wines made east of the Rocky Mountains. The moment they make such corrections their wines are no longer "pure sweet wine which may be fortified free of tax" within the meaning of the said section 43. The United States Department of Agriculture has been investigating the subject of the manufacture of eastern wines for several years. That department has recognized the fact that wines made in the eastern part of the United States, as well as wines made in Germany and other parts of Europe, can not be produced from the uncorrected juice of the grape, but that natural deficiencies must be corrected. In food-inspection decision No. 120 of the United States Department of Agriculture, issued May 13, 1910, the use of a certain amount of water and a certain amount of sugar to correct deficiencies in eastern grapes was duly authorized. Among other things, that decision says:

"However, it has been found that it is impracticable on account of natural conditions of soil and climate, to produce a merchantable wine in the States of Ohio and Missouri without the addition of a sugar solution to the grape must before fermentation. This condition has recognition in the laws of the State of Ohio, by which wine is defined to mean the fermented juice of undried grapes, and it is provided that the addition, within certain limits, of pure white or crystallized sugar to perfect the wine or the use of the necessary things to clarify and refine the wine, which are not injurious to health, shall not be construed as adulterations and that the resultant product may be sold under the name "wine." Furthermore, it is permitted in some of the leading wine-producing countries of Europe to add sugar to the grape juice and wine, under restrictions, to remedy the natural deficiency in sugar or alcohol, or an excess of acidity, to such an extent as to make the quality correspond to that of wine produced without any admixture from grapes of the same kind and vintage in good years. It is conceived that there is no difference in principle in the adding of sugar to must in poor years to improve the quality of the wine than in the adding of sugar to the must every year for the same purpose in localities where the grapes are always deficient."

However, the United States Department of Agriculture has now abrogated said food-inspection decision No. 120, and changed the same in so far as the use of water is concerned; that is, the department now permits the use of sugar, but will not permit the use of a sugar solution in eastern wines. However, in lieu of the water for reducing acidity, the department now prescribes the use of neutralizing agents. The new regulation is known as "Food Inspection Decision No. 156," and is as follows:

As a result of investigation carried on by this department and of the evidence submitted at a public hearing given on November 5, 1913, the Department of Agriculture has concluded that gross deceptions have been practiced under food-inspection decision 120. The department has also concluded that the definition of wine in food-inspection decision 109 should be modified so as to permit correction of the natural defects in grape musts and wines due to climatic or seasonal conditions.

Food-inspection decisions 109 and 120 are therefore hereby abrogated, and, as a guide for the officials of this department in enforcing the food and drugs act, wine is defined to be the product of the normal alcoholic fermentation of the juice of fresh, sound, ripe grapes, with the usual cellar treatment.

To correct the natural defects above mentioned the following additions to musts or wines are permitted:

In the case of excessive acidity, neutralizing agents which do not render wine injurious to health, such as neutral potassium tartrate or calcium carbonate.

In the case of deficient acidity, tartaric acid.

In the case of deficiency in saccharine matter, condensed grape must or a pure dry sugar.

The foregoing definition does not apply to sweet wines made in accordance with the sweet-wine fortification act of June 7, 1906 (34 Stat., 255).

A product made from pomace by the addition of water, with or without sugar or any other material whatsoever, is not entitled to be called wine. It is not permissible to designate such a product as "pomace wine" nor otherwise than as "imitation wine."

D. F. HOUSTON,
*Secretary of Agriculture.*

WASHINGTON, D. C., *June 12, 1914.*

But even wines produced under this new decision of the United States Department of Agriculture can not be fortified under the free brandy law aforesaid. It can be noted that said food-inspection decision No. 156, set out above, expressly provides that it shall not apply to sweet wines made under said free brandy law, no doubt for the reason that said law permits the addition of water to such California sweet wines, while said decision classes wines containing added water as adulterated.

In California in 1899 (see census of 1910) the amount of grapes grown was 721,433,400 pounds.

In 1899 in the States of Arkansas, Connecticut, Delaware, District of Columbia, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, New Mexico, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Virginia, and West Virginia the number of pounds of grapes produced was 273,940,655 pounds.

In California in 1909 (see census of 1910) the amount of grapes grown was 1,979,686,525 pounds.

In 1909 in the Eastern States above named the amount of grapes grown was 204,843,551 pounds.

The foregoing figures, taken from the census of 1910, show that during the period from 1899 to 1909, 10 years, there was an increase in production in California of 1,258,253,125 pounds of grapes.

During the same period of time in the Eastern States above named there was a decrease in the production of grapes of 69,097,104 pounds of grapes.

According to the census of 1910 the total number of pounds of grapes grown in the States above named during the year 1909 was 204,843,551 pounds. These were grown on 787,463 farms.

During the same year (1909) California grew 1,979,686,525 pounds of grapes. These were grown on only 17,703 farms.

These figures show the great concentration in California.

WHERE IS THE FREE ALCOHOL USED?

The total amount of free brandy used by all wine makers for the fiscal year ending June 30, 1912, is as follows:

| | Proof gallons. |
|---|---|
| Hawaii | 16,598.9 |
| New Jersey | 1,329.6 |
| North Carolina | 7,820.1 |
| New York | 143,422.8 |
| Total | 169,171.4 |
| California | 6,153,132.5 |
| Grand total | 6,322,303.9 |

See annual report of Commissioner of Internal Revenue for the fiscal year ending June 30, 1912, page 67.

It will be seen that the amount of free brandy used in the State of California during the fiscal year ending June 30, 1912, was 6,153,132.5 proof gallons. The following calculation will help to form some idea of this enormous amount:

A barrel of brandy, including cooperage, weighs 500 pounds. The usual weight of a carload is 24,000 pounds. This makes 48 barrels to a car. A barrel holds 50 gallons. This makes 2,400 gallons to a carload. Two thousand four hundred gallons divided into 6,153,132.5 gallons makes 2,563.8 carloads of free brandy used within California for the year mentioned. Thirty carloads make an ordinary train. Thirty divided into 2,563.8 makes 85.5 trains of 30 cars each of free brandy used in California for the fiscal year ending June 30, 1912.

Loss of revenue at $1.10 per proof gallon equals $6,768,445.75, and this only for one year.

WHO GETS THE BENEFIT OF THIS ENORMOUS LOSS OF REVENUE?

The amount of brandy used in California alone for the fiscal year endiny June 30, 1912, free of tax, was 6,153,132.5 proof gallons. At $1.10 per gallon this amounts to $6,768,445.75.

The records of the Internal-Revenue Department show only 86 wine makers in California using free brandy, although there were 17,793 growing grapes according to the last census.

This makes an average bonus of $78,702.85 to each of the 86 wine makers using free wine spirits in California for the year mentioned. But it should be borne in mind that only a very few used the great bulk of this. The following report taken from pages 5874–5875 of the CONGRESSIONAL RECORD of October 2, 1913, shows who used all this brandy:

APPENDIX.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
*Washington, October 2, 1913.*

Hon. ATLEE POMERENE,
*United States Senate, Washington.*

SIR: In compliance with the resolution of the Senate adopted on the 1st instant, calling upon the Secretary of the Treasury for a statement containing the names and addresses of manufacturers of sweet wine who use wine spirits or grape brandy in the fortification of sweet wine, together with the number of gallons of wine spirits or grape brandy so used during each of the five preceding fiscal years, also a statement showing the amount of revenue received during each of said years from the wine spirits or grape brandy so used, I have the honor to transmit herewith statements containing the information called for.

Respectfully,

W. G. MCADOO,
*Secretary.*

*Statement showing quantity of grape brandy or wine spirits used in the fortification of sweet wines by the various wine makers in the United States during each of the fiscal years 1909, 1910, 1911, 1912, and 1913.*

The amount of revenue (3 cents per gallon) so far derived from the spirits so used is as follows:

| During the fiscal year— | |
|---|---|
| 1909 | $115,876.37 |
| 1910 | 145,697.25 |
| 1911 | 152,389.37 |
| 1912 | 189,292.11 |
| 1913 | 148,056.36 |
| Total | 751,311.46 |

It will be observed from the foregoing figures that in California 16 wine makers alone used in the fiscal year ending June 30, 1912, approximately 4,744,841 gallons of free wine spirits, and that one firm alone, during that fiscal year used the enormous amount of 1,125,279⅘ gallons.

NOTE.—The amount of revenue received by the Government at 3 cents per gallon, referred to at the end of the tabulation, was received for supervising the use of the free brandy in the sweet-wine making establishments in which said brandy was used and can not be said to be a revenue, because it simply covered the cost to the Government of supervising such use of free brandy.

It will be noted from the foregoing tabulation that a number of eastern wine makers have used free brandy in the fortification of sweet wines. Without knowing all the facts and circumstances as to how these wine makers secure the free brandy and how they made the wines into which they put it, we are unable to explain how they could legally use this free brandy while other eastern wine makers can not do so. We can only say that we have found no way in which it is possible for eastern wine makers to use brandy free of tax in manufacturing eastern sweet wines without violating the law.

BENEFIT TO THE GRAPE GROWERS.

It is our contention that the so-called "free brandy" law, instead of working to the benefit of the grape growers of California, actually works against the interests of those grape growers, and that the grape growers of the Eastern States are better treated by the wine makers of the East and fare better all around than do the grape growers of California, notwithstanding the fact that the wine makers of California enjoy the benefits of that law, while the eastern wine makers have to struggle against such tremendous odds.

The eastern wine makers protect their grape growers by charging for eastern wines such prices as will enable them to pay the grape growers an equitable price for grapes. We quote the following statement in our behalf from the printed report of the hearings before the subcommittee of the Committee on Finance of the United States Senate in 1913, page 75:

Mr. Bell made a plea for California grape growers. We have grape growers to protect as well as the Californians. We do protect our grape growers by charging for our wines a price that will enable us to pay our grape growers a fair compensation for their grapes. We pay for our grapes from $30 to $80 and sometimes $100 per ton. The average price of grapes in California is about $8 per ton. Our grape growers are not complaining, while their grape growers are. In California the wine makers pay the grape growers such a small price for the grapes that they practically crush the grape growers as hard as they crush their grapes in order that they may sell wines at a price which they voluntarily make so low that no one can compete with them. As a matter of fact, they have no competition on such wines, so far as price goes, and no reason why they should have such prices if their

wines are of the quality they claim for them. They can not complain that our wines compete with their so far as price is concerned, because the cost price of our wines is higher than the selling price of the California wines. Furthermore, our answer to Mr. Bell's plea for sympathy for his thrifty immigrants is that our German grape growers of the Eastern States are just as thrifty as any class of people on earth, and from the oldest to the youngest of the family are able to work, and all do work. They are entitled to at least the same consideration at the hands of Congress as the immigrant families referred to by Mr. Bell.

Now, note the following statement from a representative of the California wine makers, published on page 63 of the printed report of the hearings above referred to:

The cost of raising the grapes, as shown, is $10.50 per ton. This varies with different varieties, and in the sweet-wine districts contracts for grapes are made from $10 to $12 per ton, averaging approximately $10.50.

Also note the following excerpt from a letter dated April 28, 1913, from A. Sbarboro, one of the largest grape growers in California, to the editor of American Wine Press. (See American Wine Press for May, 1913, p. 25.)

Only last year sweet-wine grape growers were paid as low as $5 per ton for their grapes, who in many instances, rather than pay $2 or $3 a ton for picking and hauling, turned the hogs into their vineyards.

QUALITY DISREGARDED.

One of the effects of the so-called "free-brandy" law is to cause a disregard of quality of the wine made under that law, and a consideration only of the alcoholic strength of such wines, and one of the strongest talking points in regard to sales of such wines to dealers is that they have such high alcoholic content. Salesmen of such wines can point out that they contain from 20 to 23 per cent of alcohol (because they get the brandy free); while salesmen of eastern wines have to sell wines containing only 18 per cent of alcohol (because eastern wine makers do not get brandy free).

THE ERRONEOUS CONSTRUCTION PLACED ON THE LAW BY THE INTERNAL-REVENUE DEPARTMENT HAS PERMITTED TRAFFIC IN FREE BRANDY.

Section 45 of the law in question provides, in part, as follows:

That under such regulations and official supervision, and upon the execution of such entries and the giving of such bonds, bills of lading, and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, any producer of pure sweet wines as defined by this act may withdraw wine spirits from any special bonded warehouse free of tax, in original packages, in any quantity not less than 80 wine gallons, and may use so much of the same as may be required by him under such regulations, and after the filing of such notices and bonds and the keeping of such records and the rendition of such reports as to materials and products and the disposition of same, as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, in fortifying the pure, sweet wines made by him, and for no other purpose, in accordance with the limitations and provisions as to uses, amount to be used, and period for using the same set forth in section 53 (42) of this act * * *.

The object of the foregoing law was just this: The internal-revenue laws existing at the time this free-brandy law was passed provided that distilled spirits, including brandy, should be placed in bonded warehouses within a certain number of days after being produced in the distillery, unless the tax was paid. The tax was not required to be paid on them at the time of production, unless the distiller wished to pay it, but unless the tax was paid they were required to be put in bonded warehouses, from which they could not be removed until the tax was paid. But the framers of this free-brandy law saw that the following situation might arise: Grapes might be plentiful in a given year and a wine maker might have such a large production of grapes that he would early in the season fill up all his tanks and casks with wine and still have a surplus of grapes on his hands. If the law would only permit him to do so, he might ferment this surplus of grapes and distill brandy from the same and store it for use for fortifying purposes at some future time. As the law stood at that time, he must either pay the tax or store the brandy in a special bonded warehouse, and once stored there it could not be withdrawn until the United States Government was paid the tax per proof gallon on such brandy. Therefore section 45 was put into the law as an enabling act to permit such a wine maker to distill and store his brandy in bountiful years until such time as he could use it to advantage.

Another reason for this enabling act was this: Sweet wine must be fortified, according to the California method of making it, within a few days after the grapes are crushed; that is, within two or three days after fermentation starts. In other words, according to the California method of making sweet wine, as hereinbefore explained, the fermentation of the grape juice must be arrested by the addition of wine spirits when the fermentation has reached a certain point, otherwise the wine will not turn out as a sweet wine. Therefore the California sweet-wine maker must take the precaution to have on hand a sufficient amount of brandy to fortify his wine at the right moment. If it happens that his distillery is not of a sufficiently large capacity to produce brandy fast enough to fortify his sweet wines as fast as he ferments these sweet wines, then it is necessary for him to have a reserve stock of brandy on hand to take care of such an emergency. He could not keep this emergency stock of brandy stored at his distillery without paying the tax under the laws that existed then or under the laws that exist now, and as explained above, once he put it in the bonded warehouse, he could not get it out without the payment of the tax; hence the enabling provision contained in section 45 of the law permitting sweet-wine makers, who are also distillers, to withdraw wine spirits from any special bonded warehouse free of tax.

Our contention in regard to the meaning of section 45, above quoted, is that according to the plain wording of the law, as well as according to the plain meaning of the law, to be gathered from all its sections taken together, the only person who is authorized to withdraw brandy from a special bonded warehouse free of tax is a sweet-wine maker who is also a distiller and who has himself placed that brandy in that warehouse. In other words, he is permitted to withdraw his own brandy that he himself has stored there. We contend that a sweet-wine maker can not take brandy out of a bonded warehouse unless he distilled it himself and put it in the warehouse. The very word "withdraw" presupposes the prior placing of the thing to be withdrawn. But the Internal-Revenue Department has so construed this law as to permit distillers of brandy to place the brandy in a bonded warehouse and then go out and sell the brandy to wine makers anywhere in the country, such distillers not necessarily being sweet-wine makers themselves. Thus California distillers ship the brandy in bond to the special bonded warehouse nearest their customer, the sweet-wine maker, and then the distiller withdraws it out of bond without paying the tax on it and lets the sweet-wine maker to whom he sold it use it free of tax for fortifying sweet wines. The distiller, as pointed out above, may or may not be a sweet-wine maker, and the sweet-wine maker who buys this brandy under this operation is not the man who placed it in the warehouse. By this practice it has been possible for distillers to traffic in free brandy at a large profit to such distillers, while the Government supervises the various operations of producing the brandy at the distillery and taking care of it at different warehouses at a great expense, for which it receives no returns. The Government no doubt has a record of such transactions, and we contend that there is a tax due the Government from such distillers of $1.10 per proof gallon on every gallon that has been sold and used as above indicated, and that these back taxes amount to several millions of dollars. This traffic in free brandy not only works a further injustice against the eastern wine makers who have to buy tax-paid spirits, and can not legally use such free brandy for fortifying sweet wines, but also works an injustice against the eastern distillers of tax-paid spirits, who can not sell their tax-paid spirits in competition with free spirits.

Surely it was never intended that the Government should stand the great expense of supervising the production of such brandy in distilleries and then keeping track of it in the warehouses where first stored, and again keeping track of it in the warehouses to which it is subsequently transferred in furtherance of a sale to the wine maker who buys it without any compensation whatever to the Government.

THE LAW DISCRIMINATES AGAINST INDUSTRIES WHICH MAKE NECESSARIES FOR EVERY HOME.

The sweet-wine makers of California alone have the privilege of using (undenatured) alcohol free of tax. It may be used free only in the production of sweet wine, and it is necessary to use alcohol for that purpose.

But it is absolutely necessary also to use alcohol in the manufacture of flavoring extracts. Lemon extract contains 85 per cent of alcohol, which is almost twice as much alcohol as is contained in whisky, as bottled-in-bond whisky contains only 50 per cent alcohol. Vanilla extracts also contains from 30 to 60 per cent of alcohol. This is also true of many other flavoring extracts. These are common household articles. These flavoring extracts can not be made without the use of alcohol. Any extract made from an oil (such as lemon oil) must contain alcohol to dissolve the oil. This is commonly called "cutting" the oil. It is a matter of common knowledge that oil and water will not mix. A flavoring extract that is made from a resinous substance, such as vanilla beans, which contain resins, must contain alcohol to dissolve or "cut" the resins. It is also a matter of common knowledge that resins will not dissolve in water. The fact that these common household articles contain alcohol in greater quantities than does whisky is not, however, generally understood. Yet it is a fact that they do, and of necessity must contain alcohol. Practically all soda-water flavors, such as vanilla, lemon, orange, rose,

and practically all flavors also contain alcohol, and must contain alcohol for the reasons above stated. On all this alcohol a tax of $1.10 a proof gallon is paid into the Treasury of the United States, and this revenue is paid by the consumer. Every housewife helps to pay it. Every farmer helps to pay it. Every laborer helps to pay it. Every schoolboy and every schoolgirl who tenders a penny or a nickel for a glass of soda water or a dish of lemon or vanilla ice cream or a piece of candy helps to pay it. Because all these things are flavored with extracts containing alcohol. But the gentleman or lady of leisure who drink their after-dinner California sherry, tokay, or muscatel do not help to pay it—the alcohol that is used to produce the drink that contributes to their pleasure is given to the wine maker free of tax. Manufacturers of flavoring extracts can not use free brandy or free alcohol.

THE MEANING OF THE WORD "PROOF."

The word "proof" is a word that is peculiar to the internal-revenue law and to the distilling industry. What it means is to denote the amount of alcohol that may be present in a liquid. Pure alcohol, 100 per cent pure, is designated as "200 proof." This is the highest proof possible. The moment any water is added to pure alcohol it lowers the proof. Thus, if 50 per cent water is added to pure alcohol, the mixture is designated as "100 proof," which means that it contains 50 per cent water and 50 per cent alcohol. Whisky is ordinarily 100 proof—that is, it contains 50 per cent water and 50 per cent alcohol. If we say a liquid is "50 proof," we mean it contains 25 per cent alcohol and 75 per cent water or other liquid. California wines containing 22 per cent alcohol are 44 proof. The words "taxable gallon" mean the same as "proof gallon." The internal-revenue tax of $1.10 a gallon on alcohol is on proof gallons.

EFFORTS TO HAVE FREE-BRANDY LAW REPEALED IN 1913.

When the tariff act of 1913 was pending before Congress, Senator POMERENE, of Ohio, submitted to the Senate Finance Committee an amendment to the bill as it came from the House, which amendment sought to repeal the free-brandy law. This repeal would have raised a revenue of approximately $7,000,000 annually, and, we understand, this $7,000,000 was figured in the estimates of the Senate. But no sooner had the amendment been submitted to the Finance Committee than the Californians succeeded in having the wording of the amendment changed in such a way that, while it would repeal the free-brandy law and cause them to pay a full tax on all spirits used, the same as eastern wine makers have been doing, still it would put an additional tax of about 25 cents a gallon on all eastern wines, which tax they would not have to pay in California. This was accomplished by getting into the matter the question of standards for wines and thus involving the pure-food issue. The Californians succeeded in getting the repealing clause so worded that it would destroy the entire eastern wine-making industry. This dragging in the question of standards for wines involved a consideration and careful study of the entire art of making wine. The Senate Finance Committee started out by giving a hearing of an hour to both sides—30 minutes to each—but at once saw that the subject was so complicated, from the standpoint of standards, that they could get head nor tail of it in such a short space of time. They then gave further hearings, amounting in all to about three days, and some of the members at the end of that time stated that they were more bewildered on the subject of wine making than they were before the hearings were had, and that they did not feel like legislating on such an important subject without a better understanding of what they were doing, especially when two great sections of the country were making contentions diametrically opposed to each other. It addition the Department of Agriculture sent a letter to the Senate Finance Committee stating in effect that it was a very inopportune time to legislate on the subject of wines, as it might interfere with work that department was doing. The Secretary of Agriculture, however, finally admitted that the question of whether the Californians paid $1.10 a proof gallon for the brandy they used in wines or got the brandy free would not have any bearing on the subject of proper standards for wines. Nevertheless by that time the question of standards for wines had hopelessly befogged the real issue. The amendment passed the Senate in such form as to give the eastern wine makers some little recognition and relief, but the whole amendment, including the repeal of the free-brandy law, and which would have raised $7,000,000 for the Government from brandy, was thrown out by the conference committee, and this amount was either never made up or proportioned by tax on other products so as to make it up. This action of the conference committee had been predicted in positive terms by certain of the Californians several weeks before the conference committee even convened, and on the strength of this prediction they refused to even consider the question of compromise on the question of the repeal of the free-brandy special privileges.

THE AFTER EFFECT OF OUR EFFORT TO HAVE FREE-BRANDY LAW REPEALED IN 1913.

During the time the said amendment was under consideration every recommendation that came from the Internal Revenue Department or Treasury Department on the subject of the amendment was unfavorable to the cause of the eastern wine makers and decidedly in favor of the California wine makers, notwithstanding the enormous loss of revenue to the Government that has been pointed out in the foregoing pages of this pamphlet, and which was repeatedly brought to the attention of the said Treasury Department. Since that time the Internal Revenue Department has been particularly antagonistic to the eastern wine makers, and has published a special Treasury decision prohibiting the manufacture of pomace wine, which is a product that has been made in the East ever since wine has been made in America, and which is a cheap and wholesome beverage, consumed by laboring classes, who could not afford to buy a more expensive wine.

Immediately after Congress adjourned in October, 1913, the United States Department of Agriculture also took up the subject of the manufacture and labeling of wines and repealed a decision that had been adopted by the Secretary of the Treasury, the Secretary of Agriculture, and the Secretary of Commerce and Labor under the former administration relating to the manufacture of eastern wines, which decision had been promulgated after a full hearing and consideration of the subject. The decision was known as food-inspection decision No. 120 of the United States Department of Agriculture. That decision permitted eastern wine makers to correct natural deficiencies in grapes grown east of the Rocky Mountains by means of the addition of a solution of sugar and water, the same as permitted under the wine laws of Germany, where wines similar to our eastern wines are produced. The decision of the Department of Agriculture issued in 1914, known as food inspection decision No. 156, and printed in the foregoing part of this pamphlet, not only takes away from the eastern wine makers the right to manufacture wine in the manner in which it has been made in the East ever since wine has been made in America, but it is positively favorable to California, and expressly provides that it shall not apply to wine made under the so-called free-brandy law. It positively prohibits eastern wine makers from using any water, while expressly providing that it shall not apply to wine made under the free-brandy law, which, as we have pointed out, permits the addition of 10 per cent water and 24 per cent other ingredients to California wines, making a total of 34 per cent added to those wines, and still permitting them to be classed as pure wines. This food-inspection decision No. 156 of the Department of Agriculture is still in full force and effect. The eastern wine making season is now at hand, and the eastern wine makers are confronted with the proposition of either ignoring that decision and taking their chances in the courts of the land to secure justice for their industry or produce wines under that decision that they and all other practical wine makers know full well will be unmerchantable, unwholesome, and of inferior quality when produced. This is the reward that the eastern wine makers have received for their attempt in 1913 to have the free-brandy law repealed and raise $7,000,000 annually in revenue and to secure equality under the laws of the land.

THIS IS ONE EASTERN WINE THAT IS BEING DISCRIMINATED AGAINST.

[Song for Catawba wine, by Henry W. Longfellow.]

This song of mine
Is the song of the vine,
To be sung by the glowing embers
Of wayside inns,
When the rain begins
To darken the drear Novembers.

It is not a song
Of the Scuppernong,
From warm Carolinian valleys,
Nor the Isabel
And the Muscatel
That bask in our garden alleys.

Nor the red mustang,
Whose clusters hang
O'er the waves of the Colorado,
And the fiery flood
Of whose purple blood
Has a dash of Spanish bravado.

For the richest and best
Is the wine of the West,
That grows by the Beautiful River [the Ohio River];
Whose sweet perfume
Fills all the room
With a benison on the giver.

And as hollow trees
Are the haunts of bees,
Forever going and coming;
So this crystal hive
Is all alive
With a swarming and buzzing and humming.

Very good in its way
Is the Verzenay,
Or the Sillery soft and creamy;
But Catawba wine
Has a taste divine,
More dulcet, delicious and dreamy.

There grows no vine
By the haunted Rhine,
By Danube or Guadalquiver,
Nor on island or cape,
That bears such a grape
As grows by the Beautiful River.

Drugged is their juice
For foreign use
When shipped o'er the reeling Atlantic,
To rack our brains
With the fever pains
That have driven the Old World frantic.

To the sewers and sinks
With all such drinks,
And after them tumble the mixer;
For a poison malign
Is such Borgia wine,
Or at best but a devil's elixir.

While pure as a spring
Is the wine I sing,
And to praise it, one needs but name it;
For Catawba wine
Has need of no sign,
No tavern bush to proclaim it.

And this song of the vine,
This greeting of mine,
The winds and the birds shall deliver
To the queen of the West
In her garlands dressed,
On the banks of the Beautiful River.

[The foregoing poem by Henry Wadsworth Longfellow is said to have been written upon the occasion of his visit to Nicholas Longworth, the pioneer Ohio grape grower and wine maker, who first planted the grapes along the bluffs of the Ohio River, and furnished the young plants to the settlers in the valleys of the Ohio and Missouri Rivers.]

WINES AND WINE MAKING.

[By A. Haraszthy, commissioner on the improvement and growth of the grapevine in California to the honorable Senate and Assembly of the State of California, 1862.]

Page 262, he quotes an authority:

"We find that wine consumers estimate as good wines only those whose contents of acids do not exceed 6 parts in 1,000. He shows a table by Dr. Hiubeck on vintages of 1841, showing that wines of too high acid brought the lowest market prices:

| | Acids. | Alcohol. | 15 gallons, price in United States money. |
|---|---|---|---|
| Brandner | 5.0 | 9.8 | $5.52 |
| Murberger | 5.9 | 8.3 | 4.65 |
| Radkersburger | 6.2 | 8.4 | 4.42 |
| Kerschbacher | 7.1 | 9.5 | 3.86 |
| Wiseller Johannisberger | 8.3 | 8.9 | 3.31 |
| Sauritschor | 9.1 | 10.2 | 3.03 |
| Marburger Koschacker | 12.0 | 6.7 | 2.25 |

"It illustrates that even though the alcohol was higher in some, they brought a lower price, owing to their higher acids."

Haraszthy further states:

"That all wines, in order to be estimated as good and palatable, must contain at least 4½ pro mille of free acids (counted as vinegar acid) and not more than 6½.

"That all containing more than six-thousandths of free acids must be considered as having not enough water in proportion to its acids.

"That experience has taught us, for more than 10 years, in all the different German grape districts, that a proportionable addition of water and sugar forms the means to produce, even from the most sour must, as drinkable and as good a wine as is otherwise produced in good medium seasons."

On page 269, A. Haraszthy quotes Dr. L. Gall, as follows:

"The price of wines is, in general, more regulated by a medium degree of acids of no more than 6 and not less than 4 pro milles, than by a higher degree of alcohol than 8 per cent."

On page 269, Progress of Wine Fabrication since 1850:

"In France we see a lady, Mrs. Cora Millet, a landed proprietress, taking the lead in adapting a rational manner to increase the quantity of the wine by more than 5 per cent, without harming the quality; soon others convinced by the good results followed in the wake. In the year 1856 a district class was founded at the Royal College at Dijou, the capital city of the rich Burgundy district, for the instruction of students in the application of chemistry to the culture of the grape.

"In this the different newly invented methods of making and increasing the wine are clearly discussed and taught inasmuch as they are based upon proportionate additions of sugar and water. A similar class was founded at Rheims, the capital of the Champagne district."

On page 282 A. Haraszthy states:

"The eminent technician, Mr. Dubrunfant, promulgated for the first time, in the year 1854, in France, his opinion based upon many trials:

"'That an addition of sugar-water to the must, regulated according to the quantity of its acids, will be the unfailing means to produce from every vintage, no matter what locality, always wines of like quality as those of the best seasons, and to quintuple their quantity if necessary.'

"The proposition of Dubrunfant was carried out in the largest measure the year following by a Mr. Abel Petiot de Chanirey, a large vineyard proprietor in Burgundy, and an essay on the manner employed and its results was handed by him to the Imperial Society of Agriculture."

[From The Literary Digest.]

ANOTHER FOOD SUBSTANCE IN WINE?

Those who affirm and those who deny that alcohol has true food value agree that certain nutritive substances may be found in alcoholic drinks. That glycerin and cream of tartar, which are found in wines, are foods no one would deny, though probably no one ever drank wine solely for the purpose of profiting by their nutritive properties. To these, however, has now been added a food of great value, namely, a lecithin, one of a class of substances recently found to be especially promotive of rapid growth. We quote the following from a note contributed to La Nature, Paris, August 6, by Dr. E. Varenne, formerly preparator in therapeutics to the Paris Faculty of Medicine. Says Dr. Varenne:

This valuable vital principle was discovered in the yolk of egg, which contains it in large proportions. * * * Yolk of egg is, as everyone knows, a food of the first order, and Gobley, the celebrated chemist professor at the school of pharmacy (who discovered lecithin in 1846), has published numerous interesting papers about it.

But there are vegetable as well as animal lecithins, for lecithins seem indispensable to life. The lecithin that seems to be most widespread is "stearic lecithin," whose chemical name is "distearo-glycero-phosphate of trimethyl-hydroxyl-amine-ammonium." This lecithin is also met with in milk, corn, peas, oats, etc.

Messrs. Weirich and Orthieb have also discovered it in grape stones. These chemists, in an investigation of pure natural wines, remarked the superiority of a Greek wine of Thyra (Cyclades) when used for the purpose of rehabilitating "sick" wines. The analysis of this wine indicated that it contained 0.095 per cent of phosphoric acid. A white Malaga contained 0.049 per cent; a Tokay 0.068 per cent; and another sweet wine 0.054 per cent.

Now, from their researches Messrs. Weirich and Orthieb have concluded that the phosphoric acid thus found came from organic combinations formed in the grape stones and dissolved in the wine during the fermentation of the must and proportionally to the quantity of alcohol produced. * * *

We must then accept the fact that lecithin exists in very appreciable quantities in natural wines, and the more as these are richer in alcohol. Here, however, we must make a distinction and remark that only wines rich in alcohol by fermentation contain lecithin.

Weak wines artificially strengthened by the addition of alcohol after fermentation do not contain it. Again, as lecithin alters at about 50°—60° C. (122°—140° F.), the so-called "pasteurized" wines lose this precious principle during heating. Also, pink and white wines, which have fermented without the pulp and the stones, contain no lecithin.

Hence we draw an important conclusion—that wine is a real food, not only from the alcohol, the glycerin, and the cream of tartar that it contains, but especially from its licithin.

But in order to fulfil this condition the wine must be pure, made not chemically but by old and honest methods. Such wines may easily be found at modest prices. And still another point must be noted. * * * Use, do not abuse. (Translation made for The Literary Digest.)

[K. A. Helleńthal's Manual for Wine Growers and Wine Dealers, or The Perfect Wine Cellar Master. Eighth improved and enlarged edition. After long years and practical experience of the author, and by using the most renowned authorities on oenology and chemistry. J. Beyse, author.]

(Page 368.)

As early as the period of the first settlement in America it appears that the there existing wild grapevine attracted the attention of the colonists, and it is asserted, that in the year of 1564

they already made wines out of grapes grown in Florida. The earliest attempt to plant vineyards was made in Virginia, in 1620, and after 10 years the vineyards were so promising, that they had French vineyardists come, who through unsuitable treatment are said to have caused the grapevines to perish.

In 1647 we again find wine production in Virginia, and in 1651 prizes were issued to encourage the wine growers.

In the year of 1648 grapevines were raised in the State of Delaware, then called Uvedale, which grapevines were supported by mulberry trees and sassafras trees. Four varieties were cultivated: Toulous Muscat, Sweet Scented, Great Fox, and Thick Grape; all varieties imported from Europe. The first two produced a strong, red sherry, the third a light claret, and the fourth a golden colored wine. In 1633 William Penn tried to plant vineyards near Philadelphia, however, without success. From that time on the viticulture in Pennsylvania was entirely in the hands of the Germans.

In 1796 French colonists made wine in Illinois from wild grapes; at the same time Frederick Rapp and others planted a vineyard of 10 acres near Pittsburgh, Pa.

In 1790 a Swiss colony also formed to pursue viticulture. Their first experiment by planting foreign vines was an utter failure; then they tried it with native vines and better results followed; yet after 40 years no trace of the vineyards was to be found as the colony scattered.

Viticulture on a large scale first began at the time when the Germans settled in the Ohio and Missouri Valleys.

They experimented with vines from foreign countries. However, they gained better results with the Catawba grapevine, which originated in the State of Virginia.

This variety, which is subject to mildew and rot, in many localities is replaced by other varieties of native vines, regarding whose larger productiveness and endurance they were convinced. In the vicinity of Cincinnati there are now 3,000 acres of vineyards along the Ohio River, and these were planted within a period of 30 years. These vineyards produce annually about 4,000,000 gallons—i. e., 250,000 buckets of wine.

Still later the wine growing began in the Missouri Valley. At Hermann, a German locality, the first vineyard was planted in the year 1845. The first vines were the Catawba grapevines, which flourished particularly well in this valley. Now, Norton's Virginia Seedling is cultivated there, from which a red wine is made, which boldly can match itself with every fine red wine of the old world, and which has a similarity to Burgundy and port wine.

A third native variety of wines which is extensively cultivated is the Concord. Besides the grapes mentioned, one now also finds, the Herbemont, Delaware, Hartford-prolific, the Maxatawney, all cultivated from the native wild grapes, by cross breeding and refining.

Toward the north, for Minnesota, the Clinton is splendidly adapted.

There are now already 50 American varieties of grapevines, which are preferably adapted for the Middle West. The first three varieties named comprise the largest in number. The wine in those localities is still called Catawba wine.

At Hermann, Mo., there are 1,000 acres of vineyards, which in the year 1865 left an income of $200,000; this year was a particularly bad year.

Furthermore, wine growing is done on a large scale at Boonville, in Cooper County; at Augusta, in St. Charles County, Mo.; at Hannibal, Mo., on the Mississippi River; and at St. Joseph, on the Missouri River.

In the State of Illinois we find vineyards at Alton, Belleville, Mascoutah, Warsaw, Nauvoo, and Makanda.

In the State of Iowa wine growing has just begun at Burlington and Davenport.

In the State of Kansas wine growing is going on since two years.

With the large German immigration the wine culture there will in a few years increase enormously.

The gallizing of wines is done extensively, especially in unfavorable years; the gallizing proves good in American, just as in Europe.

In the Union there, furthermore, is wine growing in the vicinity of New Orleans, in Massachusetts, in Texas, in Virginia, and in Florida.

In California viticulture has taken on large dimensions. It started there in the year 1852, and California now furnishes the Union with 600,000 buckets of good wines, of a character reminding one of Sherry, Maderia, Tokay, and port wines.

After they finally stopped experimenting with the acclimating of Europe grapevines and took to the native wild-growing varieties, and cultivated and improved them, then the wine growing in the Union had a great future before it.

The latest vineyards cultivated are those of the Mormons, in Utah, said to bear excellent grapes, which, however, are used for the table only. Brigham Young does not want to hear anything about wine—no wine, but, on the other hand, many wives.

In America the early as well as later attempts of the Frenchmen, Englishmen, Spaniards, and Portuguese to cultivate grapevines were failures; only the Germans were victorious. They threw overboard the prejudiced idea that American soil is not adapted to grape culture, and they scouted around for varieties which would thrive and after they found same, then viticulture made fast and vigorous headway.

GALLIZING.

(Page 60.)

In the last edition of my works I dwelt upon the method of improving the must, which, as named after the discoverer, Dr. Gall, is called gallizing. This method has since then completely opened its way into general use. All wine, Moselle and Neckar wines—in fact, all German wines shipped to America—are gallized, and exactly this circumstance has created a very important market in America for these wines.

These gallized wines offer important advantages:

First. Always are uniform wines, even in poor seasons.

Second. Stand transporting without undergoing changes.

Third. Never get cloudy, don't form mold (mycoderm), and only careless cellar treatment can cause them to turn into vinegar.

Fourth. After the first year they hardly require any cellar treatment.

Fifth. They are stronger without any alcohol being added, and this strength makes same adapted for far-off markets.

Sixth. The wines became cheaper, because considerable more than was the case formerly was called for by the trade.

The erecting of numerous grape-sugar factories (dextrose factories) in the Confederated German States, in Austria, in France, proves the extent to which gallizing of wines has made headway. Only for this purpose and no other is grape sugar (dextrose) used.

The many screechers who condemn gallizing have become mute; those who protested the most now gallize their wines. No person now can do without it. The practice has created a revolution in wine making and it is one of the greatest progresses to be recognized in the making of wines.

It has this advantage, that it is exceedingly simple, and that the smallest producer can avail himself of the method, because it does not require the buying of new cellar apparatus.

After this short introduction, I now take up the practical procedure. In order to make good wine out of must, it must contain 24 per cent of sugar and not over 6½ per cent acids. Accordingly, 100 pounds of such must would consist of sugar, 10×24 per cent=240 pounds; free acids, 1×6½ per cent=6.5 pounds; water (inclusive of other wine-producing ingredients), 753.5 pounds. Total, 1,000 pounds.

This compilation forms the so-called normal must for good wine and serves as the foundation for all calculations.

The must containing less sugar and more acids (and such is always the case in medium and in poor years) is, therefore, fit to be improved in order to be equal to normal must of good years with regard to sugar and acids.

If a mild summer has formed a deficiency of grape sugar in the grapes, but, on the other hand, an excess of acids, then it is the human aid which restores the deficient grape sugar and diminishes the excessive acids. This is done through the principle of improving the must. On the part of the producer it requires a little more knowledge, more labor, and a further expense for grape sugar (dextrose). In return the producer in poor years secures a good wine, and, besides, more wine than he presses from the grapes. (Translated by O. G. Stark, St. Louis.)

THE SUGAR.

The natural varieties of sugar we divide into grape sugar and cane sugar. The sugar mingled with acids in fruit juices is grape sugar; the sugar dissolved in neutral fluid is cane sugar.

The former prevails in all ripe fruits, sometimes as grape sugar alone, sometimes mixed with cane sugar. The second is found in sugar cane, in the palm, and so forth.

Ripe grapes invariably contain only grape sugar, yet before the ripening of the grape the grape sugar is mixed with cane sugar.

The cane sugar crystallizes very easily and in large crystals; the grape sugar, however, crystallizes only incomplete.

Cane sugar, through the actions of acids, is transformed into grape sugar.

Cane sugar is composed of the following elements:

| | |
|---|---|
| Carbon | 72 |
| Hydrogen | 11 |
| Oxygen | 88 |
| Total | 171 |

That means in 171 grains sugar there are contained 72 grains carbon and the elements of 99 grains water, since hydrogen and oxygen are found in sugar in the same proportions as in water.

Grape sugar, in comparison, is composed as follows:

| | |
|---|---|
| Carbon | 72 |
| Hydrogen | 12 |
| Oxygen | 96 |
| Total | 180 |

That illustrates: To the same amount of carbon, 72 grains, there are contained in the grape sugar the elements of 108 grains water; therefore a little more than in cane sugar.

The grape sugar to be had in commerce is prepared from potato starch (and from corn starch).

When sulphuric acid takes effect on potato starch, then this is first converted into dextrin; the dextrin is then further converted into grape sugar.

The composition of grape sugar derived from potato starch is precisely the same as that of the grape sugar contained in grape juice.

All sugars, however, when dissolved and mixed with lees—yeast—will undergo a wine-spirituous fermentation.

This is very important. It follows that when you add to a must which is poor in sugar contents, either cane sugar or sugar prepared from potato starch, these will ferment exactly as though there were in the must only grape sugar contained in the grape.

Page 106: In Rhine wines the sugar represents six-sevenths of the extracts.

In the residue, therefore, there are six parts sugar and only one part of all salts and nonvolatile substances together.

In the red Bordeaux wines we find only very little sugar.

In Muscat Rivesaltes, however, there is 24½ per cent extract against 22 per cent sugar. Much sugar is also contained in Muscat Lunel. True enough, the must in this wine is condensed, and in Cette, France, a large amount of rock candy is added besides.

Rich in natural sugar are Ruster, Meneser, and Tokayer.

The red wines contain only one-half per cent sugar; without that same would not taste agreeable and the astringent taste of the tannic acid would be too domineering.

Among the sweet wines some contain one-fourth of their weight in sugar.

UTILIZING THE PRESENT POMACE.

The richest utilizing of pomace is gained through the Petiot method. Where, however, wines are treated according to ordinary methods, the pomace taken out of the press is mixed with water and grape sugar added, and subjected to another fermentation. A medium-grade wine is derived, which is given to laborers. Often same is distilled to produce brandy. The thus obtained pomace brandy is not exactly as palatable, but is more intoxicating than cognac, which is obtained through the distillation of the wine. (Translated by O. G. Stark, St. Louis, Mo.)

THE CONSERVING OF WINE AND MUST AND THE ADMINISTERING OF SALICYLIC ACID IN THE CELLAR TREATMENT—CRITIC'S PERUSAL OF THE WAYS AND MEANS EMPLOYED UP TO NOW IN THE CONSERVING OF WINE AND MUST FOR WINE PRODUCERS AND WINE DEALERS.

[By Antonio dal Piaz, author of Utilizing Wine Residues, of Wine Making and Cellar Treatment, etc. Published by A. Hartleben's Verlag, of Vienna, Pest, and Leipzig, 1878. Written by Antonio dal Piaz in April, 1878, at Kloster Neuburg (Cloister Newburgh), Austria. Translated from German by O. G. Stark, St. Louis, Mo.]

(Pages 20 and 21.)

Alcohol or wine spirits as a conservative in wine deserves the fullest consideration because the clean spirits of alcohol is added to the wine for the purpose of keeping it in sound condition. Then no foreign or deleterious substances get into wine, and there is only a moderate increase in the volume of wine. Alcohol in the pure concentrated condition, as well as diluted within certain bounds, is a substance which suppresses the vegetable life and can be administered in all directions as a ferment germ destroyer and conservative.

The natural alcoholic conditions of wines always act conservingly, and the stronger the wines are the better they will be in regard to keeping. This has been recognized in early times, and it was therefore sought to increase the keeping qualities of wines through corresponding alcoholic additions. Apparently in such countries where, through favorable conditions, large wine exports were built up the necessity at the same time arose to make wines fit for transport; that is, to put same in such condition that same in transport, even when exposed to unfavorable circumstances, would not take on a change nor undergo a second fermentation. It was therefore the addition of alcohol, or the so-called alcoholizing, especially customary in Spain, Portugal, Italy, and France, where all wines intended for export receive a stipulated addition of alcohol, which is not only governed to suit the country to which the wine goes, but their prevailing taste, and also is governed with special regard for the quality of the wine itself. In France even the addition of alcohol to the wine is legally regulated and permits of wines destined for export an addition of wine spirits up to 5 per cent.

(Page 22.)

Ordinarily wines with low alcoholic strength are always more subject to the various sicknesses and have keeping qualities only to a smaller extent. With the increase of alcoholic contents the keeping qualities of the wine also increases. Wines having an alcoholic strength of 12 per cent by volume and over will not form moldy scum (mycoderm), and also have good keeping qualities. Wines, however, with alcoholic strength of 14 to 15 per cent by volume are secure against any afterfermentation or cloudiness, even though there will be some unfermented sugar contained therein and it be exposed to a high temperature; likewise it is impossible for such wine to become sick, owing to the influence of ferment germs (yeast cells), because in the fluid containing about 12 to 15 per cent alcohol the development of germ propagation can not take place. If, therefore, enough alcohol is added to the wine so as to raise the alcoholic strength thereof up to 12 to 15 per cent by volume such wine will no longer become sick, even if it is stored or transported under the most unfavorable conditions. In the case of must of high saccharine percentage, when same contains more than 30 per cent sugar, the fermentation will produce about 15 per cent of alcohol, and a further fermentation will then be interrupted even if a larger quantity of unfermented sugar is still on hand in the wine, because the fermenting germs or yeast cells are killed under such alcoholic strength, and thereby the further fermenting is made impossible. With a corresponding addition of alcohol therefore wines of low alcoholic strength can be made of good keeping qualities and be protected against becoming sick, which same otherwise are easily subjected to. If the corresponding quantity of alcohol is added to such light wines this will enable same to be transported to great distances. The increase of the alcoholic strength can be accomplished in such manner that either the necessary alcohol is added immediately and directly to the wine, or else the alcoholic conditions of wines can be increased at a time when the wine is produced by adding to the must before fermentation double as many per cents of sugar as the desired increase of alcoholic strength, just as is the case in the method of wine improvement known as chaptalising. The high alcoholic strength not only makes the wine of better keeping qualities, but through the addition of alcohol, sicknesses of wines can be suppressed at the time the sickness is developed. Mold germs which form on the surface of the wine can be removed and destroyed entirely if one carefully pours and distributes rectified alcohol over the surface of the wine. The (specific) lighter alcohol will spread over the surface and completely destroy the developing mold germs (Mycoderma vini). * * *

When fortifying with alcohol, it is advisable to pay strict attention that only clean alcohol fully free of fusel oil is used.

---

TABLE FOR CALCULATIONS FOR PERFECTING MUST OR WINE ACCORDING TO DR. GALL'S SYSTEM OR MANUAL FOR EVERY WINE PRODUCER.

[By Henri Schlippe.]

Following many requests made of me, I give with this third edition a compact but fully sufficient illustration and interpretation of the entire Gall system to whenever necessary improve or perfect Rhine wines and similar wines.

ELUCIDATION AND UTILITY OF THE GALL SYSTEM.

Dr. Gall's real fundamental system to improve and perfect inferior must or wine, which system continues more and more to improve itself practical, substantiated, and world-wide known, rests solely and alone on the rule how to scientifically establish the quantity of acid and of sugar or alcohol present in the must or wine; then, to see if one or the other, compared with good wine as nature furnishes, does not show an excess or deficiency, and finally how to regulate the excessive acid and deficient sugar by the addition of water and sugar so that the total acid and sugar contents are brought into such proportions with each other and the remaining characteristics of the wine as we expect same from nature, if same shall be agreeable to our taste and to our well-being or, better, our health.

Water and sugar, or alcohol created from sugar through fermentation and closely united with the wine, are both substances which are contained in every must or wine in more or less quan-

tities. Sugar and water are, therefore, no foreign substances which are added, but only augmentations based on art and science, and as well known are two principal ingredients of wines; therefore, additions entirely fitting nature, and the Gall process is, therefore, entirely in conformity with nature a truly perfecting, against which in the interest of agricultural economy on the whole as well as the single producer and consumer, no objection can in a sensible way be offered, but on the contrary deserves protection and support, inasmuch as the process transforms a more or less inferior unsalable and unhealthful nature's product into a merchantable article sought and well paid for everywhere even in foreign countries, and therefore circulates money and brings welfare in general and to the individual, and what really is the main point renders a fine tasting, full-bodied, and strong drink, which not only refreshes and invigorates our body but also beneficially enlivens and cheers our mind and disposition. * * *

(Page 13.)

When adding water, use clear well water. When distilled water is available, I recommend it, because well water contains other substances. However, I do not believe that the difference is sufficient as to make it worth the trouble to secure distilled water under difficulties and at an expense.

When adding sugar, use either loaf sugar, rock candy, or grape sugar (dextrose). As to which sort is most serviceable, opinions are not quite well established. Some claim to know that cane or beet sugar produces more alcohol, against which others claim grape sugar gives the wine a peculiar mellowness, only it must not be yellow, but almost white, at least hard, about like wax; better, however, entirely dry and minus the bitter taste. From my own observations I can, nevertheless, assure that with grape sugar (dextrose) the wine is fermented through and completed sooner; but one may use only good quality, without undesirable taste, otherwise the wine easily also will have an undesirable aftertaste.

I must here call attention that in all directions and calculations as to the additions of sugar, cane or beet sugar—that is, loaf sugar or dry, clear rock candy—and that when using grape sugar (dextrose), when it is not dry, more must be used than the general calculation indicates. For instance No. 1: If not entirely dry, then use 10 parts more; i. e., instead of, for instance, 60 pounds cane or beet sugar, use 66 pounds grape sugar. No. 2: When using solid grape sugar, like wax, then one-seventh times as much; i. e., instead of 60 pounds use 69 pounds, which, according to Balling, will equalize the differences.

Balling quotes the saccharine strength of dry (anhydrous) grape sugar (dextrose) at 89 to 90 per cent, and the solid grape sugar, like wax, at 80 to 84 per cent.

(Concluding remarks, page 15.)

Here I must remark that gallized wines, after the chief fermentation, often have a disagreeable, insipid, or bitter taste. This, however, must not cause us to become uneasy, as that will pass away and delights us usually with a so much more surprising result.

Many persons now probably ask, Would it not be, in many respects, easier and more simple, instead of sugar, to immediately add the finished alcohol?

I reply thereto that such a procedure is always promptly recognized by its odor and taste as an obnoxious bothing and is contrary to nature, because it is something entirely different to mix the finished alcohol with the wine than it is to let the sugar, by way of fermenting the wine, turn into alcohol, peculiarly develop, and then in the closest manner chemically combine with the wine, to which fact I promptly pointed in the very beginning of my editions.

The supposition that alcohol may be used instead of sugar is therefore entirely erroneous, without taking into account that sugar will, besides, always impart aromatic and antheric particles. (Translated by O. G. Stark, St. Louis, Mo.)

—

THE WINE CULTURE—A GUIDE TO THE PLANTING AND TREATMENT OF THE GRAPEVINE AND THE WINE IN THE MIDDLE STATES OF NORTH AMERICA.

[By John Becker, member of the Viticultural Society of Evansville, Ind., formerly for many years member of the Baden (Germany) Agricultural Society, Evansville, Ind., 1860.]

(Page 101.)

The peculiarity, however, must not be overlooked, that from freshly crushed grapes it is not as easy to press out the juice as from such crushed grapes which were allowed to remain some time in the fermenting vats.

In Europe, therefore, the crushed grapes often are permitted to remain in the fermenting vats from two to three weeks and ferment, the wine underneath separating fairly clear, and the pomace floating on top. The wine is then drawn off into casks. * * *

The sooner the crushed grapes are crushed, the more so will the color of the wine be pale. If, however, red wine is wanted the crushed grapes must be allowed to ferment several days, so that the color in the grape skins will dissolve, because only in the skins is located the color.

In the regions of France which produce red wines the pomace is repeatedly stamped down, so as to have the color dissolve faster and the wine be more colored.

The pressed-out pomace can be packed into vats and casks and used for distillation and will produce a good brandy. The packing away of the pressed pomace, however, must be done at once into air-tight containers, otherwise the developing alcohol (spirits) will evaporate and the pomace get moldy after the pomace has gone through the distilling process, same will prove to be a valuable fertilizer for vineyards, which contains especially much potash and is very beneficial for the grapevine. (Translated by O. G. Stark, St. Louis, Mo.)

—

THE TREATMENT OF AMERICAN WINES—THEIR SICKNESS AND THE CURE.

[By Charles H. Frings, editor of Grape Culturist; founder of Deutschen Wein Zeitung (German Wine Newspaper) in Mayence, Germany; superintendent of Bluffton Wine Co., St. Louis, Mo. Conrad Witter's Book Store, St. Louis, Mo., 1869.]

(Page 6.)

While the sugar under its process of separating from the lees is transformed into alcohol and carbonic gas, other ingredients of the must also become changed, inasmuch as they either undergo new combinations with one another (for instance, fragrant ethers are formed from alcohol and acid) or they precipitate part of them (for instance, hydrogen potassium tartrate, commonly known as argols). The transformation takes place more rapidly in warm temperature than in low temperature.

Cold temperature interrupts the fermentation, since it makes impossible the propagating of the yeast cells (fermenting germs); the germ then sinks to the bottom and the wine becomes clear without being fully developed. As soon, however, as it again is exposed to warmth fermentation again sets in and keeps up until cold temperature again interrupts the fermentation or until all the sugar or all ferment stuff is consumed.

This refermenting sometimes repeats several years in succession before the wine is fully developed and can be called bottle ripe; wherefore the German wines, which almost without exception are stored in very cool cellars, seldom can be drawn off into bottles before the third year.

Very many German wines of 1865 vintage, which showed a high percentage of sugar, were not even bottle ripe in 1869. Under such circumstances it is easily comprehensive why German wines are valued higher the older they get. * * *

(Page 8.)

A room in which during the winter the temperature can be kept at 15° Réaumur or 65° Fahrenheit will suffice fully to make the wines bottle ripe by the fourth or fifth month following the vintage, and it requires therefore, even during the hottest summer, no other room to store the wine and keep it from spoiling. On the contrary, through the warmth to which they are subjected they will become more perfect, acquiring the character of older wines.

To warrant this claim, which may appear to most as incredible, probably even paradoxical, I refer to following historical facts. Already in ancient times the Greeks and Romans, as Plinius and Dioskorides proved, kept their wines in the uppermost parts of the houses and in parts exposed to the south. These places are called "horreum vinarium."

In the seventeenth century in Bacharach, Steeg, Diebach, and Manubach on the Rhine wines were made from must by rapid fermentation and then hurriedly taken to Holland, where they were appreciated extraordinarily owing to their agreeable taste. This rapid fermentation was accomplished by heating in so-called "fire chambers," and called the resultant wine "fired wine." Since the custom was abandoned to offer a reward for the first cask produced in the manner for Holland, no one thereafter was in a hurry, and the "fire chambers" are now no longer to be found either in Bacharach nor in the surroundings.

Madeira wines formerly were allowed to pass the Equator several times to improve them, and the Englishmen shipped some to East India and back for this purpose, whereupon such Madeira, commanding enormous prices, was called East India Madeira.

In the meantime the practical Englishmen discovered that a quiet rest in a warm place will improve the wine just as well as an expensive trip past the Equator, and since 70 years they avail themselves of large rooms heated by stoves or pipes.

If, however, they desire to produce a very fine Madeira wine, which they call "Vino de rota"—meaning traveled wine—then

they bury the well-corked bottle of wine in deep ditches filled with horse manure, which manure undergoes fermentation, thereby developing such a warmth that the young wine kept a few months in the manure will acquire the character of old wines five or six years old. * * *

(P. 14.)

The riper the grape is the more sugar it contains. However, the distance of the grapes from the ground has an influence from one and the same grapevine. The must of the grapes close to the ground showed 1,089, the higher one 1,072, and the still higher ones 1,069 specific weight.

Burned sugar—caramel—often is found in grapes which were exposed to intense and extended heat or were dried in the sun. It imparts to the wine a deep color, heavy body, and a Madeira taste.

In general, the sugar contents of must from cultivated American grapes is between 15 and 20 per cent. The lowest percentage—15 per cent—I found in Concord, and the highest—20 per cent—in a Norton's Virginia Seedling, which was pressed from overripe grapes.

One part sugar yields in fermentation one-half part alcohol. A sugar content of 20 per cent accordingly yields a wine of 10 per cent alcoholic strength, while more than 25 per cent sugar could not all ferment. As soon as the 25 per cent of sugar has fermented, then the alcohol produced therefrom will stop any further fermentation, and the wine will remain sweet.

The volume of free acids, just like the sugar, depends upon the degree of ripeness of the grape. With increasing ripening the malic acid diminishes and the tartaric acid increases.

Inasmuch, however, as tartaric acids in the same proportion, bound by potash, is turned into hydrogen potassium tartrate (argols) the effect on the whole of the increasing ripening is that the free acids diminish. The acids are to be found not only in the expressed juice but also in the skins of the grape as well as in the stems (combs). A wine containing 5 per mill, that means in 1,000 pounds wine 5 pounds acids, is a palatable wine If it contains less acid, then it tastes insipid; if it contains more, then it tastes too sour.

(Page 15.)

The longer must ferments on the pomace the more powerful will be the color, because the coloring matter can only be extracted by the alcohol which forms through fermentation.

In the American grapes is to be found—as a result of the immense fertility of the soil—by far greater quantities of those nitrogenous albuminous substances which we call gluten.

As necessary as these components are to bring about fermentation, it can be positively accepted that the juice of the fully ripened American grape contains such a surplus of gluten that there is sufficient of it to ferment the double quantity of must, while the pomace still contains great quantities of it besides.

(Page 20.)

One more chief component of the must and of the wine will I especially have remembered. That is, the water, which forms 70 to 80 per cent of the must and 80 to 90 per cent of the wine. It is present in the grape in larger quantities, if the seasons of the year were more wet, and if the respective soil was damper, and also if the same received richer fertilizing; furthermore, if it rains before or during the grape picking (a rain lasting a few hours can increase the volume of water from 1 to 1½ per cent), or, if the grapes were picked before the morning sun has dried the dew. (Translated by O. G. Stark, St. Louis, Mo.)

## Speedy Settlement of the Affairs of the Five Civilized Tribes.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM W. HASTINGS.

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 6, 1916.*

Mr. HASTINGS. Mr. Speaker, the speedy settlement of the affairs of the Five Civilized Tribes is important to every citizen, both Indian and white, in Oklahoma. The Commission to the Five Civilized Tribes was appointed under an act of Congress dated March 3, 1893, charged with the responsibility of negotiating agreements with the Five Civilized Tribes, looking to the allotment of their lands and a division of their moneys. Agreements were made and ratified by the Government of the United States and the tribes. All the lands agreed to be allotted have been allotted among the enrolled members thereof.

I promised the people of my district that if elected to Congress I would do everything in my power to bring about the sale of the remaining tribal property and a division of all of the moneys belonging to the several tribes among the members entitled thereto.

CHEROKEES.

For several years prior to June 30, 1914, I was national attorney for the Cherokee Tribe of Indians. Their lands were all allotted, except some fractional lands which were sold and the proceeds paid out per capita. Upon coming to Washington in November, 1915, I found that the Cherokee Tribe had approximately $138,000 remaining to its credit. I immediately suggested to the Commissioner of Indian Affairs the advisability of paying this money per capita to the enrolled members, which was done in February and March, 1916, the payment amounting to $3.30 per capita. The Cherokees have no other tribal funds or tribal property, and their affairs are completely wound up.

CHOCTAWS AND CHICKASAWS.

All of the lands agreed to be allotted by agreements with the Government have been allotted among the enrolled members of the Choctaws and Chickasaws. On January 4, 1916, I introduced a bill (H. R. 6883) providing for a per capita payment of $300 to the members of the Choctaw Tribe and $200 to the Chickasaw Tribe, and for an annual per capita payment thereafter out of their funds. I went before the Indian Committee with the other Members of the Oklahoma delegation and assisted in arguing this matter. A payment of $300 to the Choctaws and $200 to the Chickasaws was included in the Indian appropriation bill, which has already become a law.

I have cooperated with the other Members of the Oklahoma delegation in preparing a bill providing for the sale of the coal and asphalt lands. I went before the Indian Committee and assisted in presenting the same. It has been favorably reported and is upon the calendar waiting action by the House. We hope to get favorable action upon it during this session of Congress.

The Choctaws and Chickasaws have some unsold unallotted lands, timber lands, and what is known as the surface of the segregated coal lands. The sale of these lands needs no legislation. On May 17, 1916, I addressed a letter to the Commissioner of Indian Affairs suggesting the advisability of offering these lands for sale during the month of August, 1916, when the per capita money was being distributed throughout the Choctaw and Chickasaw Nations. On June 30, I invited the commissioner's attention to it again by letter, and on July 3 I invited his attention to it in person. I was assured by him that the same would receive early consideration. It will be seen, therefore, that I have done everything possible to urge upon Congress and the Indian Office here the advisability of speedily winding up the affairs of the Choctaw and Chickasaw Tribes.

CREEKS.

It is represented by the Creek authorities that certain persons who were not in existence have been erroneously enrolled, and that valuable tracts of land have been allotted them. Suits have been brought to cancel these allotments and to secure these tracts for the whole Creek Tribe. It is urged that some of them are valuable, and that if recovered to the tribe it would be unfair for any one of them to be taken by any single enrolled member of the Creek Nation. Two resolutions (H. J. Res. 50 and H. J. Res. 194) have been introduced providing for the withdrawal of these lands from allotment in the event any are recovered for the tribe. The first resolution provides for the sale "or lease" of them. The second resolution, which was introduced by myself, is in exactly the same language as the first, except that the words "or lease" are omitted. In other words, the resolution that I introduced provides for the sale of these lands. The records in the Indian Office on April 25, 1916, showed that there was upon that date to the credit of the Creek Tribe $2,264,978.61. My contention is that none of this money can be paid out to the enrolled members of the Creek Tribe until all of their lands are sold and the proceeds converted into cash and added to the above funds, so that the money can be apportioned at one time. Now, if a single tract is recovered and leased it means that the above sum of money will not be prorated for years to come and the settlement of the affairs of the Creek Tribe will be prolonged until the lease expires or the land is sold. This is important to the members of the Creek Tribe, and they should understand it. They have the above sum of money. There are a few tracts of land the titles to which are being contested in the courts. You can not make a lease for less than 15 years, and for this reason I have advocated, if any of the lands be recovered, that under rules and regulations prescribed by the department to insure the Creeks getting a fair

value for the same, the lands be sold and the proceeds added to their other funds, and that all these funds at the earliest possible date be prorated among the enrolled members of the tribe. This resolution is upon the House calendar, and members of the Creek Tribe should acquaint themselves with these resolutions and indicate to the Indian Office and Members of Congress their views with reference to the matter. I went before the Indian Committee on May 5, 1916, and urged that the lands be sold and not leased.

The loyal Creek Indians claim that the Government of the United States is indebted to them in the sum of $600,000, as provided in a treaty of 1866. I introduced a bill (H. R. 9326) on January 18, 1916, providing for the payment of the above amount, or the balance due the loyal Creek Indians. It was referred to the Committee on Indian Affairs and has been favorably reported. It is now on the calendar awaiting action by the House.

The Creeks claim that they were each entitled to allotted land equal in value to $1,040, but that they received land equal in value to $800. This is a legal question. I introduced a bill, H. R. 13478, to refer the matter to the Court of Claims, and it is pending before the Indian Committee of the House.

It will thus be seen that I have been diligent in doing everything possible to assist in winding up the affairs of the Creek Tribe of Indians.

On the first day Congress met I introduced H. R. 108, to confer the administration of individual restricted Indian matters upon the Superintendent for the Five Civilized Tribes at Muskogee. This bill was referred to the Indian Committee and extensive hearings were had upon it. It was finally reported unanimously and is now upon the calendar awaiting action by the House.

In addition, the Indian appropriation bill contains items appropriating $185,000 for the office of the Superintendent for the Five Civilized Tribes; $85,000 for probate attorneys; $275,000 in aid of rural schools; and $47,500 for the Cherokee Orphan Training School at Tahlequah. I assisted the other members of the delegation in securing the inclusion of these items in the bill.

You can readily see that I have been as active as it was possible to have the departments, committees, and Congress issue orders and enact legislation looking to the speedy settlement of the affairs of the Five Civilized Tribes. The people of my district may rest assured that it will be my purpose to do everything in my power to aid in all further legislation for the final settlement of these Indian estates.

I am sure that I voice the sentiment of every Indian in my district without exception, when I say that they want whatever remaining money is due, paid them. The Commission to the Five Civilized Tribes has been 23 years in winding up the affairs of these tribes. One-third of the enrolled members of the tribes are dead, and surely it is not too much to ask of the department and of Congress that the Indians now living be paid the balance due them.

---

**Dedication of New Labor Temple—Speeches of President Woodrow Wilson, Secretary of Labor William B. Wilson, and President Samuel Gompers of the American Federation of Labor.**

---

## EXTENSION OF REMARKS

OF

## HON. EDWARD KEATING,

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 6, 1916.*

Mr. KEATING. Mr. Speaker, organized labor is no longer a tenant in the Capital of the Nation. It owns its own home.

The dedication of the American Federation of Labor's new office building in this city on the Fourth of July was an event of historic significance. It furnished a new and convincing bit of evidence that the American labor movement is not an ephemeral agitation, but a progressive and enduring movement in defense of human rights.

The dedicatory ceremonies were marked by a dignity in keeping with the importance of the occasion. The Secretary of Labor, Hon. William B. Wilson, was master of ceremonies, and the President of the United States and the president of the American Federation of Labor delivered addresses. As the program was originally arranged, President Wilson was to have spoken first, but at the last moment, at the President's earnest solicitation, the schedule was changed, and President Gompers delivered the first speech.

SECRETARY OF LABOR WILSON.

In introducing President Gompers Secretary Wilson said:

"Ladies and gentlemen, members of the American Federation of Labor and its affiliated unions: I congratulate you upon the construction of this temple, dedicated to the welfare of the wageworkers on a basis of justice to all mankind. The labor movement represents the struggle of the ages to establish those principles of the Declaration of Independence that all men are created equal and that governments derive their just powers from the consent of the governed. And what a glorious struggle it has been. The fight to break through the crust and to abolish slavery and serfdom; the contest for political liberty; the effort to secure equality of economic opportunity. Then the rebirth of the inventive genius of man; the coming of our modern industrial system with all of its complications and the effort to secure for those who toil a share and a fair share of the increased productivity of man so that they may aspire to greater mental and spiritual development. The building of trade unions to assist in the accomplishment of that purpose and their coming together in later years in the form of the American Federation of Labor, intelligently directed, accomplishing more for human uplift in its 35 years of existence than had been accomplished in a century before; an association in which can be found a multitude of altruistic men and women willing to sacrifice their own comfort and personal welfare in order that the future might benefit thereby. A great body of struggling humanity making an effort for the improvement of the entire race, and the selected leader of that body I have the honor of presenting to you, President Gompers, of the American Federation of Labor."

PRESIDENT SAMUEL GOMPERS.

President Gompers spoke as follows:

"Fellow working men and women, fellow citizens and friends, in the name of the great labor movement of our country I greet you and bid you welcome on this day and on this occasion, when we are assembled to perform a double duty—the one which primarily brings us together here to dedicate this splendid temple of labor, and the day, the celebration of our independence as the Republic of the United States.

"Several of our friends have asked me whether the day was not illy chosen and whether we might not have more fittingly celebrated or dedicated this structure on Labor Day. My answer was, in substance, that in the Capital of our Nation the American Federation of Labor Building could be dedicated on no day quite so fitting as the Fourth of July, when we hoped, as we have realized, that the President of the United States would address this assemblage.

"My friends, it is a most difficult task for me to know just how to address you and what to say, and yet, I take it, you would not have me deal in a few generalities and thank you for your attention. May I, then, not say that this occasion affords the opportunity for the deepest reflection. Bear in mind that in the cycle of time—it has been only a few short years since the formation of the American Federation of Labor—thirty-five or six years count but little. If, however, we take a retrospective view of the conditions of the toiling masses even of our country, and compare the physical conditions, the economic situation and standards, the political contrasts and the wonderful changes which have come about in the life and the work and the rights and the hopes and the aspirations and the ideals of the toilers of our country, it is sufficient to cause us not only to pause but to give credit to those who have gone before, to renew the confidence we have in the men and the women of our time, and to look forward with an eye and a vision for the future that promises a world of happiness, of justice, of freedom, and the best concepts of humanity for all our people.

"In the early days of the American labor movement it happened that through inexperience coupled with high-mindedness, altruism, selfishness, sordidness, our movement could not have any cohesive existence nor a long-continued career, and thus the organizations of labor sprung up overnight and died in the morn. It has been to the credit of the American Federation of Labor that for the first time in the history of the organized movement of the workers of our country there have been a steadfast growth and development, a continuity and expansion of thought and hope and activity, always maintaining one star in our mind to lead on and on and on. Though you and you and you and I have all been impatient with the apparent slow growth, the superficially slow growth in the achievement of the

rights to which we claim the toilers are entitled, all too slow in the abolition and the remedying of the wrongs to which the toilers have too long been compelled to endure, yet our progress onward and upward has been sure and steady. I am as impatient as the most impatient among you, but when I take a retrospective view of the material, of the political, and of the social conditions at the time when the American Federation of Labor was given to the world and compare them with the conditions on this Independence Day, July 4, 1916, there is cause for gratification and jubilation which gives us the incentive and whets our appetities and desires to the determination to go on and on and on in the attainment of every right to which the toilers are entitled and the abolition of all wrongs which they have too long endured.

"If those of you who are of mature years will bring your minds back, and if you of more recent times who may have read or heard of conditions prevailing in the olden times will imagine the contrast when the doors of men and women in decent homes were closed in the faces of the men who dared preach the gospel of the rights of labor and contrast that situation with now, this glorious era in which we live, when at the dedication of this magnificent structure, erected for the service in the cause of labor, justice, freedom, and humanity, we find the President of this great Republic of ours adorning this occasion with not only his presence but the presence of members of his Cabinet you will find a marvelous change. From the time of slavery, when all the workers, not only the blacks but the whites, were slaves; when the owner, the master, was the lord of all; when there was none to say to him nay against his overlordship over those men and women workers whom he owned; from the time of serfdom to our institutions of industry of to-day there has been a growth that dazzles the mind.

"This is a wonderful age in which we are privileged to live. There has been running through the course of history the struggle of the masses of the people, the hewers of wood and the drawers of water. Wherever injustice and tyranny were exercised it was the masses, it was the people, the workers, who suffered. It was and is the mission of the masses of the people, it is the mission of the workers of our time, it is the mission of the much misunderstood and misrepresented organized labor movement, to carry on the work to its fulfillment so that the wonderful sentiment and view and rights declared in our Declaration of Independence, that man is endowed with certain inalienable rights, and that among these are the right to life, liberty, and the pursuit of happiness, shall not only be a declaration that was given to the world but shall establish a new status and a new concept of new rights of man.

"That declaration gave to us this Republic of ours with all its opportunities, and it is the purposes of the organized-labor movement of America to make these declarations a charter of human rights, the living, actual rules of our everyday life. Men are not necessarily free because declarations of independence so declare. Men are not necessarily free because the Constitution guarantees freedom. Men are given the opportunities for freedom, and they must, if they aim to be free, exercise the activities that come with the intelligent free men.

"Through a long series of years there have come to the workers influences and activities that place them in a different category and occupying a different status from the rest of the citizenship of our country. This is not the time nor the occasion for criticism. All that is required or appropriate is to mention or to refer to facts that under interpretation of laws and extension of jurisdiction the men and women of labor were placed in the category of products, inanimate products of labor. It was not conceded or understood in such concepts that in contrast to attributes of property and products the worker had a heart and a mind and a soul and that his labor could not be separated from his very being, his very life. To place human labor in the same category with wood, and coal, and beef, cloth, and wool, and iron is to declare at the same time that the man who purchases that labor power is the master and owner of the worker.

"It was because of the recognition of this injustice, this unjust status into which we were temporarily forced, that the American labor movement resolved that, come what may, every effort must be bent toward securing a legislative declaration, solemnly enacted into law, that the labor power, the labor of human being, is not a commodity or article of commerce. Due to the campaign of organization and agitation and education and the driving force of our cause in the political arena, we finally prevailed upon our Congress to pass the labor provisions of the Clayton antitrust law. The Hon. Woodrow Wilson was afforded the grand opportunity to affix his signature to the law.

"My friends, there is not an overabundance of our own people who understand what is really contained in that declaration in section 6 of the Clayton antitrust law. It solemnly enacts this declaration into law, that the labor of a human being is not a commodity or article of commerce, and for the first time in the history of the struggles of the human race, for the first time a high legislative body, or, for that matter, any legislative body in the whole world, repudiated the old doctrine that the labor of a human being is property, that the labor of a human being is a commodity, that the labor of a human being is an article of commerce.

"In addition to that, supplementary to it, the enactment of the seamen's law gave greater security to life and property at sea, and at the same time gave the opportunity to the seamen of the United States to be free in the ownership of themselves and their labor power when their vessels are in safe harbor. Quite apart from the other constructive legislation enacted by the Congress of the United States and by the legislatures of our several States, if they were entirely barren of any results, the enactment of these two laws—the labor provisions of the Clayton antitrust law and the seamen's law—are themselves a monument to our civilization, larger vision, broader humanitarianism, and highest concepts of human liberty. These two acts in themselves stand out as such a monument.

"Just a word and I shall have done. The labor movement of our time is concerned in securing a larger share, a better reward, as the result of the services that the workers give to society; but quite apart from a demand for a higher wage, for a shorter workday, for relief from burdensome toil, for the securement of safety, sanitation, workmen's compensation, old-age pensions, the labor movement of our country and our time demands the right and opportunity to take part in all the affairs and in all the activities of our public life. The demand is justified by the service rendered, without which even civilization itself could not endure.

"The toilers, the sovereign citizenship, together with the sovereign citizens of all other groups, make a demand that there shall be but one purpose, one hope, one struggle, and one ideal—the perpetuation of this Republic, improved, handed down to those who follow us, that they may in their time say, 'Well done, good and faithful servants.'

"There is not any act on the part of our Government, there is no activity in any group of our people, in which the wage workers, the toiling masses, are not concerned. Let us do all that we can do to help the man at the head of the affairs of our country, who is weighted down with great responsibilities—the President of the United States—to see to it that we are kept out of actual war with any nation. We know how seriously and earnestly he is striving to achieve peace; but in order that his wise and humane purposes may be carried into effect it will require the loyal and intelligent support of the masses of the people of our country. We, his fellow citizens, who want peace, have a duty to perform. No man in all the world can stand alone. A man may become a hermit and try to free himself from his former environment, but he is not alone and can not be alone. There are new conditions which confront and surround him. So I say, my friends, it is not only to believe in peace, it is not only the desire for peace, but let us give out the clarion call to our people that we by every honorable means at our command are going to see to it that the policy of trying to maintain peace shall be sustained. And yet I say that if after every honorable effort has been made and peace is not longer possible and the horrors of war shall come to us or be forced upon us, let me say this not only for myself but for all the workers, for I believe I express the spirit and the purpose of the men in the labor movement of America, that they may be counted upon to give a good account of themselves.

"Men and women, friends, and those of you who are wage earners, I doubt the necessity, and yet I can not close without abjuring you to see to it, that those who are not members of organized labor join that movement at once. We may not always be right—we are human and are liable to err. If you know better than we, come in and make the contribution of your intelligence to the sum total and leaven it up. If you are honest and earnest and patriotic, come into the organizations and help us in the great work of upbuilding and to spread the gospel of the rights of labor and the duties and the obligations of the workers.

"And you business men and public men and professional men, may I not appeal to you to take a broader view of this labor movement of ours than many of you have taken in the past? See to it that you endeavor to conduct your affairs in accord with the ideas and the purposes of the labor movement. Help us in this great, rational, natural constructive work to bring

light and hope into the life and the work of the toilers of our country, and to help build up character and manhood and womanhood in the life and the hearts and the minds of the toilers. Help us that the children may have a broader and a better day than the men and the women of our time had during their child life. See to it that the citizenship shall have the opportunity of growth and development and to become one homogeneous citizenship, the manhood and the womanhood of to-day and the children of our time that they may take up the work where we were compelled to lay it down and carry on the good work to carry the good word on and on and on until the time shall come when man to man shall be a brother 'for a' that and a' that.' So that time may come I plead with you on this sanctified holy day to be true to yourselves, true to each other, true to the organized labor movement, true to the institutions and the flag of our country, which we shall uphold in all times and against all obstacles, no matter from which quarter they may come."

THE PRESIDENT OF THE UNITED STATES.

At the conclusion of Mr. Gompers's remarks, the master of ceremonies presented the President of the United States, who spoke as follows:

"Mr. Secretary, Mr. Gompers, and my fellow citizens, Mr. Gompers is generally very happy in his choice of words, but he used one word just now from which I wish to demur. I am not here to adorn the occasion, but I am here to express my very deep interest in it and to show how near it lies to my own heart that the legitimate objects of the great labor movement should be achieved.

"It seems to me that it is a happy conjunction of time and occasion, because we should never make any new move or establish any new instrumentality which will affect the national life without thinking of the national life and how it will be affected and how we can serve it. It is very proper that this great building should in this wise be dedicated on the birthday of the Nation. You know, my fellow citizens, that the mind needs air to breathe just as the body does. You can not rise to the tasks of the day with any kind of zest and interest unless you know their significance; and they have a very narrow significance if you merely look upon them as a means of keeping body and soul together. It seems to me, therefore, that the most heartening thing that a man can do is to think as often as he can of the relation which his work bears to the place he lives in, to the State he lives in, and to the country he lives in. You know that every man who is a man takes some pride in doing his work well, but why should he take pride in it? Merely to glorify and distinguish himself from the common run of workers? That will only make a prig of him. A man who works in order that he may be distinguished is sooner or later going to do some selfish thing that will disgrace him, because his object is himself and not the ideals which he serves. And therefore it seems to me that every one of us should remind himself every day that he is working for something besides wages; that he is working for some persons whom he loves, for some community that he wishes to assist, for some nation that he is ready to serve and defend. That is the reason why, it seems to me, that this is a happy conjunction of day and occasion. Because, my fellow citizens, you will realize that in a position such as I occupy for the time being, I am not at liberty to think of any one class of our fellow citizens to the exclusion of any other class, and since I have been asked to make the dedicatory address of this building, I am going to take the liberty of dedicating it to common counsel and a common understanding. I am going to take the liberty of dedicating it to the thing that I believe in most, the accommodation of the interests of various classes in the community by means of enabling those classes to understand one another and cooperate with one another.

"The way we generally strive for rights is by getting our fighting blood up, and I venture to say that that is the long way and not the short way. If you come at me with your fists doubled, I think I can promise you that mine will double as fast as yours; but if you come at me and say, 'Let us sit down and take counsel together and, if we differ with one another, understand why it is that we differ with one another, just what the points at issue are,' we will presently find that we are not so far apart after all; that the points in which we differ are few and the points in which we agree are many, and that if we only have the patience and the candor and the desire to get together we will get together.

"The trouble in a great many of the labor contests we have had, my fellow citizens, as you will bear me out in saying, is that one side or the other did not wish to sit down and talk it over and that the great difficulty in the settlement of a great many labor disputes has been the difficulty of getting candid and dispassionate conference with regard to the points at issue. The great difficulty about the relationship between capital and labor is this: Labor is in immediate contact with the task itself, with the work, with the conditions of the work, with the tools with which it is done and the circumstances under which they are used, whereas capital in too many instances is at a great remove. It is owned and controlled by many who have not taken the pains to go and see the workers at their work and know just what the circumstances are; and the thing most to be desired is that capital should be humanized by being brought into a comprehending contact with the conditions of labor. You have seen what has happened in some instances. You have seen men who had sat in their offices in some great city and directed the use of capital presently realize that they did not know how it was being used and themselves go to the factory which their capital operated or the mines which were worked by the use of their capital, themselves don overalls and go into the bowels of the earth or through, it may be, greasy processes of the factory and come out with an entirely different range of comprehension as to what it was all about and a signally increased capacity to understand the point of view of the man who was actually doing the work. That is the kind of thing which I like to see done, and that is the kind of thing that we ought to talk about on the Fourth of July.

"The Fourth of July was a day when a great union was formed, but it was not a union of any one class or body of persons in that little Nation of 3,000,000 that formed it. It was a union of all the people for common objects, and no man is a true American who does not realize that all the objects of our national life are common objects, and not separate objects. But it is easy to say, my fellow citizens, and it is very hard to put it into practice. A great many men come to see me and tell me a great many things, some of which I believe; but if I were to listen with greater comprehension than I have to everything that they tell me, I would realize when the day's work was over that I could not hold in my single comprehension the infinitely varied, complex life of this great country to which we belong. It takes a multitude of minds to comprehend the United States, and that is the reason that I think a building like this should be devoted to the processes which pool our understandings. Nobody has got enough by himself to run the country. We have got to pool our understandings, and with regard to every problem which affects labor, this great building ought to be the place to pool our understandings. Every counsel that goes forth from these offices should be a counsel of conference, of mutual comprehension, if possible of mutual accommodation, because every one of us has some part in the infinitely difficult task of driving this Nation as a team, not as a body of contesting elements. We ought to be all comprehended in one spiritual organization from which no individual or group of individuals will allow himself or itself to be torn away.

"You know we used to hear very ornate orations on the Fourth of July. All the highly colored words of the very varied vocabulary of our great language were called into commission on that day to glorify the Stars and Stripes, and I remember that when I was younger and had been immersed in fewer difficulties than recently, I used to thrill with those words and think they meant something, but I now know that rhetoric does not get to the heart of it. Flag after flag went by in that procession just now; every one of those flags ought to have suggested to every one of us that we have not yet fulfilled the full conscientious duty of America in understanding each other and, through comprehension of each other, understanding and serving the world. America did not come into existence to make one more great nation in the family of nations, to show its strength and to exercise mastery. America opened her doors to everybody who wanted to be free and to have the same opportunity that everybody else had to make the most of his faculties and his opportunities, and America will retain its greatness only so long as it retains and seeks to realize those ideals. No man ought to suffer injustice in America. No man ought in America to fail to see the deep dictates of humanity.

"Mr. Gompers was referring just now to the sixth section of the Clayton antitrust law, the section in which the obvious is stated, namely, that a man's labor is not a commodity, but a part of his life, and that, therefore, the courts must not treat it as if it were a commodity, but must treat it as if it were a part of his life. I am sorry that there were any judges in the United States who had to be told that. It is so obvious that it seems to me that that section of the Clayton Act were a return to the primer of human liberty; but if judges have to have the primer opened before them, I am willing to open it. If any part of the United States, through habit, through ancient prejudice, through long addiction to technical ideas, insists upon living in an age which everybody else with his eyes open knows

has gone by, why, then, we have got to sound some great note that will wake them up, but wake them up always to the same thing, with which we should thrill as well as others; that it is take as well as give; that the other man has as much right as we have; that we are not to seek for an advantage, but for an equality; that though we have been put upon, we do not desire to see any other man put upon, or any other class, but that we should all have as our highest ideal merely to bask in that only nourishing sun that has ever shone upon the human heart, the sun of justice and of truth and of humanity.

"Mr. Gompers spoke just now, and I dare say truthfully, as if it were somewhat a matter of surprise that the President of the United States should recognize the great labor movement by his presence on an occasion like this. I am sorry for any President of the United States who does not recognize every great movement in the Nation. The minute he stops recognizing it he has become a back number. And how anybody could overlook this movement I can not imagine—a movement so fraught with all sorts of things that appeal to the reason and to the heart. You can not go deep into any argument with a workingman interested in the rights of other workingmen as well as his own without finding that a deep emotion underlies the argument. And, my fellow citizens, I want to remind you that we are governed by our emotions very much more than we are governed by our reason. It is a very dangerous fact, but a very profoundly interesting one, that a man follows his heart more often than he follows his head, and when he follows his heart it is of primary importance that his heart should be right and not wrong. Somebody said to me once that this was the day in which mind was monarch, and I replied that if that was true I ventured to say that mind was one of those modern monarchs that reigned but did not govern; that, as a matter of fact, we were governed by a great popular assembly made up of the passions, and that the most we could effect was that the handsome passions should be in a working majority. It is the business, therefore, of every organization like the American Federation of Labor to see to it that the handsome passions have a working majority, and to summon everybody with whom they deal to put their best representative handsome passions into the conference, so that heart may meet with heart as well as mind with mind, and one great emotion shall at once sway and unite us, the emotion of a mutual affection and a mutual comprehension."

### Army Appropriation Bill.

## EXTENSION OF REMARKS
OF
## HON. WILLIAM L. LA FOLLETTE,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, June 26, 1916.*

Mr. LA FOLLETTE. Mr. Speaker, this bill making appropriations for the needs of our Army, including our coast defense and the proper outfitting and maintenance of our National Guard as provided for in the Army reorganization bill lately passed by the House of Representatives, is, I think, a very reasonable and commendable appropriation bill, even though it calls for many millions of dollars more than was ever asked for in any previous appropriation bill for the maintenance of the Army.

Mr. Speaker, I do not consider it necessary or wise for this Republic to ever maintain a large standing army or that we should ever build up a great military establishment in the United States. I think it would not only be unwise but dangerous to the perpetuity of our political freedom and our democratic institutions. I believe that history shows, without an exception, that each and every nation that has established great standing armies for the safety of the nation has seen the force thus created become the dominating factor in the nation, and that it has usually led to the coercion of the civil power that created it, and caused either the total downfall of such a nation or a general realignment of conditions that led to the misery and degradation of the masses. Mr. Speaker, the disclosure by history of this fact has never been, in my judgment, any reason why a nation should go to the other extreme and not make reasonable and proper provision for national defense and adequate appropriations of money to make our units of organization for defense potent and workable; and for this reason I have persistently voted since I have been a Member of the House of Representatives for the largest appropriations for the maintenance and equipment of our Army and Navy that have been asked for. I have made some study of American campaigns from our earliest times down to the present day, and the fact has been indelibly fixed upon my mind that the Congress of the United States has always been derelict in its duties, when it came to making proper provision for the furnishing of necessary ordnance and general supplies necessary to make effective the Army and Navy of the United States in case of trouble. It was so in the War of 1812, again in the Mexican War, the War of the Rebellion, and, later, our Spanish-American War, and we would find ourselves in the same condition should we become at the present time involved in war with Mexico. We have always, with our wonderful resources and ability to handle emergencies, been eventually successful in all our wars, and the difference in money cost of not being properly equipped and prepared could be overlooked and condoned if that were all that was involved.

It was the unnecessary suffering of our soldiers and the enormously increased toll by death, wounds, and disease that could have been avoided had our armies been properly equipped and prepared, which can not be excused or condoned and which makes lack of the necessary equipment of ordnance and all Army supplies inexcusable and almost brands the Congresses that have been derelict in their duties with criminal negligence. There has always been too much politics and not enough patriotism shown by Congress in dealing with supply bills for the Army and Navy. We had a fair sample of that when the Kahn amendment was offered to the Army reorganization bill lately. The bill provided for the reorganization of the Army on a sound basis, specifying the various units of Cavalry, Infantry, Artillery, Engineers, Signal Corps, and so forth. The Kahn amendment added additional enlisted men without increasing the number of organizations in the Army and without providing for the assignments of the enlisted men to the organizations already carried in the bill.

The amendment not only did not provide any organizations for the increased number of enlisted men but did not authorize any additional officers, and this legislation would have been practically worthless without additional legislation following it. It was simply a political expedient. I do not believe in playing politics when questions of magnitude and importance are being considered. I supported the House bill and likewise the conference report, wherein practically the same number of men provided for in the Kahn amendment were provided and in such a form as to be practical, properly officered, and really efficient.

I think the chairman of the Military Affairs Committee [Mr. HAY] and his associates are to be congratulated that in framing this bill they did not let the extremists either for or against national preparedness influence them unduly in either direction, and have calmly and dispassionately made the necessary provisions for taking ample care of the Military Establishment with its added burdens in a manner worthy of the country and its ability to adequately provide for its proper maintenance.

---

### Democracy's Great Revenue Bill.

## EXTENSION OF REMARKS
OF
## HON. EDWARD KEATING,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. KEATING. Mr. Speaker, the members of the Committee on Ways and Means are to be congratulated on having presented the pending bill to the House. My good friend Mr. KITCHIN, of North Carolina, the distinguished leader of the majority, has referred to it as a nonpartisan measure. Of course, he smiled when he made the statement, because he knows, as every Member of this House knows, that this is a Democratic bill. It would not be here if we did not have a Democratic majority in this House and a Democratic majority at the other end of the Capitol and a Democratic President in the White House. The Democratic Party assumed the responsibility of its preparation, the responsibility of its passage; and when we go before the voters this fall it will be the Democratic Party, and not the Republican Party, which will shoulder the burden of explaining and defending its provisions.

This is a pleasant responsibility, Mr. Speaker. We have no desire to shrink from it, because this is the kind of legislation which causes Democratic majorities to spring up all over the country like daisies after a June shower.

NO TAX ON NECESSARIES OF LIFE.

The bill provides for a total of $225,000,000 of new revenue, and not one dollar of that vast sum will be raised by a tax on the necessaries of life.

The primary purpose of the bill is to provide the money needed to pay for President Wilson's "preparedness" program. Every dollar will come from the purses of those who are most capable of making the contribution—the very rich men of this country.

The increase in the income tax will produce more than $100,000,000. The inheritance tax is expected to produce $17,000,000 the first year and $54,000,000 each year thereafter, and the tax on munitions of war will bring in $71,000,000 a year while the European war lasts.

Heretofore the cost of conducting the Federal Government has been met by the imposition of taxes which increased the cost of the things men must have in order to sustain life.

Men did not contribute in proportion to their wealth but in proportion to their consuming power. Every time you purchased a hat or a suit of clothes, or a pound of sugar or meat for your table, or furniture for your home, or a cigar, or a sack of tobacco, a certain sum was added to the price on account of the tariff or the internal-revenue tax. Of course, you did not know you were paying something for the upkeep of the Government, because the manufacturer quietly added the tax without annoying his customer with a discussion of the matter. But every dollar of the vast total required to keep Uncle Sam in business came out of the pockets of the consumers.

It was the indirect, the Republican, the easy way of raising revenue.

INJUSTICE OF OLD SYSTEM.

One of the worst features of the system was that it took as much from the poor man as from the rich. We all agree that every citizen under the flag should contribute his just share of the money needed to keep that flag flying in security over a Nation of free people.

But no one will contend that the man of moderate means should give as much as the multimillionaire.

Yet, it was not until the advent of the Wilson administration that any serious attempt was made to equalize the burden by compelling wealth to bear something like its just share. The masses of the people still contribute to the support of the Government through tariff and internal-revenue taxes. In fact, they are paying practically as much per capita as they did in former years, but the Democrats have refused to add to those burdens by piling on the cost of "preparedness."

That item will be taken care of by the income, inheritance, and munitions taxes. As I have explained, the munitions tax will end with the war, but the income and inheritance taxes are permanent institutions—at least, they will remain on the statute books if the Democrats remain in power.

What the Republicans would do with them, if they should secure control of the Government, I do not know.

HUGHES OPPOSED TO INCOME TAX.

I do know, however, that their candidate for President, Hon. Charles E. Hughes, while governor of the great State of New York, used all the influence of his position to defeat the income-tax amendment to the Federal Constitution. If he has changed his mind on that subject he has not taken the people into his confidence. Presumably he still believes that the burdens of government should be placed on the back of industry instead of wealth.

The reasoning which led him to oppose the income tax will lead him to fight the inheritance tax.

So, Mr. Speaker, if Judge Hughes is inaugurated President of the United States on the 4th of March next, and finds himself supported by Republican majorities in the House and Senate, we may expect him to convene Congress in extra session for the purpose of removing from the statute books the bill which we are about to enact, and replacing it with legislation more in keeping with the traditions of his party.

FOUGHT FOR 25 YEARS.

For more than a quarter of a century the people of this country demanded the enactment of an income tax, but their desires were not gratified until Woodrow Wilson entered the White House. The Underwood tariff bill, enacted in 1913, contained a provision levying a tax on all incomes in excess of $4,000 for married men and $3,000 for single men. During the last fiscal year that tax produced $124,000,000. Under the pending bill we are reenacting that law, but increasing the rates so as to produce about $225,000,000 instead of $124,000,000.

The records show there are 173 individuals in this country whose income exceed $500,000 a year. Their gross income for 1914 was $246,327,000, and under this bill they will be compelled to contribute 12 per cent of that staggering amount, or about $30,000,000, to the support of the Government which safeguards their lives and property. Is that unreasonable?

Prior to the present war it was estimated that the annual income of John D. Rockefeller was about $25,000,000. As a result of the unparalleled prosperity which this country is experiencing the experts tell us that Mr. Rockefeller's income has practically doubled, and that he is now in receipt of approximately $50,000,000 a year. If that be true, he would contribute under this bill $6,000,000 a year to the support of this Government. What is more, experts estimate Mr. Rockefeller's wealth at $1,000,000,000. No other man in the history of the world has controlled such a vast fortune. Compared with the owner of Standard Oil, Croesus was a village banker. Mr. Rockefeller's holdings are represented on the tax rolls of every State in the Union; his fleets plow the seven seas and his dollars are laboring for him in every land and under every flag between the Arctic and the Antarctic Circles.

As an individual, he would be helpless to safeguard those mighty investments. As an American, he demands and receives the protection of the flag.

Deprived of the shelter of the ægis of the giant Republic of the west he would be as helpless as a peon on a Mexican desert, but resting in its shadow he is as secure as a Cæsar in his palace.

Will we be considered unreasonable if, in return for this protection, we demand that Mr. Rockefeller contribute to the National Treasury 12 per cent of his income, or six-tenths of 1 per cent of the estimated value of his holdings?

On the contrary, Mr. Speaker, I believe the sober judgment of Mr. Rockefeller himself will be that Congress has exercised unusual moderation in its use of the taxing power conferred on it by the Constitution.

In using Mr. Rockefeller's name I have not been actuated by a desire to indulge in personalities. He is the best known figure in the financial world. His name suggests wealth beyond the dreams of avarice, and I have used it because it seemed best adapted to complete the illustration I desired to make. What I have said about Mr. Rockefeller applies with equal force to every individual called upon to pay this income tax.

They are all required to contribute in proportion to their wealth. What system could be more just or more democratic?

REPUBLICAN AUTHORITY CITED.

Before I leave this subject of an income tax I want to call to my support a very distinguished Republican authority. I have said that under the old system of raising Federal revenue the poor man paid as much as the rich man. In support of that statement I want to quote from a speech delivered in this House by one of the ablest and most courageous gentlemen who ever occupied a seat in this Chamber—Judge Prouty, of Iowa. Judge Prouty, as you know, is a Republican, an earnest, loyal party man, and this is what he said in discussing the income tax in the Sixty-second Congress:

I have living near me at home a section man that has eight children, with an actual income of $504 a year. Now, I will wager everything that I have that this section man pays more for the support of the Government than does John D. Rockefeller.

Now, let us analyze for a minute. Where do our taxes come from to support the Federal Government? From internal revenue and tariff duties.

Now, what are the items from which we collect internal-revenue duties principally? Spirits, tobacco, and oleomargarine.

Now, my friend Rockefeller does not smoke, he does not chew, he does not drink, he does not take snuff, and he does not eat oleomargarine, and therefore he does not pay a cent to the Federal Government on its internal-revenue tax. I am sorry to say that my section-hand friend uses a small amount of all of those items and therefore pays the tax on them.

Mr. CANNON. Will the gentleman yield there?

Mr. PROUTY. Certainly.

Mr. CANNON. The statistics show that the gentleman's State has a larger per capita wealth than any other State in the Union.

Mr. PROUTY. I agree with you on that, sir, and yet the same statistics, I am sorry to say, show that the average income of the people of my State is only a little over $600. And yet I am prepared to say that the people of my State, with an average income of $600 per year, pay more per capita than does John D. Rockefeller for the support of this great Government that lends its entire power to the support of his vast property. The armies and navies of the United States are always held in readiness to defend his holdings in every quarter of the globe.

Now, take the articles upon which tariff duties are levied. There is sugar. I venture the assertion that my section hand and his family use 10 pounds of sugar to 1 used by the dyspeptic Rockefeller and his good wife, and therefore he pays ten times as much tax to the Federal Government. And this is true of pepper and every other article on the tax lists, and this is largely true of wearing apparel.

My section man and his good wife and eight boys and girls wear out more boots and shoes, more hats, more pants, more coats, more dresses, more neckties, more collars than does my peripatetic friend J. D. and his good wife. If the reports in the newspapers are to be credited, J. D. has most of his clothes made for himself and wife in Paris, which he brings in duty free; and I saw by the papers that the last time he was in Paris he bought wigs enough to last him the rest of his life. [Laughter.]

Mr. JACKSON. The gentleman should be fair enough to admit that Mr. Rockefeller's revenues are diminished by the amount of the corporation tax given to the Federal Government.

Mr. PROUTY. No. His amount is not diminished by the tax. Any man who has been watching the matter can see easily that if the corporation tax is from Standard Oil, enough is collected from the people that use oil to cover expense, tax, and dividends. Having, as they do, a practical monopoly, they do not allow the tax to interfere with dividends. They just raise the price enough to the consumer to equal the tax. If the dividends are from railroad stocks or other public-service corporations, it is just as true. The public pays the fares that cover the tax to the Government and the dividend to Rockefeller. If there was no tax, the fares could be less. The public, therefore, pays the corporation tax—not Rockefeller.

Now, when our forefathers started on this system, it was not a bad one. Our people were none of them very poor and none of them were very rich. But with the advancement of our civilization, with the vast accumulations of property, with the enormous incomes that some have, with the corresponding poverty brought to others, the present system is made practically intolerable, whether you found it upon a basis of a protective tariff or upon the basis of a tariff for revenue only. [Applause.]

Mr. McCall stated on the floor of the House the other day that the per capita tax for the Federal Government was about $7. That is about correct. This makes my section hand pay $70 per year as taxes for the support of the Federal Government. My friend J. D. possibly pays $14, but I seriously doubt that. If we had an income tax, J. D. would contribute in proportion to his wealth, but not a dollar of it would come out of his necessities or even luxuries. But when you take $70 out of the meager income of the poor man, with his large family, you take it out of the necessities of life. It means privation and want. It means children poorly fed and thinly clad. It means children going to school with holes in their shoes, holes in their stockings and in their pants, fore and aft It means the taking of children out of school at tender years and crowding them into the factory to help splice out the family living. It means sick children and no doctor. It means that the wan, gaunt specter of dread and want accompanies the holy stork. It means real pinching, poverty, and distress.

Such a system as that is intolerable and indefensible as a just system of collecting revenue. It violates every principle of equity and equality. It puts the burdens on those least able to bear them and practically relieves those who are best able to carry them.

WORLD'S OLDEST TAX.

There is nothing new, Mr. Speaker, about the income tax. Those of you who are familiar with your Bibles know that this form of taxation was established by divine command in the days when the prophets walked the earth and foretold the coming of the Saviour of Mankind. Practically all the great nations of the earth avail themselves of its beneficent provisions. In England, for example, the rates are very high, and Lord Northcliffe, the owner of the London Times, announced only a few weeks ago that he expected to be compelled to contribute 50 per cent of his income to the support of the Government, and that he did not believe the rate would be materially reduced at the conclusion of the war.

In this country we enacted an income tax in 1861 to help meet the expenses of the Civil War. The rates were much higher than any now proposed. For instance, those who had incomes of between $600 and $5,000 a year were compelled to pay 5 per cent; between $5,000 and $10,000 per year, 7½ per cent; and over $10,000, 10 per cent. In a period of 10 or 11 years this law produced a total of $376,000,000. It was repealed in 1870.

When the Democratic Party came into power in 1893 an income tax was enacted. It was attacked on the ground that it was unconstitutional, and the Supreme Court sustained the objection under most unusual circumstances.

There are nine members of that august body. When the income-tax case was being considered, involving at that time tens of millions of dollars of revenue, one of the justices was absent by reason of sickness. The remaining justices found they could not reach a decision. Four believed the law unconstitutional and four eloquently maintained that it was constitutional. They decided to await the return of the sick justice. After hearing the arguments, he announced himself as convinced of its constitutionality.

Then an extraordinary thing occurred. One of the judges who had argued in favor of the constitutionality of the law changed his mind and joined those who insisted it was unconstitutional.

Thus because a supreme judge changed his mind the income-tax law was kept off the statute books for 20 years, and this Government was deprived of revenue of over fifty to one hundred million dollars a year, or a total for the 20 years of from 1,000 million to 2,000 million dollars.

WHY "STANDPATTERS" FIGHT LAW.

The motive which prompts Republican statesmen of the standpat variety to object to the income tax may be found in a speech delivered by the late Senator Aldrich, of Rhode Island, in the Senate on June 29, 1909. He declared frankly at that time that he was opposed to the income tax because it was "a tax which was sure in the end to destroy the protective-tariff system."

I know there are Democrats who are opposed to the income tax, and I know there are Republicans who have ably and consistently supported it, but a careful examination of the congressional history of this country will sustain the statement that the income tax is peculiarly the child of Democracy and that the leaders of the Republican Party have never overlooked an opportunity to mutilate or destroy it.

AN INHERITANCE TAX.

There is just one more feature of the pending legislation that I desire to consider, and that is the inheritance tax. We will be told that we should not levy an inheritance tax for Federal purposes because it is a source of revenue for the States. It is true that most of the States levy an inheritance tax, but from the very nature of things those statutes can not be effectively enforced. It is mighty easy for men of great wealth to conceal their holdings from the representatives of a State. It would be much more difficult for them to avoid Uncle Sam's tax collectors.

According to the best information I have been able to obtain the States collect about $25,000,000 a year from inheritance taxes. This is a mere bagatelle when one considers the enormous wealth of this country. It is estimated by those who are in a position to know that we have twice the wealth of Great Britain. Personally it is my judgment, based on rather careful investigation, that that is a very conservative estimate.

Now, no one will contend that the English Government, which is controlled in large port by a land-owning aristocracy, would levy an unreasonable tax on large estates. Yet during the years immediately preceding the European war Great Britain collected about $100,000,000 a year through its inheritance tax. In other words, with one-half our wealth it collected four times the amount of revenue we secured from an inheritance tax.

If the States of the Union had taxed inheritances at the same rate as England did before the war, they would have secured a revenue of approximately $200,000,000 instead of the $25,000,000 they placed in their coffers.

It is because the States have utterly failed to take advantage of this source of revenue and are in fact not in a position to fully avail themselves of it that a Federal inheritance tax becomes a political and economic necessity.

A VERY CONSERVATIVE LAW.

The bill we have under discussion is really a very mild statute. It will not affect estates with a net value of less than $50,000. That means that after all expenses of every character have been paid there must remain to the credit of the estate $50,000 before Uncle Sam will levy a tax. The framers of the bill inserted this provision because they did not deem it necessary to oppress widows and orphans in order to support the Government.

The tax is graduated from 1 to 5 per cent, and larger amounts being levied on estates above $450,000.

TAX ON MUNITIONS OF WAR.

There are other very important provisions in this bill, Mr. Speaker, which I would like to discuss if I had the time. For instance there is the tax on munitions of war. The experts tell us it will bring in $71,000,000 during the coming year. Who can better afford to pay that sum than the men who are gathering hundreds of millions of dollars of blood-soaked profits as a result of the Old World's fearful tragedy? I have never been able to reconcile myself to the thought of Christian America growing rich through the manufacture of the instruments with which Europe's war-maddened people are murdering each other. It has been a bloody business, and I believe that in the years to come we will have reason to curse the day when a few of our people embarked upon it.

Then, there are the provisions for a tariff commission, the antidumping clause, and temporary protection for the dyestuffs industry. I have not changed my views on the subject of a protective tariff, but I believe that a tariff commission properly constituted can furnish the Congress of the United States with needed information to be used in framing tariff laws. The power to fix the rates could not and should not be surrendered by Congress.

The antidumping clause is a precautionary measure. Some of our people seem to think that when this war is over the floodgates of European industry will be opened and that our markets will be swamped with the products of the mines, mills, and factories of the Old World. I do not share that belief, but nevertheless, I believe as reasonable men we should take the precaution suggested by the President and his advisers. It will give our business men a sense of security which they would otherwise lack, and it has been my experience that the prosperity of the country is largely based on confidence.

This war revealed the fact that our country was dependent on Europe for dyestuffs. The pending bill gives those who are interested an opportunity to establish that industry in this

country, and we are assured by capitalists that they will gladly take advantage of the opening.

BILL DRAFTED BY STATESMEN.

This fragmentary review of the bill under discussion will suggest, Mr. Speaker, that it was drafted by farsighted statesmen, who were not building for to-day or to-morrow, but for the long years of the coming century.

I said in the beginning it was a Democratic measure; and yet, when the roll is called you will find that many of our Republican brothers will vote for it. They may criticize some of its provisions; they may clamor to dot an "i" or cross a "t," but they know that the folks at home want this bill placed on the statute books, and that the man who bars its progress with his vote will have a most embarrassing experience when he is forced to face his constituents and "tell the reason why."

## Widows' Pensions.

### EXTENSION OF REMARKS
OF
### HON. EDWARD E. BROWNE,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. BROWNE. Mr. Speaker, this bill increases the pension of a widow who was the lawful wife of a soldier during the period of his service in the Civil War from $12 to $20 per month. This cares for the so-called war widows. The surviving widows of this class is comparatively small.

This bill will also give a pension of $20 per month to all Civil War widows who have now reached, or may hereafter reach, the age of 70 years who are now on the pension rolls or who may hereafter be placed thereon, and the fact that a widow of a soldier married a civilian who has died or from whom she has been divorced will not, under this bill, prevent her drawing a pension.

Under the act of June 27, 1890, no widow who married a soldier after that date is entitled to a pension. This bill raises the marriage limit 15 years or until June 27, 1905.

No woman who married a soldier during the past 11 years or who may hereafter marry a soldier will be entitled to a pension under this bill.

No woman who has married a soldier during the past 26 years—since 1890—can be charged with having married the soldier with the expectancy of receiving a pension, therefore the committee thought it was fully warranted in leaving this restriction for a period of 15 years.

I indorse this bill, Mr. Speaker, and hope it will become a law at the earliest possible time.

Widows of the Civil War did not receive a pension until 1890, or nearly 25 years after the close of the war, and then only $8 per month, which was increased to $12 per month in 1908.

A pension of $12 per month for a person three score years and ten is absolutely inadequate at this time.

Only a small percentage of widows live beyond the age of 70 years, and none are able to earn their own support who live beyond this age, and a pension of $20 per month is small enough to provide for their wants.

All honor to the brave men who enlisted in that war, that meant more for free government and civilization than any war in history. Every man that served his country in that terrible struggle made a sacrifice that entitles him to the everlasting gratitude of all mankind.

I have voted for every pension bill that has come before this body, and no act incident to my service in Congress has given me greater satisfaction than supporting and voting for bills making provisions for the soldier, his widow and orphans; and I now reiterate what I said upon this floor on one occasion in supporting a pension bill, that I believed every soldier who had served his country in time of war was entitled to a sufficient pension from the Government to provide him with a decent, comfortable living in his declining years, and that his widow and orphans were entitled to equal consideration.

When men enlisted back in the sixties this Government made a solemn pledge that the widows and dependents of soldiers should be treated as the honored wards of the people and that this Government would stand between them and want. This legislation is but a fulfillment of that sacred promise.

Wisconsin at the time of the Civil War was but a young State, it having been admitted to statehood less than a dozen years. With a population of only a trifle over 700,000, she sent to the front an army of between ninety and one hundred thousand of as brave men as ever shouldered a musket.

The sacrifices that the people of this young State made at that time can be seen to-day, over 50 years after the war and by reason of those sacrifices, there is hardly a pioneer home in the State of Wisconsin that has not vacant chairs about its fireside.

The men who returned to civil life after the terrible conflict were rare exceptions that did not come out of the struggle with wounds or other disabilities that handicapped them in business and in their future life. These disabilities grew heavier with the years and often caused even a valiant soldier to lose out in the unequal competition of business and many times hurried him to an untimely grave.

The soldier's widow, who perhaps waited in vain at the cottage door for a husband that never came; the wife who stood by her husband's side in the hour of adversity, who helped her husband fight the battles of life against poverty and sickness, who sat by his bedside and nursed and comforted him in sickness, did her share in the rehabilitation of this Republic which the men in blue had saved.

The soldier's wife enlisted in a service not for a few years, but fore a lifetime. She fought the good fight uncomplainingly and alone, with only the stars as witnesses, and her silent victories were as important for civilization as those of the husband.

All honor to the soldier who served his country in time of need; all honor to the soldier's widow who served her soldier husband and his family in their time of need.

This Government owes both a debt of gratitude that it can never repay. Congress can perform no more sacred and patriotic duty than to make provision for its soldiers and the widows and dependents of its soldiers.

## Memorial Day Address.

An address by Hon. A. P. GARDNER at Gettysburg, Pa., on Memorial Day, delivered from the Rostrum in the Soldiers National Cemetery to Corporal Skelly Post of the Grand Army of the Republic and many thousands of school children and visitors who gather there annually to pay homage to the Nation's heroic dead.

### EXTENSION OF REMARKS
OF
### HON. C. WILLIAM BEALES,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. BEALES. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include an address delivered at Gettysburg, Pa., on Memorial Day, by my colleague, Representative A. P. GARDNER.

The address is as follows:

MEMORIAL DAY ADDRESS IN GETTYSBURG, PA., MAY 30, 1916.

On the spacious farm of the western prairie, under the giant chimney of the New England factory, in the subterranean gallery of the Pennsylvania mines—everywhere in this broad land where Union hearts were found a pause has come to-day. Men and women and children are gathered together to do you honor and with you to do honor to your comrades who have gone before.

Other nations, barbaric and civilized alike, since the dawn of history have exalted the memory of their chieftains slain in their country's service. Kings and princes, generals and admirals—all have been honored by storied urn and marble pillar. It has remained for this Nation to decorate the grave of the plain soldier, of each soldier individually, as he lies forever in his narrow cell. Granite and brass and marble endure, though flowers perish. They perish, indeed, but year after year they are renewed by gentle, loving hands, while the sculptured urn in the great cathedral is soon forgotten or serves at most to awaken a moment's wonder as the traveler passes by.

"WHEN THERE IS NO PEACE."

In the cloistered seclusion of the study men of letters may dream that the day has already come when mankind will at last beat its useless swords into plowshares and that the awful roar of battle will be heard no more. My friends, the dawn of such a day is still afar off. Kings may no longer rise against kings, in defiance of their people's wishes, but nations will rise against nations just so long as the wishes and rights and hatreds of one part of the earth conflict with the wishes and

rights and hatreds of another part of the earth. May the Lord defend this Nation from pestilence and from war, but let us see to it that our martial spirit is not stifled. Gentlemen will continue to cry, "Peace, peace," as gentlemen have always cried, "Peace, peace"; but let us not forget that it is heroic work to trample out the vintage where the grapes of wrath are stored.

The Almighty has given to every living being an almost irresistible instinct of self-preservation. The ability to overcome that instinct is the measure of a man's courage. The strongest motive power known to man is the instinct to preserve his own life. The greatest task which man must face in war is the struggle against that involuntary impulse. If he yields to the instinct of self-preservation, he is useless as a soldier. If he overthrows it, he wins immortal renown. To follow the command of his manhood into the teeth of danger, while his poor mortal body trembles with the fear which his immortal soul subdues; that is the awful task set before the soldier. If his fear is conquered, he is great, but his greatness may be only the greatness of a heroic death.

So long as woman crowns the brave with laurel, so long as contempt for death kindles our admiration, just so long will the memory of those who died for our country be kept green in the hearts of our countrymen, and the plaintive protests of the high priests of circumspect tranquillity will fall on inattentive ears.

THE CALL TO ARMS.

For most Americans the Civil War is only history or, at best, a confused and faint recollection. For you soldiers it is a living memory, and in that memory on Memorial Day we of the younger generation are proud to join.

We dream of ourselves at your side when Lincoln told you that your country was in danger, when the call came for men, when the patriotism of the country caught fire amid the rolling of drums, the echoing of bugles, and the billowing of flags. In our imagining we think of you as you scrutinized your hearts while you listened to the inspiring words at the war meetings. How searching was the examination to which each one of you subjected yourself. Shall I be brave on the stricken field or will my spirit give way and my name be disgraced? Have I the right to leave my young wife and my children or the girl whom I love and who loves me? What will become of my loved ones if I fall? Will a grateful country protect them or will a bankrupt Nation turn to them with words of thanks and empty hands?

And so you took counsel with your women, and they bid you follow the trumpet which shall never sound retreat. The answer went out to Father Abraham, "We are coming."

From the church and from the college, from the farm, the factory, and the store, leaving the aged mother, leaving the bride of to-morrow, boys and men cast from them the opportunities of life and freely offered themselves as a sacrifice to the Nation's needs. Follow these men and boys through the dull routine of the camp of instruction, follow them through the privations of the march and the bitter bivouac of the rain and cold. Follow them with McClellan to Antietam, with Meade to Gettysburg, with Grant through the Wilderness; follow them through all the campaigns East or West. Everywhere you will find them doing their duty through pain and through sickness, meeting death in the stricken field or in the pestilential camp, bearing their agonies that their country might live.

DUTY.

What a lesson of duty well done the soldier teaches us. Duty! It is a noble word, of which we hear too little. Men think and quarrel too much about their rights, but to most of us the word "duty" signifies only a sacrifice which some one else ought to make. Rights and duties should go hand in hand. They should be inseparable one from the other. They should be fitted to each other like lock and key. What is wrong with the world that we delight to honor the plausible demagogue who furiously incites us to demand some obscure right while we turn our backs on the sincere divine who solemnly urges us to perform some obvious duty?

I was born at the end of the war, and yet my head has grown gray. My step is not so light as it was, and life's shadows begin to lengthen as my sun heralds the oncoming of early evening. It may be that my fire is beginning to burn a little lower; but to-day I find other things in this world more sacred to me than my clamorous rights. Loyalty, love, honor, truth—if God gives us those blessings, he has no greater gift in store.

THE GOLDEN AGE.

Oh, I know that in this Nation much has been wrong which has been called right. I know that our laws have sometimes mingled injustice with justice. To do good without an admixture of evil is the prerogative of the Divinity alone. The golden age is an epoch of the future, not of the past. The world has passed through a barbarous age, a cruel age, a murderous age, an unjust age, a dishonest age, an unfaithful age, but never has it passed through a golden age. Read your Bible, read your history, read anything except the printed mirage which we call the news of the day, and you will find that America is nearer the golden age than ever before. Never was man so far removed from the haunting specter of penury, never was justice more certain, never was the standard of right living higher, never did men exact or practice more rigid honesty, never did the sun of publicity banish so completely the dark places in human dealings. Comrades, I say to you that this world is not going backward.

TAPS.

To you who have survived those perilous war times may the Lord grant a ripe fullness of years. While you are still with us the Nation owes you more than can be gauged by any pension scale. Though after a fashion a grateful Republic may be able to show its good will to the living, to the dead we owe a debt which must ever remain unpaid. Three hundred thousand Union soldiers did not live to see the dawn of peace. Three hundred thousand gallant gentlemen were called to their eternal reward before their fellow countrymen could show their love and gratitude.

I would that every soldier of that noble host slumbered to-day in hallowed ground where tender hands could deck his grave with garlands. But no, many and many a tortured body found its last resting place in the blood-soaked earth of some southern field.

Many a soul ascended to its Maker amid the wrecks of war, leaving its mortal shell to be interred by friend or foe, as chance would have it. Over those nameless graves no flowers can be scattered by loving hands to-day, and only nature knows which wild flowers bloom the brighter springing from honored turf where soldiers lie at peace.

But where we may, year after year, old and young will gather with flowers to strew on the graves of your departed comrades.

LISTEN TO THE POET'S WORDS.

Cover them over with beautiful flowers,
Deck them with garlands, those brothers of ours,
Lying so silent, by night and by day,
Sleeping the years of their manhood away.
Years they had marked for the joys of the brave;
Years they must waste in the sloth of the grave;
All the bright laurels that promised to bloom
Fell to the earth when they went to their tomb.
Give them the mead they have won in the past;
Give them the honors their merits forecast;
Give them the chaplets they won in the strife;
Give them the laurels they lost with their life.
Cover them over—yes; cover them over—
Parent and husband and brother and lover;
Crown in your hearts these dead heroes of ours,
And cover them over with beautiful flowers.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. ROBERT M. SWITZER,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. SWITZER. Mr. Speaker, our Democratic friends ask the Republican Members of the House to support the pending revenue bill on the ground that the appropriations it is to care for have been necessitated by the great preparedness program of this session, creating, according to their contention, an emergency, and that a negative vote means an attempt to cripple the present administration.

I do not see it is that way. This is not an emergency measure. The extraordinary expense on account of the Mexican situation, we are told, is to be taken care of by a bond issue. The appropriations to be taken care of by the revenue raised by this bill are permanent in their nature and not temporary. These appropriations next Congress will be larger, and still larger at the next Congress, and so on; but it is not true that all of the revenue derived from the pending measure is to be used in caring for the appropriations on account of the additional preparedness program. Forty millions or more of it will be used in paying the salaries of that great army of 30,000 increased Democratic officeholders, and so I could enumerate.

The Underwood tariff bill when before the House for consideration in the Sixty-second Congress contained an income tax and an antidumping provision which I favored, but I voted against it for the reason that the basic method of the bill pro-

vided for the raising of revenue was a free-trade tariff method instead of a protective tariff one. This free trade basic method then became the law and it still remains the law, and as long as it remains unchanged and not protective I feel constrained to vote against all Democratic revenue measures, although they may carry isolated protective duties, the tariff commission, and antidumping provisions, all of which as carried in the pending bill and with some modifications I would gladly support and vote for if they were disconnected from the revenue features of the bill. The antidumping provisions of the pending bill are absolutely worthless as additional protective measures and the tariff commission provision as it now stands does not contemplate the ascertainment of the difference between the cost of production at home and abroad for the purpose of protecting American industries, and it authorizes President Wilson, a free trader, to appoint six members of a tariff commission, having tenures of office from 2 to 12 years, respectively, each drawing a yearly salary of $7,500, and a secretary to receive $5,000 a year, with an army of special experts, stenographers, clerks, and employees, and makes an appropriation of $300,000 for the first year's maintenance of many deserving Democrats and authorizes a like amount each year thereafter. Should I vote for this bill as it now stands I would say to my constituents that I am satisfied with the existing Underwood tariff law and that I favor raising all additional revenue needed by the Government in the future by taxation methods other than protective tariff duties.

If the Underwood law is revised and made protective, it would raise more than $100,000,000 of additional annual revenue, the greater part of which would be paid by the foreigner. I am in favor of compelling the foreigner to pay a tax for the use of our markets, and to pay tariff duties sufficiently high to adequately protect American industries and to give to American labor certain and full protection. I will therefore vote to recommit the bill with instructions to amend it so as to raise an equitable portion of the required revenue from a protective tariff, "sufficient to protect adequate American industry and American labor, and to be so adjusted as to prevent undue exactions by monopolies or trusts."

During the debate on this bill several dyed-in-the-wool Democrats have enthusiastically stated that the Federal reserve banking law, which went into effect about a year and a half ago, had succeeded in throttling the money power of Wall Street and was working marvelous benefits to the people. So far as Wall Street is concerned, when fifty or one hundred million dollars is needed, the officials of the Government, as well as private individuals, still journey to Wall Street.

I have in mind a national banking institution located in the State of Ohio, having a capital stock of $100,000, that has been compelled by reason of this much-lauded Federal reserve law to subscribe and pay for $7,500 of stock in the Federal reserve bank, from which the national bank has received no dividend, and it is compelled to keep on deposit with the Federal reserve bank $12,500, for which it is paid no interest; in other words, one-fifth of the capital of the bank is rendered useless as an income producer, and I know of no advantages the bank has received up to this time by reason of its connection with the Federal reserve bank.

The pending revenue bill increases the tax from 1 to 2 per cent on the net income of all banking institutions. I would like to have some of the enthusiastic defenders of the Federal Reserve System explain just how these serious handicaps and immense burdens placed on national banks benefit such institutions and their stockholders and in what way it enables customers of the banks to obtain cheaper interest rates.

The Democratic platform of 1912 denounced lavish appropriations and high taxes and demanded a return to simplicity and economy, but the appropriations for this Congress will be in the neighborhood of one billion six hundred millions of dollars and, likely, authorizations to the amount of two hundred millions more, and in three years they have increased the number of officeholders 30,000, and at this rate it will be 35,000 by March 4 next, drawing annual salaries of more than forty millions of dollars. To pay this enormous increase in appropriations direct taxation has been resorted to of every conceivable nature, and the rates have been yearly going higher, but in the long category of failures to fulfill their platform pledges last but not least is the ignoring of their pledge to labor to enact an employees' compensation law, so far as the Federal jurisdiction extends, providing adequate compensation for injury to body or loss of life. The House of Representatives in the Sixty-second Congress, by a vote of 218 to 81, passed a workmen's compensation act fixing the amount of compensation due from every common carrier engaged in interstate and foreign commerce by railroad to an injured employee or to his widow and dependent children under the age of 16, and so forth, in the event of his death, but it failed to pass the Senate. The House was then Democratic, and the Democratic national platform, under the conspicuous title of "Rights of Labor," contained the pledge I have just referred to. Since the 1st day of March, 1913, Democratic ardor for this proposition seems to have become much chilled, for while it was a conspicuous pledge of their platform then, their more recent expressions of platform promises of this year are just as conspicuous because of the absence of any reference whatever to workmen's compensation legislation.

One Democratic Congress has come and gone and another is fast nearing the closing months of its existence and no bill has been reported for consideration, and I am informed that none will be. A bill was introduced in the last Congress as well as in this Congress, and the committees to which they were referred had acess to an exhaustive, full, clear, and comprehensive report of the law and the facts upon the subject of workmen's compensation, known as Senate Document 338 of the second session of the Sixty-second Congress, consisting of more than 200 pages, as well as the printed compilation of all the hearings before a joint commission appointed by President Taft and the two Houses of Congress, containing nearly 1,500 pages of printed matter. The Sixty-first Congress, a Republican Congress, passed a joint resolution creating this commission, in pursuance of which two Senators were selected by the President of the Senate, two Representatives by the Speaker of the House, and two members selected by President Taft. The bill recommended by the Taft commission would give compensation for injury or death to all employees or their widows and dependents regardless of the old common-law defenses, assumed risk, contributory negligence, or for any other act or neglect on the part of the employee or by his fellow employees, and nothing can defeat the recovery except willful negligence of the injured party or the deceased, or willful act of his fellow employees, or unless the injury or death be the direct result of intoxication. This proposed legislation has the indorsement of the Order of Locomotive Engineers, the Order of Railway Trainmen, and the Republican Party in its national convention at Chicago this year has also indorsed it.

Statistics show that upward of 100,000 railway employees are injured annually and that from 4,000 to 5,000 receive injuries resulting in death, and the railroads pay damages in not more than 10 per cent of the cases, and that of the 10 per cent who recover damages not more than 35 per cent of what the railroad paid went into the pockets of the claimants, and the remainder went to damage-suit lawyers and to pay the cost of litigating the claims. It is estimated that the railroads pay annually $10,000,000 or $12,000,000 on account of personal injury and death claims of their employees, and that if a law were enacted carrying rates recommended by the Taft Joint Commission, the railroads would not have to contribute to exceed $18,000,000 annually on account of such claims, and that practically all of the 100,000 employees annually injured would receive a fair compensation and that practically all of the families of the 4,000 or 5,000 annually killed would also be reasonably compensated for the loss of the deceased. I suppose when the Democratic Members of Congress look back upon the miserable records of broken promises and smashed pledges of the Baltimore platform, they have concluded to throw this pledge also upon the scrap pile for good measure and let the dead Past bury its dead.

I had the privilege of voting for the workmen's compensation bill, which passed the House March 1, 1913, and I hope to have the privilege of voting for the same in the next Congress, which will be Republican.

Before bringing these promiscuous remarks to a close I desire to call the attention of the people to the procrastination of the Democratic Senate of this Congress in taking final action on the Burnett immigration bill. I voted to pass a similar bill over the veto of President Taft in the Sixty-second Congress and to pass a similar bill over the veto of President Wilson in the Sixty-third Congress, and I voted with the majority Members of the House in passing the Burnett bill in March last. Within a few days after its passage it went over to the Senate where it seems to have been pigeonholed by the chairman of the Committee on Immigration. I have no doubt that he is holding it up at the instance of the friends of President Wilson, who do not want the bill to be presented again to him for the second time on the eve of the presidential election. Three-fourths of the Members of the Senate are for the bill, and there is no question of its passage should it be allowed to come to a vote, and there is not much doubt that it will receive a two-thirds vote of both Houses and become a law should the President again veto it, but it is very evident that a great effort is being made by the President's friends to put off a final vote on the bill in the Senate until after the election, at the short session of Congress.

## The Revenue Bill.

### EXTENSION OF REMARKS

OF

# HON. THOMAS W. MILLER,

OF DELAWARE,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. MILLER of Delaware. Mr. Speaker, on the floor to-day we witnessed the Representatives of Arizona and Montana protesting against the tax on copper in this bill, and if their predictions are true as to the effect of this bill on this great industry in their States, and no one has reason to doubt their assertions, a great injury will be done to their people should this bill be enacted into law, on account of only one provision in this bill, viz, the copper tax. Arizona is represented on this floor by one Representative, a Democrat, and Montana by two Members of the same political faith. As I listened to their well-expressed appeal for a fair deal I could not help but be impressed as to the utter futility of their appeal, because with only three votes in this body their voting strength was practically nil, and therefore the great copper industry within the confines of their respective States must submit to the terms of this measure and be satisfied with the verbal protest expressed by their Representatives. These men were performing their duty in bringing to the attention of this body the effect that this bill will have upon one of their great industries; and the fact that I, too, occupy the position of lone Representative of my State on the floor does not deter me from making this statement in the RECORD concerning the effects of this measure upon the people of my State.

The banks of my State are numerous and prosperous, but they are already taxed as much as they should be without having assessed against them the provisions of section 302 of this bill. Bank failures are practically unknown in Delaware, and the banks throughout the State, in the rural and city districts, have helped considerably to make the farmers and city people of my State thrifty and prosperous. It is only natural that they should protest against double taxation, which will be the case with section 302 included in the bill. Happily it was stricken out, not only in Committee of the Whole but also in the House on a roll-call vote. In order to show some expressions of opposition to this provision in the bill I will insert here some copies of telegrams received from banks of my State in this matter:

WILMINGTON, DEL., *July 10, 1916.*

Hon. THOMAS W. MILLER,
*House of Representatives, Washington, D. C.:*

Federal omnibus bill. Will you please use best effort for repeal of bankers' special tax, which we regard as gross discrimination and wholly unwarranted.

DELAWARE STATE BANKERS' ASSOCIATION,
OTHO NOWLAND, *President.*
W. G. TAYLOR, *Secretary.*

ODESSA, DEL., *July 10, 1916.*

Hon. THOMAS W. MILLER, M. C.,
*House of Representatives, Washington, D. C.:*

This bank is opposed to the increase of income tax proposed in the omnibus revenue bill. Use your influence to defeat it.

NEW CASTLE COUNTY NATIONAL BANK,
JOS G. BROWN, *Cashier.*

WILMINGTON, DEL., *July 8, 1916.*

Hon. THOMAS W. MILLER,
*Washington, D. C.:*

This company urges the defeat of the Federal omnibus revenue bill, and asks that you use your efforts to this end.

DELAWARE TRUST CO.

WILMINGTON, DEL., *July 10, 1916.*

Hon. THOMAS W. MILLER,
*House of Representatives, Washington, D. C.:*

Banks and trust companies are already overburdened with Federal taxation. It would be a great injustice to increase burden. Please do all you can to convince the House that this feature of the pending Federal omnibus revenue bill should be eliminated.

SECURITY TRUST & SAFE DEPOSIT CO.,
BENJ. NIELDS, *President.*

Another section of this bill to which I desire to address myself is the munition manufacturers' tax. There is no denying the fact that the people of my State will be affected by the provisions of this munition section, and are just as much and as vitally interested in its provisions as are the people of Arizona and Montana in the copper tax. Coming from the State of Delaware I may be said to be prejudiced, but granting that I am, I feel that it is my duty to present facts on the other side of the question of the munition tax. I have no hesitancy in saying that, in my opinion, a number of the provisions in this bill taxing the makers of munitions of war are almost confiscatory in their effect.

I realize full well that the temper of this body is inimical to this great industry located in part within my State and am fully aware that the mention of the word "munitions" or "powder" almost drives certain of our friends on the floor into a frenzy which may explain why certain industries in the munitions trade are taxed with a viciousness that amounts to almost penalization.

Since the outbreak of the European war the Democratic Party has been forced to pass two revenue-raising measures, and this is the third one proposed. The first was the so-called "War-tax bill" passed in October, 1914. This was made necessary according to the claim of the administration and the party in power because of the falling off of customs receipts due to the stopping of imports on account of the war. It was apparent to the country, however, that there was a deficit in the Treasury at the end of the fiscal year on June 30, 1914, the first full year under the Democratic administration and after the Underwood Tariff Act had been in operation for almost a year and some months before the European war was started. There can be no disputing the statement that had there been no war in Europe the Democratic Party would have been compelled just the same to pass this legislation which was dubbed a "war tax" although this country was at peace. The second measure passed was a resolution presented to Congress in December, 1915, extending the provisions of the so-called "war tax," which is repealed in this measure presented to-day.

The prosperity which this country has enjoyed since the outbreak of the European war is due to the trade in munitions of war supplied by this country to the various belligerents, and in that respect it may be termed a "fictitious" prosperity for which no party be it Democratic, Republican, Progressive, and so forth, can take any individual credit.

The industrial conditions existing in this country at the time of the elections in 1914 are not forgotten, and they represented the true conditions that would have existed in this country had not the great war in Europe favored this country with a trade that has made practically every industry hum. Why is it, therefore, that this bill discriminates against the manufacturers of explosives while others engaged in the manufacture of other munitions of war and making equal or greater profits are permitted to go free?

It is interesting to note the exports of other commodities from the United States to belligerent nations since the beginning of the war, and which might rightfully be considered as munitions. Within the 20 months after the outbreak of the war rubber to the value of $42,000,000 was exported from the United States for military purposes; likewise automobile trucks and passenger automobiles to the value of $142,000,000 were sold for military purposes abroad; aeroplanes and parts to the value of about $8,000,000; motor cycles to the value of over $4,000,000; and woolen goods to the value of $70,000,000. These are authentic figures with respect to only a few of the commodities which may rightfully be termed as munitions. There could be added to the list such articles as canned meats, army rations of various kinds, shoes, harness, saddles, blankets, kerosene, gasoline, acids, alcohol, locomotives, parts of submarines, range finders, stamped metal military equipment, swords, bayonets, bromine and other military gases, barbed wire and other products of iron and steel.

It is probably forgotten that since the outbreak of the war horses to almost the value of $130,000,000 and mules to the value of $31,000,000 have been exported for military purposes; that guns and ammunition used by the belligerents are taxed, but the animals that haul and make it possible to use these terrible engines of war are permitted to be sold at just as great profit without any tax being placed on the beneficiaries from that sale. I make the above statements and comparisons not necessarily in advocacy of a tax upon them but more as a comparison to bring out the inequalities of this tax measure.

Having compared the method by which gunpowder and other explosives are taxed in comparison with other munitions of war which are untaxed, it might be in order to illustrate further inequalities as compared with other material classed as war munitions on which the bill provides a tax. Why should a dollar received from gunpowder, or some other explosive, bear a tax of 8 per cent while a dollar received from the gun that burns this gunpowder bears a tax of only 5 per cent, and the copper for shell cases but 3 per cent?

The value of almost every raw product entering into the manufacture of gunpowder and other explosives has advanced many times since the outbreak of the war. The value of copper has more than doubled, but there has been no material increase in

the cost of production. It is interesting to note the increase in cost of various chemicals used in the powder industry, such as benzol, originally selling for 20 cents per gallon, now 80 cents; toluol, which has advanced from 20 cents to $4 per gallon; and fuming sulphuric acid from $15 to $150 per ton.

Let us consider the amount of cotton that has been used since the outbreak of the war, and which is necessary for the manufacture of explosives. Coming from a State that lies almost wholly south of the Mason and Dixon line, I can not be accused of sectionalism when I call attention to the great prosperity that must have accrued to the Southern States by reason of the use of cotton in this industry. Before this great product of the South commenced to be used in larger quantities than ever before used for the manufacture of powder the situation created in the opening months of the European war seriously threatened the prosperity of the Southern States because of the injury to the cotton trade by reason of the war. We all remember the campaign to "buy a bale of cotton." A few months ago the House passed a joint resolution authorizing and directing the Director of the Census to collect and publish additional statistics with respect to cotton, and I remember at the time I was one of about eight Republicans who voted for this measure on the roll call in spite of the fact that certain proponents of the measure asserted that certain industries existing in my State were fighting the bill for ulterior reasons. I thought it proper that the public should know just how much cotton was being used in the manufacture of explosives. Since that time I have taken the trouble to find out the correct figures as to the amount of cotton used. The figures of the estimates show that one of these powder companies has used over 600,000 bales of cotton of all grades from December, 1914, up to and including May, 1916, and in addition thereto other munition manufacturers and purifiers of cotton for the manufacture of munitions have used as much as 300,000 bales, almost 1,000,000 bales in all. This cotton, which has sold as high as 8 cents per pound, advancing from 2 cents per pound in some grades, has meant prosperity for the cotton producers of the Southern States, and in that I sincerely rejoice. The votes for the passage of this bill come in a large measure from the section of the country that has prospered in the demand for cotton.

While it is to be admitted that the manufacturers of gunpowder and other explosives have enjoyed a period of exceptional prosperity during the past 18 months, the fact seems to have been lost sight of that their prosperity has been so distributed that it has permeated other lines of industry and been of benefit to thousands of working people throughout the country. The other industries which have shared the prosperity that has been passed on to them are not forced to bear any taxation, but the burden of taxation has been placed upon the source without being equitably distributed. There seems to be an idea that all manufacturers of gunpowder and other explosives have made exorbitant profits, and therefore that they should be "soaked" to the limit. It seems to have been forgotten that while these manufacturers may have received what appeared to be high prices for their products, they have been forced to meet unusual expenses and they have faced an ever-ascending scale of prices on raw materials.

Under the retroactive feature of this bill manufacturers of munitions are forced to pay a tax upon the gross receipts upon all business done since the 1st of January of this year. When contracts were made for this work no such expense item as this was considered in fixing the price of the product, and in many cases where the contracts have been filled and the money received therefrom distributed in either additional equipment, wages, salaries, and dividends, it is impossible for the retroactive tax to be recovered, and therefore it must be borne in the future and out of what contracts with the belligerents that remain to be filled. Can any one deny that this feature is unfair?

I am reliably informed that the largest company engaged in this business—the Du Pont company—employs about 60,000 men in its various plants throughout the United States, and in the last year and a half it has paid directly, in wages alone, for the manufacture of military explosives $45,000,000. The men employed in their plants have been worked on eight-hour shifts, and, in addition to receiving a scale of wages higher than has been paid heretofore for similar work, they have been granted an additional 20 per cent bonus in wages. In addition to this sum expended in wages, this company has been indirectly responsible for the expenditure of a greater amount to labor on raw materials and machinery which it has purchased.

I have inserted the above remarks because I not only deem it my duty to do so but, after investigating the facts, I fully believe that this bill is unfair and drastic in many of its provisions and as such is not warranted by the conditions existing at this time.

There are some features of this bill for which I would like to vote, as, for instance, the tariff commission, the dyestuff section, as well as the provision regulating unfair competition. A tax on munitions of war, distributed equitably and fairly, would not be opposed by me, in view of conditions the country faces to-day, for which, however, the Republican Party is not responsible. I have no hesitancy in saying that I favor an income tax, but believe that this tax should be collected on incomes as low as it is profitable for the Government to collect this tax, believing that it tends to better citizenship and interest in government if more individuals bear the burden of this income tax, even though it means in many cases not even a dollar a year, which is the kind of income tax leviest in other countries of the globe which use this as a means of revenue. I shall therefore vote against this measure as a whole.

---

### The Estate or Inheritance Tax.

## EXTENSION OF REMARKS
OF
## HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

*Monday, July 10, 1916.*

Mr. CURRY. Mr. Speaker, I would like to vote for this bill, but I can not on account of the estate or inheritance tax provision and on account of the excessive tax on wine and the legalizing of the manufacture and sale of spurious wine as wine.

That the Federal Government has the power to levy an inheritance tax is admitted; that it has the moral right to do so I deny. Inheritance taxes have been levied from the time of the Roman Empire in countries where under the laws of primogeniture and entail vast estates under the terms of the original grant escaped all ordinary taxation, and the only way they could be made to pay their just share of taxation for the expenses of the Government was to collect an inheritance tax upon the transference of the property from the dead to the living. Usually, however, the inheritance tax is a local and not a national tax. It has up until now been so considered in this country. Forty-two States now collect an inheritance tax. By what shadow of right would the Federal Government filch this revenue from the States or punish thrift by double taxation.

California was one of the first States to enact an inheritance tax law. Under the original act all of the tax went into the school fund. The law was declared to be unconstitutional by the Superior Court of San Diego County. The case was not appealed, but the courts and county clerks accepted the judgment and ceased trying to collect the tax. I was elected county clerk of San Francisco in 1894. During my term the estate of Senator Leland Stanford was probated. I caused suit to be commenced against the estate for the inheritance tax. The superior court held the law to be unconstitutional. The case was appealed to the supreme court, which reversed the superior court and upheld the constitutionality of the law. The final result was that the Stanford estate paid over $500,000 into the school fund of the State before the final decree of distribution was entered.

Since then the law has been amended, and now $250,000 of the tax goes into the school fund; 5 per cent into the teachers' retirement or pension fund, and the balance into the general fund of the State.

In 1907 the National Taxation Association, composed of revenue and tax officials from every State in the Union and from Canada, passed strong resolutions against the levying of a Federal inheritance tax, taking the position that the inheritance tax should be a State tax. Similar resolutions have been passed at each of the subsequent meetings of the association.

In 1908 an inheritance tax provision was in the tariff bill as it passed the House but was struck out of the bill in the Senate. A number of State legislatures were in session at the time and they all passed resolutions against the tax.

I have received a strong argument against the tax from Hon. John S. Chambers, the State controller of California. He also sent me copies of letters he received against it from the Wisconsin tax commission and the comptroller of New York. I shall include them as a part of my remarks. The county auditors' association, the tax collectors' association, and the boards of county supervisors of California also passed reso-

lutions against the Federal Government levying this tax. Following is a list of the States that levy an inheritance tax and the amount of the revenue derived from this source for certain specified fiscal years:

*Inheritance-tax revenue by States.*

| State. | Year. | Revenue. |
|---|---|---|
| Arizona | 1914–15 | $12,132.45 |
| Arkansas | 1913–14 | 44,361.49 |
| California | 1913–14 | 1,796,478.57 |

STATE BOARD OF EQUALIZATION STATE OF CALIFORNIA,
*Sacramento, June 5, 1916.*

Hon. C. F. CURRY, M. C.,
*Washington, D. C.*

DEAR SIR: I am transmitting herewith copy of a resolution adopted by the State board of equalization relating to inheritance-tax laws.

As you know, California since 1893 has had an inheritance-tax law, which, by amendment in 1905, produces considerable of California's revenues going to maintain the State government. The loss of this revenue, or any great proportion thereof, would seriously cripple the State and more than likely compel it to levy an ad valorem tax upon the people generally to make up the deficiency.

We earnestly trust that you will use all honest endeavors to check any congressional legislation looking to the enactment of a Federal inheritance-tax law.

Respectfully, your obedient servant,

R. E. COLLINS,
*Chairman State Board of Equalization.*

STATE BOARD OF EQUALIZATION OF CALIFORNIA RESOLUTION AGAINST A FEDERAL INHERITANCE TAX.

Whereas information has been received from reliable sources that the Ways and Means Committee of the House of Representatives has determined to recommend to Congress the enactment of a Federal inheritance tax law; and

Whereas further information is to the effect that the States will be requested to abandon their inheritance tax systems to the end that such revenues may be collected by the Federal Government, with the understanding that a certain percentage of such collections, now understood to be 50 per cent, less overhead costs, shall be returned to the States on the basis of collections within each State; and

Whereas many of the States have incorporated the inheritance tax as a part of their taxation system and have developed its application with remarkable success; and

Whereas the State Board of Equalization of California, convinced that the passage of an inheritance tax law by the Federal Congress will inflict serious injury upon the States, particularly California, which derives an average annual revenue from inheritance taxes of about $3,000,000; and

Whereas the average annual revenue to California from this source will be reduced about one-half, on the basis of our present collections and a 50 per cent return, or $1,500,000, and as a consequence the common schools may be deprived of approximately $250,000 annually now given them by the State from its inheritance tax collections; the teachers' pension fund will suffer a loss of one-half the revenue derived from this source; and the general fund of the State treasury will lose about $1,000,000 annually; and

Whereas a loss in State revenues of this magnitude will seriously affect the entire State revenue system and place a higher tax upon corporations or a general property tax upon the people, who in either event must bear the burden: Now, therefore, be it

*Resolved*, That we, representing the State Board of Equalization of the State of California, do disapprove of inheritance-tax legislation by the Federal Congress, and urgently request our Representatives and Members of the Senate to do all in their power to discourage and defeat such legislation, for the reason that the States need this revenue; that the Federal Government has far more sources upon which to draw for revenue than have the States, and therefore should not encroach upon the rights and needs of the States in the matter of inheritance-tax revenues; and be it further

*Resolved*, That the chairman and secretary of this board send a copy of these resolutions to each Member of the California delegation in Congress.

STATE BOARD OF EQUALIZATION,
R. E. COLLINS, *Chairman.*
T. M. EBY, *Secretary.*

Since these resolutions were adopted the Ways and Means Committee changed its tentative plan to collect an inheritance tax and pay half of it back to the States. It provides in this bill for the collection of an estate tax by the Federal Government and the retention of all of the tax. This policy once established will result in time to a larger and larger tax being levied until the States will in decency be compelled to repeal their inheritance tax.

COUNTY AUDITORS' ASSOCIATION OF CALIFORNIA,
*Woodland, June 5, 1916.*

Hon. C. F. CURRY,
*House of Representatives, Washington, D. C.*

DEAR SIR: The county auditors of California, in State convention assembled in the city of Yreka, adopted last week resolutions against a Federal inheritance tax. I was directed by the association to send you a copy of the resolutions, which you will find inclosed.

Our information is to the effect that it is the purpose of Congress, or at least of the Ways and Means Committee, to recommend legislation of this kind. Of this there appears to be no doubt; and further information reaches us also that the committee favors the plan whereby the States shall abandon their inheritance-tax systems and that the Federal Government shall collect such taxes, returning to each State a certain percentage of the taxes collected within each State, less cost of collection.

It appears certain that the Federal rates, in any event, would be so high as to force the States either to reduce their rates materially or else to abandon their systems entirely. If such a plan should be adopted as the Ways and Means Committee is said to favor, on the basis of California's present annual average collections, her revenue would be reduced from $3,000,000 a year to probably less than $1,500,000.

We trust you will give this matter your earnest consideration. It means much to California.

Yours, very truly,

COUNTY AUDITORS' ASSOCIATION OF CALIFORNIA,
By R. P. WALLACE, *Secretary.*

Following are the resolutions. Similar resolutions were adopted by the County Tax Collectors' Association and by the boards of county supervisors of California:

RESOLUTIONS AGAINST FEDERAL INHERITANCE TAX.

Whereas the United States Commission on Industrial Relation in its report, which was made public in August, 1915, strongly urged the imposition of a tax upon inheritances by the Federal Government; and

Whereas the Ways and Means Committee of the House of Representatives has been in correspondence with the State controller of California, John S. Chambers, and with like officials in other States of the Union, asking for data as to the collections, by the States, of

revenue under their inheritance tax laws, with the undoubted object in view of utilizing such information in connection with the plan of the Congress to enact Federal legislation of the kind; and

Whereas press dispatches and letters received by the State controller of California from Washington proclaim the determination of the Ways and Means Committee of the House of Representatives to recommend to the Congress the enactment of a Federal inheritance tax law; and

Whereas further information is to the effect that the States will be requested to abandon their inheritance-tax systems to the end that all such revenue may be collected by the Federal Government, with the understanding that a certain percentage of such collections, less overhead costs, shall be returned to the States on the basis of collections within each State: Now, therefore, be it

*Resolved*, That the county auditors of California in State convention assembled in the city of Yreka, on June 1, 1916, do disapprove of such proposed legislation by the Federal Congress, and hereby protest; that the States, and more particularly California, would be done a grievous injury by such legislation; that under the State of California's system of taxation it is essential not only that the State derive revenue from inheritance-tax sources, but also that the average annual collections of about $3,000,000 should not be materially reduced without just cause; that the proposed plan of a partial return to the States by the Federal Government, even if 50 per cent, less the cost of collection, would reduce California's revenue from this source to less than $1,500,000 a year; that as a consequence the revenue of the common schools of the State would be imperiled to the extent of $250,000 annually, the sum now given them under the present average revenue; that the teachers' retirement fund, commonly called the teachers' pension fund, which receives 5 per cent of the total inheritance-tax collections each year, would suffer a loss of more than half the revenue derived from this source; that the general fund of the State treasury would lose approximately $1,000,000 annually; that the State can not spare this revenue, and would be forced to obtain it from a higher tax upon corporations, or a general property tax upon the people—the people under either plan carrying the additional burden; that the States have developed the inheritance-tax system with remarkable success; that they need this revenue, and that the Federal Government, if in need of more revenue, has many sources upon which to draw, far more than have the States, and therefore should not encroach upon the rights and the needs of the States in the matter of inheritance-tax revenue; and be it further

*Resolved*, That the secretary of this association send a copy of these resolutions to each member of the California delegation in Congress.

---

WISCONSIN TAX COMMISSION,
*Madison, June 1, 1916.*

Hon. JOHN S. CHAMBERS,
*Comptroller, State Capitol, Sacramento, Cal.*

DEAR SIR: Your favor of 24th instant to Hon. John S. Donald, secretary of state, is referred to this department for attention. Under our law the administration of the inheritance tax is placed in charge of the tax commission.

I have to say that we are in cordial agreement with your views as to the serious objections to a Federal inheritance tax. It is objectionable upon the grounds that you mention, to wit, that it is an especially suitable source of revenue for the State, and that the State needs all of the revenue that can be imposed with justice upon inheritances, devises, and bequests.

But another very serious objection is that the Federal administration of the law through the county, probate, or surrogate courts of the several States involves an interference with and confusion of the jurisdiction of these courts and a duplication of work that will add very greatly to the expense of the settlement of estates and to the labors of the judges and other officers of these courts.

With a Federal inheritance tax it would seem necessary to have Federal records kept in the courts and a duplication of orders, notices, appraisals, and hearings. In case of dissatisfaction the appeal would probably be to the Federal courts, while the appeal from the determination of the State inheritance tax is to the circuit or other State courts and to the State supreme court. There might be two appeals in the same estate—one where the United States is appellant against the executor of the estate and another where the executor is appellant against the county and State. A little thought will suggest to you quite a variety of complications that might arise.

Notices, orders, and appraisals will also be necessary perhaps in most estates from which no tax is found eventually to be due; but in the meantime the estate has been placed at much expense. I am satisfied that our commission will be glad to do anything it can within reason to aid in the prevention of a Federal inheritance tax law.

Very truly, yours,

WISCONSIN TAX COMMISSION,
JOHN HARRINGTON,
*Inheritance Tax Counsel.*

---

STATE OF NEW YORK,
COMPTROLLER'S OFFICE,
*Albany, June 1, 1916.*

Hon. JOHN S. CHAMBERS,
*Sacramento, Cal.*

DEAR SIR: I acknowledge receipt of your communication of May 24, relative to a Federal inheritance tax. I greatly appreciate your interest in the matter.

I have already been energetically at work to bring about the defeat of such a measure. As soon as I was informed of the introduction in Congress of a measure providing for a Federal tax on inheritances, I immediately prepared and had introduced in both branches of the New York State Legislature a resolution opposing a Federal inheritance tax and calling upon the United States Senators and Representatives in Congress from this State to vote against it. I also wrote the chief fiscal officers of the various States calling attention to this measure and urging their cooperation in bringing about its defeat. I am informed recently that the Democratic leaders in the Senate and House are planning to enact such a bill. This should, in my judgment, be opposed in every possible way and I shall continue so to oppose it. The taxing of inheritances has long been considered as peculiarly a State function and one which ought not to be availed of by the Federal Government.

If you can suggest any further way to make our opposition effective I shall be glad to hear from you.

Very truly, yours,

EUGENE M. TRAVIS,
*Comptroller.*

AUGUST, 1915.

## THE INHERITANCE TAX.

[By John S. Chambers, State comptroller of California.]

Before taking up the inheritance-tax system of California I would like, first, as briefly as is practicable, to discuss taxation in general with especial reference to the powers of the State thereto; second, the broad question of the taxation of inheritances and certain important issues thereunder; third, its possibilities in the matter of the control of the distribution of vast fortunes; and, fourth, the future attitude of the Federal Government toward the States as to this form of taxation.

### TAXATION IN GENERAL.

The lack of information upon the part of the public as to the theory of taxation, the principles underlying it, as all of you know, is appalling. Generally speaking, the average man feels that only two things are certain in this world—death and taxes. He can't escape the first and, directly or indirectly, the latter gets him, too. He will admit, more or less reluctantly, that taxation of some kind, to some extent, is necessary in order that organized government may be maintained, but he believes that more money is called for than is needed, and is firmly convinced that, in so far as he himself is concerned, he pays more than his proportionate share. And as a result some of them seek to offset this state of affairs by methods of their own.

### UNTOLD WEALTH.

It probably was the knowledge of this mental attitude upon the part of most men that prompted a newspaper humorist to perpetrate the following story:

"Pa," asked the boy, "what is meant by the expression 'untold wealth' that I see in the papers so often?"

"My son," replied the wise father, "I'm glad to note your inquiring mind. 'Untold wealth' is wealth about which we fail to say anything to the assessors. Make a note of it."

### MISUNDERSTOOD INHERITANCE TAX.

But if the lack of information upon the part of the people as to taxation generally is appalling, it not only is more so as to the inheritance tax in particular but much of the misunderstanding and opposition to this tax comes from people who ought for their own interest to strongly support it.

The wealthy pay the bulk of it, the well-to-do a small part of it, and the rest of us not a cent.

In California about 15 estates out of every 1,000 pay one-half of this tax. Surely this is significant!

### THE STING OF DEATH.

I think it was St. Paul who once upon a time exclaimed, "O death where is thy sting!" According to the great apostle, the sting of death is sin. But in these latter days, at least in so far as many heirs of rich estates are concerned, the sting of death seems to be the inheritance tax. No matter how hard you try to explain the justice of the tax or to convince them that in any event they are getting something for nothing, they insist upon feeling they have been "stung."

### TAXATION—POWERS OF THE STATE.

While it is true that the primary purpose of taxation is to produce sufficient revenue for the proper support of the Government levying the tax, other considerations, nevertheless, not only legitimately may be but should be borne in mind by the taxing power as relating to the general benefit and welfare of the political society—the public. This, in substance, is Justice Cooley's declaration in his great book on taxation.

Further, he asserts, and the assertion can not be successfully disputed, that "all subjects over which the sovereign power of the State extends are, in its discretion, legitimate subjects of taxation; and this may be carried to any extent which the Government may choose to carry it. In its very nature it acknowledges no limits."

It was Chief Justice Marshall, it will be recalled, who stated in one of his opinions that "the power to tax involves the power to destroy." In other words, as Justice Cooley says, there is no limit.

And further, as pointed out in a decision of the Massachusetts court (Amesbury Nail Factory *v.* Weed, 17, Mass., 52), "neither is it necessary that the object of the tax should benefit the party who is required to pay; for example, a tax for school purposes levied upon a manufacturing corporation."

### ORGANIZED SOCIETY CREATES VALUES.

Hon. John H. Underwood, professor of economics in the University of Montana, in an address before the National Tax Association a few years ago, set forth the situation very clearly, in my judgment, when he said, insubstance: "What we claim as ours simply becomes ours through organized society, under government, and is so retained. A multitude of things contribute to opportunity and create value—the State, people, society, growth, development. The individual may contribute by sagacity and industry to this situation and profit accordingly, but after all, his part is the least. Property values are political and social creations."

In other words, organized society—the State—is not only a copartner but the partner who contributes by far the greatest service. Therefore, the State is entitled, practically, to whatever it may care to take of such accumulations, in the form, say, of taxes.

But sane judgment requires that it should not demand more than is needed for support and development, the proper regulation of business and the accumulation and distribution of wealth and such other matters as may relate to the general welfare of society.

### INHERITANCE TAX ABOVE QUESTION.

I think the foregoing citations are sufficient to establish the power of the State in matters of taxation. The State is supreme. This being so, to take up the particular subject of this paper, it follows that there can be no question whatever as to the right and the power of the State to levy and collect a tax upon inheritances.

Such a statement would seem to be superfluous. The inheritance tax has been an established institution so long, not only in this country but throughout the civilized world, that its practicability and justness would not appear to be debatable. Yet, as I have stated, the ignorance that exists concerning it and the prejudice and consequent hostility that have developed because of this ignorance, is disquieting. This is why I made my preliminary statement. I wanted to lay a foundation that could not be questioned.

### SUPREME COURT UPHOLDS TAX.

Let me clinch it by one more illustration: In the case of Knowlton *v.* Moore (178 U. S., 41), Chief Justice White, of the United States Supreme Court, indulged in a full discussion of death duties and dis-

tinctly recognized the inheritance tax as a legal, just, and firmly established mode of taxation.

In fact, the courts everywhere have sustained this tax; but not, let me add, as a tax upon the property transferred, but as a tax upon the privilege of making the transfer, or a succession tax, measured, however, by the value of the property.

To the lay mind, especially to the heir concerned, this may look like a distinction without much of a difference. He receives just that much less in any event and the State just that much more. It is a situation, I may add, with which the State has no quarrel.

UNIFORMITY, PERSONAL PROPERTY, PROGRESSIVE RATES.

Let us now take up three important issues under the general administration of the inheritance-tax laws: First, as to the practicability of uniform rates and exemptions as between the States; second, the taxation of personal property; and third, progressive rates.

There can be no question in my mind of the desirability of uniform rates and exemptions as between the States, but conditions vary so in the different States that such a thing might not be practicable. I am inclined to think, however, that it would be. Certainly a much nearer approach to uniformity as to rates and exemptions could be made than now exists, and also as to other issues under the administration of this law.

On direct heirs there is now as between the States a variance as to maximum rates of from 1 per cent to 15 and on collateral heirs of from 5 per cent to 30. Such a variance offers opportunities for tax dodging that uniformity or a near approach thereto would greatly minimize or stop entirely.

UNIFORMITY UP TO THE LEGISLATURES.

I would like very much to have the various State legislatures consider this suggestion. But if uniformity comes, it will not be soon. It would mean that a few States would have to materially lower their rates, while a large number would have to raise theirs, since a happy medium would have to be found, to say nothing as to exemptions. And then the trouble would start.

We must always bear in mind the varying conditions in the different States, their trend toward taxation in general and toward special taxation in particular, their wealth development, and the character of their people. The outlook for uniformity, desirable as that stage is, certainly is not encouraging.

RESIDENT'S PERSONAL PROPERTY OUTSIDE STATE.

Now, as to an inheritance tax upon personal property: First, let me remark there is no issue as to such taxation upon real estate. It should be, and is, taxed in the State of its situs.

But there is no such unanimity concerning the taxation of personal property. That is frequently made subject to an inheritance tax in two States and sometimes in three. This means either double or triple taxation.

Double taxation may be justified under certain circumstances, but should be avoided as far as practicable. It will prevail, however, in my opinion, until the States adopt uniform inheritance-tax legislation.

THE COURTS' EMPHATIC STAND.

It has been the law and the policy of California, as well as of other States, to impose an inheritance tax upon the personal property of a decedent who was a resident of this State, no matter where the personal property might be located, whether in or out of California. The right of the State having the primary administration of an estate—the State of the domicile of the decedent owner—to tax personal property having its situs outside of the State, is not only the law of California, but it has been upheld by the courts even as affecting personal property which never was in this State and, moreover, under the will of the decedent (estate of Hodges, Cal.) was bequeathed to nonresidents and so in all probability never will be brought here.

OUR INCONSISTENT POLICY.

With this ruling I have no quarrel. I think it a just one. The domiciliary State is the logical taxing power under such circumstances. It certainly should not be deprived of this power.

But California and other States are not consistent in this regard. They insist upon following the personal property of a deceased resident to the ends of the earth, so to speak, but, on the other hand, also insist upon taxing all personal property of a nonresident found within their borders.

And California, as well as certain other States, likewise tax the stock of corporations incorporated under their laws, which is held by nonresident decedents.

WOULD MEAN REVENUE LOSS.

I have not time in this paper to pursue this topic much further. I consider the policy inconsistent, if not unjust. Yet to abandon it would cost California several hundred thousand dollars a year. And while I hold a State had better lose revenue than obtain it unjustly, it is difficult to see how California can cut off this source of income unless all the other States do likewise.

And so, again, we are back to the issue of uniformity.

RETALIATORY PROVISIONS.

It would seem that if the States could not have uniform rates, at least they could have uniform laws as to other issues.

A number of States did have, and several still have, retaliatory or reciprocal provisions in their inheritance tax laws whereby each treats the personal property or intangible property of a nonresident found within its borders just as the domiciliary State of such a nonresident treats such property.

In other words, the personal property of a Californian found in one of these retaliatory States would be taxed because we would treat a nonresident's intangible property in exactly that way.

NEW YORK'S EXPERIENCE.

New York and Massachusetts have abandoned the policy of imposing an inheritance tax upon the personal property of the estates of nonresidents within their jurisdictions and thus have set good examples. But I suspect this change upon their part was not prompted so much by a desire to do right as because they found, under the other plan, they were getting the worst of it.

New York a few years ago materially raised the rates, but, when it was discovered that millions in cash, stock, bonds, and other personal property was being taken out of the State and that wealthy citizens were registering elsewhere, promptly lowered them again.

PROGRESSIVE RATES.

Let us now turn to the subject of progressive rates. By this I mean rates that ascend with the value of the inheritance, say, by divisions of fifty and one hundred thousand, a quarter and a half a million dollars,, and which also are graded according to the degree of relationship that existed between the decedent and his heirs—the wife or children, for example, paying a lower rate than a nephew, niece, or cousin, while a stranger in blood would pay the highest rate of all.

I think no argument is necessary to convince you that wife and children are entitled to the lowest rates and most liberal exemptions, with near relatives coming next, and so on.

Nor can I see any room for argument as to progressive rates where they apply uniformly to heirs of a certain class, as wife or child, brother or sister, uncle or aunt, or stranger in blood.

STATE'S POWER TO CLASSIFY AND TAX.

You will recall that in the beginning of this paper I quoted you an authority to prove the State's unlimited power as to taxation and also showed you that organized society, through government under the State, contributed the opportunities and created the values that made it possible for a citizen to accumulate wealth—the individual's part being by far the least.

The State, first a copartner, upon the death of the citizen became a coheir, also the heir with the largest claim upon the estate. And with just as valid a claim, let me say, though not named as an heir under the will, as it held as an unnamed partner. And just as it could have done during the life of the individual, when it could have taxed him as it pleased upon his possessions, so, as an heir, it has an equal right to tax his estate as seems good to it. But here, as in taxation during one's life, sanity should rule.

It is for the State to say whether a single rate, as 5 per cent, upon the sum total of an estate will satisfy it, or whether it prefers to classify the sum total and have ascending rates upon the divisions, as 2 per cent, say, upon $25,000 to $50,000, 4 per cent upon $50,000 to $100,000, and, passing over other likely divisions, 15 per cent or more on $1,000,000 and over.

WEALTH'S SPECIAL OBLIGATION.

Bear in mind, too, that it is not the property which is taxed under the inheritance-tax laws, but the transfer of that property from one ownership to another or to several. The privilege of passing it on, of receiving it, is what is taxed.

As men who accumulate wealth owe a special obligation to society in accordance with the value of their estates, so, too, do those who inherit such properties owe a peculiar obligation to the State. Through a progressive income tax these wealthy men pay their special obligation, or a part of it, while they live, and through a progressive inheritance tax do those who inherit—those who reap where they did not sow—pay a part of their obligation to organized society.

In short, if a tax upon inheritances is justifiable—and that is not open to question—then equally certain is the justice of and the State's power to collect this tax by classification and ascending rates.

A FEDERAL INHERITANCE TAX.

From this discussion of progressive rates it is natural to turn our attention to the point first raised, in public at least, by Col. Roosevelt while President, and, again, very recently by the United States Commission on Industrial Relations, and that is that the income tax and the inheritance tax, by means of high, progressive rates, should be used to control the distribution of swollen fortunes.

In other words, that, by means of these high rates, a very material portion of an estate of this character would be diverted from the so-called natural heirs into the Public Treasury and then, as used in the support of the Government, be distributed widely among the people.

SCATTERATION HAS BEGUN.

There is no question that such a policy would result as anticipated; and I think it will come—in fact, it is pretty well on the way now in a few States, including California.

You will recall at this point, perhaps, my quotation from Justice Cooley's work on taxation, to the effect that, while the primary purpose of taxation is to produce revenue, other considerations not only could be but should be borne in mind by the taxing power.

The scatteration of swollen fortunes, which may menace the welfare of the Nation unless dissipated, is one of the considerations beyond question.

THE STATES ARE NATURAL AGENCIES.

But who shall perform this duty? Col. Roosevelt and the Industrial Commission look to the Federal Government. But is there any reason to believe that Washington can do this work more effectively than the States? Has the Federal Government administered the income tax so successfully as to warrant the belief that it can handle the inheritance tax more efficiently than the States? It certainly has not.

Thirty-eight States now levy and collect taxes upon inheritances. Most of them have been very successful, and a number remarkably so. Why, then, should the Federal Government, which has consistently neglected this source of revenue all these years, step in now or later to interfere with the States in a field they have developed?

True, it may be said that both the Nation and the States can impose inheritance taxes. But this, manifestly, is absurd. What would be left the latter under practically confiscatory rates by the former?

STATES WOULD LOSE VAST REVENUES.

New York's largest single item of revenue in 1914 was from its tax upon inheritances, over $11,000,000 having been collected. California's income from this source is averaging $3,000,000 a year.

By what right would the Federal Government take away this source of State support? And if it should, how will the States make up the loss? By increased local taxation, of course. The revenue can not be spared. If taken, it must be made good in some other way. Do the people at large want to add this burden to that which they already carry?

WHY THE STATES SHOULD TAX.

The inheritance tax naturally belongs to the State. The burden of producing and protecting estates is primarily a function of the State, not of the Federal Government. The interest of the local community is greatest in the contribution of the estate as to social welfare. Conditions, too, may not justify the same kind of administration in all the States. The estates of decedents must pass through the probate courts of the State. An estate is accumulated under State laws, is willed away under State laws, and likewise so distributed upon the order of a State court.

Why, then, should the State, having gone this far, be estopped from reaping payment for its services?

NATIONAL TAX ASSOCIATION'S ATTITUDE.

In 1907 the National Tax Association, composed of Federal and State officials, economists, tax experts, and students of taxation from every State in the Union, adopted a resolution against a Federal inheritance tax and went emphatically on record in favor of the States. In 1908 this resolution was affirmed, and for several succeeding years was reaffirmed, so that there could be no misunderstanding as to the position of this influential organization.

I do not see how the States can do otherwise than stand together upon this issue. And surely, so standing, they should be able to control their Senators and Representatives in the Congress.

BRIEF WORLD HISTORY OF THE TAX.

Let us now turn to the inheritance-tax system of California. But, first, a brief history of the inheritance tax as an institution.

There is every reason to believe that the Egyptian Government, prior to the coming of Christ, collected a tax similar in effect to that which we now call the inheritance tax. Such a tax was established, as the records prove, by the Emperor Augustus in the year 6 A. D.; like taxes were levied during the Middle Ages and on down, with variations, by a number of the European Governments, until now, as in England, for instance, it yields in one form or another from $80,000,000 to $100,000,000 a year.

The United States in its early history enacted a stamp tax which included a tax upon the inventories of the effects of deceased persons, upon the probate of wills, and the administration of estates. During and following our Civil War the Government levied a straightout inheritance or succession tax that yielded, between 1865 and 1870, $2,000,000 a year.

THE STATES.

Pennsylvania was the first of the States to have such a tax; in fact, as a colony she enacted a law of the kind as far back as 1626. New York, of all our States that now have inheritance-tax laws, and nearly all of them have, secures the greatest revenue therefrom, as might be surmised because of her wealth. Her first law of the kind was enacted in 1885, and frequently has been amended. Last year her revenue from this source was $11,000,000, and during several years prior thereto had averaged $8,000,000 annually.

CALIFORNIA'S LAWS.

California did not have an inheritance-tax law until 1893, and it applied only to collateral heirs. In 1905 the law was amended in several important respects and made applicable also to direct heirs. The rates of taxation and the exemptions are based upon the Wisconsin law. In 1911 the rates and exemptions were raised, and in 1913 the rates were adjusted to new classifications, but liberal exemptions left as they were. This year, 1915, the rates were again readjusted and, in some instances, very materially increased.

THE GROWTH OF OUR RATES.

The law of 1893 exempting direct heirs carried a flat rate of 5 per cent on all other bequests, save as to charities, etc., with only a $500 exemption.

In 1905 the law also embraced direct heirs, the rates running from 1 to 3 per cent, the latter applying to all bequests in excess of $500,000, while widows and minor children were exempt from taxation up to $10,000 and adult children up to $4,000. The rates on distant kin and strangers ran from 5 to 15 per cent, with $500 exemption.

In 1911 the maximum rate on direct heirs was raised from 3 to 5 per cent, but the exemptions were increased from $10,000 to $24,000 as to widows and minor children and from $4,000 to $10,000 as to adult children. The maximum rate on collateral heirs was increased from 15 to 25 per cent.

In 1913 two classifications were added—one covering bequests from $500,000 to $1,000,000 at 7½ per cent for direct heirs and 27½ for indirect, and the other bequests of $1,000,000 and over at 10 per cent for direct and 27½ for collateral. This led to a readjustment of certain rates upon estates under a half million.

This year—1915—the maximum rate as to straight heirs was advanced from 10 to 15 per cent, and in indirect from 27½ to 30 per cent. No change has been made as to exemptions since 1911.

1913 AND 1915 AMENDMENTS.

Prior to 1911 the inheritance-tax act of this State was very defective. That year it was strengthened, and in 1913 very materially so.

One of the most important of these amendments was that more clearly defining the phrase, "Contemplation of death," thus making it far more difficult to evade the inheritance tax by transferring property before death by gift or otherwise than by will.

Another important amendment imposed a very heavy penalty upon banks, trust companies, or corporations that transferred deposits, securities, or other assets standing in the name of a decedent or in the name of a decedent and one or more persons. Save for this amendment, with its heavy penalties, it is likely the State would lose many thousands of dollars every year through failure to locate cash, bonds, stocks, and other securities usually kept in safe-deposit boxes.

INHERITANCE APPRAISER ALSO PROBATE.

A third amendment, and a very important one, was that giving the comptroller authority to name one or more inheritance-tax appraisers in each county, and further providing, by amending section 1444 of the Code of Civil Procedure, that the court must appoint one of these appraisers as a probate appraiser in any estate where an inheritance tax might be made.

This year this feature of the law was further strengthened by making it mandatory upon the court to appoint an inheritance-tax appraiser as one of the probate appraisers, or the sole appraiser if the court so wishes, in every estate passing through probate.

Thus the State now must have a representative on hand while the probate appraisement is under way and additional opportunity is accorded accordingly for learning all about an estate. And this, too, should be done at a minimum cost to the heirs. The way thus afforded to prevent duplication of work, one appraisement can be made the basis of two. Cooperation on the part of the courts, attorneys, and appraisers not only will enable the latter to render more efficient service but will prove to the best interests of all estates involved.

ATTORNEYS AND SEARCHERS.

The last important amendment of 1913 to the inheritance-tax laws was that giving the comptroller authority to name two assistant inheritance-tax attorneys at a salary of $3,000 a year each, one to be located at San Francisco and to represent the bay region and adjoining territory and the other at Los Angles, to act with the appraisers in the southern California counties. These two attorneys are assistants to the legal head of the department, who resides in Sacramento.

The legislature of 1915, which gave by far the most liberal appropriation ever made for the support of the inheritance-tax department of the controller's office, authorized the appointment of two experienced attorneys as assistants to the heads of the San Francisco and Los Angeles offices and also of two more attorneys for the Sacramento office.

In addition the position of searcher of records was created and each office now has such an assistant. His present duty is to check the records from 1905 to date. Unquestionably in past years, before the law was made effective and the force increased, many estates escaped the inheritance tax. Even this early we are getting results and I look to see much money recovered.

NEW METHOD OF COMPENSATION.

Next to readjusting rates and materially raising certain of them, as already indicated, the most important amendment made by the 1915 legislature to the inheritance-tax laws was that doing away with the $5 per diem allowed an appraiser and providing that hereafter the court and the controller should fix his compensation in each estate.

There is no question that the fixed rate frequently worked an injustice. This was acknowledged. The trouble, however, was to overcome this without opening the door to abuse of the department to criticism. We hope we have solved the problem. The work in each estate will be considered upon its merits and a proper allowance made. But in addition a maximum amount has been fixed beyond which an appraiser's yearly compensation can not go.

The absurdity of appraisers possessing ability to appraise complex estates that brought the State anywhere from $250,000 to $430,000 in taxes alone, for a compensation of $100, or an amount in that neighborhood, should be apparent. The executor of such an estate would think he got off well if he paid such an expert in private service anywhere from $1,000 to $2,000, or perhaps more. The State's old policy put temptation in a man's way. We now pay an appraiser what he is worth.

MANY ARE THE COMPLICATIONS.

Not only is California's inheritance-tax act new to her, but in many respects it contains many novel features. Gradually the courts are passing upon the problems involved, precedents are being set, and the way cleared for the better working of the law.

Complex wills devising life interests or bequeathing property to this person and that upon the happening of this eventuality or that open up hard questions in nearly every instance. The difficulty is in figuring the proper tax under such uncertain conditions. How can the tax be fixed, when, for example, there is no way to tell whether this man or that will die first, and yet the property is to go one way or the other, according as one shall live or die. The safest way for the State is to take the highest tax collectible, subject to a refund later if found excessive.

Joint accounts, family corporations, transferring property before death, alleged business partnerships between husbands and wives, and so on, all mean trouble and call for care, study, and eternal vigilance.

UNIFORMITY—STANDARDIZATION.

There is much to be done, too, toward securing uniformity in appraisements, toward standardizing such work. One appraiser may value a certain stock as worth 10 cents, another in the same city as worth 50 cents. An appraiser may fix the value of a piece of real estate at so much, while another representing another estate may take adjoining property identical in character and estimate it at much less or much more.

There should be, too, more uniformity in the making of reports by appraisers and also in the matter of court procedure. All these things are being worked out gradually.

THE APPRAISERS' CONVENTIONS.

A departure that has contributed much to this desirable end is that of holding annual conventions of inheritance-tax appraisers. The first convention of this kind ever held I called in November, 1913, at Los Angeles for the southern appraisers. A second was held in January, 1914, at San Francisco, for the northern men.

This year, in the exposition city, we held a full State convention of all the appraisers, few being absent. Very much good has resulted from these meetings, and I hope they have become a permanent institution. They are clearing houses of information and experience. They increase knowledge and efficiency, stimulate industry and loyalty.

INHERITANCE TAX COLLECTIONS.

You may have noticed in the press some time ago a statement given out as to inheritance-tax collections for the year 1914–15. The figures were divided into two groups—those for the settlement year and those for the fiscal year. The county treasurers settle with the comptroller twice each fiscal year—in December and in May—while the fiscal year runs from July 1 to June 30. In other words, after the May settlement, which includes collections up to May 1, two months, May and June, remain of the fiscal year.

Now, for the settlement year of 1914–15 the actual cash turned into the State was $2,783,089.56, a gain of $1,080,663.82 over the 1913–14 settlement year. But there came into the hands of the county treasurers during the other two months of 1913–14 enough money to raise these collections to $2,493,948 for that fiscal year.

And so with the fiscal year 1914–15. With the settlement year totaling $2,783,089, sufficient money came in during May and June to run the collections for that fiscal year to $3,000,000, the biggest year California ever had in so far as revenue under the inheritance-tax law is concerned.

For the three years preceding 1913–14 the collections averaged $1,500,000 yearly. And for the 17 years prior thereto averaged annually only $348,632. So, as you can see, we have progressed.

COMPARED WITH OTHER STATES.

Taking the actual cash turned in for the settlement year of 1913–14 (complete figures for 1914–15 are not available), California, with $1,702,425, ranked fifth, being exceeded by the following States: New York, $11,163,680; Pennsylvania, $2,516,790; Massachusetts, $2,277,832; and Illinois, $2,243,583. On the basis of her 1914–15 settlement year ($2,783,089), California, as compared with the foregoing figures, would rank second.

For the fiscal year of 1913–14 California, with collections of $2,493,948, ranked third, New York and Pennsylvania exceeding her revenue. With $3,000,000 as her total collections for the fiscal year of 1914–15, the probabilities are that California is second.

HOW STATE USES THIS MONEY.

Under the law a quarter of a million dollars annually is given of this revenue to the permanent school fund, and 5 per cent of the total receipts from this course are also set aside each year for the benefit of the teachers' retirement fund. The balance goes into the State treasury, to be used as the legislature may direct.

CALIFORNIA'S RATES AND OTHERS.

Briefly, I would like to tell you how California now compares with the thirty-eight other States that collect inheritance taxes as to rates and exemptions. The rates were those effective in 1912, most of which still are in force, except as to three States (Arkansas, California, and Oklahoma), the rates of which are those of 1915.

In the matter of rates as applied to lineal heirs the California rates run from 1 to 15 per cent, the latter applying to estates of over $1,000,000. The nearest approach to these rates are those of Arkansas, which run from 1 to 8 per cent. A number of States have flat rates, of 1, 2, or 5 per cent, the 1 per cent rate predominating, while 11 States do not tax direct heirs at all.

But if we run high as to rates as applied to lineal descendants, we are, to offset it, the most liberal State as to exemptions. These run in California from $10,000 to $24,000, North Dakota being second, with from $10,000 to $20,000, and West Virginia third, with from $10,000 to $15,000. Iowa, with a flat exemption of only $1,000, is least generous, but her rate as to lineals is a flat 5 per cent.

As to collateral heirs, California, with rates running from 2 to 30 per cent, again leads, with Arkansas again second, with rates of from 3 to 24 per cent. Kansas, Minnesota, and West Virginia each has from 3 to 15 per cent, while 17 States have a flat 5 per cent rate.

In the matter of exemptions for collaterals California is not as generous in proportion as she is to lineals. Her exemptions run from $500 to $2,000, as also is the case with Idaho, Illinois, and Texas. Nebraska, Colorado, and Connecticut run each from $500 to $10,000, while Utah has a straight exemption of $10,000 for both direct and collateral heirs and a flat rate of 5 per cent for both.

UNJUST TAX UPON WIFE.

I have left to the last, but not because I hold it the least important, a certain phase of the administration of the inheritance tax laws of California that I consider very unjust and which, I am sure, all fair-minded men will condemn as I do when they understand the situation. I will only briefly refer to it here, as I plan to take it up in detail later through the press and in public speeches.

I refer to the ruling of the courts and a law later framed upon this opinion, whereby a wife is forced to pay an inheritance tax upon her half of the community property accumulated by her husband and herself upon the death of her husband, while the husband, upon the death of the wife, not only pays no such tax but succeeds to his wife's half of the community property as a matter of course, without any act of court or any administration whatsoever.

The Supreme Court, in certain cases where the inheritance-tax law was not an issue or even considered, decreed that the wife succeeds to her half of the community property as the heir of her husband. There was nothing left to do, therefore, in so far as the inheritance-tax law was concerned, but to tax the wife upon her share, and the legislature in 1911 accordingly imposed such a tax. But it is illogical and unjust.

THE PROBLEM IS COMPLEX.

I am aware that amendments to the laws governing the control and disposition of community property should be considered in fear and trembling; that deep issues, grave questions, and results far-reaching as to our social life and business structure are involved.

But I do not wish to disturb any of these things. It seems to me that the legislature could give relief, in so far as the inheritance-tax phase of the matter is concerned. I intend to try to secure it, at any rate.

California may not be in a position to do as I would like to see her do in the matter of the taxation of the personal property of non-residents coming under her jurisdiction, because she is not alone there, but one of many States interested. But she is alone and free of entanglements as to the wife's half of the community property, and she should see justice done.

USE OUR POWER JUSTLY.

California's attitude in this matter reminds me of the story of a dock laborer. "I'm not bating ye, Bridget," he said to his wife, "because I'm displeased with ye, but just to show ye I've got the power."

And, having the power, let us not abuse it.

—

[From the Sacramento Bee, July 4, 1916.]

TAX BILL SLAP AT 28 STATES—CHAMBERS, STATE CONTROLLER, POINTS OUT WHERE MEASURE WILL WORK MUCH INJUSTICE.

The tax bill introduced in Congress by the Democratic Ways and Means Committee is a direct slap at the States and will work a great deal of injustice, according to State Controller John Chambers, who is waging a vigorous fight to prevent the Federal Government gobbling up a big share of inheritance taxes.

Chambers discusses that portion of the bill which affects inheritance taxes, as follows:

As I understand this proposed law, a straight exemption of $50,000 is allowed, but no distinction is made as between near relatives, distant relatives, or strangers in blood. The failure to make this distinction is contrary to the policy pursued by the States, and, in my judgment, will work a great deal of injustice.

IN CALIFORNIA.

In California, for example, widows and children are given the largest exemptions; brothers and sisters, smaller exemptions; uncles and aunts, smaller still; and other degrees of relationship or strangers in blood the very smallest of all, in this State amounting only to $500.

STATE GETS LESS.

The straight exemption of $50,000 is, of course, larger than that granted by California or any other State. California gives an exemption of $24,000 to widows and minor children and $10,000 to adult children. The tax runs from 1 to 2 per cent. The Federal tax on the first $50,000 above the exemption is 1 per cent.

As a matter of fact, this apparently generous exemption by the Federal Government is more or less immaterial in so far as the States are concerned. Our rates on estates under $50,000, as just stated, run from 1 to 2 per cent, and necessarily bring in very little money. The bulk of the revenue derived by California from her tax upon inheritances is upon estates ranging from $150,000 to $500,000, and the rates on estates of these values run from 7 to 10 per cent. The Federal Government's proposed rates run from 3 to 5 per cent.

In other words, should this proposed bill pass, the estates, if California should retain her present rates, would pay, instead of from 7 to 10 per cent, as now, from 10 to 15 per cent, the Federal Government taking about one-third of the tax so collected.

MANY WITH HIM.

Since the information first came to me that it was the purpose of the Ways and Means Committee to place a Federal tax upon inheritances, I have done what I could to bring opposition to bear upon its program. Many State controllers and auditors joined with him.

BELONGS WITH STATES.

It was felt, in view of the Democratic assertion that they had a handsome surplus, that there was no need to invoke an inheritance tax upon the part of the Federal Government, but that if additional money was needed, this form of taxation should be left to the States, where it naturally belongs. Inheritances have to do with estates, which affect local communities and which are developed under State laws, and upon the death of the owner are administered upon and settled through State courts.

—

[From the Oakland Tribune, May 25, 1916.]

REVENUE FROM INHERITANCES.

Secretary of the Treasury McAdoo has submitted to the Ways and Means Committee of the House a revised estimate of revenue required to meet the expense of the National Government for the fiscal year 1916–17. He believes $150,000,000 additional revenue—that is, that much more than is promised under existing revenue-raising machinery—will be sufficient. This estimate is surprisingly low, and with the preparedness measure, rural credits, good roads, and flood-control projects to be carried out it is difficult to see how this extra sum will provide against a big deficit in 1917.

Inheritance taxes, extra income tax, and a tax on war munitions are expected to provide the additional amount required. President Wilson has approved these three tax features, but it is not yet know whether Mr. McAdoo has abandoned his scheme to tax gasoline and internal-combustion engines.

While it seems foolish for the National Government, with its many resources for raising revenue indirectly and with the country sadly in need of a protective tariff, to impose these direct burdens on the people, they are certain to be levied. The Democratic majority is an assurance that they will be.

The question of a Federal tax on inheritances is a new one and will meet with strong opposition from the minority party in Congress. Comparatively few persons realize that such a tax will injuriously affect State revenues in States where inheritance laws are in operation. The Federal Government is planning to grab this handsome source of State revenue and compel the States to meet their expenditures from other sources.

California for this fiscal year will collect nearly $3,500,000 under its inheritance tax law. This money is needed for the proper support of the State government. Five per cent of it goes into the teachers' retirement fund each year, and $250,000 into the general school fund. The balance goes into the general treasury and can be used for general State purposes. If the Federal Government should impose a tax upon inheritances it will mean that the States either will have to reduce their rates and thus greatly curtail their revenue from this source, or else will have to abandon this system of taxation entirely. But the States can not do without this money. It follows, therefore, that if we can not secure it from a tax upon inheritances, it will have to be secured in some other way. State Controller Chambers intimates that the burden will be shifted to the public utility corporations and adds this observation:

"While it is true that California now derives by far the greatest part of its revenue from a tax upon corporations, especially the public utility corporations, that tax is, of course, considered by these corporations when they fix their rates, and so, after all, the consumer in the long run bears, proportionately, the greatest part of the burden. The inheritance tax is not a burden upon people generally. Statistics show that in California about 15 estates out of every 1,000 pay half of the total tax collected each year. Moreover, it is a tax that can not be shifted to the consumer. In addition, it is a tax that belongs logically to the States, and is a system that has been developed by the States with very great success."

There will be other effects, but they all will mean heavier burden for the consumer—the people. Why have the Democrats repudiated their campaign promises to levy "tariff for revenue only"?

—

[From the Mail of Woodland.]

ENCROACHING ON STATE REVENUES.

The proposal of the Democrats to impose Federal taxation on inheritances in order to make up the deficiencies of their near-free-trade tariff law as a revenue producer, and to liquidate their extravagances in appropriating public moneys, has raised a storm of protest all over the country.

All but six States of the Union have an inheritance-tax law. The exceptions are Alabama, Florida, Mississippi, New Mexico, Rhode Island, and South Carolina. Upon this tax the States depend for a considerable portion of their revenue. The Democrats could hit upon no more vexatious tax than that of inheritance, because the States believe this to be a subject peculiarly within their own purview. As a State institution it is complicated enough, but when to those complications is added the provision for a Federal inheritance tax, it is pointed out by students of the subject that not only will the cost of collection be greater than the returns therefrom, but the interference with State revenues will be productive of incessant bickering and dispute.

As Mr. John Harrington, of the Wisconsin Tax Commission, points out, in discussing the inheritance tax before the American Academy of Political and Social Science:

"The inheritance tax is administered in the usual process of settling the estate in the probate court. These are State courts, over which the Federal Government has no jurisdiction nor control. With a Federal inheritance tax, it will become necessary for Federal authorities to intervene in the State courts to protect the interests of the Government and collect the tax. The Federal Government, to be effective, would doubtless require its own appraisers, its own forms of notices, orders, records, reports, and so on, duplicating the procedure of the probate court. All of this procedure must necessarily create a confusion of jurisdiction and of practice that would be irritating and expensive to the representatives of estates, and that in a great majority of cases

would cause the estate a greater expense than the amount of tax derived by the Government. It would also appear to be an unwise and improper encroachment by the Federal Government into a just and proper field of State taxation."

Countless questions arise in regard to the enforcement of the tax. The inheritance tax on real estate is due in the State where located. Where personal property is owned in a foreign State it has been held to follow the residence of the owner. But numerous States have held it subject to taxation in the State where located, thus subjecting the same property to double tax. The Federal inheritance tax would hit this property in one State or the other, thus subjecting it to triple taxation. There is an actual instance in which railroad stock of the deceased was subject to the tax in Wisconsin because that was the State of his residence, in Illinois because the stock was in a safety-deposit box in Chicago, and in Utah because the railroad company was a Utah corporation. Should another such instance arise, would the Federal tax take a chop at it?

Another thing: There would be no estimating the probable revenue from such a tax, on account of the uncertainty of human life. With the conclusion of the European war and the consequent slacking up of business, free-trade products swamping the American market, and business going into bankruptcy, the only hope for succor from this tax which the Democrats might have would be a national visitation of the black plague.

THE WINE TAX AND SPURIOUS WINE.

The excessive tax levied on the wine industry in the so-called emergency war tax measure by Congress in 1914 has not produced the revenue expected by its proponents. I stated at the time it would not, but that it would reduce the production of wine and the price the grower would receive for his grapes, and if it was retained on the statute books for any length of time would destroy the viticultural industry in California. That act has already had its effect. From the vintage of 1915 was produced 10,500,000 gallons less sweet wine than was made in 1914, 4,000,000 gallons less dry wine, and over 700,000 gallons less brandy; and more than 100,000 tons of grapes rotted on the vines for lack of a market. Very few of the grape growers made expenses. No bank would lend money on the crop as security.

My colleague, the Hon. Mr. KENT, has worked hard and conscientiously to secure, if possible, a recommendation from the Treasury Department to Congress to grant some measure of relief. All of the members of the California delegation have cooperated with him.

Mr. Sheehan, the secretary of the State viticultural commission; Mr. Welch, representing the sweet wine and table grape growers; and Mr. Alpers, a dry-wine grape grower, spent months in Washington. We had numerous conferences with the collector of internal revenue, the Secretary and Assistant Secretary of the Treasury, and had hearings before a subcommittee of the Ways and Means Committee. The Kent bill, which is the basis of the wine-tax provision in this bill, is the result. Early in the campaign for relief I told my colleagues it would not be granted to any appreciable extent, and it has not. The scale of taxation provided in this section will more scientifically extract revenue from the industry as long as it lasts, but it will destroy the industry in the end. Two cents a gallon on wine under 14 per cent and 7 cents a gallon on wine over 14 per cent is all the industry can stand.

I suppose my colleague, Mr. KENT, after vainly trying to have his friend the Secretary of the Treasury recommend a tax under which the viticultural industry might live and prosper in California, finally, under protest, submitted to the rates in this bill as being some better than the the present law, and with the hope that it would not kill the industry before some Congress and administration in the near future would treat it fairly.

All civilized nations encourage viticulture—the cultivation of the grape and the manufacture of pure wine from the juice of the grape. The United States Government until recently has encouraged viticulture, particularly in California. Under that encouragement 340,000 acres of land have been planted in vines in my State—170,000 acres in wine grapes, 110,000 acres in raisin grapes, and 60,000 acres in table grapes. One-half of the raisin and table grapes are of no value except to make sweet wine and brandy.

[From the Oak Park (Cal.) Ledger.]

The principal reason for the great strides made by the California grape industry during the past half century has been the encouragement given to it by both the State and the Federal Governments. Our State legislature alone has appropriated more than $300,000 in fostering the industry.

Both State and Nation have established experimental stations, investigated methods of combating the ravages of insect pests, and distributed vast quantities of literature for the benefit of the vineyardist.

To afford facilities for solving grape problems, the United States Bureau of Plant Industry has established 12 experimental vineyards on the Pacific coast. One of these is at the Plant Introduction Field Station at Chico, and the others are located at Oakville, in Napa County; Fresno; Guasti, in San Bernardino County; Brawley, in Imperial County; Colfax, in Placer County; Geyserville and Sonoma, in Sonoma County; Livermore, in Alameda County; Lodi and Stockton, in San Joaquin County; and Mountain View, in Santa Clara County.

Characteristic clusters of over 500 varieties of wine, raisin and table grapes were collected last vintage by Prof. George C. Husmann, in charge of the United States experimental stations in California, and sent to the Panama-Pacific International Exposition. There they attracted great interest and proved a revelation to foreign and eastern visitors.

It is doubtful if any other State or nation can display a wider variety of grapes than California, whose soil and climate enable us to produce practically every variety of wine, raisin, and table grapes grown anywhere on the face of the globe.

There are 15,000 vineyards in the State, some of them ranging in size from 200 acres to one of 3,200 acres, but most of them are in small holdings of from 10 to 25 acres each.

Seventy-five thousand people are supported by grape culture in California. They depend on raising and selling grapes for a living. This does not take into account the number of people and their families engaged in the wineries, making wine from the grape. They number 75,000 more.

The amount of money invested in vineyards and wineries is over $200,000,000.

The cost of making a vineyard of bearing vines averages $300 per acre.

Grapevines yield from 4 to 8 tons per acre per annum, and are sold to the wineries at from $7.50 to $11 per ton. Some years extra choice dry wine grapes may be sold for as much as $25 a ton.

The net profit to the grape grower is small, as the cost of developing and cultivating a vineyard is great.

A ton of grapes makes from 150 to 160 gallons of dry wine or 80 gallons of sweet wine. The reason that a smaller quantity of sweet wine than dry wine is made from a ton of grapes is because a portion of the grapes in the manufacture of sweet wine is distilled into brandy, which is used to fortify the sweet wine.

It costs about 14 cents per gallon to make dry wine and 16 cents per gallon to make sweet wine.

Dry wine is sold at the wineries in bulk for about 19 cents per gallon, and sweet wine at an average of 29½ cents per gallon.

Dry wine is an article of diet used as a drink with their meals by a large number of our citizens, particularly those of foreign birth and their children, and more particularly by those from France, southern Europe, and parts of Germany. Dry wine is also regularly used on the tables of many Californians and Louisianians. They use it with their meals as most people use tea and coffee. This tax on dry wine will add to the cost of living of many frugal, hard-working people in moderate circumstances.

In 1914 the production of sweet wine was 16,620,212 gallons. The production of brandy 3,320,744 gallons. The production of dry wine about 25,000,000 gallons.

In 1915 the production of sweet wine was, as near as can be ascertained, about 6,000,000 gallons. The production of brandy 2,613,286 gallons. The production of dry wine 20,921,000 gallons.

It is estimated that 100,000 tons of grapes, including wine grapes and raisin and table grape culls were left unpicked on the vines for lack of ability to sell to the wineries on account of the excessive Federal tax on brandy used in fortifying sweet wines.

The annual production of table grapes amounts to about 250,000 tons, one-half of which has in the past been sold to the wineries.

The annual production of raisins is about 125,000 tons, and one-half of the raisin grapes must be sold to the wineries, as only the best clusters are used for drying for raisins.

Last year the winemen, because of the prohibitive tax on brandy used in fortification, dried 4,000 tons of raisins out of wine grapes, and the raisin-grape growers made 200,000 gallons of dry wine out of raisin grapes. The raisins and wine thus manufactured were of inferior quality and have not been and will not be marketed. To maintain the high standard of California raisins and wine the Fresno raisin producers purchased the 4,000 tons of raisins from the wine association, and the wine association purchased the 200,000 gallons of wine from the raisinmen, and neither the inferior raisins nor the inferior wine will be marketed.

During the early part of May, 1916, a heavy frost killed a large part of the grape crop in the Sacramento and San Joaquin Valley. It is estimated that over 85,000,000 worth of grapes were destroyed. A frost at that time of the year had never before been known to occur in the valley, and during the first week in July a heavy rain mildewed half of the grapes remaining on the vines. As a result of the frost and rain, grapes will bring from $15 to $25 a ton this year, but also as a result of the frost and rain very few grape growers will have much, if any, grapes to sell.

The tax placed by Congress in the emergency revenue bill two years ago has not produced the revenue you expected, and I told you at the time it would not. But it has diminished the production of wine as I told you it would. The present wine-

tax provision in this bill is unjustly excessive and instead of relieving the situation will still further discourage the making of wine. If it is enacted into law and remains on the statute book for any length of time, it will drive every small independent producer out of business and will reduce the price of grapes to such a point that a large acreage of vineyards in small holdings will be so unprofitable that their owners will be compelled to dispose of them to large holders at a sacrifice, if they have a chance, and otherwise will have to dig-up their vineyards that have cost them much money and years of labor to develop, and where the soil is favorable start all over again in some other branch of farming.

No other country—not even one of those engaged in war—has imposed such a burden of taxation on its viticultural industry. The grape and wine industry of California does not wish to escape its just share of taxation to meet the emergency in the Federal Treasury, but the tax provided in this bill is unjust and excessive.

Grades of dry wine sold in bulk to our people as a part of their regular dietary should not be taxed at all. We do not tax ten nor coffee; neither should we tax the dry wine that is used as a drink with their meals by many poor people—particularly by a large proportion of our foreign-born population from France, Germany, and the Mediterranean and by their children. California protests against any change in the legal definition of wine.

We do not want the Pure Food Bureau's definition of wine changed by law or by the bureau.

Under section 43 the manufacture of spurious rot-gut wine is legalized and recognized as wine, as will be evident to anyone who reads that section from the word "fermentation," on page 72, line 8, down to the end of the section, on page 73, line 9.

The Government ought not to permit impure wine to be made and sold. To be healthful wine must have age and be made from the juice of the grape.

Among the many letters, telegrams, and resolutions I have received against the rate of taxation on wine provided for in this bill and against legalizing the manufacture and sale of spurious rot-gut wine are the following, which I shall read and include as a part of my remarks:

CALISTOGA, CAL., *May 17, 1916.*

MY DEAR MR. CURRY: I herewith hand you a duplicate set of resolutions regarding the so-called Kent bill, which originated actually in the United States Revenue Department, and the proposed change in the definition of wine, contained, I think, in the pure food law, which allows compounding materials and calls it wine, against all of which the dry wine men protest most heartily. You will find that the so-called Kent bill, and the change as to definition of wine will have the approval of our sweet wine men and of the trust, and the large independent wine makers, since it will reduce the small man to the necessity of quitting.

We respectfully ask that these resolutions, and this letter, if you wish, be printed in the CONGRESSIONAL RECORD, since we do not want it to pass and allow it to be said there was no objection. Of course, we have no hope from the present administration, history shows that which they start they drive through. And out of their need for money, and perhaps also their desire to ruin our business from a prohibition standpoint, comes the proposed changes in the definition of pure wine, which allows the eastern fellow to make it out of water, etc., and also puts him in the class with our pure grape juice. All we hope to gain from the present administration is that the RECORD shall show that we protested.

You will see that this Grape Protective Association comprises 34 wineries, owned by both Democrats and Republicans, all alike protesting.

Very truly,

ELMORE M. BILLINGS.

---

CALISTOGA, CAL., *May 17, 1916.*

TO CALISTOGA GRAPE PROTECTIVE ASSOCIATION:

Your committee to which was referred the matter of drafting resolutions opposing the proposed Kent bill and the change in the definition of wine, allowing adulteration, as directed by this Association, begs leave to report as follows:

We have given this matter serious consideration, taken counsel with many leading citizens, friends of the dry wine industry of California, and are assured and believe that any law that attempts to put the dry wine industry in the same class with the sweet wine industry or with the compounded, "stretched" or "sophisticated" wines of the Eastern States can only do serious injury to the dry wine industry of California. We believe that it will be found difficult to put all the different kinds of wine into one class and do justice to all, we refer especially to the eastern wine maker, the sweet wine maker, and the California dry wine maker.

We believe that the proposed Kent bill will do injustice to the farmers who grow grapes used by dry-wine makers, especially in the following particulars:

The Kent bill puts the burden of the tax on the humble grower, whose profit is very little beyond a living. It should be remembered that for more than 20 years we have been compelled to sell our wines at an average price of 15 cents per gallon. This wine is used by thousands of poor and middle class people as a table beverage as commonly as others use tea or coffee. All of the tax proposed in the Kent bill will be paid by the farmer.

There are 34 small wineries in the vicinity of Calistoga. Five hundred gallons per acre is probably a conservative estimate of the average production of the hill and valley vineyards in this locality. The proposed Kent bill would therefore impose an average tax of at least $15 per acre in addition to all other taxes, and is more than any farmer can stand and permit the wine industry a chance to continue.

The grower of corn or barley pays no such tax, and he can use his crop for some other purpose. But if the farmer growing grapes suitable only for dry-wine making is taxed out of existence, his grapes are worthless; they can be used for no other purpose.

We wish to emphasize the fact that we are defending nothing but the pure, unadulterated dry-wine industry of California.

Another objection to the proposed law is that it permits "stretching" or "sophisticating" of wines by adding water and acids. All materials for producing pure wines are found in the California grape. Our trade in pure wine made of pure grape juice has long been established, and our dry-wine makers demand that the producers of compounds be not permitted to sell their product without specifying their composition. To simply state "Missouri wine," "Ohio wine," "Michigan wine," as has been proposed, will deceive the public, which will think that it was made in these localities, but is pure wine. This alone would, we believe, ruin the dry-wine industry of California. Ninety per cent of all grapes grown for wine purposes in the United States are grown in California. Half of the remainder are used to make grape juice. It would seem, therefore, that the producers of 5 per cent of the total wine output of the United States are to win at all points.

We believe that clause in the Kent bill which fixes a certain tax for wines having an alcohol content of less than 10 per cent and a higher tax on wines containing more than 10 per cent and up to 14 per cent is objectionable. As any of our dry wines containing less than 11 per cent alcohol are not considered merchantable, we would never derive any benefit from the lower tax. Our marketable dry wines range in alcohol from 11 per cent to 14 per cent, and we therefore urge that there should be but one tax on all wines up to 14 per cent alcohol and that that should not be to exceed 2 cents per gallon.

The California wine industry has been fostered by both State and Nation, inducing our people to dig out stones and stumps on the mountain sides, and now in addition to all other ever-increasing taxes the Federal Government wants $15 per acre tax. This would be an excessive burden. No other farming industry is asked to stand it.

We understand that the Kent bill would turn every one of our 34 little wineries into bonded warehouses, placed under the control of the United States Treasury and Revenue Departments, with a minimum penalty for the smallest infraction of the law of $500. This law would permit the Revenue Department to make regulations, and violation of which is thus penalized. This would tend to reduce the wine business of Napa Valley into one large monopoly. It is practically certain that not one of the 34 wineries in the vicinity of Calistoga could survive these added burdens. If such conditions, governmental restrictions, burdens, and taxes are to be permanent, we can only look forward to the time when we can alter our business or produce crops less hampered.

It must be remember that very much of our land devoted to grapes will not grow hay or grain, and we would be compelled to experiment with trees or orchards after grubbing out our grapes.

"Whereas the proposed law would injure if not destroy the dry-wine industry of California; and

"Whereas these matters are undoubtedly clouded by want of full understanding: Therefore be it

"*Resolved*, That copies of these resolutions be sent to our Representatives and Senators in Congress and that they be urged to do all in their power to save the dry-wine industry of California."

Which was unanimously adopted.

A true copy.

E. L. ARMSTRONG, *President.*

Attest.

WM. W. KORTUM, *Secretary.*

OAKVILLE, CAL., *March 14, 1916.*

Congressman C. F. CURRY,
*House of Representatives, Washington, D. C.:*

The position taken by the State Viticultural Commission authorizing Representative KENT to introduce a measure providing for the legalizing of wines made from sugar and water and the fortification of such wines or pure wines with neutral spirits other than grape brandy will cause the reverend clergy of America to suspect all California wines shipped to them for sacramental purposes. Sacramental wines can only be made from nothing but the pure product of the grape. I would appreciate it very much if you would register my protest with the Ways and Means Committee against any act providing for the legalizing of adulterated or spurious wines or for the fortification of wines by the use of neutral spirits.

REV. P. BLAKE.

[Western Union telegram.]

NAPA, CAL., *March 14, 1916.*

Hon. CHARLES F. CURRY,
*Washington, D. C.:*

Our attention has been called to fact that certain California interests not affiliated with dry-wine interests have given their approval to use of spirits and sugars in manufacture of wines. We being one of largest independent dry-wine manufacturers in State of California desire to be placed on record before Ways and Means Committee as opposed to any change in manufacture of pure California wine as now defined under pure-food laws. We would prefer to see 8 cents per gallon wine tax stand as at present rather than allow big interests adulterate and ruin vineyards of dry-wine section.

MIGLIAVACCA WINE CO.,
JOSEPH A. MIGLIAVACCA,
*President.*

[Western Union telegram.]

ST. HELENA, NAPA COUNTY, CAL., *March 14, 1916.*

Hon. CHARLES F. CURRY,
*House of Representatives, Washington, D. C.*

Grape growers of Napa County in a meeting this morning unanimously voiced their objection to the passage of any bill by Congress that will permit the use of sugar, water, grain, or neutral spirits in the manufacture of pure wines, and request that you appear before committee and present our objections. We desire that the definition of pure wines remain as at present provided by pure-food laws.

Napa County Growers' Association (Wm. Bornhorst, president) Frank Pellett, Chas. Davis, John N. Wheeler, Mrs. M. Holje, French American Co., L. Kortum, Migliavacca Wine Co., F. W. Ewer Co., I. Light, C. N. Pickett, Chas. Krug Winery, Bismarck Fruck, E. M. Billings, Charles Fauver.

TREASURY DEPARTMENT,
*Washington, May 19, 1916.*

Hon. HENRY T. RAINEY,
*Chairman Subcommittee on Ways and Means,*
*House of Representatives, Washington, D. C.*

MY DEAR MR. RAINEY: I have the honor to submit herewith for consideration in connection with the pending wine bill (H. R. 13282) statements and estimates, prepared by Representative Kent, of the production of wines, cordials, etc., and the quantity of brandy used in the fortification of wines during certain stated periods.

The statement of collections under the present wine law is found to agree with the records of this department, except as to the tax collected on brandy. During the period from November, 1914, to October, 1915, which, including the month of October, 1915, is found to be $162,997.40 instead of $162,197.14 as given in the statement submitted. While somewhat less than the tax assessed on the brandy so used, the actual collections from this source, as well as the tax on the wines produced, would seem to furnish a fair basis for comparing such receipts under the present law with the estimated receipts under the proposed law.

The records show that since the enactment of the present wine law there has been a large falling off, not only in the production of certain grades of wines but in the quantity of brandy used for fortifying purposes. This large decrease is doubtless due mainly, if not wholly, to the high rates of tax now imposed, and it is reasonable to conclude that, under the reduced rates of tax provided for in the pending bill, the wine industry will again assume normal proportions, and that the revenue to be derived therefrom will at least equal that now estimated by Mr. Kent.

In view of the probable increase in revenue under the lower rates of tax and the fact that the administrative features of the bill would doubtless prove far more effective than those contained in the present law, I regard the bill as now drawn a meritorious one and would recommend its passage.

Respectfully, W. G. MCADOO, *Secretary.*

The monthly reports of the Internal-Revenue Bureau show that the amount of fortification of sweet wine in August to October, 1914, was unprecedented. It is obvious that wine makers rushed fortification so as to evade the burdensome fortification tax of 55 cents a gallon, which was then being discussed.

It was assumed at that time that the next season would show a return to normal conditions under the operation of the emergency law, as the next season's output would be unaffected by change of legislation.

Furthermore, the wines on which taxes under the emergency-revenue law were collected were the product of a season which started long before the enactment of the law itself, and a comparison of 12 months subsequent to its enactment (which period, from October, 1914, to October, 1915, included the end of one normal season and the beginning of another season—an abnormal season), a comparison of receipts from mixed seasons with receipts from a normal season, is not a fair nor an accurate method of computation. The division of the year, as October to October, brings into calculations the productions of two different seasons, one of which may be extremely large and the other extremely small, and there is consequently difficulty in proving the cause of reduced production.

The law having been in effect about 18 months, the only reasonably accurate method of estimating the effect of the law is to compare the receipts of the first 12 months with the receipts of the last 12 months, and then to compare the gallonage producing this revenue with the output of an average year prior to the enactment of the present intolerable tax. Inasmuch as the past 12 months, from April, 1915, to March, 1916, inclusive, practically covers a season's production under the operation of the emergency-revenue law, the production during this period as compared with the production of any season prior to the enactment of the emergency law will show conclusively the effect of the law on the wine industry

Inasmuch as official figures are available on the sweet-wine industry only, as against the total of all other branches, the effect of the law can most readily be ascertained on this branch of the industry, as, for instance, the normal production of sweet wines prior to the enactment of the emergency-revenue law was about 20,000,000 gallons, whereas during the last 12 months only 6,000,000 gallons of sweet wine have been fortified.

The tax on the sweet-wine industry was increased by the emergency law from three-fourths of a cent a gallon to about 23 cents a gallon, or approximately 3,000 per cent.

When the law went into effect it was confidently expected that 20,000,000 gallons of sweet wine would alone produce, at the rate of 23 cents a gallon (8 cents stamp tax and 15 cents fortification tax), $4,600,000. The actual collections, however, were as follows:

*November, 1914, to October, 1915, inclusive.*

| | |
|---|---|
| Sales of wine stamps | $2,985,032.33 |
| Assessments (includes penalties) on unstamped wines | 28,995.57 |
| Tax collected on brandy used in fortification (corrected) | 162,997.40 |
| Total | 3,177,025.30 |

*April, 1915, to March, 1916, inclusive.*

| | |
|---|---|
| Sales of wine stamps | $2,498,270.28 |
| Assessments (includes penalties) on unstamped wines | 78,534.19 |
| Tax collected on brandy used in fortification (corrected) | 307,861.29 |
| Total | 2,884,665.76 |

The following table shows the revenue which can reasonably be expected under the pending bill as based on the estimates contained in the letter from the Secretary of the Treasury March 15, 1916. The revenue figures on domestic cordials, sparkling wines, and champagnes were obtained from recent letters from internal-revenue collectors, furnished through the courtesy of Commissioner Osborn, and do not pretend to be comprehensive:

| | |
|---|---|
| Estimated revenue, exclusive of domestic cordials, sparkling wines, and champagnes | $3,684,914.00 |
| Domestic cordials, etc. (incomplete) | 653,762.43 |
| Domestic champagnes, sparkling wines, etc. (incomplete) | 103,080.96 |
| Total | 4,441,757.39 |

*November, 1914, to October, 1915, inclusive.*

| | |
|---|---|
| Estimated receipts | $4,441,757.39 |
| Actual collections | 3,177,025.30 |
| Difference | 1,264,732.09 |

*April, 1915, to March, 1916, inclusive.*

| | |
|---|---|
| Estimated receipts | $4,441,757.39 |
| Actual collections | 2,884,665.76 |
| Difference | 1,557,091.63 |

The above figures, based on incomplete returns, show conclusively that the pending bill, even though it reduces the present rates of taxation from 35 per cent to 50 per cent, will provide an increase of revenue of over a million and a half annually.

Moreover, the bill provides a permanent tax, whereas the present law was enacted merely to provide a temporary source of revenue.

Another advantage is that with the improved administrative features of the pending bill there will be little opportunity to evade payment of taxes. Under the present law there have been discovered flagrant abuses and evasions.

It is reasonable to assume that for the next year or two there may be a slight increase in revenue under the present law over actual production, inasmuch as much of the sweet wine that is now being marketed was fortified under the 3-cent fortification tax, and the Government is collecting stamp tax on this old stock. As soon as this stock of wine is sold off (it is alleged that there were 40,000,000 gallons in California at the time of the passage of the law) it is evident that the Government will then be collecting revenue from the annual production, which will afford an opportunity of computing the actual effect of the emergency law on the wine industry.

It is furthermore evident that the Government is receiving revenue at the present time from only 35 per cent of the normal production of still wines, and unless the present rates of taxation are lowered there is no reason to hope that receipts can be increased. On the other hand, an immediate reduction of 65 per cent of production during the first year and a half under the operation of the emergency revenue law raises the presumption that, without relief, the discouragement and the fight for actual existence will tend to create a progressive decrease in production, and consequently in revenue.

*Table showing percentage of reduction in production of sweet wine.*

| | Gallons. |
|---|---|
| July, 1914, to March, 1915, inclusive | 17,133,228.66 |
| July, 1915, to March, 1916, inclusive | 6,051,565.49 |
| Difference (a drop of 65 per cent in production) | 11,081,663.17 |

The season of 1914–15 was divided between two rates of tax. A comparison between the season of 1915–16 and an average of the seasons of 1910–11, 1911–12, and 1912–13 follows:

| | Gallons. |
|---|---|
| Sweet wine produced in 1910–11 | 19,498,767.24 |
| Sweet wine produced in 1911–12 | 24,198,626.19 |
| Sweet wine produced in 1912–13 | 19,281,758.12 |
| Total | 62,979,151.55 |
| Average for three seasons | 20,993,050.516 |
| Production 1915–16 season (a drop of about 72 per cent) | 6,051,565.49 |

| Brandy used in 1912–13 | 4,939,464.7 |
| Total | 16,343,286.1 |
| Average for three seasons | 5,447,762.0 |
| Amount used in 1915–16, or a drop of 83 per cent | 955,515.5 |

[NOTE.—All figures taken from annual reports of Commissioner of Internal Revenue, and reports furnished by his office for period subsequent to issuance of last annual report.]

**Response of Vermont.**

EXTENSION OF REMARKS
OF
HON. PORTER H. DALE,
OF VERMONT,
IN THE HOUSE OF REPRESENTATIVES,
*Monday, July 10, 1916.*

Mr. DALE of Vermont. Mr. Speaker, an item which has been quite extensively copied by the press of the country from the Springfield (Mass.) Republican announces that—

Of the States in the eastern department, New York, up to Sunday, had sent forward 5,643 men to the Mexican border; Massachusetts, 5,437; New Jersey, 4,056; Pennsylvania, 3,398; and others fewer numbers. Considered as an actual pro rata contributor the Bay State is nearly at the top of the list. It is something of an expert in preparedness.

While admitting the claim that Massachusetts is something of an expert in preparedness, and gladly assenting to her conspicuous place in that respect so long as she is represented in this House by the well-informed, superb advocate of that policy [Mr. GARDNER], yet a citizen of the little State of Vermont can not help feeling that the number and quality of men from that State and the dispatch with which they responded may justly be called to notice.

As an actual pro rata contributor the Green Mountain State is not only nearly, but quite at the top of the list, and with almost twice the number of men on the border in proportion to its population that the Bay State has sent.

In the manner of its response Vermont is sustaining a reputation recorded in history. In 1861 the governor of Vermont issued his call for a special session of the legislature on the same day that the President called for troops. The legislature was opened by the national salute from the two brass field pieces captured by Stark at Bennington, appropriated a million dollars, provided for the raising of volunteers and the support of their families, and adjourned. Within a week thereafter the first regiment was ready to go. During the next four years not only more men enlisted, but more men gave their lives for the Union from Vermont in proportion to its population than from any other Northern State. Not till a year after the close of the war did the last regiment come home from its service on the banks of the Rio Grande, when the scheme of a foreign power to establish an empire in Mexico had been abandoned. Vermont in that war sent a soldier for every ten of its population, including men, women, and children, within a month of the President's call offered twice the number of companies the Government was ready to accept, raised the first full regiment of mounted men from New England, at the close of the war had exceeded by more than fifteen hundred men its quotas under all calls, and brought back all its colors, never having lost one in action.

In 1898 a new generation in Vermont responded to the President's call with energy and celerity similar to their fathers. The First Regiment of Infantry was ready in a few days. Capt. Clark brought the battleship *Oregon* from California round the continent 13,000 miles in the quickest record time and put it in place for the naval engagement that sunk the Spanish fleet in Santiago Bay. And before this another Vermonter, in command of the Pacific Squadron, had steamed out from Hongkong and met his instructions to "find the Spanish fleet and destroy it." This Admiral Dewey did without the loss of a single man in Manila Harbor.

The old martial spirit, fortified by the stern sense of civic duty, still survives in Vermont. Her troops are not only so many in proportion to her population, they were not only among the first to reach the border, but they are, officers and privates, men of superb character. The chaplain of the Vermont regiment now on the border is Rev. Dr. Thomas, president of Middlebury College. The reason why he went, simply and briefly stated, is a little forceful sermon.

I had to come. I have been for three years chaplain of this regiment, have had the benefit of the training, and was regarded by officers and men as their friend and chaplain. When they were called to the front I simply could not refuse to offer to go with them. How could I ever stand up and urge my students or anyone else to do their duty even in the face of sacrifice, if I flinched in this great crisis? A man must stand by his conscience or his force is gone. So a great load was lifted when I offered to go, and I will try to do my duty by the boys.

The colonel of the regiment is Ira L. Reeves, president of Norwich University, which ranks as a military training school next to West Point. He has seen years of Regular Army service; was an officer in Cuba and the Philippines; has met the experiences of the march and the battle, and has been severely wounded. Col. Reeves is in the prime of splendid physical and moral manhood. He is a man with a great deep intellect, who speaks briefly, but with a volume of power. His deeds are based on a sound conscience. Col. Reeves was inaugurated president of the university a few days prior to his leaving for the border, and the quality of the man is indicated by the strong, quiet power of his remarks. He said:

This is an unusual time for an inauguration. An inauguration usually occurs at the beginning of an administration. For all I know, it may be at the end of mine. I have been asked if I want to go back into active service. If war breaks out, I want to go. I am quite sure that none of these young men have asked to be released. I am quite sure if they did not go at this time, the time would come when they would regret it. We all have an obligation. Somebody must fight these battles. If I could not go out as a colonel I would go out as a private. My young men, it will some time be a source of pride to you and to your children to feel that you went out when your country needed you. I have often had inquiries as to who were the bravest men in battle. It is usually those who with white faces and jaws firmly set have the determination to go right in.

Wherever we go, I think we can depend on Vermonters doing their duty, for they have made one of the best military records in this country. Let us hope that I will make good in my command. I want to assure you that your sons will receive my most conscientious support. I have in my regiment one of the sons of the governor. I have the sons of a great many fathers and mothers, and I want to assure you that your son will receive every attention that I can give him. If I can't do all I hope to, to make the First Vermont Regiment one of the best, if not the best in the United States, I will get out and give some other man a chance.

Mr. Speaker, Vermont has only sent the first of many regiments if they are needed. A squadron of Cavalry is fast being recruited at Fort Ethan Allen by Maj. Wallace Batchelder, who was one of Theodore Roosevelt's Rough Riders. The character of the man and his desire for troops of quality are both made clear in his plain, direct talk to officers and men on a recent Sunday, when he said:

Boozing and soldiering do not mix well. You can't do both in this command. If you want to soldier, we will soldier. If you want to booze, get out and let the rest of us soldier. I stand for fair play. These splendid officers and men have a right and their families have a right to be absolutely certain, and each officer and man has a right to feel secure in the assurance that if he ever goes under fire his comrades, his noncommissioned officers, and his officers shall be perfectly sober and in full possession of all their faculties.

Mr. Speaker, it may be that Vermont can not keep pace with other States in the ratio of population, but with martial mettle, civic courage, and genuine, reverent, preeminent devotion to the death she will respond more than pro rata to the Nation's call.

**Harking Back on the Tariff Commission.**

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, July 7, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, in extending my remarks in opposition to the Democratic deficiency bill, which proposes to compromise Republican votes upon the tariff question by the tender of a "nonpartisan" tariff commission to be appointed by President Wilson in line with the St. Louis platform of the Democratic national convention, I wish to submit for the information of some of my Republican colleagues who are being urged "to pull the Democratic Party out of its financial hole," to present a few extracts from great speeches by leading Democrats, who were not so enthusiastic about a "nonpartisan" tariff commission, when we had one under the Taft administration in 1909 and 1910, as they have been since the Democratic convention of 1916 has awakened to the fact that there was something in a protective tariff after all.

And before I introduce these honest expressions of Democratic faith I wish to remind the Republicans who have been in this House for one or two terms only that in their failure to appear in the Sixty-first Congress, when the Democrats were preparing to take away the gavel from Speaker CANNON and turn it over to Speaker CLARK in the Sixty-second Congress, they missed one of the most tragic incidents in our legislative history—the defeat and burial of a tariff board which had been gathering data for Congress at less expense and on lines substantially as comprehensive as are proposed in the $300,000 Wilson tariff commission, with its six $10,000 specialists, who are to have no practical experience but only a theoretical knowledge of the tariff question, and who—Heaven save the mark!—are not to have been guilty of service in the House of Representatives.

The death of the Taft Tariff Board was accomplished by a remarkable filibuster, conducted principally by the gentleman from New York [Mr. FITZGERALD] and the gentleman from Texas [Mr. GARNER], which lasted all of the night of March 3, 1911, and continued until successful, a few minutes before the expiration of the Sixty-first Congress, March 4, of the following day. One of the grievances of the Democrats who opposed the board was that it was too expensive, and that it had employed a secretary at the enormous salary of $6,000 per annum, which is the amount fixed in the present Wilson tariff commission proposition, plus the six $10,000 economic specialists, who are to superintend the work that is already being done in the various departments and commissions of the Government.

When the filibuster had reached the point where it threatened the failure of several of the important appropriation bills, Mr. Payne of New York, the leader of the majority, arose and made this statement:

Mr. PAYNE. Mr. Speaker, it is evident that this bill can not pass before 12 o'clock. [Applause on the Democratic side.] And I understand that the sundry civil bill has not yet been engrossed; and in order to do that, this bill will have to get out of the way.

As I have been very earnestly for this bill, as has been a majority of the House, I regret to break in at this time, but I ask unanimous consent, and I ask the friends of this bill to join with me, to vacate the order now pending and to allow the resolution to be withdrawn.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. [Applause on the Democratic side.]

In the excitement—for it was an exciting occasion—before the Republican leader threw up the sponge, a vote was had on a motion to agree to the resolution of the Committee on Rules, reporting the Tariff Board measure, and on that vote, which was recapitulated because of the confusion under which it was taken, substantially all of the Democrats who are now in the House voted in the negative. They are prepared now to vote for a Wilson-Underwood free-trade tariff commission, although they were then unwilling to continue a board of five, two of whom were Democrats, one of the latter being a former highly respected Member of this House, who hailed from the State of Georgia. It will be interesting for Republicans who watch the vote on the Wilson-Underwood tariff commission bill, to know that amongst the present Ways and Means Committee members who voted against the Tariff Board on March 4, 1911, were the gentleman from North Carolina [Mr. KITCHIN], chairman of the committee; the gentleman from Illinois [Mr. RAINEY], who introduced the Wilson-Underwood tariff commission bill; the gentleman from Mississippi [Mr. COLLIER]; the gentleman from New York [Mr. CONRY]; the gentleman from Indiana [Mr. DIXON]; the gentleman from Texas [Mr. GARNER]; the gentleman from Tennessee [Mr. HULL]; the gentleman from Missouri [Mr. DICKINSON]; and the gentleman from Arkansas [Mr. OLDFIELD]. The gentleman from Missouri [Mr. CLARK] voted in the negative, while on the last vote the gentleman from Alabama [Mr. UNDERWOOD] did not vote. Taken as a whole, it was a solid and emphatic Democratic protest against a tariff board or commission—in striking contrast to the present unanimous Democratic demand for a tariff commission, as will be seen from the speeches which are to follow. It is fair to new Republicans in this House, who are now being swayed by eloquent Democratic appeals for Republican support "to help them out of a hole," that they shall be informed as to the kind of a "nonpartisan" tariff commission they may expect, if in voting for preparedness, as they believe, they swallow the political pills which have been prepared for them in this bill.

Listen to the kind of appeals that were made to us on January 30, 1911, when Mr. Dalzell, of Pennsylvania, brought in a rule to make it in order under the sundry civil bill to provide for a tariff board to cost $240,000.

THE GENTLEMAN FROM MISSOURI.

The gentleman from Missouri [Mr. CLARK], now the Speaker of the House, commenting on a tariff commission to fix rates—and the Wilson-Underwood commission proposition gets very close to it—said:

I was opposed to that last year and I am opposed to that this year because it is idiotic. It is idiotic because the Constitution of the United States absolutely precludes such a performance. * * * The proposition for a tariff board has been so amended in this pending bill that the board shall report to the Senate or report to the House. On the motion of the Democrats in the committee it was fixed so that the House shall be able to select the subjects which this board shall investigate. That makes an entirely different situation. We Democrats will have the House after the 4th of March, and we propose to carry out in good faith the promise to revise the tariff down, and we are going to do it just as soon as we can. [Applause on the Democratic side.]

The old board is not a bipartisan board. The new board is to be a bipartisan board. I use the word "bipartisan" advisedly. Such a thing as a "nonpartisan" board is an impossibility in nature, and if the word "nonpartisan" is in this bill I will move to strike it out. I wish we could fix it so there would be three Democrats and two Republicans on that board at once, but that we can not have; but on the 4th of March, 1913, we can get three Democrats and two Republicans on that board, and that is the way this board will then stand. [Applause on the Democratic side.]

* * * * * * *

Mr. RUCKER of Missouri. Does the gentleman from Missouri think that we will need any experts that the President may appoint to aid us in making a Democratic tariff?

Mr. CLARK of Missouri. Information is information, wherever it comes from.

* * * * * * *

Mr. RUCKER of Missouri. Does the gentleman think we are going to sit idly by while this commission, appointed by the President, collects information for the Democrats elected to perform their duties?

Mr. CLARK of Missouri. Not at all. As far as I am concerned I am willing to take the Ways and Means Committee as at present selected and go into a room and frame two new schedules before Saturday night. [Applause on the Democratic side.]

* * * * * * *

Mr. HITCHCOCK of Nebraska said paragraph 7 "provides that said board, composed of three Republicans and two Democrats, shall submit the results of its investigation, together with any explanatory report," and asked:

I should like to ask him whether he does not think the minority member of that board should have the right to submit a report? Otherwise it would be controlled absolutely by the Republican members of the board.

Mr. CLARK of Missouri. Undoubtedly; and I believe under any parliamentary procedure known among men that the minority of the committee have a right to file a minority report; but if there is any doubt about that I am in favor of putting that in the bill.

THE GENTLEMAN FROM NEW YORK.

Mr. FITZGERALD. I am not only opposed to the rule, but I am opposed to the bill. I do not believe that it is intended to help the Democratic Party, but that it is intended to embarrass the Democratic Party in carrying out the will of the people in the next Congress. [Applause.] * * * I do not profess to be an expert upon the tariff, but I do know and I believe that the country is convinced that any man of ordinary intelligence has all of the information necessary to make radical changes in practically all of the schedules of the present infamous law.

THE GENTLEMAN FROM INDIANA.

Mr. CULLOP. I am opposed to this bill and every provision contained in it, because it violates a well-established and venerated principle in the doctrine of the Democratic Party. [Applause.] I am as much opposed to a government by commission as I am opposed to a government by injunction. Both are inimical to the underlying principles of the Republic and a menace to its perpetuity. * * * The Constitution confers solely upon the House of Representatives the duty of originating bills for revenue, * * * and any attempt to surrender this great function of government should be resisted. The people selected the commission last November to revise the tariff. They selected the commission delegated with that power under the Constitution, and we should see that that power is not transferred to any other body not provided for in the fundamental law of our Government. The transfer of this duty would be a confession to the world that we felt ourselves unable to perform the duties for which we were selected and an attempt to evade the responsibility we have assumed. * * * Let us revise the tariff as soon as we come into power, relieve the people, and let the tariff barons wait. * * * Sir, if I voted for this bill I should consider it my imperative duty to go back to the legislature of that State [Indiana] which is now in session and petition it to rescind the action taken by it just two weeks ago, when it elected the Hon. JOHN W. KERN to the United States Senate [applause] and in lieu thereof elect his opponent, the Hon. Albert J. Beveridge. How could I do otherwise and keep faith with the people of the great State who have so generously honored me with a seat in this great lawmaking body? [Applause.]

THE GENTLEMAN FROM NORTH CAROLINA.

The rule was adopted—two hours being agreed upon by Messrs. Payne and CLARK for debate on the bill. Then the fight was resumed.

In the course of Mr. LONGWORTH'S speech as to a meeting of the national tariff commission "somewhere in Washington" the following ensued:

Mr. KITCHIN. Where did that association, that tariff association, hold its meetings?

Mr. LONGWORTH. In the city of Washington.

Mr. KITCHIN. Were any Democrats present and made any speeches?

Mr. LONGWORTH. There was a distinguished member of the Democratic Party present

Mr. KITCHIN. Who was it?

Mr. LONGWORTH. He was a member of another body.

Mr. KITCHIN. No Democratic Member of this House was present?

Mr. LONGWORTH. A distinguished member of the Democratic Party made a very eloquent speech.

Mr. KITCHIN. All the other members were protective-tariff Republicans, were they not?

* * * * * * *

THE GENTLEMEN FROM ALABAMA AND TENNESSEE.

Mr. CLAYTON of Alabama. I desire to know, if this bill becomes a law, when this tariff board will report either to the House or to the Senate or to the President or reach any conclusion whatever.
